Mr. SPARKMAN. The Senator from Wisconsin very kindly supplied me with an advance copy of his speech. I have read it with great interest and with considerable sympathy for many of the points which he makes. This question is not new with me. I remember when LYNDON JOHNSON and I came to the House of Representatives together. I am certain he felt then, as I did, that there ought to have been more frequent caucuses. But as time went on and I observed the practical working of getting legislation through the House, I came to understand some of the reasons why there were not frequent caucuses in the House, under some of the ablest and, I think, most democratic legislators I have ever known.

Speaker Bankhead, when Senator JOHNSON and I came to Congress, presided over the House; then, after he passed on, SAM RAYBURN became the Speaker. Certainly they were two of the finest parliamentarians I have ever known. Both of them were always ready to take the individual Member, whoever he was, into his confidence, and to discuss legislative problems with him. Yet we did not frequently have Democratic caucuses in the House.

When I came to the Senate, I found the same thing to be true. The only

difference is that here the meetings are called conferences, while in the House they are called caucuses.

I was interested in some of the statements which the Senator from Wisconsin made with respect to housing legislation. I was particularly interested in them because he and I work together, as does the Senator from Illinois [Mr. DOUGLAS] on the Committee on Banking and Currency. I have often thought of the question which the Senator from Wisconsin has just raised, namely, Who is to determine how this particular program fits into the whole? I think that is one of the great difficulties confronting Congress. It does not simply affect legislation; we know that it is true also of appropriations. Who will make the appropriations fit the revenues? Those are problems with which we are always confronted. I do not know how to solve them.

Mr. PROXMIRE. I think there is a way in which it can be done. It is the way in which it has always been done, or a way in which it has almost always been done, by the majority party. Usually the majority comes into office with a President of its own party. The President submits a budget which makes the entire program fiscally interrelated. Unfortunately, we do not have a Democratic President. The Republican President has submitted a budget which we Democrats have rejected. We do not think it is completely accurate. We do not go along with it. Most Democrats have rejected it. We have an overwhelming, decisive majority in the Senate of 64 to 34. Having rejected the standard of a relatively small minority, it is now up to us to set a standard of our own. I do not suggest that it is up to us to engage in the enormous research which only the executive department staff can do, but I think the policy committee ought to engage in some research and offer some recommendation, so that we can go forward with a fiscally responsible program.

The policy committee should have some notion of how much housing the Nation can afford. There would have to be give and take. But I think the result would be better understanding and a more responsible position.

Mr. SPARKMAN. The Senator from Wisconsin knows that there is a committee which is supposed to lead the way in that field. I refer to the Joint Economic Committee, of which the distinguished Senator from Illinois [Mr. DOUGLAS] is the very able chairman. I believe the report of that committee was filed with Congress today, or that it will be filed shortly. If the Senator from Wisconsin will examine that report, he will find that the Joint Economic Committee has tried to pull these things together. That is a part of the legislative procedure.

Mr. PROXMIRE. The Joint Economic Committee, as I understand, is a bipartisan committee; it is not a standing committee of the Senate.

Mr. SPARKMAN. That is true.

Mr. PROXMIRE. It is chiefly interested in the picture of legislation affecting the economy. It is not my understanding that the purpose of the Joint Economic Committee is to provide for a fiscally responsible program for the majority party of Congress.

Mr. SPARKMAN. No. It is supposed to provide information for Congress. But if the Senator will read the report, he will see that the majority joined in making the principal report, and then the members of the minority submitted what I suppose might be called minority views, but what are really supplemental opinions or differing opinions. They agreed in great part with the views of the majority.

It seems to me that what we have tried to do has been to draw together a general policy for Congress. We recommend it as one which we can follow.

I have long aspired to see the time when it might be possible for the Joint Economic Committee to lay down guidelines for Congress, very much as the Economic Council does for the President.

Mr. PROXMIRE. And then pull all Senators into it.

Mr. SPARKMAN. That does not mean that any individual Senator will be bound by what is contained in the report. That is true of caucuses, conferences, or any other assemblies. I reserve to myself, as I am sure every other Senator does, the right to make my own decisions as to how I shall vote on a particular measure.

I have my own viewpoint, for instance, with respect to housing. Let us go back to housing, since the Senator from Wisconsin is a member of the Committee on Banking and Currency and has used housing as one of his illustrations. The Senator knows the policy of the committee. He made a very fair statement, I thought, of the committee procedure. I do not believe he complains that he did not have ample opportunity in the committee to participate in the discussions, to present his own views, or to vote his own way.

Mr. PROXMIRE. Certainly not. I said so in the course of my speech.

Mr. SPARKMAN. I so interpreted it.

It was said on the floor that a great many persons were wondering why action was being hurried on the housing bill. I tried to make it clear, first, that the FHA was running out of insurance authorization. The administration thought the FHA would be in trouble by the middle of February. As a matter of fact, it is not in trouble yet. It appears now that it may be possible for the FHA to continue through March without difficulty. But it looked earlier as if the FHA would run out of insurance authorization.

Mr. PROXMIRE. Is it not true that a bill introduced by a colleague of the Senator from Alabama in the House, Representative RAINS, was at that time pending in the House? It was perfectly obvious then that that bill would not pass for 2 or 3 weeks, and it has not passed the House yet. Therefore, for the Senate to rush action on our bill would really accomplish nothing, because it would not provide any housing relief at all.

Mr. SPARKMAN. I was stating what at that time seemed to be the emergency situation. 'Way back last fall the majority leader, the Senator from Texas, was talking about what we should do. I recall that in one or two speeches he made, he said he thought it would be desirable to get legislation through quickly. He did not tell us to put through an omnibus bill or a "quickie" resolution.

As a matter of fact, 'way back last summer, when the housing bill failed to clear the Congress, it was announced that one of the first orders of business in this new Congress would be a housing bill. I know I was questioned about it from time to time, during the adjournment of Congress. I said I did not know what procedure the Senate would decide on, but that I certainly believed we should put through an omnibus housing bill quickly, instead of going through with a "quickie" resolution which would run things until June 30th, and then come along later with a regular housing bill.

The Senator will recall that when the full Banking and Currency Committee met, it was decided to proceed on that basis. We took all the housing bills which had been introduced up to that time. Fair notice had been given to the administration, and it had even sent its bill up here. That was not difficult to do, because last summer we thrashed out the whole matter. The bill I took up was no pet project of mine. But I took the bill as nearly as I could as it was passed by the Senate last year, after being worked out and agreed to between the two parties and passed without one dissenting vote.

But I think it fair to say that even the administration participated in working out that program. So I thought the bill we took up would be the least controversial one of all. We merely made changes in order to fit the changes which had occurred since that time. That is the bill which was presented here and was, largely, passed last month.

I "caught it" from both sides, because I was trying to get through a bill which the Senate had already agreed upon, and which I believed the President would sign. I did not want the Senate to pass a bill which would be vetoed. I wanted the Senate to pass a bill which would produce housing for American families. And that is the kind of bill I advocated all the way through.

Many persons did not like the bill. Some thought I was too conservative. On the other hand, some persons "shot" at me because they thought I was too liberal. But I still believe it was a good bill, even though it contained many provisions which were different from the ones I would have preferred to have seen included.

Mr. PROXMIRE. I agree; and I supported it enthusiastically.

Mr. SPARKMAN. Yes; and I think it was a good bill.

That bill was not rushed through. It is true that we had voluminous hearings, although we had had hearings last summer. But every person who wished to testify this time was given a chance to do so. In fact, if I recall correctly, we had 843 pages of hearings.

We obtained the printed hearings from the Printing Office at the earliest possible moment. We prepared the report

for the majority. But some of the committee members wished to submit supplemental views could be added to the of town. His airplane did not bring him back in time. So we had to wait until he returned, in order that the supplemental views could be added to the majority report. We did not print the majority report until the supplemental views were ready; we left them unprinted, in order to permit committee members who wished to submit minority views or supplemental views to do so.

That raised a little question, when the majority leader proposed that the bill be taken up the next day, because at that time the majority report had not been printed. But, as the Senator from Wisconsin knows, that was not the fault of the majority members of the committee; neither was it the fault of the committee members who wished to submit supplemental or minority views.

So all of us waited until the supplemental views were submitted; and then the majority report and the minority views and the supplemental views were printed, and were made available.

Therefore, when the bill was brought up, the next day, the report on the bill was available, the bill itself was available, and the hearings on the bill were available; and the bill was the one which had been thrashed out thoroughly last summer in almost exactly the same form.

I do not recall that the debate on the bill was hurried. A time limit may have been agreed to unanimously; but, if so, it was not forced on anyone.

Let me say that I certainly agree with what the Senator from Wisconsin says about the desirability of having thorough debate in the Senate. I believe that all bills considered by the Senate should be debated thoroughly. In fact, I go further: I am not in favor of limiting debate in any way, at any time.

But sometimes, when we are trying to accommodate the entire membership of the Senate, and when we can agree to limit debate on some particular proposal, we go along with such a proposed agreement. That was done with respect to several amendments to the housing bill, but not with respect to the bill as a whole.

Mr. MONRONEY. Mr. President, will the Senator from Alabama yield to me?

Mr. SPARKMAN. I do not have the floor; the Senator from Wisconsin has the floor.

Mr. PROXMIRE. I yield to the Senator from Oklahoma.

Mr. MONRONEY. I believe that the distinguished junior Senator from Tennessee and I had one of the most controversial amendments. Both of us agreed to unanimous consent for the closing of debate, inasmuch as we were given all the time we felt we could possibly use to add anything to the debate. The debate was rapid and succinct, and we had all the time we wanted.

The fact that we obtained only 28 votes for our side was our fault, not the fault of anyone else. After all, we had ample time. But the vote which was taken resulted in rolling us over. Certainly, after having been one of the "rollees," as a result of the decision of the Senate, I am not going to engage in any Monday morning quarterbacking and say we were treated improperly. The decision which was reached was the decision of the Senate; and the Senate was established for the purpose of reaching decisions.

Mr. SPARKMAN. Mr. President, will the Senator from Wisconsin yield further to me?

The PRESIDING OFFICER. Mr. DODD in the chair). Does the Senator from Wisconsin yield to the Senator from Alabama?

Mr. PROXMIRE. I yield.

Mr. SPARKMAN. I believe the Senator from Oklahoma has brought out a very pertinent point, because in my opinion that was the most controversial issue in connection with the bill. As the Senator from Oklahoma knows, 'way down deep inside me I was in sympathy with the viewpoint he took. But I recognized the practicalities of the situation, and I said so from the first; and I voted in favor of increased interest rates, even though I did not favor them. But I realized that it was necessary for me to take that position if we were to be able to provide the housing which the veterans need. So I was willing to go along in that respect. But there was no railroading of that legislation.

We were trying to have the Senate pass the bill that week, because that was a practical matter, for we know that every year the Senate does not do any legislating during the week of Lincoln's birthday. That is an established tradition with the Senate. We on this side permit our Republican brethren to go out and try to convince the country they are the true disciples of Lincoln. [Laughter.] We know how unsuccessful they are in that attempt; but we are tolerant of the vanishing tribe. Therefore, the Senate does not do any legislating during Lincoln's birthday week. We do not suspend the sessions of the Senate during the week of Jefferson's birthday or during the week of Jackson's birthday; but in the case of Lincoln's birthday, the Senate takes off the entire week.

In this case, we were trying to have the Senate dispose of the bill before the Republican Members left town.

The debate turned out to be rather long—on a bill which had been passed unanimously by the Senate only a few months before.

Mr. President, I am not critical of the Senator from Wisconsin. I admire him; I think he has done a wonderful job during his service as a Senator. As a matter of fact, I think it is rather refreshing to have him bring up these matters for debate. But I believe that the enactment of legislation involves a great many practical matters which we simply cannot dispense with simply because it is good to theorize otherwise. I think we must be practical.

I admit that I had a hard time coming to that point of view. I want Senators to know that when I first came to Congress, I was about as idealistic as anyone, and I like to think that I still am. But I have learned something, and sometimes I have learned it in rather the hard way, that is, that the work here is highly practical.

Again to use the housing bill as an example, let me say that I think we followed the practical course in getting that bill through. I still believe it is a good piece of legislation, and that it will produce housing for American families, and that it will carry out the directive the Congress has, under the law, and the directive the Administration has, under the law, which was enacted in 1949, when we were told that we should devise programs which would help bring about a decent home and a decent living environment for every American family.

We cannot do that overnight. The Senator from Wisconsin, fine legislator that he is, recommended programs beyond which I was willing to go, not because I did not believe in them, but I was trying to be practical and to weigh the probability of having a housing law in view of the great program which has been announced throughout the country about balancing the budget, and so forth.

In other words, I believed we could put into effect a moderate bill, whereas, if we went as far as some of us thought we should go, we might not have any housing legislation. I still think we did the practical thing. I do not see how anyone can complain about the manner in which that particular piece of proposed legislation was handled.

The other bill to which reference has been made is the airport bill. Goodness knows, I had an idea of what I wanted in that bill. I had an opportunity to testify before the committee. I said there what I wanted to say.

I say to the Senator from Wisconsin, I think we must balance the idealistic with the realistic, and recognize that practical situations are involved, and that many times legislation has to be considered in the light of practicalities.

I should like to make a further statement about the housing bill. I do not know whether or not the majority leader made any suggestions to other members of the Housing Subcommittee, but I was chairman of the subcommittee, and at no time did the majority leader suggest any particular item he thought should go into the bill. That bill represented the handiwork of the Banking and Currency Committee, and I think the Senator from Wisconsin will admit that is true.

The Senator from Texas did say he hoped to get a bill through the Senate, and that we should pass it before Lincoln's birthday. As I recall, I told him we would have a bill ready by February 2. We would have had it ready by then if one Senator had not gone out of town. As it was, we had it ready by February 3. I think I am correct in my recollection of the dates.

So far as the contents of the bill are concerned, at no time was there any suggestion by the Senator from Texas of what the bill should contain. He said he hoped we would have a housing bill that would produce housing and would become law. That is as far as he went.

I cannot help but feel the housing bill—and that is the bill with which I

am most familiar—which passed the Senate this year, and one which the able Senator from Wisconsin has used so frequently throughout his speech as setting a pattern, represents the democratic processes certainly so far as it has gone in clearing the Senate. I am confident that as it goes through the House, and as it comes to conference between the two Houses, it will continue to represent the best of the democratic processes. Even though I do not get what I want all the time, I am happy to say these democratic processes work.

I came to the conclusion a long time ago that legislation at its best is a compromise. I know that idea does not fit in with what some persons say—that one must not compromise, that he must stand up for his principles, that he must stand up and fight for them to the bitter end, and not compromise. Legislation is not obtained in that manner. Legislation is not obtained by standing up and fighting to the bitter end and insisting that one get his way or that there be no bill at all.

After all, the Members of the Senate come from 49 sovereign States. I believe the States are sovereign. The House of Representatives is made up of 436 Representatives from 49 different States. I like to think that when a piece of proposed legislation has been hammered out by the 534 representatives of all the people, from all over the United States, and from each of the 49 different States, it has gone through the democratic processes. When that is done, it seems to me it represents legislation which has been arrived at in a democratic way.

Mr. President, I had not intended to take so long. I am appreciative to my friend from Wisconsin. He is a good Senator. I admire him. He has been an excellent member of the Committee on Banking and Currency, on which I have the pleasure of working with him. I appreciate his giving me this opportunity to make these few comments.

Mr. PROXMIRE. Mr. President, I am glad the Senator from Alabama has gone into the detail with which he has spoken. He is certainly the best qualified man in the Senate to discuss the housing bill. Nevertheless, the facts speak for themselves. We had nearly 8 hours of debate on February 4. We had nearly 12 hours of debate on February 5. We were up against a deadline. We had a night session. The fact is that there was no necessity for having the bill passed in such a hurry, since the House did not pass its bill in all of February and into March.

I agree with what the Senator has said about the need to compromise. That is one reason why I think we should have conferences and get together to arrange compromises. I am trying to be practical and businesslike.

Mr. President, with a two-thirds majority in the Senate of the United States, my party in the Senate has an obligation to adopt an overall fiscal policy, to pronounce it publicly, and to measure the legislation we propose—to spend or conserve the taxpayers' money or to raise or reduce taxes—against it.

Every kind of business does it. Every kind of organization adopts some kind of such plan to measure the amount it proposes to spend.

Without such a policy the majority party in the Congress is being backed into a fiscal corner by the plausible pleas of the President to balance the budget. We may think the President's budget proposals are wrong or even untrue; but we cannot escape the fact that it is the only budget that has been proposed by the responsible head of either party.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield.

Mr. MANSFIELD. I think the Senator from Wisconsin would be the first to admit that what he is now proposing certainly relates to what is a very difficult problem to solve. He knows, as well as do the rest of us, that the President has a Budget Bureau which comprises somewhere in the neighborhood of 500 persons, and which works on a year-round basis. It gets the results of the findings of the various independent agencies, departments, and whatnot.

How would it be possible for the Senate, especially in caucus or conference assembled, to perform what the distinguished Senator from Wisconsin has in mind?

Mr. PROXMIRE. It seems to me the first thing we have to do is take the President's budget as the first point of departure, as the beginning. As the Senator has said, it is based on very careful examination by the most competent people available in the executive branch.

Mr. MANSFIELD. Not that I agree with it, because I think the President is wrong so far as the Defense Department is concerned.

Mr. PROXMIRE. We have to start somewhere. It seems to me this is where we should start. I am not saying we should come up with a precise dollar figure as to every department at all.

What I say is that by requesting every one of the 64 Democratic Senators to thoroughly consider this overall fiscal problem, I think we can arrive at a consensus—an informed and intelligent consensus as to whether we can responsibly favor a balanced budget or a surplus. If so, roughly what should be the level? Then we shall be in a position to fight for and defend our housing bill and to fight for and defend the position that we should be better prepared militarily. Now, every time we come up with a proposal for airports or housing or anything else which will cost money, the President steps up to us to say, "You are unbalancing the budget." This is an effective approach. What is the answer? The American people only know about one budget, the President's budget.

Mr. MANSFIELD. Having watched the distinguished Senator from Wisconsin for the past 2 years, I do not think anyone has to worry about his fighting for the things he believes in and making his views understandably and well known.

Has the Senator from Wisconsin thought about the possibility of a different procedure? Instead of considering the budget in conference, along the lines the Senator suggests or recommends, it might be possible, as some of our colleagues have stated, to have two sessions within each session of Congress each year. The first 6 months we could consider legislative matters and then for 3 months we could confine ourselves to matters affecting appropriations. It has been thought that in such a manner, instead of sandwiching in the appropriations between legislative matters, giving them little or no consideration, we could better acquaint ourselves with the situation. I am sure the Senator is not in favor of lack of consideration of appropriation bills, because I know he thinks appropriation bills should be given careful consideration. It might be possible in that way to break these things down. Six months could be purely legislative, and the last 3 months could be purely for appropriations. Then, perhaps, we could accomplish more, and do it more understandably.

The Congress and the Appropriations Committees of both Houses do not have at their command, no matter how they try, the knowledge which the President's Bureau of the Budget can furnish to him, because the Bureau of the Budget operates on a year-round basis. Consequently, the President has the edge on us. In that way we are at a great disadvantage.

Mr. PROXMIRE. I would add that I think we should spend at least several weeks considering this enormously important question of some kind of a fiscal framework, so that we may have some idea where we are going with a housing bill or an airport bill.

Mr. President, I very much appreciate the participation of other Senators. On the other hand, I have been yielding a lot. I am afraid I am imposing on some Senators who are present in the Chamber by continuing this discussion at too great a length. If other Senators want me to yield I shall be happy to do so, but I think we should keep that point in mind.

If this Democratic Party of ours, with its overwhelming congressional majority, is unwilling to propose an alternative budget which will tell where we intend to go, we are letting the President determine the only standard by which our own program and performance is going to be measured by the American people.

THE SENATE AS A DELIBERATIVE BODY

Mr. President, this vital process of relating the diverse tendencies of committees to the whole national responsibility has been a problem which has been reconciled in the Senate in past years in two ways.

Mr. President, this is extremely important. First, overall policy was determined in advance by a Senate majority party caucus or a President who represented the party that had the majority responsibility in the Senate. That is No. 1. Secondly, overall interests were reconciled after bills were reported to the Senate in debate on the floor, involving the Senate as a whole.

We have already seen how the death of our majority party caucus and the absence of a Democratic President has eliminated the first method of responsi-

bility: Determination of policy in advance.

What of the second method—The role of Senate floor debate after committees report legislation, as an instrument of national responsibility? Certainly debate in this historic body has served that purpose before.

This was a principal reason why in the 19th century the Senate earned the reputation as "the greatest deliberative assembly on earth." The Senate won that accolade through protracted debates like that on the Oregon bill in 1846, the Force bill in 1890, and the Silver Purchase Act in 1893. The tariff measures which bore the names of McKinley, Wilson, and Dingley were largely framed in the Senate after extended deliberations.

The Senate continued to function as a deliberative body in the early decades of the 20th century, when the great measures of the New Freedom era were hammered out on the anvil of debate in the upper chamber and during the bitter fight over the League of Nations. Senators like Borah, George Norris, and "Old Bob" La Follette helped to sustain the ancient tradition. The days of the Great Depression likewise produced great debates over the economic course which should be pursued to win our way out of economic despair.

During the Second World War, far from becoming an anachronism or a mere rubber stamp in providing funds and delegating powers, the role of Congress in the American system of government increased rather than diminished. After due deliberation, many difficult decisions were made by the National Legislature on organizing the resources of the Nation and on allocating men, money, and materials among competing claimants. Alternative choices and different standards of judgments gave rise to extended deliberations within Congress, and to recurring debates over such controversial issues as price control, consumer subsidies, war taxes, and reconversion.

These debates have served two great purposes. First, they have informed all Senators who cared to listen or to read the RECORD what was at issue. In doing this they provided the opportunity for all viewpoints to be heard and for an informed majority opinion to be determined, an informed opinion that could not have been achieved without debate. They provided also the chance for the Senate in floor session to resolve the diverse recommendations of committees with the necessities and interest of the whole Nation.

Secondly, the Senate through debate played a tremendous role in informing and shaping the very public opinion which is so basic in the determination of policy in a democracy. All the great issues of the political campaigns of the 19th century were formulated through senatorial debates. Prof. Lindsay Rogers of Columbia University in his book "The American Senate," concludes after long and careful analysis that prolonged Senate debates on pending legislation or treaties have been extremely useful in giving the country opportunities to form and express opinions. "The Senate," said Rogers, "is the only available forum that can draw any interest to its proceedings. The Senate can help the country to form opinions and by its eternal vigilance act as the real balance wheel of the Constitution."

Mr. President, what has happened to that balance wheel of the Constitution?

Let me read the observations of two thoughtful and able observers on how this great deliberative body has been operating in recent years. The first is from columnist Marquis Childs who wrote last January 16, in describing the attitude that has come to dominate my party in this body.

> Public controversy is bad—bad for the party and bad for the country. That is the heart of the Johnson conviction. You have to work things out in the cloakroom and then when you've got them worked out you can debate a little before you vote.
>
> In the politics of manipulation and manuever JOHNSON, as he proved once again, is a master. But this ignores the content, the substance, of political give and take. It draws off the fire, the fight, the conviction, the zeal.

And from the National Review of January 17 Willard Edwards describes what has happened to the Senate as follows:

> LYNDON JOHNSON has established speed, unanimity, curtailed debate and the elimination of record votes as the hallmarks of good legislation. He has elevated the unanimous vote to a legislative ideal. Under his leadership a system of backstage bargaining for votes has reduced debate on the Senate floor to a dull formality.
>
> The record of the last session shows what it means to reach "agreement without discord." It means brief and perfunctory debate; a lack of intelligent questioning; sparse attendance; the absence of quorum calls to summon absentees; the omission of record roll calls without which the public can never know which Senators were present and how they voted; the approval of legislation in obvious ignorance of its meaning.

Mr. President, I think this is a serious and honest indictment. It goes to the heart of my difference with the leadership.

My staff has gathered statistics for the last 12 years to check the accuracy of Mr. Edward's allegations; this is what they show:

The number of bills passed has sharply increased. Comparing the period from 1947 through 1952 with the period from 1953 through 1958, the number of bills has increased by a huge 40 percent. At the same time the number of roll call votes has dropped sharply. The number of quorum calls has fallen a great deal. And the number of hours and days in session have also dropped.

In relationship to bills passed: Rollcalls have fallen 40 percent; the number of hours in session has dropped off by one-third; and most decisive of all the number of quorum calls requiring attendance of absentees has fallen more than 60 percent.

Mr. LONG. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield to the Senator from Louisiana.

Mr. LONG. I must point out to the Senator that he has a completely erroneous table to support his statement. For example, I ask the Senator to look at the table on the next page of his prepared text in view of the reference to hours in session having declined. The Senator will notice that, based on the 6 years from 1953 through 1958, the Senate was in session more hours, except for the period 1949 and 1950. As a matter of fact, the reason the Senate was in session such long hours during that period was that legislation was brought up which resulted in two long and successful filibusters, and that in each such case the Senator who was making the speech ended his speech by suggesting the absence of a quorum, and insisting upon a live quorum present. Perhaps the Senator did not look up that information. I think that accounts for the fact that the Senate was in session so many hours during the time referred to. I do not believe the Senator from Wisconsin is standing here advocating two successful filibusters.

Mr. PROXMIRE. It is true, of course, that during the 1949–50 period there was extended debate on bills which came before this body. It seems to me that, nevertheless, the facts speak for themselves. I shall be delighted to collaborate with the junior Senator from Louisiana in eliminating the period during which the two filibusters referred to took place. Having done so, I think we would still find that if we consider the hours in session, with relationship to bills passed, the number of hours in session declined.

I point out that the very excellent point made by the junior Senator from Louisiana does not touch the principal point I make, namely, that we are not having rollcalls in the same proportion as we did previously. The number of rollcalls has dropped very sharply. The most substantial, drastic, and dramatic change was in the number of quorum calls. A quorum call brings Senators to the Chamber, so that when there is extended debate they can hear it.

Mr. LONG. Unfortunately, the Senator has not had the experience with long sessions that some of us have had. I know of no greater waste of time than that which occurs when a Senator who has an amendment which has no chance whatever of adoption, and which he knows has no chance of adoption, insists on a quorum call, keeping the Senate in session for half an hour longer while a live quorum is attained, and then insisting on calling the roll to take a yea-and-nay vote, only to have the amendment defeated overwhelmingly. Often it is an amendment in which the public is not interested, and no one else is particularly interested. No other Senator really desires a yea-and-nay vote. I think it would be wiser, both for the individual Senator and for the Senate, not to insist on a yea-and-nay vote on such an amendment.

On occasion I have insisted on a yea-and-nay vote, only to lose by perhaps 8 or 9 to 1. The Senator perhaps does not realize how much such votes hurt. On occasion, I would have appreciated it if some Senator had suggested to me

that I permit the question to be decided by a voice vote.

Mr. PROXMIRE. It certainly does hurt to be defeated, and to have exposed the degree of defeat in a yea-and-nay vote. But that is a real public service. The people have the right to know where Senators stand. The only way they can know is by putting Senators on record. There have been a number of yea-and nay votes when I wished I could have evaporated. But we are here to make a record, and the only way we can make a record is by having yea-and-nay votes.

I believe that the evidence indicates that we have not made the kind of public record that we have made in the past.

Mr. LONG. It seems to me that there are many ways to spare the Senate a great deal of unnecessary labor, at a great saving to the public. One of them is for a Senator to place statements in the RECORD without reading it, when other Senators are not available to hear his speech, and no one particularly cares.

There are a great number of instances in which a Senator can accommodate itself and the Nation, and reduce expenses, by merely placing in the RECORD a Senator's views, rather than keeping the Senate in session for hours in order that he may deliver his speech on the floor.

We can expedite proceedings in the Senate if Senators will prepare their views in advance, and not delay the Senate unduly, and by avoiding unnecessary quorum calls. In such ways we can serve the public more expeditiously.

I do not for a moment concede that in earlier years the public was always enlightened when a bill was taken up and debated for 2 or 3 weeks before we ever got around to vote on it. In most instances, Senators would not remain to hear all the debate.

However, even based upon a comparison of the hours in session, if the Senator omits the two sessions in which there were two protracted and successful filibusters, he will find that the number of hours the Senate was in session during the 6 years referred to were greater, on the average, than the number of hours during the other two sessions.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that a table showing bills passed, rollcall votes, quorum calls, and hours in session be printed in the RECORD at this point as a part of my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

	Bills passed	Rollcall votes	Quorum calls	Hours in session
1947–48	636	248	575	1,461
1949–50	913	455	851	2,410
1951–52	775	331	431	1,648
Total	2,324	1,034	1,857	5,519
1953–54	1,027	270	467	1,962
1955–56	1,159	218	156	1,361
1957–58	1,062	309	253	1,875
Total	3,248	797	876	5,198

Mr. PROXMIRE. It is perfectly obvious that the great process of reconciliation of diverse claims in national interest on the anvil of debate on the floor of the Senate did not take place last year as it has traditionally in the Senate, and experience this year suggests that debate is likely to be even more abbreviated. Unless we stop this trend, more and more crucial matters will be decided over the telephone, in the cloakroom, or almost any private place where dissent can be silenced without public knowledge. All too often this public ignorance of what is happening and why will be shared by many Senators with the consequence that important legislation will pass without Senators knowing what is in it.

The part the Senate can play in public education can hardly be overestimated. There have already this year been some nationally significant speeches delivered in the Senate, and I am sure there will be others. These speeches were a genuine service to our country. I believe the present Presiding Officer, the junior Senator from Connecticut [Mr. DODD] made one of those speeches.

But, Mr. President, those speeches were not delivered on pending legislation. They did not involve the big proponents and opponents of the major legislation before this body. There was none—as Marquis Childs pointed out—of "the fire, the fight, the conviction, the zeal." This fighting attitude is the child of conflict. Any newspaperman will tell us that it is the clash of controversy that shakes the public out of comfortable boredom with TV and family chitchat and rivets its attention on public affairs. When the housing bill slipped through the Senate so slickly and quietly, the American people were robbed of an education on the big contradiction between the urgent need for housing on the one hand and the already cruel burden on the taxpayer on the other. That clash never really came off. The differences were patched up in advance. We lost the great value of an aroused public intelligence as well as an informed Senatorial intelligence.

Mr. President, what this adds up to is that not in a conference or caucus of all Democratic Senators, not in a policy committee of some of the very wisest and most competent Democratic Senators and not on the floor of the Senate will the great responsibility that all Democratic Senators share for the conduct of this majority of ours be discharged. The program that will be put together by the enormously gifted man who is the majority leader will be accomplished not only without any direction from majority Senators in advance, but without any opportunity for majority Senators to know in advance where they are being taken; and for most of us, Mr. President, this process of flying blind will continue right up until and including the final vote we cast on each piece of legislation.

In this business, Mr. President, a Senator's responsibility has to be measured as much by his understanding of what is going on as by his integrity. Of course, no Senator can expect to know all the details of all the thousands of bills the Senate passes on. But, Mr. President, the way the Senate is now operating it is not only difficult for the most diligent and intelligent Senator to know the major proposals in legislation that whizzes across the floor, it is impossible for him to know where each major bill fits in the framework of national demands which the President of the United States tells us gravely challenges all of our national resources.

Mr. President, the American people have handed the Democratic Party in the U.S. Senate a very great responsibility. I say we can only live up to that responsibility if we establish an honest, publicly declared policy that indicates at least the broad fiscal outlines upon which we will build our program.

As the majority party in this Congress, it is not enough for us to oppose or support the minority program offered by the President. It is not enough for us to grope instinctively along even though we follow a man of great and proven political genius, the majority leader. We must know and we must insist that the American people know to whom we are responsible and where we are going.

CONCLUSION

Mr. President, in my first talk I contended that regardless of who makes Democratic policy, how it is made, or whether it is good, bad, or indifferent, the typical Democratic Senator has nothing to say about it.

In this talk I have attempted to show that it is the majority leader who dominates the determination of Democratic policy. I have tried to show that this policy is determined instinctively, as we go along without any predetermined plan and that this has brought certain serious consequences. Furthermore, I have said that Democratic Senate discussion in committee, and more importantly on the floor, has not been fully responsible because it has lacked any framework of overall party responsibility. Finally, I have contended that the invaluable deliberative and educational role of the Senate has been short-circuited by the leadership policy of settling issues off the floor.

In the next of my series of speeches I intend to begin to discuss the consequences of Democratic Senate policies on the American people.

In conclusion, I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks an excellent chapter entitled "The Senate Policy Committees," from a book entitled "Party Committees and National Politics," written by Prof. Hugh Bone.

There being no objection, the chapter was ordered to be printed in the RECORD, as follows:

THE SENATE POLICY COMMITTEES

The American penchant for organization has been reflected in the creation of still another set of national party committees, the so-called policy committees in the Senate. These differ from the national, congressional, and senatorial committees in at least three particulars. First, they are the only party committees that have statutory sanction, each committee receives a public appropriation of about $75,000 anually. Second, the major concern of the committees is not the

management and financing of campaigns. According to law, the committees are charged with "the formulation of overall legislative policy of the respective parties" and are given a staff "to assist in study, analysis, and research on problems involved in policy determinations."[1] Third, less is known about the policy committees than about any of the other national party agencies. This is not so much because they are the newest (they were created in 1947) as because they shun publicity and prefer to work in an unpublicized, subterranean manner.

The policy committees are an interesting paradox. Despite their title, they usually profess that they do not determine policy, and frequently they may shy away from doing so. Although they are presumably not concerned with campaigns, they are definitely conscious of the role, both direct and indirect, they may have in reelecting their own party's Senators. On at least one occasion the Republican policy committee issued a model campaign speech, which also carried details on the campaign school operated by the Republican National Committee. In 1956 the Republican policy committee had its staff prepare for use in the campaign an encyclopedic 250-page guide under the title "Election Issues of 1956." The chairman of the committee, STYLES BRIDGES, suggested that this background material could be used for radio and television, in campaign literature, or in newspaper messages. The book was arranged under sixteen subject headings such as agriculture, national defense, civil rights, immigration, veterans, small business, and domestic communism. To enhance its value further, a detailed index was included. It is perhaps remarkable that although the Republican policy committee is nominally not a campaign committee, it turned out a campaign document more comprehensive in scope of subject matter than anything published by the Republican national, congressional, or senatorial committees.

CREATION AND DEVELOPMENT

Right after World War II there was much discussion in and out of Congress about party responsibility. The Joint Committee on the Organization of Congress reported that strong recommendations had been made to it concerning the need for the formal expression within Congress of the main policies of the majority and minority parties.[2] These recommendations called for some mechanism capable of bringing about more party accountability for policies and platform pledges. The committee recommended the creation of policy committees, and the Senate accepted the proposal as it was incorporated in the legislative reorganization bill, forming such committees for itself by attaching an item in the Legislative Branch Appropriation Act. The House, however, deleted the provision.

Speaker SAM RAYBURN was strongly opposed to the proposal for party policy agencies in the House, and JOSEPH MARTIN was also reported to be unenthusiastic about it. RAYBURN has never made much use of the Democratic caucus or other institutional leadership devices, preferring to handle leadership problems in his own way. Although he is not formally a member, RAYBURN is generally consulted by the Democratic congressional committee on a variety of matters, and he has used the committee's staff from time to time.[3]

In 1949, for reasons that were not made public, the Republicans converted their steering committee into the House Republican policy committee. The floor leader serves as chairman, and the congressional committee chairman and the conference chairman, secretary, and whip serve ex officio. Seventeen others are chosen, three by the committee on committees and the remainder on a geographic basis. An elaborate resolution prescribes the function of this committee.[4] The policy committee serves as an advisory group for the leadership and meets on call before important action on the floor and reports its action and policy to the party conference or to the whip organization. Illustrative of what the House Republican policy committee may do was its calling for substantial reductions in President Eisenhower's budget for the fiscal year of 1958. JOE MARTIN said that no figure was given but that he considered $3 billion substantial. The committee said that it expected all Republican Representatives to support its stand at the next party caucus.[5]

No Republican is bound by the decisions of the policy body, but its actions are designed to guide Members in legislative policy. Many matters are not considered by the policy committee, and Representatives themselves are unwilling to speculate on how much real influence the committee has on party policy in the House. The House Republican policy committee differs from its Senate counterpart in that it has no statutory sanction, no funds, and no staff.

In the Senate, before the creation of the policy committees in 1947 the Republicans, under the leadership of the late Senator Robert A. Taft, made important use of the steering committee. This body was simply converted, with few changes, into the Senate Republican policy committee. Senator Taft became chairman of the new committee and retained the position until he became majority floor leader in 1953. Taft did not wish to hold both positions, and Senator William Knowland took over the committee chairmanship. Upon the death of Senator Taft a few months later, Senator Knowland followed the precedent he had set and relinquished the chairmanship to Senator Homer Ferguson.

Democratic practice has been quite different. The Senate floor leadership, the chairmanship of the Democratic policy committee, and the chairmanship of the Democratic caucus have been held by the same person, while with the Republicans the offices have been filled with three different persons. The first Democratic chairman, Senator Alben Barkley, made little use of the committee because he saw no need for it, handling policy and leadership matters to his own satisfaction. Senator Lucas, McFarland, and Johnson, who succeeded him, convened the committee fairly regularly. Both policy committees generally meet weekly while the Senate is in session.

The size and complexion of the Republican committee have undergone marked change. From the beginning, several officials have been ex officio members: the chairman and secretary of the Republican conference, the floor leader, the whip, the President pro tempore of the Senate—if he is a Republican—and, of course, the policy committee chairman. The remainder are nominated by the chairman of the conference and ratified by it. Senators have the privilege of sending suggestions for nominations to the chairman.[6] The fact that the party officials are on the committee has meant that persons with seniority and a generally conservative orientation dominate its membership. In response to complaints of freshman Senators, Senator Taft added two younger persons to the committee in 1949. There were 9 Senators on the first policy committee, and the number was increased to 11 during the 81st and to 12 in the 82d and 83d Congresses.

In 1954, Senator Ferguson's defeat, plus the loss of majority control by the Senate, led to considerable reorganization at the beginning of the 84th Congress. STYLES BRIDGES, who had been President pro tempore of the Senate during the 83d Congress, was chosen as chairman of the Republican policy committee. In a surprise move it was decided to make every Republican Senator up for reelection in 1956 a member of the committee, making a total of 23 on the committee. A major purpose of this change was to give the prestige of being on the policy body to each person running for reelection. With this move, which virtually doubled the size of the committee and put on it about half the Republican membership in the Senate, the body obviously could no longer be regarded as a small one concerned with legislative planning and scheduling. The composition of the committee insured that it would be an agency strongly sensitive to the political realities of the forthcoming 1956 election.

The committee's composition in the 84th Congress appeared to have one additional merit. It brought onto the committee, by coincidence, many ranking members of standing committees. Ten of the fifteen committee chairmen during the 83d Congress were included, thereby insuring that the policy body would be kept apprised of developments within many important committees.

Again in 1957, the Republican conference radically changed the composition of its policy committee.[7] As now constituted, nine members are on the committee by reason of ex officio positions. In addition to the six mentioned above, the respective chairmen of the senatorial campaign committee, the committee on committees, and the Republican personnel committee were added. Six

[2] For discussion of recommendations concerning the establishment of the policy committees, see Report of the Joint Committee on the Organization of Congress Pursuant to House Concurrent Resolution 18, 79th Cong., 2d sess., Report No. 1011, Mar. 4, 1946, pp. 12–13. A number of additional details on the policy committees will be found in the author's article, "An Introduction to the Senate Policy Committees," in American Political Science Review, L (June 1956), 339–59.

[3] Treatment of the general leadership problems of Congress is beyond the scope of this book. It should be noted, however, that RAYBURN along with Democratic Floor Leader JOHN W. MCCORMACK has run the Democratic party in the House to a great degree, and their views have had an extraordinary influence on the Democratic national and congressional committees. Many Democrats in Congress have privately criticized RAYBURN's leadership, but so fare none have been willing to wage an all-out battle with him over who is to run the House Democrats. For an account of this in the 85th Congress, see "Democratic Representatives Voice Discontent with Leaders," Congressional Quarterly Weekly Report, XV (Feb. 22, 1957), 224–25.

[4] The text of the resolution will be found in George B. Galloway, The Legislative Process in Congress (New York: Thomas Y. Crowell Co., 1953), pp. 334–335.

[5] See Congressional Quarterly Weekly Report, XV (Mar. 8, 1957), 317.

[6] See "Republican Conference Rules," January 11, 1955. See also "Functions of the Senate Republican Policy Committee and Its Staff," August 1953, obtainable from the Senate Republican policy committee. All the Republican party officers are chosen by the conference.

[7] The changes may be found in the Republican Conference Rules of January 10, 1957, the Senate Republican Memo of January 3 and 10, 1957, and in the resolution adopted by the conference January 12, 1957. It was reported that much discussion preceded the rules changes.

other persons were nominated and elected by the conference. This reduced the membership to 14[8] in the 85th Congress.

The six Senators elected by the conference serve on the Republican policy committee for 2 years and are eligible to succeed themselves only once, but they may be reelected after 2 years have intervened. However, since all of the party offices are on the committee ex officio, several have served many years. Senator Millikin, by reason of being conference chairman, served on the committee from its creation until he retired in 1957. Senator SALTONSTALL, who became the whip in 1949, and Senators YOUNG and BRIDGES have served several terms. During the 82d and 83d Congresses there was a fairly adequate sectional representation on the committee and a balance between the larger and smaller States.

In sharp contrast, membership on the Democratic policy committee has no terminal point and has tended to be self-perpetuating. Turnover has occurred when there were changes in the three ex officio members (the floor leader, the whip, and the caucus secretary) or when Members dropped out of the Senate. The number on the committee has remained at nine. Three who were appointed in 1947—GREEN, HILL, and RUSSELL—have served without interruption until the present. Senators JOHNSON and KERR were first put on the committee in the 82d Congress and have continued to serve ever since. Senator Clements was defeated for reelection in 1956 and was replaced by the new Democratic whip, MIKE MANSFIELD. The remaining three members on the committee in 1958 were Senators HENNINGS, MURRAY, and HAYDEN.

The six members appointed to the committee were chosen presumably on the basis of seniority, point of view, and geography. But its membership has lacked the broad sectional basis of its Republican counterpart. For instance, in the 85th Congress, despite Democratic representation from such large States as Illinois, Michigan, Minnesota, and Ohio, no Senator from the Midwest was on the committee. Senator GREEN was the sole member from the East. MANSFIELD and MURRAY, both from Montana, were members, the first by reason of being the newly chosen whip, MURRAY because he was on previously. It appears that once a member is appointed, his tenure is for the duration of his stay in the Senate, irrespective of logic or imbalance.

The southern and border States have always had six or seven of the nine seats. In terms of Democratic representation in the Senate, of course, the southern and border States can argue that they provide two-thirds of the membership and are entitled to the lion's share of the representation on the policy body. Nevertheless, the needs of certain important northern interests have no impressive voice on the committee. One member of the Democratic policy committee, however, sees it as operating in the "country as a whole" and as simply a part of the process of reconciling sectional and factional differences within the party. Extremists have been left off the committee and moderates compose the membership.

The policy committees have been personal rather than institutional leadership devices. When LYNDON JOHNSON was absent for several weeks in 1955 because of illness, the Democratic policy committee did not even meet. Later, after he had a heart attack, the committee met long enough to prepare a statement that it would carry out his policies. Most chairmen in both parties have used the policy committee at their own discretion. When Senator Scott Lucas of Illinois served as floor leader, he was confronted with the necessity of obtaining cooperation from southern Senators and made considerable use of the committee as an agent for broadening the basis of his leadership.

In Democratic circles on Capitol Hill, the Democratic policy committee is often spoken of as the "personal staff of Senator JOHNSON."[9] JOHNSON is very successful as a floor leader. He tries to foster a type of discussion among Democrats that will end in friendship rather than in splitting the party, and he uses the policy body to work for a large Democratic vote and to keep the party together. In recent years Democratic leaders have feared that the caucus would lead to quarrelsome debates and create party disunity, so one has been held only at the beginning of a session. In the interim the policy committee is used to a considerable extent to eliminate the need for convening the caucus. The fact that the floor leadership and policy committee chairmanship are held by the same person has tended to make the committee an instrument of the leadership. The staff of the Democratic policy committee serves also as the staff for the duties of the chairman as floor leader.

Although both party committees are instruments of personal leadership, the Republican body has been considerably less personal than the Democratic. After Taft gave up the chairmanship, the Republican policy committee gave more thought to its own nature as a corporate body and tried to institutionalize itself. By having its own chairman and by maintaining separate identities for its floor leader and conference chairman, the policy group avoids becoming exclusively the tool or personal staff of the chairman. Leadership of the Senate Republicans is pro forma more highly dispersed. Institutionalization has also been fostered by prescribing rules for democratic election and the composition of the committee's membership, by issuing a public statement on the functions of the committee and the staff, and by providing that none except the ex officio members are eligible to successive terms on the committee.

GENERAL OPERATION AND FUNCTIONS

From the foregoing discussion it is obvious that there is a substantial difference between the two policy committees. Nowhere have the Democrats set down the functions for their policy committee; the Republicans, on the other hand, have prepared a brief description of their work operations and functions.

The Republican conference rules include the statement, "The policy committee shall consider the legislative program in the Senate and the question whether any party policy is involved, shall prepare and present recommendations for action by the conference, and advise all Senators on legislative matters which they desire to present to the policy committee." In the memorandum prepared in August 1953, it was asserted that the following 12 types of operations were being performed by the committee in pursuance of the authority given to it in the conference rules: (1) consideration of legislative program to be scheduled for floor operations, (2) consideration of parliamentary procedure, (3) canvass of measures before standing committees, (4) cooperation with the President and White House staff, (5) preparation and issuance of statements on matters involving policy committee interests and actions, (6) advice on the undertaking of committee investigations, (7) consideration of questions arising out of presidential nominations, (8) discussion with individual Senators of matters of interest to them, (9) attempts to reconcile divergent views among Senators on legislation with the object of promoting party unity, (10) initiation of studies on legislative matters "to advance the national welfare, to implement the party platform, and to strengthen Republican leadership," (11) recommendation of occasions for calling the whole Republican conference, and (12) cooperation with House Republican leadership.

There is no reliable evidence from which to determine which of these functions is the most important. The last, cooperation with House Republican leadership, is no longer of significance. For a short while after the House Republican policy committee came into being, in 1949, it met in joint meetings with the Senate group, but these meetings were abandoned because of poor attendance on the part of the House Members. There is considerable informal relationship between House and Senate leaders, even though the formal policy body relationships no longer exist.

When the party was in the minority, the Republican Senate policy group considered certain of President Truman's nominations, but the screening of nominations was of little importance after Eisenhower's inauguration.

The staff of the Republican policy committee is composed of about 10 professionals and 5 secretaries. Virtually all the former possess bachelors or graduate degrees, and most of them are research workers. Although they are generalists, they tend to specialize in certain areas, such as agriculture, conservation, or public works. The staff serves the committee, the Republican conference, and the Republican calendar committee.[10]

The Republican staff produces a large number of publications and has tried to provide material Republican Senators will need for important legislation and policies. One of its best-known publications is the weekly memorandum entitled "Senate Republican Memo," intended for use in speeches, press releases, newsletters to constituents, and radio and television broadcasts. Illustrative titles include "The Dixon-Yates Contract," "The Political, Hypocritical $20 Tax Scheme," "More Evidence of Communist Influence in Democratic Administration," and "Republicans Sell Rubber Plants for Top Prices." In March 1955 the staff put out a 51-page analysis of the Yalta papers under the title "Highlights of the Yalta Papers and Related Data," which stirred up a considerable amount of Democratic ire.

The staff also assists Republican Senators in outlining and drafting speeches dealing with legislation and policy. It gives limited help on campaign speeches. At the end of each session of Congress the staff prepares a detailed report on the Republican record and performance that is published as a public document.

Upon request from Senators, the staff will conduct interviews with persons and organizations having an interest in legislation and will report the findings to the Senators. Other services include bill drafting on re-

---

[8] Since the Democrats gained control of the Senate, there has been no Republican President pro tempore to serve on the policy committee.

[9] Senator JOHNSON generally directs the staff work. In the Republican committee, allocation of the staff work is usually handled by the staff director and secretary, Lloyd W. Jones.

[10] The Republican policy committee has a suite of offices in the Senate Office Building. The Democratic staff, which includes six professionals and four clerks, is located near the Senate floor in the Capitol, in less spacious quarters. Turnover has been higher in the Democratic office, and none of the members has been with the staff from its beginning. Only one person has been a member since 1949; several of the professionals joined the committee when LYNDON JOHNSON became its chairman. As a result, there is no staff member who possesses firsthand knowledge of the history of the committee's work. In contrast, two staff members have served the Republican committee since its inception.

quest and the analyses of the legislative records and histories of Senators. Although the staff directors have broad initiative, the chairmen appear to have kept close control over most of the work done, exercising final direction and command. There have been only two staff directors, and each has served under more than one chairman. Nevertheless, there is undoubtedly a personal accountability to the chairman. The association of the staff with other Republican policy committee members is not nearly so close as with the chairman. In general, staff work for Republican Senators is contingent upon whether the material desired concerns party interests and principles or not. If help is requested outside this frame of reference, Senators are likely to be advised that their own staff aides and other sources should be used.

On nearly all staff publications put out for general distribution, the following printed disclaimer appears: "NOTE: Neither the members of the Republican policy committee nor other Republican Senators are responsible for the statements herein contained, except such as they are willing to endorse and make their own." The protective statement is used to cover situations in which the material was originated either by the staff director or by one of the members of the committee. It also absolves the Senators whose views might be at variance with those expressed in a staff study.

An interesting incident that occurred just before the national conventions in 1956 illustrates this point. The policy committee staff published a report charging that the Communist Party line was that "the Republicans must be defeated and all support thrown to the Democrats" in the election. On the Senate floor a steady parade of Democrats denounced the report and demanded that the members of the policy committee take responsibility for the action of their staff and repudiate the statement. A senior member of the Republican committee rose and announced that he had not seen the memorandum until the Democrats brought it up. He said: "I want to go on record as saying I disagree with it completely; it is shameful. I am overwhelmed with regret. As a member of the Republican Party I cannot tolerate this. I personally will take it up with the policy committee and I think I can assure you that this kind of thing will stop."[11] Knowland also said he publicly repudiated any effort to associate the Democrats with subversion.

Chairman BRIDGES was not in Washington, D.C., when the report was published, and when he returned he said he had no knowledge of it until it came out. This was despite the fact that the chairman is supposed to clear every report before it is published. BRIDGES said, "I know that responsible leaders in the Democratic Party both in and out of Congress repudiate any support from the Communist Party * * * and are all patriotic citizens and loyal Americans."[12]

The number and variety of publications by the Democratic policy staff are much less impressive than those of its Republican counterpart. Very little work is done for individual Senators. The staff does a good deal of spot research for the chairman and prepares legislative status reports. It compiles quorum records, noting Senators' presence or absence during rollcalls and votes, and prepares a vote card that goes to every Democratic Senator very soon after a vote is taken on the bill. It also prepares a list of expiring legislation, which goes to committee chairmen and Senators. Presidential recommendations and speeches are analyzed for partisan overtones.

As might be expected, the research of the policy committee staffs is politically oriented and partisan, being designed to document the party's record and find holes in the opposition's armor. It has been a function of the Republican policy staff in particular to take the raw materials it receives and to try to apply the party's position to them and point up the policy problems involved. The work of the Republican staff is clearer and more tangible than that of the Democratic staff.

On Capitol Hill the usefulness and accomplishments of the policy committees are fairly well recognized in three fields: service and research, education, and legislative scheduling. The services provided by the staff have been described. In addition, the Republican committee has helped Senators to secure administrative assistants, secretaries, and high-level staff members. Certain personnel procedures were systematized in 1947, and the new committee chairmen were supplied with names of qualified persons for committee staffs.

At the request of Senators the Republican staff prepares a considerable number of individual memorandums, sometimes as many as 100 per year. These may be used to accompany legislation or in answering letters. The Republican staff has also met with administrative assistants and other employees in the Senators' offices. During campaigns the staff sends research materials to the Republican National Committee and has done a limited amount of speechwriting. Some research is also done for the Republican senatorial committee. The Republican congressional, national, senatorial campaign, and policy committees exchange and make some use of one another's materials. In a general sense, all the materials put out are designed to be helpful to the party in defending its record and pointing to weaknesses in the Democratic record. Some Republican Senators believe that from 1947 to 1950 Senator Taft saw the policy committee as an instrument for electing Republicans.

The educational function of the Republican policy committee is significant. Committee chairmen have appeared before it to report on major problems and measures that are before their committees. This has helped the policy committee members to get a broader view of policies, program, and legislation, and committee leaders in turn have been helped by the policy members. During the first few months of the Eisenhower administration, several Cabinet Secretaries appeared before the committee. This made the Secretaries more aware of party considerations and provided the Senators with a greater understanding of departmental programs and wishes. The committee has helped the newer Senators learn their way around and has added to their knowledge of how the Senate really operates.

The Democratic policy committee has also served educational purposes, but its activities have been less obvious and narrower in scope. Its meetings are at luncheons, and other Senators and executive officials are seldom present. Yet its operation, as will be seen shortly, undoubtedly results in educating a number of Democratic Senators.

The policy committees perform useful functions in preparing for the call of the calendar, a procedure for the disposition of minor bills and resolutions. The policy committee of the party in power is of considerable importance at times in determining the general legislative schedule. Early in 1958, for example, the Democratic policy committee announced that it had decided to give top priority to proposals for dealing with Presidential disability. In reality, the determination of what will be brought up on the floor is a function of the leadership, but the policy committees may be an aid to it. There is sometimes a discussion of whether to bring up a bill at all. Quite often the floor leader simply brings in a legislative agenda for the ensuing week and asks the policy group if it has any questions. Members may then ask to have certain items included.

Some have compared the policy committees with the House Rules Committee. In terms of legislative scheduling, this is not an apt comparison. The latter enjoys the status of a standing committee with authority to issue specific rules, impose limitations, and bottle up measures, the policy bodies possess none of these powers. Scheduling in the real sense of the word involves discussion of strategy, decision as to sequence, and consideration of timing. Neither policy committee, as a committee, appears to have gone into these matters with any degree of regularity.

THE POLICY COMMITTEE AND THE EXECUTIVE

A perennial problem in the American system of government is the relationship between the President and the majority party in Congress. Among the matters given much consideration by the Joint Committee on the Organization of Congress during the 1940's was that of institutionalizing the communication between the two. This committee, popularly known as the La Follette-Monroney committee, recommended that majority policy committees of the two Houses "serve as a formal council to meet regularly with the Executive, to facilitate the formulation and carrying out of national policy."[13] It foresaw that this would result in "improved understanding of each other's problems" through consultation before the introduction of legislation to carry out pledged party promises, and also that it would give congressional leaders a chance to formulate policy instead of simply acting on programs prepared by the Executive.

When the Eisenhower administration first took office, its legislative program was formulated in a 3-day meeting between administrative and legislative leaders. The Republican policy committee took over the residuum of the meetings and more or less accepted it as Republican policy. Under Chairman Homer Ferguson (1953–54), there was a reasonably close relationship between the President and the Republican policy committee. The contact was due largely to Senator Ferguson. There is no record, however, of a single instance in which President Eisenhower met with all of the members of his party's policy committee. President Truman appears to have met once with the Democratic policy group at the suggestion of its chairman, Senator Ernest McFarland. McFarland expressed the hope for similar meetings, but none seem to have been held.[14]

Policy committee members have usually learned of wishes of the President or cabinet officers indirectly from their policy chairman. For example, Senator Taft, and often Senator Vandenberg, met with individual members of the Truman cabinet instead of bringing them before the Republican policy committee in the 80th Congress. Taft then simply reported to the committee what the officials had told him. As has been mentioned, Senator Ferguson had numerous Eisenhower cabinet officers appear before the committee, a practice that was well received. Several

[11] New York Times, July 3 and 4, 1956. Strictly speaking, the staff itself does not make memorandums public. All publications go to Senators, and if one of them makes it public then it becomes his responsibility.

[13] "Report of the Joint Committee on the Organization of Congress," p. 13.

[14] New York Times, Jan. 28, 1951. Senator Elbert D. Thomas, in his evaluation of policy committees, felt that President Truman should have taken the initiative to convene the Democratic committee with his cabinet and himself. "Had he done so," writes Thomas, "there would have been no need for various clashes between him and several Members of Congress which have occurred." See "How Congress Functions Under Its Reorganization Act," American Political Science Review, XLIII (December 1949), 1183.

Senators said that the sessions were helpful in getting a detailed view on some forthcoming departmental legislative proposals. However, such meetings between administrators and policy members have been exceptional.

From the beginning of the Eisenhower regime, an important aspect of the almost weekly meetings of the Republican policy committee was the report of Senate leaders on their regular meetings with the President. An interesting development of relations between the President and his party in the Senate occurred early in 1956, when all Senate Republicans were invited to attend a weekly policy committee meeting for a briefing on White House legislative thinking.[15] The meetings were held the same day as the leaders' sessions with Eisenhower.

As is so often the case in politics, these arrangements were the outgrowth of intensely practical, rather than theoretical, considerations. The conference chairman, Eugene Millikin, was quite ill in 1956 and could not report to the conference on his meetings with Eisenhower as he had previously done. Senators BRIDGES and Knowland reported in his stead, and the policy committee and conference were, practically speaking, merged in order to hear the President's views. Some of the "Young Turk" Eisenhower Republicans felt that they had not been kept abreast of what the White House had been telling the more conservatively oriented BRIDGES and Knowland. These meetings also afforded them a chance to ask questions and to discuss Eisenhower's program. Further, when the arrangement was started, it was not known whether the President would run for a second term, and it was felt that these weekly meetings of all Senate Republicans would help to promote greater party unity. One Republican Senator expressed the view that these meetings served a real educative purpose and that the policy committee's greatest potential lay in this area.

In 1957, Senator LEVERETT SALTONSTALL replaced Millikin as conference chairman, and the size of the policy committee was reduced from 23 to 14. Nevertheless, it was decided to continue to invite all Republican Senators to meet with the policy committee. As a result the conference committee met much less frequently, since Republican Senators were brought together in the committee meetings. Observers of the Senate have privately expressed the feeling that the Republican policy committee is less effective than before it began the practice of inviting all the party members in the Senate to attend its meetings. More of the actual legislative strategy in the 85th Congress was settled by the top leaders and less by the policy committee. The Republican policy group has become, however, a far more important link with the White House than its Democratic counterpart.

The independence of the policy committee from the other national level committees is often noted. On several occasions the policy committee of the party in power or its chairman has been at variance with the President and has made it known obliquely or otherwise. Some Senate Democrats have said privately that their policy committee, in effect, worked against part of President Truman's civil rights program. Senator STYLES BRIDGES in 1957 more or less disassociated himself with the high Eisenhower budget, and the Republican conference on March 12 adopted a sharp resolution opposed to "excessive Federal spending under present conditions."

Again, in late autumn and early winter, 1955–56, Chairman BRIDGES and Floor Leader Knowland made repeated public statements that President Eisenhower should announce his intentions early in 1956 so that other aspirants could file in the New Hampshire and other primaries if he was not going to run. But National Chairman HALL and the White House staff repeatedly urged that there be no pressure on Eisenhower and said that he could and should take his time.

Another example of disagreement between the President and the Senate leadership occurred when the Republican policy committee issued a 32-page memorandum giving data on guided missiles, various weapons, and the numerical strength of the Armed Forces.[16] The Democrats and some of the press raised the cry that this made public classified information. Defense Secretary Wilson and other officials issued a statement asserting that "no security violation" was involved, but they found themselves, according to the press, "in the embarrassing position of defending publication of a summary of new American weapons by the Senate Republican policy committee while criticizing publication of such military information elsewhere."[17] President Eisenhower said he regarded the publication as a "blunder," and that he would not have given out such information.[18] The chairman of the committee, Senator BRIDGES, took to the Senate floor with the retort: "The President's reference to the national defense study by the staff of the Republican policy committee as a blunder is most unfortunate."[19] The incident shows that there was no consultation with the Executive prior to publication. It is but one of several that might be cited to demonstrate that policy committee leadership may be publicly at odds with the President.

On the other side of the ledger, it should be pointed out that nearly all the Republican policy committee's publications have attempted to equate Eisenhower's program with that of the Republican Party. This is especially interesting in light of the fact that of the three policy committee chairmen since 1953—Knowland, Ferguson, and Bridges—only Ferguson had the public reputation of being an "Eisenhower Republican."

POLICY AND POLICY COMMITTEES

At the outset, the conclusion is inescapable that the policy committees are misnamed. They have never been "policy" bodies in the sense of considering and investigating alternatives of public policy, and they have never put forth an overall congressional party program. The committees do not assume leadership in drawing up a general legislative program but consider certain proposals on an ad hoc basis as they arise or are due for consideration on the floor. Some important policies receive little or no discussion in the committees, and only rarely have the committees labeled their decisions as "party policies." There have been disagreements within the committees, and issues are rarely put to a vote. JOHNSON seldom makes a speech on the Senate floor, and he seems to follow the framed motto on his office wall: "You ain't learnin' nothin' when you're talkin'." Much legislation is worked out in casual meetings by groups of Senators who may or may not be members of the policy committees. Party policy is made by a large number of people. "As devices for coordinating legislative policy and strengthening party leadership," says George Galloway, "the Senate policy committees have thus far failed to fulfill their potential."[20]

Chairman LYNDON JOHNSON, more than his predecessors, has perceived the policy committee as a strategic device and weapon. The committee is used to set up issues in a way that will permit a maximum number of Democrats to go along with the position of leadership. JOHNSON's philosophy is to meet Senators halfway, talk with them personally, and seek to understand their problems in terms of their own constituencies. Under JOHNSON the policy committee is an instrument for accommodating factionalism. His predecessors, as well as Republican chairmen, have used the committee to discuss the wisdom of bringing up an issue or leaving it alone and to work for unanimity and agreement among the members of the committee. If agreement is reached, the chairman often goes to the other members of his party and says, in effect, "It is the unanimous opinion of the policy committee that this action is wise (or unwise)." The Democratic policy committee in recent years has often discussed the wisdom of certain kinds of Democratic attacks on President Eisenhower, and it has not hesitated to make its views known, by word of mouth, to other Senate Democrats.

The Democratic policy committee is also used to formulate issues in a way that will embarrass the opposition. On the censure of Senator McCarthy, for example, the committee stated that it was not a party matter but concerned the morals of the Senate and that each Democratic Senator should vote according to his own conscience. This avoided giving Senator McCarthy an opportunity to build up strength among Republicans by arguing that censure had been formally made a partisan issue.

When President Eisenhower sent Congress the resolution on the Yalta agreements, it was quickly endorsed by the Democratic policy committee. The Republicans were divided on the issue, with many feeling that it did not go far enough. The action of the Democrats in endorsing the Eisenhower resolution left the Republicans arguing among themselves, and the resolution was finally buried in committee. Republican Senators were clearly put on the defensive in the matter.

After Senator WAYNE MORSE, of Oregon, supported Adlai Stevenson instead of General Eisenhower in 1952, he asked that he be assigned to committees as an Independent rather than as a Republican. He wished, moreover, to retain his seat on the Armed Services and Labor and Public Welfare Committees. He lost on three different votes on his assignments.[21] The Democratic policy committee took a position against MORSE on all three rollcalls. Despite this, several members of the committee supported MORSE on the second and third votes. The incident shows how the policy body may take a position on a Senate personnel matter but be unable to line up its membership for that position. In 1955, when MORSE became an avowed Democrat, Policy Chairman JOHNSON used his powers to restore him to a seat on more important committees.

In talking with Senators and their assistants, one finds widely varying views of the accomplishments and usefulness of the committees in the field of policy. This is undoubtedly due to the absence of criteria and

standards for judging what the committees are supposed to do and what they can do. Some believe that the committees, particularly the Democratic committee, do very little, while others purport to see a few real achievements. A few Senators would like to see the committees turned into real policy bodies with all that the term connotes, but there is no great desire on the part of most for strengthening them in terms of tightening party discipline. The desirability of developing more party cohesion is sometimes admitted in the abstract but not in the concrete. While there is little evidence that a majority of Congress was enthusiastic about policy committees before their creation, a number of Representatives and Senators publicly testified in 1945 in favor of their establishment. It may be concluded that the majority of Senators today are not disappointed that the policy committees have failed to become effective instruments of party responsibility and discipline.

The decentralization and fragmentation of power, the prerogatives of individual power and seniority, the habits of individualism and independence are so well entrenched in the Senate that few Senators are interested in placing authority in the hands of a policy body. Many Senators wish to obtain support, if not sponsorship, of important legislation from Senators of the opposite party. This would be difficult to achieve if either party declared a measure to be party policy. Further, the environment of Congress is not conducive to the delegation to a party committee of the authority to lay down a party line that could serve as a public yardstick for judging a lawmaker's vote on an issue and embarrassing him at election time. If the party line is unknown, or obscure, a Senator has more latitude.

As noted earlier, the composition of the committees leaves much to be desired if policy is to be a major preoccupation of their efforts. The late Senator Walter George, for many years the generally recognized spokesman for the Democrats in foreign policy, never served on the Democratic policy committee, and the late Senator Arthur Vandenberg served only 2 years on the Republican policy committee. Some of the most influential committee chairmen and ranking Members are not on the policy bodies.

Despite the fact that Senators remain unenthusiastic about a more centralized legislative policy arm, there are some modest achievements that can be claimed for the policy committees. In the 83d Congress, the Democratic policy committee forged what might accurately be termed a party position on the proposal to tie together the Alaskan and Hawaiian statehood measures, on the recommitment of the Atomic Energy Bill to the conference committee, and on certain tax proposals. It actually formulated a compromise on the $20 deduction per dependent on the income tax in 1955 and was able to obtain the votes from all but five Democrats on the measure. The Republicans were able to get an almost unanimous vote, with only one dissent, on the same tax question.

The Democratic policy committee took a strong position against any use of sanctions to punish Israel for her refusal to withdraw from the Gaza Strip and admonished the Eisenhower administration against using coercion on Israel.[22] The way in which this position was formulated is typical of the committee's operation. Senator LYNDON JOHNSON sent a letter to Secretary of State Dulles setting forth his position. Later he put this letter before the policy group. Senator HENNINGS, the committee's secretary, moved that the letter be adopted as the committee's position, and a unanimous vote resulted in its endorsement. Often JOHNSON has taken a policy position on his own, and if no one has disagreed it has passed as Democratic policy.

The Republican policy committee spent much time trying to draft an acceptable compromise position on the Bricker amendment. Secretary Dulles and Attorney General Brownell attended several meetings where this was discussed. About two-thirds of the Republican Senators went along with the compromise. Also, the policy committee proposed a uniform code for senatorial procedure and requested the Senate Rules Committee to give it early consideration.[23] Chairman Ferguson led a drive for the adoption of these rules and brought committee chairmen together with the policy committee to discuss them. Nothing came of these efforts officially, but the discussion made the Republican chairmen aware that the leadership was concerned with the problem.

In many cases both party committees have looked at proposals before the Senate and decided that no party policy was involved. At other times they have reaffirmed a policy becauses it appeared in the party platform. On occasions committee chairmen have obtained help from policy committee members on legislation.

These examples of dealing with policies are not likely to impress advocates of party government and discipline either by their number or scope. But neither are they negligible. Many issues of importance are discussed in both committees even when no attempt is made at policy agreement. To some extent, policy discussions in the committee have helped to accommodate factionalism and to etch, for the party leadership, the areas of agreement and disagreement.

To be sure, the committees can bind no one. They can only consider, recommend, and attempt to persuade.[24] Yet some cohesiveness, especially in the Republican Party, has been obtained through the preparation of staff memoranda and statements of performance records and through the formulation of issues. In a few instances a definite stand has been taken on a policy that has commanded nearly unanimous support. Both committees have issued a number of broad statements of party policy.

Policy committee members try to make a distinction between program and policy—possibly a distinction without a difference. The members maintain that they do not make policy but take a program submitted by the executive branch or someone else and decide if it will be adopted as party policy. Democratic members in particular emphasize that they attempt to interpret programs and policies in line with historic Democratic policy. To the extent that this is the role of the policy committees, it is a function of sifting, evaluating, and ratifying rather than of originating and creating. In terms of Senate tradition, however, the role of reviewer is more acceptable than that of drafter and formulator of party policy.

There is a certain intangible psychological influence in the policy committees' activities that is not easy to measure. The label "policy" gives the appearance of leadership. When a pronouncement is made and presumably has the support of all or nearly all the members of the policy committee, it creates an impression of a party position. There are pressures for conformity in the Senate notwithstanding the extreme individualism of its Members. Policy committee members include many of the most respected and most powerful men in the Senate. The views of a Millikin, a Taft, a Russell, or a Hill, are highly regarded. When such men speak as members of the policy committee, one will not oppose them without important reasons. Emulation as well as individualism is the vital part of the totality of the Senate. To the extent that policy committees can be worked into this fabric of personal interaction, prestige, and interpersonal relationships in the Senate, they can achieve successes.

CONCLUSIONS

Experience with the Senate policy committees has led to very little public understanding of their role and, indeed, of their existence. Their immediate ancestors were the steering committees, and in a generic sense the policy committees are steering committees, a designation that probably connotes but little. They have been useful in monitoring the consent calendar, in considering certain matters of legislative scheduling and strategy, and in performing routine and other services needed by the floor leadership. Policy committee sessions are meetings of some of the men of power in the Senate at which political strategy, policy, program, and diverse other matters are discussed. As has been stressed several times before, the influence of the Senate policy committees and of the other party committees, cannot be successfully evaluated because so much influence in American party politics is personal in character. Influence cannot be determined by looking at the number of votes for what is presumably a party measure in the Senate. The personal influence of a Sam Rayburn or a Styles Bridges is not easy to measure, but it is known to be considerable. Taking the views of Senators both on and off the policy committees, evaluations of the committees' influence on party discipline and unity range from "negligible" to "perceptible," with, no one claiming impressive accomplishment. Unfortunately, there is no way to measure whether there would have been even less party cohesion had the committees not existed.

It is interesting to note the difference between the Republican and Democratic policy committee. William S. White, a keen student of Senate behavior, observes that the Republican policy committee will meet every week, but it will do so only upon carefully printed notices circulated to the committee's members officially to inform them that there is to be a meeting. The Democratic policy committee will meet, perhaps, once a week, and when it does the thing simply seems to happen and members will stroll in, usually late, with the air of a man dropping into another's office to have a drink and, having nothing better to do at the moment, to pass the time of day.[25]

The Democratic committee appears more casual and personal, its counterpart more institutionalized and formal. The Republicans frequently take votes in their policy committees; the Democrats rarely do so. Republican staff members turn out many more publications and, in general, give the press more to write about. The Republican committee, at least overtly, does more in a partisan way for its individual Senators and for its party and resembles a campaign committee more than is the case with the Democrats.

It is interesting to speculate on the reasons for this difference. Simultaneously with the creation of the first policy committees, the Republicans came into control of the Senate after a long period of being in the minority. Senator Taft and other leaders recognized the practical necessity for organization and were spurred on by ideological considerations to arrest the spread of the fair deal. There had been a growing

[22] See New York Times, Feb. 20, 1957.

[23] Christian Science Monitor, July 2, 1954.

[24] William S. White in a pictorial article writes, "The functions of the Senate Democratic policy committee * * * are roughly those of the board of directors of a powerful corporation." New York Times Magazine, July 10, 1955, p. 10. This analogy suggests powers that neither of the committees possesses.

[25] "Citadel: The Story of the U.S. Senate." (New York: Harper & Bros., 1957), p. 210.

recognition in the Senate, as there had been in the Republican National Committee, that the party unable to command the great staff resources of the executive branch needed a strong staff of its own and a broader basis of organizational leadership strength. The Republican policy committee possessed utilitarian value, at least in these terms. In contrast, Senator Barkley found the Democrats in very little need of this type of organization. It should be noted that Republican representation in the Senate was so marginal in 1953 that there was no disposition to curtail the staff or diminish activities.[26] Moreover, party splits over foreign policy and certain other Eisenhower proposals made it desirable to keep intact any instrument that might help to accommodate and compromise internal differences. At the same time the Republicans appear to be more concerned than the Democrats with attacking the opposition and providing their officeholders with appropriate ammunition.[27] This spirit was inculcated in part by Senator Taft and is characteristic of a party of opposition.

Democrats, in contrast, have had control or near control of the Senate for a quarter of a century. In large measure because of the long tenure of southerners, the Democrats have possessed a very experienced group skilled in parliamentary and political procedures. The Republicans have seldom had more than a handful of such competent politicians at any one time. Members on the Republican policy committee in 1957, for example, had served an average of 9 years in the Senate, while members of Democratic committees averaged 16 years. The "old pros" in the Democratic Party have their own methods of doing things in the Senate and are reasonably well satisfied with both methods and accomplishments.

Although the Republican policy committee is more institutionalized and publicized, the assumption that it is a more useful and effective body than the Democratic committee is open to question. In terms of influence and effectiveness with its own membership, the Democratic committee may actually be superior. This paradox—if it is a paradox—needs further analysis before it can be verified.

The policy committees, like the other national level party committees, are hampered by preexisting limitations of custom, environment, and, to some extent, federalism. In the Senate the rules of the game and the encrusted traditions of that institution soon swallow up and absorb attempts at innovation. The personal operation of the Senate, the individualism of each Member, and the dispersion of power resulting from seniority tend to resist the idea of a party committee avowedly dedicated to integrating and formulating party policy. Too often there is just not a "senatorial party" to be led or integrated. Public law created a party policy committee but it did not create a senatorial party or bind the Senate membership to a party program.

Congressional and senatorial campaign committees help to provide the party's candidates with organizations, money, and a certain amount of managerial know-how during elections, but they do not discuss party program. The policy committees in the Senate help to supply certain ingredients that remain untouched by the senatorial committees. The former are useful forums for appraising political realities and rendering some political judgments of some of the party's men of power. They are an aid to the party's leadership in the Senate and provide a much needed staff for that leadership. In the absence of joint House-Senate policy bodies, there is little chance that the Senate bodies alone might offer much of a potential for party clearance of legislation in Congress. Since 1947 the margin of party control in the Senate has been relatively small, and prospects are that this may continue. In view of this, the need for some group that can influence even a few votes on crucial legislation is apparent. Perhaps this is the role that the policy committees are finding for themselves.

[26] Republican representation in successive Congresses, beginning with the 80th, was 51, 42, 42, 48, 47, and 47.

[27] The Democratic policy committee has been more restrained in attacking President Eisenhower than has the Democratic National Committee; the Republican policy committee was biting in its attacks on President Truman.

Mr. DOUGLAS. Mr. President, I agree with what I regard is the real purpose of the comments of the Senator from Wisconsin. I admit that normally I would have a certain reluctance to have the party tactics of the Democratic Party discussed on the floor of the Senate instead of at a party gathering, because I know that our friends on the other side have sharp eyes and alert ears, and are quick to seize upon what they fancy may be dissension within our ranks.

But, as the Senator from Wisconsin has said, we are the majority party, and therefore the problems which we face are, in a sense, the problems of the country; therefore, perhaps the desire for privacy can be waived in favor of an objective discussion.

Secondly, although the Senator from Illinois is in no sense an expert psychiatrist, I understand that modern psychiatrists believe that problems which concern us should be brought to the surface and discussed intelligently and dispassionately; that it is far better for us to face the issues which trouble us than for us to try to suppress them so that they may fester and rankle.

It is in that spirit, I believe, that the Senator from Wisconsin has spoken this afternoon. I found not one word of recrimination and not one word of personal bitterness in anything that he has said. We may differ with him on certain points, but his discussion, I believe, was in good temper; and it can be made very helpful, provided we are objective in considering the issues, and provided that we do not allow personalities to creep into our discussion, and that we observe charity toward those with whom we are dealing. The Senator from Wisconsin has done all these things. I shall try to follow that example in the brief remarks that I shall make.

I suppose that, fundamentally, our party difficulties arise from the fact that we are a national party. Our Republican friends are not members of a national party, and do not have appreciable strength south of the Mason-Dixon Line. Being a national party, we have our friends from the South who take one set of attitudes toward the color question and toward the status of Negroes, which is very different from that which most of us in the North adopt. They had slavery; we of the North did not. It seems hard for them to forget the bitterness of the Civil War. There are also differences in the attitudes toward basic economic issues as between some of our friends and fellow Democrats in the South and those of the North.

This makes the problem of party leadership and party conduct an extremely difficult one. I believe all of us are fully aware of the difficulties which any Democratic party leader in the Senate or in the House would have to face.

I wish to start my comments by making it perfectly clear that, while I have differed with the majority leader on certain very essential matters, such as the gas bill and the civil rights bill, he has never taken advantage of his position of leadership to exercise any reprisal upon me. I wish to acknowledge that fact. Everyone should know it. My own feeling, however, is that we should have more conferences. I do not believe, however, that individual members should be bound by any decision. On the contrary, conscience should be supreme in these matters.

Furthermore, I would couch my criticism of the policy committee and the steering committee, the latter of which the Senator from Wisconsin did not mention, in a somewhat different vein from that which the Senator from Wisconsin used in his approach.

I find two main faults with the present method of selection and composition of the policy committee and the steering committee. First, the members are appointed by the leader; they are not selected by the caucus. Second, if we analyze their composition we find that they do not adequately represent or even make any approach toward proportional representation of the industrial areas of the country or, indeed, of the Pacific coast. A part of this trouble is brought about by the seniority rule which we have adopted. However, whatever the reasons, the results are very unfortunate.

If Senators will pardon me, I should like to give them figures on this question which I had assembled a long time ago and which I tried to bring up to date this morning after I received a copy of the Senator's prepared remarks. Let us take the policy committee, which consists of nine members. It consists of one member from Texas, two from Montana, one from Missouri, one from Oklahoma, one from Georgia, one from Alabama, one from Arizona, and one from Rhode Island. There are nine members from eight States. I find that the population of those States amounts to approximately 22 million—22.5 million, to be precise—and that they represent only 80 electoral votes; that in terms of the total votes cast in those States for President in 1956, there were only 6,762,000.

Now let us take the main industrial States which are not represented on the policy committee. These are States which have Democratic Senators but which are not represented on the policy committee. They have no representation whatever on the policy committee: Maine, Massachusetts, Connecticut, New Jersey, Pennsylvania, West Virginia, Ohio, Michigan, Indiana, Illinois, Wisconsin, Minnesota, California, Oregon, and Washington.

If we look at that list and look at the figures, we find that these States have a total population of 68 million, and 255 electoral votes; that in the last presi-

dential election they cast 35,118,000 votes.

This fact is so significant that I believe it is worthwhile to dwell upon it. The representation on the policy committee is confined to 8 States, with a population of 22½ million, as contrasted with the main industrial States which have no representation whatever, with a population of 68 million; a representation of States which cast votes of 6,762,000, as compared to the industrial States which do not have any representation, with a population of 35,118,000. I repeat the few have all the representation, this many have none.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. DOUGLAS. I should like to finish this one point; then I shall be happy to yield. In terms of electoral votes, 8 States which are represented cast 80 electoral votes, as compared with 255 in the States which have no representation at all. I now yield to the Senator from Montana.

Mr. MANSFIELD. Mr. President, what the Senator says is correct. Of course the Founding Fathers, when they set up the Senate adhered to the doctrine of equality among the States, both large and small. I should like to recall to the Senator's attention that the State of New York has either 45 or 46 Representatives in the House, but only 2 Senators in the Senate; that the State of Vermont has 1 Representative in the House, but 2 Senators in the Senate. It is the way in which the small States receive a certain degree of protection, and it is the way which equalizes the preponderance based upon population and which the States with large populations have in the House.

I should like to ask the Senator a question. Prior to the last election, was a request ever made that the majority policy committee be based on population, so that the industrial centers in the Midwest and in the East—and the Senator has a point there—could be given consideration on that committee?

Mr. DOUGLAS. Let me say that States should not be given the overwhelming predominance in the Senate or in the governing bodies of our party but rather the matters, the issues, and the interests of people.

In answer to the Senator's question I am not certain that it was done before the election, but it is well known that the Senator from Pennsylvania [Mr. CLARK] addressed a letter in November, almost immediately after the election, asking that consideration be given to those factors.

Mr. MANSFIELD. The Senator is correct. The Senator is aware, is he not, that under the law the membership of the policy committee is set at a certain number?

Mr. DOUGLAS. Yes.

Mr. MANSFIELD. I do not know how we could bring about the addition of a Senator from the highly industrialized region—and I think that region should be given representation on the policy committee—without asking one of the other Senators to leave the committee.

Mr. DOUGLAS. I am glad the Senator has brought up this point. There is no intent on the part of any of us to have any of the present members get off the committee. I want to make that perfectly clear. But I think that if the Democratic leadership were to move that the total membership of the policy committee be increased, the motion would be agreed to. That, frankly, is what I believe should be done. I believe the membership should be increased, and that then the increase in the number of members should be so apportioned as to give adequate representation to areas which are now excluded from representation.

Mr. MANSFIELD. The Senator from Illinois has a point—a valid point. But I repeat what I said to the Senator from Wisconsin during the course of the debate upon his very able speech: Why not offer a resolution to increase the membership of the committee? I assure the Senator from Illinois, as I did before, that it would be given consideration as early as possible.

Mr. DOUGLAS. We may do that, but we should prefer that the initiative come from the majority leader or the policy committee.

Mr. MANSFIELD. Why not have the entire membership take the responsibility?

Mr. DOUGLAS. That is a very good suggestion. We may take it up. But we do not wish to push the leadership too far or too fast. We should prefer a voluntary yielding to an outright strike.

Mr. MANSFIELD. Why not follow the regular procedure, which is to offer a resolution?

Mr. DOUGLAS. Would the Senator from Montana be willing to be a cosponsor of such a resolution?

Mr. MANSFIELD. I feel that I am in a position where I could not be a cosponsor; but I believe the Senator from Illinois has a point, and I would be glad to give it every consideration.

Mr. DOUGLAS. I am delighted. If we can only agree on the principle, we can always devise methods to accomplish the objective.

Mr. PROXMIRE. At this point, I should like to make a comment concerning the suggestion of the Senator from Montana. This is our difficulty: The Senator from Montana is the assistant leader of the Democratic majority. He is ex officio a member of the policy committee and is a member of the steering committee.

Mr. MANSFIELD. Ex officio.

Mr. PROXMIRE. Proposals by the Senator from Montana and the Senator from Texas have a different cast and carry greater weight. I have been asked why I did not ask for a caucus. I had asked, first, to see the minutes of the previous caucus meetings. I was told that to see them I needed a caucus. I did not ask for a caucus because the nature of a caucus is predetermined. I would not have had a chance. Such a request would be considered a derogation of the leadership. It would be considered the kind of thing which should not be done.

What I am asking is that the leadership take the responsibility for providing regular caucuses, with agendas printed in advance and distributed among the members of the Democratic caucus, so that we will know what is to be taken up and will have an opportunity to propose other matters for the agenda, if the leadership feels they can be fitted in.

But we would take this responsibility, so that Senators could vote or at least determine in caucus on the kind or extent of policy we would have.

What I understand the Senator from Illinois to propose is that the leadership accomplish these things in the only way they are ever accomplished in the Senate, namely, by having the leadership make the decision. The leadership has done great things, and I agree fully that they have earned credit for what they have done. However, the leadership itself should consider this proposal and offer it. In that event, it will be adopted as a matter of course. But if the Senator from Wisconsin proposed it, it would have no chance.

Mr. MANSFIELD. Oh, no. I think the Senator from Wisconsin is mistaken. I would not want to see the majority leader become a dictator. I want to see the form of democracy we now have continued.

Mr. PROXMIRE. I am delighted with the statement of the Senator from Montana. I could not agree with him more. I want all Democratic Senators to act together in a conference.

Mr. MANSFIELD. Did the Senator from Wisconsin understand me? I said I would like to see the democratic procedure we now have continued. I would like to see all discussions of this kind held out in the open. I am not in favor of conferences or caucuses held behind closed doors. Let us disagree in the open, as the Senator from Illinois has said. We are a national party. We have enough disagreements now without having others come up from time to time.

The remarkable thing is that in spite of the fact that the majority leader has to deal with 63 prima donnas on this side of the aisle, and if he includes himself—and I think he should—the number is 64, we have been able to achieve the degree of unanimity we have. That is remarkable. It is testimony to the responsibility exercised by our party in the 6 years in which we have been the opposition party. Remember, in those 6 years we lost the Presidency twice. But so far as Congress is concerned, we have achieved a mere majority for 2 years and an outstanding majority this time. I think this was based on the responsible attitude which the leader took and the responsible attitude we took.

I think the record of Congress under Democratic leadership had much to do with the victories we have earned throughout the country and which have given us an overwhelming majority, as has been mentioned time and again, both in the Senate and the House.

The Senator knows that the policy committee is somewhat like the House Committee on Rules. It is a traffic cop for legislation. But unlike the House Committee on Rules—and I hope I am not violating any rule—no bills are held

up in the Senate. The Senator will recall that during the last 2 weeks of the last session, three very controversial bills relating to the Supreme Court were reported and considered by this body. To the best of my knowledge, no really controversial bill was held up by the policy committee during the previous sessions of different Congresses.

Mr. DOUGLAS. Is the Senator from Montana maintaining that the policy committee has no authority or real function?

Mr. MANSFIELD. No; we exercise our function. We exercise our function as individuals. So far as the majority leader telling us what to do is concerned, if the Senator had attended those meetings, I think he would have had another guess coming, because there are times when we tell the majority leader unmistakably what we think should be done, and he always bows to the majority. Strangely, most of the decisions in the policy committee are unanimous. Is there any decision which the policy committee has made to which the Senator from Illinois or the Senator from Wisconsin objects?

Mr. DOUGLAS. I prefer to go into that matter privately with the Senator from Montana.

Mr. MANSFIELD. I thank the Senator.

Mr. DOUGLAS. I point out that of the committee of nine, four members are from the South and three are from the Mountain States. Four members are from States having populations of less than a million. The big industrial States are completely unrepresented, with the possible exception of Missouri.

Mr. MANSFIELD. Two members of the policy committee come from States having a population of less than 700,000.

Mr. DOUGLAS. That is correct. That is the point I made.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. No; I should like to continue for a minute; then I will yield.

If one examines the list—and this holds good for the steering committee also—he will find that the New England States are completely excluded, except for Rhode Island; that the Middle Atlantic States are excluded; that what the census calls the East North Central States are excluded even if we include West Virginia, which is becoming a Middle Western State rather than a Southern State; and that the Pacific Coast States are excluded.

The representation is composed chiefly of Senators from the South and from the small Mountain States. We love these fellows very much; but I point out that the economic interests and beliefs of these sections of the country differ. The States which are excluded are primarily manufacturing States. To the degree that they are agricultural States, they are corn-producing States.

The States which are included are the cotton and the tobacco-producing States and the mining States.

I suppose our greatest cleavage comes over the question of what is loosely known as civil rights. The policy committee, and, indeed, the steering committee are composed primarily of Senators from States where the attitude toward what is called civil rights is unfavorable, or from Mountain States where the issue is not a present one and is not an immediate one in the localities, whereas, the States which are not represented are those which have a considerable Negro population and which therefore feel this as a national issue more acutely than do the others. So the industrial States are on the outside, looking in.

I believe that at this point I should yield to the Senator from Oklahoma.

Mr. MONRONEY. I am wondering about the composition of the policy committee to which the Senator from Illinois objects.

Mr. DOUGLAS. Let me make clear that I do not object to a single member. I refer simply to the question of the composition of the committee generally.

Mr. MONRONEY. Yes; and I refer, also, to the composition of the committee generally. The Senator's point is that it does not reflect properly the position and the sentiment of the country. The membership of the committee is now fixed by law, as the Senator from Illinois has said, at seven. Is it not a fact that as one of the outstanding liberals of the Senate, the distinguished senior Senator from Illinois recommended a senior liberal to be a member of that committee, when the present majority leader had a place to fill?

Mr. DOUGLAS. I recommended the Senator from Montana [Mr. MURRAY].

Mr. MONRONEY. That is correct. The distinguished senior Senator from Montana [Mr. MURRAY], who is one of the great liberal Members of the Senate and is one of the senior Members of this body.

Mr. DOUGLAS. Yes.

Mr. MONRONEY. The Senator from Illinois recommended his appointment because he wanted to have a proper balance or as near a proper balance as could possibly be achieved on the policy committee, as between the liberals and the conservatives and the middle group.

The other member the Senator from Illinois wanted appointed was the distinguished President pro tempore of the Senate, the senior Member of this body [Mr. HAYDEN], I believe that if any Member were to receive an appointment based on love, admiration, and affection, it would naturally be our President pro tempore.

Since the law provides that the committee shall be composed of only seven members, and since the Senator from Illinois does not favor having any of the present members removed from the committee, what is his proposal?

Mr. DOUGLAS. Again and again I have made clear that I am not making a reflection on any particular individual. Instead, I am proposing that the membership of the steering committee be increased—and that can be done very readily by means of a resolution—and that then the representation be made more in accord with the relative strength of the various sections of the country.

Mr. MONRONEY. I think the Senator from Illinois makes a fine point of that. But if I correctly understood him, he was saying that he wanted the majority leader to submit the resolution.

Mr. DOUGLAS. Well, that would make it much easier to secure the adoption of the resolution. [Laughter.]

Mr. MONRONEY. Then I think the Senator from Illinois is saying, first, that we have too strong leadership, and he objects to the leadership; but then he says that when he wants something he favors accomplished, he wants the leadership to be on his side.

Mr. DOUGLAS. That is always desirable, of course.

Mr. MONRONEY. Certainly; of course it is always nice to have something one favors supported by the leadership. But I do not think one can have it both ways; in other words, complain about the leadership and its strength and then say, "But now we want papa to fix."

Mr. PROXMIRE. Mr. President, at this point let me say that I have never at any time said our leadership is too strong. I think it has to be strong and vigorous, and I think it has won the admiration of the country. The leadership of the Senate is outstanding.

But I think the leadership should take its direction from all Members of the party, in some kind of caucus or a party meeting at which all Democratic Senators could, as a matter of regularity, be present.

I do not object to strong leadership. Of course, strong leadership is necessary for the enactment of legislation. But I believe the initiative should come from the membership as a whole.

Mr. MONRONEY. In other words, the Senator wants the strong leadership to be applied in favor of the measures he wishes to have enacted into law. Of course that is all very good.

Mr. PROXMIRE. Oh, no; I say that when the majority of the Democrats differ with me, the decision of the majority should govern. But I want that position to be arrived at in a democratic manner.

Mr. MONRONEY. But I understand that the Senator from Illinois wants the majority to take us by the hand and give us the additional members.

I believe that one of the advantages and one of the glories of the system is that if Senators work hard, and attempt to persuade their colleagues and to cajole them into supporting certain measures, and if Senators are nice to the members of the press gallery, and persuade them to say that the proposed legislation under consideration is good and is badly needed, it may be possible to have such measures enacted into law. In that connection, I understand the Senator from Illinois to say that in the case of bills and other measures he favors, he is glad to have the support of the majority leader. In that respect, I wish to point out that if the Senator from Illinois is glad to have "papa fix" in some cases, he should not object to it in others.

Mr. DOUGLAS. Mr. President, the Senator from Oklahoma is always subtle and seductive, and he has about persuaded me that the Senator from Wisconsin and I should submit such a reso-

lution. If and when we do, we shall come to the Senator from Oklahoma for help, so he can continue with the improvement of the policy committee and the steering committee—improvements which he began so illustriously 13 years ago, but which have languished by the wayside.

Mr. MONRONEY. Would the Senator from Illinois consider permitting me to join him in sponsoring the resolution—for the reason, as I have pointed out earlier, that it should include a provision that the members not be allowed to succeed themselves? I think it is even more essential to include such a provision.

Mr. DOUGLAS. Now we are getting a Proxmire-Douglas-Monroney resolution which both will increase the number of members and also will provide for rotation of membership. [Laughter.]

Mr. PROXMIRE. Certainly we are making real progress.

Mr. DOUGLAS. This debate is very constructive; and I think the Senator from Wisconsin has more than justified his speech—to judge from all these developments.

Now let me consider the membership of the steering committee. It has 13 members. One comes from Texas; one comes from Montana; one comes from Virginia; one comes from Arkansas; one comes from Louisiana; one comes from Florida; one comes from South Carolina; one comes from Delaware; one comes from Nevada; one comes from New Mexico; one comes from Rhode Island; one comes from Minnesota. Six members come from the South; three come from the Mountain States; five come from States with a population of less than 1 million. But I observe that the big States are not represented; there is no member from Massachusetts or from Connecticut or from New Jersey or from Pennsylvania or from West Virginia or from Ohio or from Indiana or from Michigan or from Illinois or from Wisconsin or from California. In other words, when the kissing takes place, somehow the Senators from those States are never under the mistletoe. [Laughter.]

Mr. MANSFIELD. Mr. President, will the Senator from Illinois yield to me?

Mr. DOUGLAS. I yield.

Mr. MANSFIELD. I should like to ask the same question that I asked in regard to the policy committee: What decisions or assignments to committees which have been made by the steering committee since the present majority leader has been the leader of our party in this body—and that is over the last 6 years, and now going into the 7th year—would the Senator from Illinois find fault with or disapprove?

Mr. DOUGLAS. I should like to discuss that matter in private with the Senator from Montana and the Senator from Texas.

But I wish to say this—I said it on a national television program, and I am glad to repeat it on the floor of the Senate: I do not think the Senator from Texas has exercised reprisals against Senators who vote against him. But sometimes I think he gives favors to Senators who vote with him. [Laughter.]

Mr. MANSFIELD. Let me say that I have been accorded consideration by the majority leader which I did not seek and do not want.

But if I correctly interpret what the Senator from Illinois has said in respect to the question of both the policy committee and the steering committee, he does have some fault to find, but he wants to discuss that in private, perhaps in a caucus.

On the other hand, I want it discussed in public; and I want the answers to be given in public because I think there is more to be achieved in the open than in private, based on the speeches the Senator from Wisconsin [Mr. PROXMIRE] already has made, and which perhaps he will continue in the future.

Mr. DOUGLAS. The Senator will notice——

Mr. PROXMIRE. Mr. President, may I say at this point I think there is a perfectly just and proper distinction between the position we have taken on principle on the caucus and on the policy committee as a whole—this has been an impersonal position. Specific examples of assignments of particular Senators would have to be personal. When we get into the personality area it seems to me it is not wise to discuss the matter on the floor of the Senate.

Mr. MANSFIELD. I was merely asking a general question. It was a question which could have been answered yes or no, without having to be discussed in private.

For the information of the Senator, I have been trying to get on the Appropriations Committee for 2 years. To the best of my knowledge, the Senator from Delaware [Mr. FREAR] has been trying to get on the Appropriations Committee for some time. I believe the Senator from Florida [Mr. SMATHERS] has been, for over a year, trying to get on the Foreign Relations Committee. We three have been unsuccessful in our efforts. We do not feel bad about it because some of the newer Members of the Senate have gotten assignments which they deserved. They have been treated by the majority leader in the same way as we were treated when we were new Members of the Senate.

So I think the record of both the policy committee and the steering committee is outstanding and excellent. So far as legislation is concerned, it has been routed, through its normal channels, to the floor of the Senate.

So far as committee assignments are concerned, I do not see how any Senator in the last 6 years, under the leadership of LYNDON JOHNSON, has had any right to complain. I think we have been treated better than we could have expected, and certainly better than we had a right to expect.

Mr. DOUGLAS. The Senator from Illinois has no right to complain, and he has not complained.

Now, let me go to the next point, namely, the distribution of chairmanships in the 16 standing committees, which can be found in the CONGRESSIONAL RECORD.

Of the 16 standing committees, Members of the Senate from the South hold the chairmanships of 10. They include the most important ones, namely, the Foreign Relations Committee, the Finance Committee, the Agriculture and Forestry Committee, the Banking and Currency Committee, the Armed Services Committee.

Senators from the Mountain States hold four chairmanships.

A Senator from the Pacific coast holds one chairmanship.

A Senator from Missouri, which is part South, part North, part East, and part West, holds one chairmanship.

But once again, no one from Massachusetts, Connecticut, New Jersey, Pennsylvania, Ohio, West Virginia, Indiana, Illinois, Michigan, Wisconsin, Minnesota, or California.

Now, I know that this situation grows out of the seniority system, but I want to suggest that the pure and unadulterated seniority system is getting our party into trouble. The States which run the Democratic Party in the Senate are not the States which can carry a presidential election. The presidential elections are decided in the States which are on the outside looking in, so far as the organization of the Senate is concerned. And, indeed, it has been the election of Senators from these large industrial States which has given us the balance of power—not merely the balance of power, but the preponderance of power in the Senate itself as well as in the House.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. DOUGLAS. Yes.

Mr. MANSFIELD. The Senator from Illinois is the chairman of a joint committee, is he not?

Mr. DOUGLAS. Of a joint committee, that is correct.

Mr. MANSFIELD. Is not the chairmanship of the Senator from Illinois based on his seniority on that committee, as well as the ability which he has in great abundance?

Mr. DOUGLAS. No, it is not by seniority. The Senator from Alabama [Mr. SPARKMAN] is senior to me. He did not press his seniority for the chairmanship of that joint committee, but he chose to press his seniority on the Select Committee on Small Business. I have no personal complaints, and I have no personal ax to grind. This is not a covert movement to try to get on the steering committee.

Mr. MANSFIELD. I think the Joint Economic Committee is to be commended for having as its chairman such an eminent economist as the Senator from Illinois; but the Senator from Illinois will admit, will he not, that after the Senator from Alabama, he was second in line?

Mr. DOUGLAS. Yes.

Mr. MANSFIELD. Had the Senator from Alabama not decided to continue as chairman of the Select Committee on Small Business, he would have, on the basis of seniority, been chairman of the Joint Economic Committee. It is because the Senator from Alabama did not so choose that the Senator from

Illinois, as the next member by seniority, was chosen to be chairman.

Mr. DOUGLAS. Does the Senator mean that if I claim the rewards of seniority, I should not object to the process?

Mr. MANSFIELD. It is just a coincidence.

Mr. DOUGLAS. The Senator from Illinois is perfectly willing to resign as chairman of the Joint Economic Committee now, and then have the committee choose a chairman.

Mr. PROXMIRE. Mr. President, the Senator from Montana has made an excellent point, but, of course, he was not referring to 1 of the 16 standing committees. A joint committee does not have anything like the kind of rights or powers that a standing committee has.

Mr. MANSFIELD. I pointed out that it was a joint committee, and not a standing committee.

Mr. DOUGLAS. The Senator is aware of the fact that a joint committee cannot initiate legislation. Legislation has to come through the standing committees.

Mr. MANSFIELD. The Senator from Illinois has just stated he is willing to resign and then have an election for chairman of the Joint Economic Committee.

Mr. DOUGLAS. I should be glad to have a vote of confidence if such was the judgment of the committee.

Mr. MANSFIELD. I am sure the Senator from Illinois would achieve the chairmanship either as a result of seniority or because of an election. Although I know he is serious, I hope he will not go through with his suggestion. I think with him as chairman of the Joint Economic Committee we will be better off and get the kind of report we should get from that committee.

Mr. DOUGLAS. I thank the Senator. I did not want to put this debate on a personal basis. I wanted to point out the difficulty which the party and the voters face as a result of this situation.

We carried the House, and largely carried the Senate, because those of us who come from the industrial States advanced, generally, a declaration in favor of civil rights, a declaration in favor of liberal tax policy, a declaration to protect consumers of gas and oil, a declaration for liberal labor legislation, and so forth.

The voters, believing what we have advocated will happen, elect us to the Senate and to the House, and, in times past, have elected a President. Then we come to Washington and find that the machinery of the Senate, under the seniority system, is controlled by those who represent localities where the predominant opinion is very different from ours.

Very frankly, we go through a process of frustration. Not only do we go through a process of frustration, but the folks back home somehow feel they have been shortchanged.

I am perfectly frank to say I do not know how long the Democratic Party can continue with this situation. We know it exists. I submit we should do something about it. One way we can do something about it is to make our governing bodies, whether they be the conference, the policy committee, or the steering committee, truly representative.

I am not afraid of getting together with our good friends from the South. I am not afraid of getting together with them in conference. I am not afraid of getting together with them in committee. I have great respect for them as individuals. I have great respect for their skill. I believe that they are patriotic Americans. I think we can probably get a better agreement if we meet face to face than if one group has the seats of power and the other group is on the outside looking in.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. DOUGLAS. There is one thought I should like to state. A distinguished southern writer has said that the Senate in its organization and practices is "the South's never-ending revenge for Gettysburg." I do not want that to continue. Let me say that we in the North have no desire for revenge for Bull Run although at Bull Run the southerners gave us a terrific beating. We want to bury the bitterness of the Civil War and do so that we can go forward as a united Nation.

Whether the distinguished southern writer is correct or not, I do not want the impression to go out that the U.S. Senate is an instrument for sectional domination, yet this is the impression which is likely to be given under the present organization of the Senate.

While I do not agree with everything the distinguished Senator from Wisconsin has said, I think he has started a very healthy process of discussion.

I hope our distinguished majority leader will not feel that this is in any sense a personal attack on him. I think he is the most skillful floor manager that this Nation has seen in a long time. I want to say, on behalf of my liberal friends from the North, that he is in no sense illiberal. We differ upon occasion as to gas and oil, and we differ upon occasion as to civil rights and antifilibuster rules, but I am frank to say I think my Senator from Texas would be compelled to take the position which he takes. We do not ask the Senators from the South to cut their wrists in a suicidal act, but we do say that interests which are not now represented in the Government of our party should be more adequately represented, and that is all. I think that it is for this that the Senator from Wisconsin is contending. That is what I have tried in a very poor fashion to advance this afternoon.

I now yield to the Senator from Oklahoma.

Mr. MONRONEY. Is it not the fact that under the present leadership the steering committee was increased from 9 to 15, and that the first 3 Members named by the Senator from Texas [Mr. JOHNSON] were the Senator from Minnesota [Mr. HUMPHREY], the Senator from Rhode Island [Mr. PASTORE], and me? This year, to give even better balance, 4 advisers were named. They were the Senator from Washington [Mr. MAGNUSON], the Senator from Massachusetts [Mr. KENNEDY], the Senator from Michigan [Mr. MCNAMARA], and the Senator from Wyoming [Mr. O'MAHONEY].

Mr. DOUGLAS. I had not known about the advisers.

Mr. MONRONEY. That was done under a unanimous agreement, if I am correct in my understanding, although I am not a member of the steering committee or the policy committee, and not one of the "inner circle" of the Johnson group, so-called, if there is one. [Laughter.]

I certainly feel that the leadership has been trying to do the very thing the leader has the power to do, which is to increase the steering committee membership. The other cannot be done without legislation. It seems to me these things should have some recognition, with regard to their effect as to broadening the base of our democratic operation within the Senate itself.

Mr. DOUGLAS. I will say I compliment the leadership for any progress made in this direction. I hope this will be only the beginning of better things to come.

Mr. PROXMIRE. Mr. President, before I yield the floor I should like to thank the distinguished senior Senator from Illinois for his statement. I think the Senator puts the case better than I do. If we disagree perhaps on some details, I do not think they are fundamentally important.

I could not agree with the Senator more that this is not in any sense a personal attack of any kind. I too have great admiration, as I have said repeatedly in this speech, as well as I have said before and as I will say afterward, for the enormous ability and great service which the Senator from Texas has given his party and his country. I simply feel the only possible way we can solve these problems is to begin to talk about them, and until we begin to talk about them we are not going to make progress. I think the discussion this afternoon has been extremely constructive and very helpful. I thank all Senators who took part, and I particularly thank the long-suffering Senators who were willing to sit through the discussion.

Mr. MONRONEY. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield to the Senator from Oklahoma.

Mr. MONRONEY. I should like to thank my distinguished colleague for the studied, dispassionate, and fair way he has brought attention to this matter. While I disagree with many of the things my colleague has advocated, I compliment him on his presentation and for keeping the fire and personalities out of it.

I should like to ask the Senator a question. In the opinion of the Senator, did the record written by the Democratic Senate under the present leadership have any effect as to increasing the majority we have today, which the Senator says in his speech has given us this responsibility for which he wishes new ways of achieving reflection of the thoughts of the present Members?

Mr. PROXMIRE. There is no question at all that the record of the present leadership has been helpful. Indeed it

has been. I think, to be completely frank about the matter, that the election of Democratic Senators was also enormously influenced by a protest against the administration in power. There is no question in my mind that both of these factors were influential.

I think also, as implied or stated by the Senator from Illinois, if we are going to elect a President of the United States in 1960 it is going to be necessary for our party to adopt a really national program, a program which reflects the will, viewpoints, and attitudes of Senators from States such as Wisconsin, Illinois, Michigan, Ohio, and Pennsylvania, as well as of Senators from the Southern States.

I think to a great extent our program does that now, but I believe it is perfectly possible that in a traditional institution such as the caucus, and with a much more liberal use of the policy committee, we can arrive at decisions which will permit our party to become the kind of national party it is becoming, and which I think it should become, if we are going to elect a President in 1960.

I should like to conclude, Mr. President, by saying that the junior Senator from Oklahoma [Mr. MONRONEY] who was the coauthor of the historic reorganization bill for the Congress of the United States, has been extremely helpful and very very effective in the colloquy we have had.

I know the Senator feels very strongly in opposition to the position I have taken, but I think the colloquy has been very helpful in bringing out my position and in stressing some of its weaknesses or some places where I may be incorrect, but also, I think, emphasizing some of the points I have made which I believe are true and right, which I am going to continue to pound home so long as I am a Member of the Senate.

Mr. MONRONEY. I thank the Senator. The process of the organization of this great legislative body must always be a continuing search to find better and improved methods. Reorganization of Congress did not stop in 1946. It must never stop, because the problems grow greater and the burdens heavier upon the 98 Members.

I wish to say in closing that I feel, apparently more than the Senator feels, the record made of the accountability and responsibility of the Democratic Senate has been a very great asset in increasing the number of Democrats from 49 to 64 in the Senate. It has given the country a focus on what the Democratic Party stands for. We in the Senate are the only visible part of the Democratic Party nationally. I do not think we would have increased the Democratic membership to this degree if the people had not accepted the courageous leadership and the ability to downplay partisanship when it needed to be downplayed in the national interest or to exercise partisanship when that was necessary to preserve the two-party system.

In conclusion I wish to say that in Oklahoma, when we win 6 years in a row, we simply do not consider changing the split-T formation. We rather like to win.

Mr. MANSFIELD. Mr. President, will the Senator from Wisconsin yield?

Mr. PROXMIRE. I yield to the Senator from Montana.

Mr. MANSFIELD. Mr. President, I wish to join the Senator from Oklahoma in commending the Senator from Wisconsin for taking the floor to discuss these subjects, which are so important. I would point out to the Senator that in open session, rather than in conference or caucus, he is exercising a right which every Senator has. I should like to emphasize again that even though we have a majority leader, so far as each individual Senator is concerned he is equal to any other Senator, and has a right to express himself, to object to unanimous consent requests, to hold the floor as long as he can within the rules, and to conduct himself as a representative of a State, which right, of course, is based on the equality of States in the Union.

I think the Senator is performing a good service. There is room for differences, and there are differences, but I am certainly appreciative of the fact that this is being done openly, for all to see and hear.

Mr. PROXMIRE. Mr. President, I thank the Senator from Montana for his characteristic fairness and thoughtfulness in making the comments he has, in view of the fact that we do disagree on the caucus and on the importance of the caucus.

Mr. President, I yield the floor.

Mr. JOHNSON of Texas, Mr. DOUGLAS, and Mr. LONG addressed the Chair.

The PRESIDING OFFICER. The Senator from Texas is recognized.

AUTHORIZATION OF APPROPRIATION TO THE NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 73, S. 1096.

The PRESIDING OFFICER (Mr. MCNAMARA in the chair). The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (S. 1096) to authorize appropriation to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes.

Mr. LONG. Mr. President, I did not hear the request, and I have not consented to it.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas that the Senate proceed to consider the bill?

Mr. GOLDWATER. Mr. President, reserving the right to object, could the Senator inform us as to the amount contemplated by the bill?

Mr. JOHNSON of Texas. $48 million. It is an authorization requested by the administration, in the exact amount submitted by the President.

It is a deficiency item which is rather important. It is anticipated that there will be a yea and nay vote upon it. We do not expect a yea and nay vote today, because of the lateness of the hour. However, I wish to have the bill made the unfinished business.

I have not consulted the Senator from Mississippi [Mr. STENNIS], but very likely consideration of the bill will go over, and the explanatory statement and speeches on the bill will be made tomorrow. I merely wish to make the bill the unfinished business at this time.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas?

There being no objection, the Senate proceeded to consider the bill.

DETERMINATION OF SENATE DEMOCRATIC POLICY

Mr. LONG. Mr. President, with reference to the presentation made by the junior Senator from Wisconsin today, I completely respect the Senator's right—in fact, I approve of his right—to criticize the leadership of the Senate when he believes that such criticism is constructive and helpful. However, I do not feel that the Senator, in the course of his presentation, should violate the rules of the Senate. I do not believe it should be necessary to do so. Nor do I believe that we have ever improved upon our process by violating the rules.

In the course of his speech the Senator used this language, which was quoted from the National Review. He read this language on the floor of the Senate, referring to our majority leader:

> Under his leadership a system of backstage bargaining for votes has reduced debate on the Senate floor to a dull formality.

That statement, as quoted from Mr. Willard Edwards, and as repeated by the junior Senator from Wisconsin here today, continues:

> The record of the last session shows what it means to reach agreement without discord. It means brief and perfunctory debate; a lack of intelligent questioning; sparse attendance; the absence of quorum calls to summon absentees; the omission of record rollcalls without which the public can never know which Senators were present and how they voted; the approval of legislation in obvious ignorance of its meaning.

If further statements of that sort are to be made, I shall personally feel it necessary to object to such statements, and call the Senator to order under the rules of the Senate. I have done so consistently while I have been a Member of this body, and I feel that I shall be required to do so in the future.

Furthermore, I do not believe the charge is justified. The Senator from Wisconsin placed certain figures in the RECORD to attempt to prove his statement, as follows:

> In relationship to bills passed: Rollcalls have fallen 40 percent; the number of hours in session has dropped off by one-third; and most decisive of all the number of quorum calls requiring attendance of absentees has fallen more than 60 percent.

The evidence which the Senator offered to prove his case does not prove it.

Not only does it fail to prove his case, but it disproves it.

I do not presently see the Senator from Wisconsin. I wish the Senator were present to hear this criticism of the advice contained in his speech. I hope he may read it in the RECORD.

The Senator from Wisconsin inserted in the RECORD a tabulation which he added up to attempt to prove that various things had happened in the years he tabulated, in an effort to show that the majority leader was impairing the processes and proper functioning of the Senate. He included years when the majority leader, the Senator from Texas [Mr. JOHNSON], was the minority leader. Certainly it would not be quite fair to blame LYNDON JOHNSON for Bill Knowland's conduct, any more than it would be fair to blame Bill Knowland for LYNDON JOHNSON'S conduct.

Therefore, the chart to which the Senator from Wisconsin has made reference should not include the years 1953 and 1954, because during that period of time the distinguished former senior Senator from California, Mr. Knowland, was in charge. His record of leadership differs in many respects, both in philosophy and in approach, from that of the senior Senator from Texas. Therefore, the years 1953 and 1954 should be left out of the chart. To include them does nothing more than to mislead Senators and others who read the RECORD.

The Senator from Wisconsin made reference to the point that the number of hours in session had been reduced. In that connection, apparently reflecting upon the Senator from Texas for reducing the number of hours during which the Senate was in session, the Senator from Wisconsin included the years 1949 and 1950. That happened to be a period during a previous Democratic leadership. The junior Senator from Louisiana was present. He can recall very well why the Senate was in session so many hours during that period. It was the result of two things. The primary reason was that there were two very lengthy and successful filibusters during those 2 years. I do not believe the Senator from Wisconsin would care to criticize our present majority leader because his leadership was so effective that there were no filibusters during the period of his leadership. In such a case, the record would only reflect credit upon him.

But other things happened during that period of time. At that time the Republican Party fought vigorously and successfully to retain the Taft-Hartley law, for example, and all that went with it. The Senate debated a bill to amend the Taft-Hartley law for a month and the bill died in the House.

A great number of things in the years 1949 and 1950 make the comparison inappropriate. I know that the junior Senator from Wisconsin would not care to bring in 2 years in which long and successful filibusters were waged, and then criticize the majority leader, by contrast, because during the time the present majority leader has occupied that office, he did not cause a filibuster—particularly a successful filibuster—to result on the floor of the Senate.

Therefore the years 1949 and 1950 have no place for purposes of comparison. If we wish to compare any years to show what has happened since LYNDON JOHNSON has been majority leader, it seems to me that the only fair comparison would be with a previous Democratic year, and also, perhaps, the two Democratic leaderships in the previous Congress, which would be the 80th Congress.

So we should take the years 1947, 1948, 1951, and 1952, in which there were no long filibusters. There was a filibuster during the 80th Congress, but even so, the hours in session were less than during the period of time the Senator from Texas was majority leader.

I have prepared a chart which I believe is fair for purposes of comparison. It compares the years 1947, 1948, 1951, and 1952 with the years in which the present majority leader, LYNDON JOHNSON, was occupying that office, namely, the years 1955, 1956, 1957, and 1958. I have now made a tabulation similar to that placed in the RECORD by the Senator from Wisconsin, using appropriate figures taken from his chart and I ask unanimous consent to have it printed in the RECORD at this point as a part of my remarks.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Louisiana?

Mr. MONRONEY. Mr. President, reserving the right to object—and I shall not object—I should like to ask the Senator if he is including in his tabulation quorum calls.

Mr. LONG. Yes, because I believe they are meaningful in connection with the point I have in mind.

Mr. MONRONEY. Under the theory of the Senator from Wisconsin, a majority leader could become the greatest majority leader in the history of mankind by having continual quorum calls, but no legislation would result. When I was a Member of the House, Representative Marcantonio delayed proceedings in connection with the call of the calendar by continually making the point of no quorum, which resulted in calling the roll all day long. I do not believe that any political scientists could ever measure the effectiveness of leadership or of a legislative body by the number of quorum calls.

Mr. LONG. Has my unanimous-consent request been granted?

The PRESIDING OFFICER. Without objection, it is so ordered.

The table, ordered to be printed in the RECORD, is as follows:

	Bills passed	Rollcall votes	Quorum calls	Hours in session
1947–48	636	248	575	1,461
1951–52	775	331	431	1,648
Total	1,411	579	1,006	3,109
1955–56	1,159	218	156	1,361
1957–58	1,062	309	253	1,875
Total	2,221	527	409	3,236

Mr. LONG. Mr. President, the comparison shows that during the 4 years which I consider to be a fair 4-year period to use for comparison purpose, 1,411 bills were passed. That is during the years 1947 and 1948, and 1951 and 1952. Under the Johnson leadership, in the years 1955 and 1956 and 1957 and 1958, 2,221 bills were passed. That shows an increase of approximately 57 percent.

With respect to rollcall votes during the 4 years to which I have referred, 579 rollcall votes were held, as against 527 under the Johnson leadership. That shows a reduction of approximately 10 percent.

Quorum calls under the previous leadership amounted to 1,006. Under the Johnson leadership, there were 409 quorum calls.

That is one point on which the majority leadership was criticized without cause. During my service in the Senate, which includes most of the years to which I have referred, I have seen no greater waste of time than the calling of a quorum insisted upon by a Senator in the effort to compel Senators to hear his speech. The result usually is that Senators answer the quorum call and immediately absent themselves, if they do not wish to hear the Senator's speech. The result is, as a rule, that no more Senators remain in the Chamber after the quorum call than were present in the first place.

In my opinion, there was no greater improvement in the efficiency of the Senate than that created by the reduction in the number of quorum calls, when those quorum calls were held for the purpose of trying to compel Senators to hear another Senator's speech.

Certainly greater efficiency is brought about in the conduct of the Senate's business when a Senator withdraws his quorum call after suggesting the absence of a quorum and after the quorum call has run for a certain period of time. It is obvious that no Senator can compel other Senators to hear his speech if they do not wish to hear it. What happens, as I have said, is that the other Senators merely come to the Chamber and answer their names, and then immediately absent themselves. The reduction in the number of quorum calls is an improvement for which the major credit should go to the majority leader.

It has always seemed to the junior Senator from Louisiana that one way in which we could improve the efficiency of the Senate would be to have someone tabulate some figures showing how many Senators are present on the floor at all times, and which Senators are present when certain Senators speak, thereby showing how many sessions of the Senate each Senator attends and how many hours he spends on the floor.

Perhaps such a tabulation would show that some of the Senators who keep the Senate in session the longest are Senators who have the fewest number of Senators listening to their speeches. Perhaps such Senators would be inclined to reduce the quantity of their remarks if they knew that a record was being kept of how many Senators were present during the time they spoke on the floor of the Senate.

By reducing the number of quorum calls, greater efficiency has been brought

about in the conduct of the Senate's business. Greater efficiency is brought about by the fact that we more often call off a quorum call after the call has proceeded for a certain length of time, instead of insisting that we conclude the call of the roll and compel Senators to appear in the Chamber even though those Senators do not care to hear the speech of a particular Senator.

A comparison has also been made of the number of hours in session. In the chart to which I have referred it will be seen that the hours in session are somewhat greater under the Johnson leadership than in the previous period to which I have referred. Under the Johnson leadership the hours in session in the period 1955 to 1958 were 3,236; in the previous period the hours in session were 3,109. Under the Johnson leadership the Senate stayed in session about 3 percent more hours and passed about 57 percent more bills than in the previous period to which I have referred.

I should like to say that the charts might well show the number of debated bills that were passed, instead of merely showing the total number of bills passed. It has never seemed to me to be a fair comparison to show or to take credit for the number of bills that were passed during a session, merely on a numerical basis that more bills were passed during one year than during another year. We all know that some bills are passed in 15 seconds or so when they are called up on the call of the calendar. Most of the work on those bills has been done by the committee before they ever reach the floor.

The great difference in the number of bills passed can be attributed in some measure to the tactics which the majority leader has used—very properly—with respect to bills to which no valid objection has been made. Oftentimes such bills are called up on motion immediately after objection to them has been made on their being called on the call of the calendar. When they are motioned up after the call of the calendar anyone who is opposed to such a bill must present his reasons for not wanting it passed. By calling up such a bill on the same day, immediately after the call of the calendar, or some day shortly thereafter it has been possible to persuade the objecting Senator to withdraw his objection or permit the bill to be passed in short order.

Therefore, on the basis of what I have seen, we are operating more efficiently and effectively under the system by which we are proceeding at the present time than was the case in previous years. I, for one, would not want to change that system, to return to the less effective and less efficient manner which I have observed during previous years.

Mr. MORTON. Mr. President, I have been in the Chamber since 12:30 o'clock. I have enjoyed the Democratic caucus. [Laughter.] It has not been my privilege to attend a Democratic caucus. I tried to listen in on one several years ago down in Kentucky, and I was very badly beaten up for trying to do so, and deservedly so, I suppose. This is the first opportunity I have ever had to attend such a caucus. I hope there will be many more of them. However I do not want to see them held on the floor of the Senate. I should like to make some remarks, the text of which I released to the members of the press about 8 hours ago.

The PRESIDING OFFICER. The Senator from Kentucky is recognized.

THE PRESERVATION AND DEVELOPMENT OF THE DOMESTIC FLUORSPAR INDUSTRY

Mr. MORTON. Mr. President, I should like to take a few minutes to comment on legislation introduced before this body last Thursday, March 5, by the Senator from Colorado [Mr. ALLOTT]. The legislation, S. 1285, would establish a sound and equitable program for the preservation and development of our Nation's sadly sagging domestic fluorspar industry. It has been a pleasure to me to have joined with the Senator from Colorado and several other of my distinguished colleagues in cosponsorship of this important measure.

This legislation establishes quotas covering the importation of fluorspar. I am fully aware of the international trade problems which arise as a result of setting up import quotas. However, the situation in regard to fluorspar in somewhat unique. The procedure used in this bill is closely related to that involved in the Sugar Act, which has worked reasonably well throughout the years. Fortunately, the domestic use of fluorspar is increasing at a rate more rapid than the expansion of the economy generally. There is every reason to believe that this rate of increase will continue in the foreseeable future. Under the terms of the bill, a modest domestic base is established which leaves sizable tonnage for offshore procurement. The offshore producer is, in addition, given 75 percent of the new business resulting from the future increased consumption of fluorspar. After the offshore producer reaches a tonnage figure equal to his 1956 to 1958 base, which was his highest base, he then receives 60 percent of the annual increment. However, it should be noted that, in any case, the offshore producer has a greater share of the expanding U.S. market than the domestic producer.

The value of fluorspar consumed by American industry in 1958 is not spectacular, dollarwise, when compared with the value of other strategic and critical materials. For instance, the dollar value of fluorspar, both domestic and foreign, consumed in the United States in 1958 is estimated at $25.7 million, including purchases made under the old Public Law 733 program. These figures tend to belittle the importance of fluorspar products in our industrial peacetime economy and to seriously understate the essentiality of a critical mineral of vital need in compiling our defense arsenal.

The Office of Civil and Defense Mobilization has called domestic fluorspar production of metallurgical and acid grades an indispensable component of our domestic mobilization base. Unless immediate and adequate measures are taken to preserve the basic plant and mining capacity to produce in peacetime, then mobilizing the fluorspar industry to a wartime footing under emergency circumstances would be seriously, if not fatally, impaired.

The growth in fluorspar consumption has been maintained at a rapid pace in recent years, but imports of foreign fluorspar have continued their relentless assault upon the domestic producers. Expiration of the Public Law 733 program at the end of 1958 also meant virtual expiration of the fluorspar-producing industry in the United States because for the past several years domestic production had been sustained by the Government purchase programs.

The sharp increases in fluorspar imports can be traced largely to Korean war activities of the United States. Guided by the urgent necessity to maintain certain stockpile requirements which the domestic industry could not at that time provide, the Government invested in foreign production facilities in order that our defense position not be dangerously diluted. Now that the contract program is virtually ended, it is expected that these foreign facilities will produce for direct competition with the domestic industry for regular commercial markets.

Domestic production of fluorspar when added to imports creates a supply far in excess of domestic requirements. For instance, in 1951 the domestic industry provided 347,000 tons of finished fluorspar; foreign suppliers, 181,000 tons. The total exceeded industrial consumption of 497,000 tons by 31,000 tons. This disparity is rather modest when data of recent years are considered. In 1957, the supply exceeded demand by 315,000 tons, and last year it ran 227,000 tons ahead of consumption. The price advantage of foreign fluorspar is vividly illustrated by 1958 statistics which show that domestic shipments of 322,000 tons were valued at $15.8 million while imports of 390,000 tons were priced at $9.7 million. Both supply and consumption dropped sharply in 1958 from 1957 levels, but the industry anticipates that consumption will recoup to 650,000 tons in 1959 and possibly to about 700,000 tons in 1960.

The Senator from Colorado [Mr. ALLOTT], in introducing S. 1285, described the indispensability of fluorspar to the production of steel, aluminum, hydrofluoric acid, atomic energy, and fluorine gas. Both he and the Senator from Montana [Mr. MURRAY] commented on the importance of fluorine as an oxidizing agent in rocket and missile propellants, both solid and liquid. The thrust of missile engines is greatly increased by the use of fluorine.

The preservation of the domestic fluorspar industry is of vital concern to my State of Kentucky. Approximately half of the domestic production comes from a small area in western Kentucky and southern Illinois. The predominant counties are Hardin County in Illinois and Crittenden, Caldwell, and Livingston Counties in Kentucky. In addition, more

than half of the estimated reserve of higher grade fluorspar are located in this relatively small region.

The impact on this area has been startling. In 1951, 1952, and 1953, according to data supplied to the U.S. Tariff Commission by producers in 1956 the average number of workers in mines and mills employed approximated 520 with an annual total payroll of about $1.8 million. By 1955, this had dropped to 393 average employees with gross wages of $640,000. The fluorspar people in Crittenden County alone say that hundreds of people have left the county since 1953 as a result of the fluorspar slump.

This legislation would provide production stability, price stability to protect the consumer, restore employees to their jobs, and enhance our national security posture. The proposal to relate consumption requirements and the ability of domestic and foreign producers to fill these requirements, will, in my opinion, avoid the pitfalls of resorting to a mandatory type of program to restrict imports.

The domestic industry with its present production capacity is not able to provide the total domestic demand. Imported fluorspar has an extremely favorable price advantage, and, thus, has been able to capture the major proportion of the domestic market. Unless imports are in some way limited, the domestic industry will be destroyed. The program envisioned by S. 1235 would provide that the domestic industry produce a certain minimum tonnage proportion of the consumption requirements for acid and metallurgical grades. The balance would be reserved to foreign producers. Should the consumption requirements increase, the domestic industry would be allocated its proportion of the increase. The foreign supplier, also, would share in this increased demand on a percentage basis and within certain limits imposed by the legislation.

I understand that other minerals are watching this legislation with deep interest because it pilots a new approach to the solution of problems besetting their particular industries. In view of this and the beneficial aspects of the fluorspar bill per se, I am hopeful that it will be cleared by the Interior Committee at an early date for floor consideration.

THE TRANSPORTATION ACT OF 1958

Mr. SMATHERS. Mr. President, earlier today, during the morning hour, several Senators, led by the very distinguished senior Senator from New Jersey [Mr. CASE], introduced proposed legislation which is designed to change the Transportation Act of 1958. I completely sympathize with the situation in which the Senators sponsoring such proposed legislation find themselves. They are Senators who have with them the problem of commuters, and what to do about them, and whether we can afford to have the railroad and bus lines which are now serving those areas keep those commuter lines in existence.

The bill which they have introduced will be referred, undoubtedly, to the Committee on Interstate and Foreign Commerce and will, in time, I presume, come to the Subcommittee on Surface Transportation, of which I am the chairman. Therefore, I would not wish to be in the position of prejudging the bill.

However, I gathered from newspaper articles published in the New York Times yesterday and from the statement by the able Senator from New Jersey today that the conclusion is that this difficulty probably originated with the passage of the Transportation Act of 1958. I think that is an unwarranted conclusion. As a matter of fact, the commuter problem is an old one. It is related to a problem which dates back to 1954, namely, the discontinuance of the operation of the Weehawken ferry, which is the particular action to which the Senator from New Jersey objects most strenuously.

An application was filed by the New York Central Railroad in 1954 to discontinue the operation of the Weehawken ferry, which operates between the New Jersey side and the New York side of the Hudson River. It was demonstrated at that time before the Interstate Commerce Commission that the operation of that one ferry had cost the New York Central Railroad, which owns it, in the neighborhood of from $1 million to $1,750,000 from 1954, when the application was first filed, until 1956, when the Interstate Commerce Commission found that the ferry should be discontinued and authorized its discontinuance. That, of course, was long before the passage of the Transportation Act of 1958.

That decision of the Interstate Commerce Commission subsequently was set aside by the circuit court of appeals, on the ground of a definition of the words "discontinuance and abandonment." The court ruled that the Interstate Commerce Commission had the authority to bring about the abandonment but not the discontinuance of the ferry, because, the court said, what was proposed in effect was a discontinuance. The court, therefore, threw the case out.

During the hearings on the bill which was passed last year, a number of persons came before the committee and spoke about the particular problem of commutation service. Everyone agrees that it is a tremendous problem. But the only persons who actually made any complaint whatever before the committee about the proposal to stop commuter service were a group who lived in Connecticut and were fearful that the commutation service between Connecticut and New York would be interrupted or reduced in some fashion.

The president of the New York Central Railroad stated last year that the reason he felt it was necessary for his company to stop the operation of the Weehawken ferry was that the ferry was not being patronized. If people would use the ferry, and if the railroad then could make any money out of its operation, obviously they wanted to do so. The railroad would not ask to have the service stopped if it were in any way profitable. But he went on to say that the operation of the ferry was so unprofitable that if the Government required the company to continue it, in time the whole railroad would be bankrupted, and all the service which it was providing in the eastern part of the United States and in the area of the Great Lakes would, of course, have to be ended.

He further stated that it would be cheaper for the New York Central to buy for each of its regular commuter passengers a new Chevrolet or a new Ford and give it to him, rather than to have to operate the particular commuter service involved, because the railroad was losing so much money from its operation.

So it is necessary to consider this matter in the light of whether the Federal Government will be asked to require a private company, a company owned by private individuals, to continue to lose money on an operation which is demonstrably nonprofitable, one which will not make a profit, certainly at any time in the foreseeable future; or whether the Government will say to the railroad, "You will have to reach into your pocket, give out your money to other citizens, and continue to operate the service, even though you are not a Government-owned corporation, even though you are a privately owned company." I do not know whether the time has come in this country when we want to go that far.

The committee has before it a resolution which was adopted by the Senate last week, providing for a study of the problem. I think a study should be made. Many public issues are involved. I think the time may come when the cities, counties, and States involved will have to provide some relief, because essentially this is more a local problem than it is a problem of the Federal Government. I think it may become necessary for the other respective agencies of government to get together. If they in their wisdom believe that the people who now patronize the commuter service are entitled to some continuance of it, then I think the local Government will have to arrange either to participate in the expense or, possibly, volunteer to take over the ownership.

The problem is not simple; it is complex. It involves more than the problems of commuters in New York and New Jersey. Some of them are in the Chicago and St. Louis areas. The problem is one to which our committee will give full consideration. I hope we can reach a solution. But I emphasize again that it has not arisen only since the passage of the Transportation Act of 1958.

It was agreed by everyone in August of last year, when the bill passed both the Senate and the House without a dissenting vote, that something should be done to try to relieve the railroads. The railroads had a passenger deficit of $726 million in 1957. The passage of the Transportation Act last year was one of the steps taken in the hope that it might be helpful to the railroads.

We would not, as a matter of procedure, want to create a situation in which people would not have their day in court. If it is the opinion of the Senators from New Jersey, New York, and Connecticut that they want another day in court, I certainly would be in-

clined to think that they are entitled to it. But I do not believe the answer to the problem, at the outset, will be to pass the stopgap bill which they have introduced today.

OBLIGATION OF THE FEDERAL GOVERNMENT TO AMERICAN INDIANS

Mr. GOLDWATER. Mr. President, I ask to be listed as a cosponsor of Senate Concurrent Resolution 12, which restates and clarifies the Federal Government's obligation to American Indians. It is high time we eradicated the completely false impression that Congress intends to abandon these citizens regardless of whether or not they are ready to care for themselves.

The resolution can be embraced on both sides of the aisle. It is in effect a bipartisan declaration. The senior Senator from Montana [Mr. MURRAY] introduced it for himself and the junior Senator from Oregon [Mr. NEUBERGER]. He was extremely candid and announced frankly that it was based on a speech by Secretary of the Interior Fred A. Seaton, the administration's spokesman on Indian policy. There will be no plagiarism suit filed.

Secretary Seaton delivered his speech in Arizona. I was with him at the time. We were visiting the Navajo country.

Both of us were concerned over the distorted interpretations of what Congress had in mind in 1953 when it adopted House Concurrent Resolution 108. He asked for my recollection of the debate on that resolution. I replied that I had no doubt that Congress was stating an objective, not an immediate goal, and that we certainly did not contemplate a headlong rush into ending the Government's relationship with Indian groups which still need Federal help.

The points listed in the resolution are taken virtualy verbatim from Secretary Seaton's speech. His remarks did much to clear up the misunderstandings that were circulating. Many leaders of Indian interest groups have applauded the views expressed in the speech. But some misunderstanding still exists. The speech had been viewed in some quarters as an announcement of a new policy, which it is not.

Instead it was a restatement of the policy which Congress enunciated in 1953. However, the fact that this misunderstanding exists is proof of the need for congressional clarification, and the resolution will accomplish it. It is an opportunity for Congress to put its stamp of approval on an expression which is so forthright and clear-cut that it would take a determined effort to misunderstand it.

The resolution will lay to rest the phony report that the Government does not intend to bother with consulting the Indians on their own fate. We are not dealing here with an abstraction, but with people's lives. We respect their opinions and want to have those opinions. Humanitarian considerations aside, there is a coldly practical reason for consulting with the Indians. It can be very expensive to ignore other people's views. We can find ourselves with a program that simply will not work without their cooperation.

Secretary Seaton said it was unthinkable to him that consideration would be given to forcing upon an Indian tribe a so-called termination plan which did not have the understanding and acceptance of a clear majority of the members affected. The resolution goes right down the line in support of that statement, and announces flatly that no consideration will be given such a proposal.

We all know Indian groups can continue to exist as cultural islands, isolated from the general public by language and custom barriers. Secretary Seaton raised a trenchant question on that. He asked:

> Does the majority of the population of such tribes prefer to live in that manner, or does it do so because there seems to be no other choice? Or, does it do so because there is no general awareness of the alternatives?

The key to developing an awareness of the alternatives is education. One of the most pleasing points of the resolution is the emphasis it places on Indian education. This is fully in line with the policy which this Administration has been pursuing since 1953.

Over the past 6 years many Federal schools for Indian children have been rehabilitated and enlarged. Arrangements have been worked out with local public school districts for the enrollment of thousands of additional children. The results are plain for anyone to see.

For example, on the Navajo Reservation, only about 50 percent of the school-age children were receiving an education in 1953. Today the enrollment is almost double what it was then. The school-age population is substantially larger, and approximately 90 percent of the children are in school.

In other Indian areas the need for educational facilities was not so drastic 6 years ago. Consequently the progress has been less striking. But it has been steady and consistent. Over the country the number of Indian children out of school in 1953 was nearly 20,000, or about 15 percent of school-age Indian population. Today that population is substantially larger, but the number out of school has been cut to less than 9,000, or some 6 percent of the total.

Why do I recite these gains?

Because, under the administration's guidance, we are witnessing a dramatic reversal. Just consider that, all the way back to the founding of this Nation, the Indians have been among the most underprivileged from the standpoint of educational opportunity. But now, I believe, more and more the Indian educational facilities are becoming comparable to—and often even superior to—those in non-Indian areas.

Educational opportunities are also being stressed for grownup Indians who missed the full benefits of schooling in their youth. On many of the reservations, as we all know, there are hundreds of men and women who have fine capabilities but are severely limited and handicapped by their lack of an adequate educational background. In a very real sense they are cut off by this handicap from full participation in the political life of their community and Nation and from full enjoyment of the benefits of modern American life. In recognition of this situation, an experimental program in adult education was launched about 4 years ago on five carefully selected reservations.

From that comparatively small beginning the adult education program has grown until today courses of this kind are being given in 75 different localities on Indian reservations or in the native villages of Alaska. In some of these areas Indian people, including many of middle age and beyond, are acquiring for the first time in their lives a basic skill in the English language. They are learning with great pride and immense satisfaction how to read and write and communicate with their non-Indian neighbors.

In other localities, where the problem is not so much one of illiteracy as of insufficient previous education, we are giving the people instruction in a variety of highly practical subjects. Just to mention a few, they are learning how to handle their personal or family incomes in line with a carefully planned budget, how to protect themselves and their children from ordinary health hazards around the home, how to take full advantage of their political rights and prerogatives as citizens of the Nation and of the several States. Their horizons are being broadened and their opportunities for personal growth and development are being tremendously enlarged.

Under the present administration, another comparatively young and closely related program is going forward in the field of adult vocational training. Here the need is also an intensely practical one.

For years one of the basic handicaps of large numbers of Indian people has been their lack of occupational skills. The fact that so many have had to present themselves on the job market as unskilled workers has severely limited both their opportunities for employment and the level of wages that they were able to command. It has been one of the more important causes for the distressing poverty we find on so many reservations.

Now effective action is being taken to equip our younger Indian adults with the kind of skills they need to realize fully their own inherent capacities and potentialities.

Under the provisions of Public Law 959 of the 84th Congress, the Bureau of Indian Affairs has entered into contracts with dozens of trade schools throughout the country. In these schools about 1,000 Indians mainly between the ages of 18 and 35 are enrolled at Government expense. They are being trained for all kinds of occupations. And they are building for themselves and their dependents a better, brighter and more secure kind of future in contrast with the grinding poverty to which most of their parents and grandparents were condemned.

But the Indian progress of recent years is by no means entirely due to governmental action.

Many of the tribes themselves have shown an increasing capacity to plan and carry out broad-scale programs for the benefit of their members. Again, an outstanding example is the Navajo Tribe. Eight or nine years ago the Navajos were widely regarded as one of the most economically depressed and severely handicaped groups in the entire country. In fact, some pessimistic observers even felt that there was no real long-range hope for these Indians and that a very large percentage of the population might have to be kept on a permanent kind of dole.

For a vivid, firsthand account of the situation on the Navajo Reservation today, I would refer any interested person to an article in the current issue of Reader's Digest magazine. As the writer points out, the Navajo people have been uncommonly fortunate since they have realized an income of over $50 million in the past few years from oil and gas leases on their tribal lands.

But the important, the truly encouraging part of the story is what the tribe is doing with this money.

With rare statesmanship the tribal leaders have been stressing capital improvements and practical programs that will produce continuing benefits for many years to come. For example, they have established a $5 million scholarship fund to provide financial assistance for young Navajos pursuing a higher education. They are investing in a new tribal sawmill which will greatly increase their annual income from the forest resources on their reservation under a plan of sustained-yield management. They are working in numerous ways to attract new industrial plants—and new job opportunities—into the general vicinity of the reservation.

These are only a few of the steps which this extraordinary tribe, among others, has taken during the last few years in its march from a past of almost incredible poverty and ignorance straight into the middle years of the 20th century. It is simply one more piece of evidence that Indian people can play an increasingly fruitful part in the broad pattern of our national life if we will just continue to provide them with the kinds of assistance and opportunities that are contemplated in Senate Concurrent Resolution No. 12.

Our American Indians on reservations can best confront their problems if they do not have to continually look over their shoulders to see whether we are trying to leave them.

Adoption of this resolution will give them the last measure of reassurance.

Mr. President, in closing, I wish to state from a lifetime of experience with American Indians that the American Indian has progressed farther and faster during the years of this administration than under any other administration, to my knowledge.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD, in connection with my remarks, an article entitled "The Navajos Feel the Wind of Progress." The article was written by O. K. Armstrong, was published in the Denver Post, and was condensed and published in the Reader's Digest for this month.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NAVAJOS FEEL THE WIND OF PROGRESS

(Condensed from the Denver Post)

"A fresh wind is blowing across our reservation," said Paul Jones, chairman of the Navajo tribal council, as I sat in his office at picturesque Window Rock, Ariz. "It's the wind of progress for our people. Go see for yourself."

Accompanied by tribal leaders and by E. O. Whelan, Bureau of Indian Affairs' expert on industrial development, I traveled over the mesas and valleys of this biggest Indian reservation in the United States. We inspected shiny new schools; we heard the clank of roadbuilding machinery. We saw neat new homes going up to replace the hogans, those tiny log-and-mud huts so characteristic of Navajoland.

These are heartening results of a crusade that is helping these original Americans lift themselves from ignorance and poverty. The program, sponsored jointly by the Navajo Tribal Council and the Bureau of Indian Affairs, moves forward on two major fronts: Education and training for Navajos, young and adult; and the development of industries to create jobs and raise the standard of living, which until a few years ago was one of the lowest of any group in the Nation.

The Navajos now number some 85,000. Their reservation, about the size of West Virginia, covers 16 million acres in Arizona, New Mexico, and Utah. Most of this is arid and infertile, agriculturally fit only for grazing sheep and goats. For generations most families lived in hogans, cooked on open fires or primitive stoves, slept on sheepskins spread on the dirt floor. One sixth of the children died before they were 3 years old. Tuberculosis and diseases caused by malnutrition and lack of sanitation took a shocking toll. Few Navajos spoke English; few children attended school. Steeped in superstition, clouded by illiteracy, these neglected and impoverished people maintained an attitude of suspicion and distrust toward the white man.

Then finally, with the Navajos increasing rapidly in numbers, the very urgency of the problem forced action. In 1950, Congress authorized the appropriation of $88,570,000 for the Navajos and the 3,000 Hopi Indians who live on the Navajo Reservation, for social and economic rehabilitation over a 10-year period. In 1953, Glenn L. Emmons, a banker of Gallup, N. Mex., with a rare understanding of Navajo needs, became Indian commissioner. He secured additional appropriations for schools and industrial expansion. More important, he encourage the Navajo tribal council to unlock huge reservoirs of income by signing contracts with oil companies and other industrial firms to develop the natural resources of their reservation. Up to 1953, oil leases on only 218,860 acres had been let. Now 1,594,609 acres are under lease, bringing the tribal treasury some $50 million, with $2 million more annually from rents and royalties.

In 1954 rich deposits of uranium were discovered on the reservation. Leases for mining this and for coal production brought the tribe $800,000 last year. Development of forest resources will soon add to the total.

Chairman Jones and his council have stanchly resisted every pressure to divide the new riches among their fellow tribesmen and thus dissipate the funds. They are determined to use the money for permanent improvement of the tribe, through education, employment, and health programs. "We know that our people have a long way to go and we're not going to be detoured by quick prosperity." tribal secretary Maurice McCabe said to me.

Under the most ambitious program of schooling ever launched for American Indians, 24 modern schools have been completed and 25 others are on the way. Thirty-three old schools have been modernized. About 1500 children have been placed in public schools in towns bordering the reservation. To be sure that no Navaho youngsters were overlooked, schools were set up in trailers out on the great plateaus.

"The biggest problem," one member of the tribal education committee told me, "is to keep up with the Navajo stork, which is a very fast bird. We'll have 3,000 new kids reaching first grade next September."

A Higher Education Scholarship Fund established by the council provides 174 scholarships for high school graduates to continue their education. Officials hope that these young people will return to the reservation as teachers, doctors, engineers, chemists, to serve their tribe. In addition many teenagers who have completed a special training program can, through carefully organized job placement facilities, go into skilled trades.

The Navajos have eagerly joined the march of industrial progress. The Bureau has helped 2,970 members of the tribe to get jobs in urban communities in many States. "We are proud of the record of these Navajo people," says Robert Culium, the Bureau's area director of relocation. "Reports from their employers shows that they make exceptionally skilled workmen."

Thousands of new jobs must still be created, however, as the maximum number who can make a good living by farming and ranching on the reservation is estimated at only 40,000.

For 1958–59 the tribal council is appropriating $3 million for projects that will create employment for Navajo workers on the reservation and in adjoining towns. An experienced mining engineer, Kenneth N. Garard, has been hired to supervise production of mineral resources, and Leigh P. Hubbard, of Navajo descent, will direct industrial development. All firms developing reservation resources must agree to employ Navajos if they are qualified for the jobs. At a plant in Shiprock, N. Mex., where uranium is milled, 75 percent of the employees are Navajos, including two graduate chemists.

Geologists have long known that an immense deposit of coal lies under 26,000 acres near the eastern edge of the Navajo reservation. The Utah Construction Co. will mine this. The tribe receives up to $1 an acre in rentals and will be paid royalties up to 25 cents a ton.

"The Utah Co. will build an electric power plant to use the coal," Garard explains. "Hundreds of laborers will be needed for construction work. Within 5 years we expect to supply power to new industries that will support 3,000 Navajo families. Ultimately, allied industries will employ 10,000 people."

The tribal forest of pine stands majestically on almost half a million acres of plateau land straddling the Arizona-New Mexico border. In it are nearly 3 billion board feet of lumber. A sawmill north of Fort Defiance, Ariz., has been producing an average of 15 million board feet of lumber a year and employing around 175 men. But a new one will soon be built, capable of cutting 38 million board feet a year. The resources committee of the tribe has completed a plan to harvest the great forest. Following strict conservation methods, the cutters will take out the timber on a sustained-yield basis so that new trees will furnish a constant supply.

"Our income from this new industry should average over $2 million a year," says Reino Sarlin, expert forester. "And the best part of it is that 480 Navajo families will be permanently supported."

Navajo families who want to continue to farm and to raise cattle and sheep receive training and assistance. A tribal loan fund extends credit for contruction of farm homes and purchase of machinery and equipment. More than 4,000 acres of arid land have recently been placed under irrigation.

In a neat modern hospital at Fort Defiance I talked to a young nurse, spotless in her uniform her black hair and bronzed face gleaming under her white cap. "Just imagine," she said, "our babies used to be born in the hogans with chanting medicinemen in attendance. Now more and more of our women are coming here, grateful for the assurance that they and their babies will live."

As the rehabilitation of the Navajos moves forward, ignorance and superstition recede, diseases are conquered, and communities show a new cleanliness and well-being. But far more important is the moral and spiritual betterment that comes from self-support and the knowledge that Navajos are contributing their full share to the life of 20th-century America.

THE HAND OF REUTHER

Mr. GOLDWATER. Mr. President, not too many days ago a subcommittee of one of the Senate committees visited the great State of Michigan, in its attempts to gather information in regard to areas of unemployment or areas which may need distressed-area help. I believe it would have been well for the subcommittee to have read an editorial entitled "The Hand of Reuther," which was published in the Arizona Republic of February 19, as the subcommittee visited Michigan, because I believe from the editorial the subcommittee would have grasped many of the salient facts which lie at the bottom of the Michigan dilemma. I ask unanimous consent that the editorial be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE HAND OF REUTHER

The cold and grasping hand of Walter Reuther has almost choked the economic life out of the State of Michigan. Only through advance payments of $35.5 million in taxes by industry was financial collapse of the State averted last Monday.

Reuther, that would-be dictator of the United States, made himself dictator of Michigan through the election of his puppet, G. Mennen Williams, better known as "Soapy," in the election of 1948. Since "Soapy" became Governor, Michigan has been stricken with a progressive anemia of the economy that has brought about the almost-fatal condition.

Through the period of the Nation's greatest prosperity—1950 to 1956—Michigan was the only State to show a loss in factory jobs, and this during a time when Michigan's greatest industry—automobiles—was in the midst of incredible prosperity.

Indeed, the loss of jobs continues in Michigan, for Chrysler has just announced that its new small car factory will be located in Ohio and not in Michigan. And this is no escape to a low wage State, for Ohio ranks third from the top of the list in factory wages.

During the years since "Soapy" Williams has come to the throne, Michigan has lost 29 new automobile plants to Indiana and Ohio. And the once booming chemical industry in Michigan has been fleeing the State. In 1956 and 1957, new industrial construction was $921,678,000 in Ohio, and $889,-123,000 in Indiana. It was $199,176,000 in Michigan.

"Soapy" Williams' answer to the problems of Michigan is a typical Reuther answer. No thought of cutting spending. No thought of trying to rebuild Michigan's economic health. Just raise the taxes. And what will raising the taxes do but drive away more industry and further decrease the number of jobs? "Soapy" wants to raise the tax on business profits and boost the income tax bite on higher wage brackets. And there goes more capital out of Michigan. Anyone knows that only through the use of capital can jobs be created. Take away the capital, and you take away the jobs.

Of course, what you see in operation in Michigan is the ideal plan for creation of socialism for the Nation. The conclusion of such a process can only be the economic death of a State. The only place the State can turn is to the Federal Government. And if all States did the same, socialism would be an accomplished fact in these United States. And this plan is accentuated by strings in the hands of Walter Reuther, whose hands also strive for control of the entire Democratic Party and eventually control of the entire Nation.

The other 48 States would do well to watch this Michigan picture and learn from it the evil that can come through profligate use of the tax and spend theory. The evil that is so close to destroying Michigan could, as well, destroy the Nation.

SUPPORT OF THE BRICKER AMENDMENT

Mr. DOUGLAS. Mr. President, last July, in the course of hearings before the Senate Public Works Committee, I made an error when I stated that, in my judgment, Mr. Charles E. Martin had been a sponsor of the so-called Bricker amendment. I find that that is not correct.

I have prepared a letter of apology which I have sent to Mr. Martin; and I ask unanimous consent that my letter of apology be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 2, 1959.

Mr. CHARLES E. MARTIN,
Director, Institute of International Affairs, University of Washington, Seattle, Wash.

DEAR PROFESSOR MARTIN: On July 28, 1958, at hearings before the Senate Public Works Committee your name was cited by Senator NEUBERGER as an authority on the international aspects of the Lake Michigan diversion bill which was then before us.

At the time I stated that you were commonly believed to have been the author of the so-called Bricker amendment and that such authorship, among other things, would in my opinion, not qualify you as an eminent authority on international law.

I now find that my reference to you was one of mistaken identity and since my remarks were not complimentary I wish to withdraw them without prejudice.

I am sorry to have made such a mistake and while I, of course, disagree with you on the question of lake diversion and its international effects, I want you to know that my statements concerning your past authorship of the Bricker amendment and my opinion which naturally flowed from believing you to be the author, were wholly mistaken.

I hope you may take this as a withdrawal of those remarks and I am asking that this letter be printed in the CONGRESSIONAL RECORD so that all may know that I was mistaken in this respect.

With very best wishes to you and my apologies for any inconvenience my remarks may have caused you.

Faithfully,

PAUL H. DOUGLAS.

SENATOR KERR, OF OKLAHOMA

Mr. MONRONEY. Mr. President, Oklahoma is lucky in having been the birthplace of Senator BOB KERR.

Not only has the fortunate circumstance of his birth in old Indian Territory given us strong and effective political leadership, from Governor to senior Senator, but his love for his native State has produced in him the greatest advocate and builder of Oklahoma in our history.

Political leadership is found in many men; but when it is coupled with a determined vigor, backed with millions of dollars of his own money to build industry within the State, it deserves special notice and appreciation. His benevolence in religious and charitable institutions; his drive for building up the State's resources, particularly in the field of water development; his constant attention, within his own huge company, and with others, in adding industrial payrolls to our economy, all mark him as true industrial statesman. His ever constant attention is to improving Oklahoma's agricultural and natural resources.

He has embellished this picture with his colorful style of debate, which has become a legend in the Senate, and in his nationwide reputation as an effective speaker.

Fortune magazine, with its great circulation among America's businessmen, has just published an article entitled "Senator BOB KERR, the Oklahoma Gusher." The article was written by Daniel Seligman, and I desire to read it to the Senate. It describes vividly the many sided career, the colorful personality, and the achievements of this distinguished native son of Oklahoma.

I read now the article published in Fortune magazine:

SENATOR BOB KERR, THE OKLAHOMA GUSHER

(By Daniel Seligman)

(As a businessman, the chairman of Kerr-McGee Oil, he has made millions. As a politician, he is a bogeyman to many businessmen and bankers. He is also the best rough-and-tumble debater in the U.S. Senate today.)

ROBERT SAMUEL KERR, of Oklahoma, is one of the most powerful men in the U.S. Senate. He is also that body's most successful and wealthiest businessman; he is the main founder and largest stockholder of Kerr-McGee Oil Industries, Inc., a fabulously successful company still expanding rapidly in several different directions. He has built up a personal fortune worth about $35 million, and his gross income in most recent years has run around $600,000. Considering KERR's stature as a capitalist, it may seem odd that so many conservatives in the U. S. look upon him as a bogeyman. But the fact is that they do.

When, early last year, Senator HARRY BYRD announced that he would not run for reelection in 1958, a sizable number of KERR's

fellow businessmen, and most bankers, were dismayed. BYRD's retirement would mean that KERR would take over as chairman of the powerful Finance Committee, which is concerned with legislation relating to Federal revenues and debt, tariffs and trade, and fiscal policy generally. After some strenuous appeals from conservatives, BYRD reversed his decision. This still leaves KERR the No. 2 man on the committee, and in a position he knows how to exploit. Why do so many fellow businessmen hold KERR in dread?

In some respects KERR is a throwback in American politics. He often seems to speak in the accents of the agrarian radicals who organized the Populist movement in the 1890's and who later gained control of the Democratic Party under the leadership of William Jennings Bryan. In his strictures against big eastern bankers, in his impassioned arguments against hard money and for the farmer's way of life, multimillionaire KERR often sounds oddly reminiscent of Bryan. KERR's father was, in fact, an ardent Bryan Democrat; and the Senator likes to tell the story about the time his father in refusing him permission to play football at college, wrote him, "I would rather have made Bryan's cross-of-gold speech than to have won every athletic contest staged on this earth since Cain and Abel ran their first foot race on the banks of the Euphrates."

Perhaps because he has been preeminent in so many different ways—his career also includes a term as Governor of Oklahoma—BOB KERR is a man of vast, almost breathtaking self-confidence. This confidence was not shattered even after his failure, in 1952, to win the Democratic nomination for the Presidency. KERR wanted the nomination badly and, rejecting the opinion of many friends, seriously thought he could win. "It would appear," he commented recently, with a broad smile, "that the people did not realize what a superior product was being offered them." But he is reluctantly persuaded now that an "oil millionaire" like himself stands no chance of winning the top office. He did not offer himself as a candidate in 1956, and he has stated that in 1960 he will be running for nothing except a third term in the U.S. Senate. He will then be 64, and can still entertain the hope of one day becoming chairman of the Finance Committee.

THE MASTER OF THE INSULT

Actually a very genial fellow, he can be as scary a figure on Capitol Hill as in the banking world. It would be possible to compile a long list of KERR's fellow Senators whose intelligence and capability he has, in the course of debate, compared very unfavorably with his own. He is able to get away with these breaches of senatorial courtesy for several reasons. For one thing, he tends to be in control of any discussion in which he participates, and any Senator who ventures to talk back runs the risk of being buried under an avalanche of wisecracks, ornately stylish rhetoric, and hard facts—KERR's mastery of detail is remarkable. His sheer physical presence is imposing: he stands 6 feet 3 and weighs 220 pounds. Even though his sallies are characteristically delivered in a bland, amiable, and altogether good-natured manner, and though he has the engaging habit of occasionally kidding himself, several Senators have as much as admitted that when KERR rises to argue with them, their instinct is to run for the cloakroom, Senator ALBERT GORE, of Tennessee, has paid KERR the ambiguous compliment of remarking that "the distinguished senior Senator from Oklahoma can take the least amount of information and look and act more authoritative than any man in the world." GORE cites the 1954 debate on atomic-energy legislation. "I came to the senior Senator from Oklahoma and suggested that we needed a speech made on the basic details of the patent questions, and the Senator said, 'What is it?' I had prepared about one page, and he spoke for 3 hours and a half, authoritatively." The late Senator Kenneth Wherry, of Nebraska, once paid KERR another dubious compliment when he noted that the latter was the only man he had ever met whom he could not outshout.

But, in general, KERR does not have to rely on shouting to silence his antagonists; most of the time he can rely on his superior talent for insulting them and for thinking faster than they do. In the course of a debate in April 1952, for example, KERR remarked that Senator Homer Ferguson, of Michigan, appeared to be confused about a pending bill. Another Republican rose rashly to Ferguson's defense and suggested that KERR was confused—and that his confusion might be related to the beating he had just taken in the Nebraska presidential primary. The ensuing avalanche is a fair example of KERR's rhetorical style: "The Senator from Oklahoma wishes to say that he is not confused as to what happened in Nebraska, nor was the result so detrimental that he is unable to recognize at this time another chapter in the continuing confusion of the distinguished Senator from Michigan. So far as I know, the Senator from Michigan has had no such jolt in the recent past as to justify the belief that the condition under which he labors at the present time is either temporary or that with reference to it there is any hope of recovery or improvement."

HIS CHERISHED COLLEAGUES

Senator PAUL DOUGLAS, of Illinois, who is something of a wit, has been one of KERR's principal antagonists over the years, and their exchanges on a wide range of issues have provided some memorable colloquies. KERR is an ardent protectionist, particularly with reference to Oklahoma industry, and during a debate on tariffs last year he began to read into the RECORD a list of industries that, he maintained, had been sorely damaged by foreign imports. DOUGLAS rose and inquired waggishly whether the Senator from Oklahoma was going to mention the Pregnant Mares' Urine Association (a trade group concerned with the manufacture of sex hormones) on his list of industries suing for tariff relief. "No, Mr. President," KERR responded, "but I know that the Senator from Illinois, being an authority on it, would be glad to inform the Senate about it—not that I think the Senator from Illinois would be an exhibit. I want it clearly understood," said KERR, raising his voice over the yawks that were echoing around the Chamber, "that I did not mean that."

Probably the greatest fuss KERR has stirred up in recent years stemmed from his assertion, made in the course of a 1957 debate on finance, that no man can help Eisenhower study the fiscal policies of this Government, because one cannot do that without brains, and he does not have them. This statement precipitated an uproar in the Senate, with HOMER CAPEHART, the Indiana Republican, leading the protests. After he had been advised by several of his Democratic colleagues that it might be wise to temper the statement somewhat, KERR amended it to read that the President had no fiscal brains. This emendation failed, understandably, to mollify CAPEHART—especially when KERR further clarified his stand by remarking: "I do not say that the President has no brains at all. I reserve that broad and sweeping accusation for some of my cherished colleagues in this body." Instead of leaving bad enough alone, CAPEHART persisted in voicing his outrage, and inquired of KERR as to the identity of those "cherished colleagues." It was a courageous but ill-advised move. KERR rose and asked that his remarks be further amended. "I desire to have the word 'some' changed to 'one,' and the word 'colleagues' changed to the word 'colleague.'" CAPEHART probably did not improve his situation by retorting that he "would rather be a friend of the President of the United States without any brains, than to be a friend of the Senator from Oklahoma with brains."

KERR alleges, with a smile, that he never gives it to others unless they ask for it. The view is widely held in the Senate, however, that you ask for it any time you cross BOB KERR. "I think he sometimes gets too personal in debate," says his junior colleague from Oklahoma, A. S. MIKE MONRONEY. "But I must say, he's absolutely fearless; he'll take on anyone. And he gets results. When he wants some Government department to do something for Oklahoma, he'll give them a rough time until he gets it. Actually, we work well as a team; BOB roughs them up and I smooth them down. We laugh about it sometimes."

FIFTEEN THOUSAND DOLLARS WORTH OF ARGUMENTS

Aside from "agrarian radicalism," it is hard to find a label for KERR's ideology. He is less likely than MONRONEY to vote with the northern liberals. In fact, he has shown virtually no interest in the issues that, in recent years, have been the main preoccupations of the liberals in both parties—e.g., segregation, McCarthyism, labor law, civil liberties, aid to underdeveloped nations. On most of these issues he votes routinely with the Democratic center—i.e., the moderates whose principal spokesman is the majority leader, Senator LYNDON JOHNSON of Texas. KERR is a good friend of JOHNSON'S, and is warmly advocating him for the Democratic nomination in 1960.

But if KERR is not a liberal, he is just as clearly not a conservative. In the majority of senatorial arguments between the spenders and the budget cutters KERR is firmly alined with the spenders. It is KERR's contention that last year's recession was brought on by tight money, excessive foreign imports, and Ezra Benson's program of flexible farm price supports. These views are, roughly speaking, the opposite of those upheld by the Eisenhower administration and the Federal Reserve Board—as KERR demonstrated, at considerable length, in the Senate's 1957–58 investigation of the financial condition of the United States. The hearings were presided over by Senator BYRD—who is a conservative—but most of the Finance Committee's time was taken up in listening to the wrangles between KERR, on one side, and officials of the Treasury (including George Humphrey) and several representatives of the FRB on the other. KERR was, as usual, carefully prepared—he had spent $15,000 to procure some exhaustive research—and, also as usual, he had the last word in all the arguments. At times KERR was outrageously demagogic in advancing his own point of view. At one point Marriner Eccles, of Utah, the former Chairman of the FRB, tried to argue that the damage done to some industries by imports was offset by gains to other industries dependent on exports, to which KERR responded: "Would you have any difficulty convincing the miners in Utah and Oklahoma of the validity of that equal benefit? * * * not that the convincing of their minds would relieve the pangs of hunger in their bodies * * *." But on balance, his performance was brilliant; and a reading of the transcript suggests that he had absorbed a staggering fund of information about the U.S. monetary situation and that, right or wrong, he had thought about it carefully. Some of the incidental flavor of the hearings may be conveyed by citing an exchange between KERR and William McChesney Martin, Jr., who is the present Chairman of the FRB, and normally a lucid and articulate man:

Senator KERR. You said in your report we had achieved a degree of economic stability in 1952.

"Mr. MARTIN. That is right.

"Senator KERR. Why are you saying now you were moving in 1953 to overcome the inflationary situation of 1952?

"Mr. MARTIN. It got out of hand here. Do you want to comment on this?

"Senator KERR. You are the one who made the statement.

"Mr. MARTIN. Well, I stand on the statement.

"Senator KERR. You can't stand on both of them, because they are in contradiction to each other.

"Mr. MARTIN. Mr. Riefler, I have gotten confused under the questioning. Will you bail me out on this?

"Senator KERR. Who are you?

"Mr. MARTIN. This is Mr. Riefler (assistant to the Chairman of the FRB).

"Senator KERR. I'll tell you, if you can bail him out of that one, I want to get acquainted with you.

"Mr. RIEFLER. I thought he wanted to correct himself. He was not saying in 1951–52 we were having active inflation.

"Senator KERR. You can say that is what he wanted?

"Mr. RIEFLER. That is right.

"Senator KERR. I tell you if you can read men's minds, I want you out of this room."

SCRIPTURES VERSUS REPUBLICANS

Like William Jennings Bryan, KERR is a deeply religious man of fundamentalist inclinations: he contributes 30 percent of his income, the deductible maximum, mainly to the Baptist church, and for many years he has made a practice of teaching a Sunday school class. His biblical learning is, in fact, one of his major resources in debating. On one famous occasion, in 1950, KERR used Hebrews 13 to the considerable detriment of a candidate running against MONRONEY. The candidate was the Rev. W. H. Bill Alexander, who one day announced to his congregation that, after communion with the Almighty, he had decided to enter the Democratic primary elections and run for the Senate. Soon afterward he switched over, and won the Republican nomination. Even though KERR was a good personal friend of Alexander's, he stumped the State for MONRONEY, and on every possible occasion raised this interesting question: "If the Lord told Bill Alexander to run as a Democrat, who told him to become a Republican? 'Remember them which have the rule over you, who have spoken unto you the word of God: whose faith follow * * * Jesus Christ the same yesterday, and today, and forever.' " The Reverend Mr. Alexander never had a chance. It is an indicator of KERR's broad political tolerance—or perhaps of Alexander's—that the two men are still good friends and often play gin rummy together.

A final parallel with the politics of the old agrarian era: KERR, like Bryan, is personally and politically a dry. (Prohibition is the law in Oklahoma, if not exactly the fact.) He feels intensely that liquor is an unmitigated social evil—several persons who are close to him have suffered from alcoholism—and he will not serve it in his home. This policy creates certain social problems in Washington, D.C., a notoriously wet city. Soon after KERR came to the Senate, he threw a huge party to which he invited virtually every prominent Democrat in town, including many (Truman among them) who like a drink. KERR spread the word that he would not provide any drinks. However, he had had the foresight to hold the affair at a local country club, rather than at his home; which meant that the guests could, if they wanted to, buy themselves drinks at an adjacent bar.

He does not smoke either, but he has a passion for sweets, and in consequence is engaged in a continuing struggle to hold his weight down. He is possibly the leading patron in all Oklahoma of the frozen custard stands which adorn that State's roadsides and, according to one of his drivers, "will not pass by a Dairy Queen even at 7 in the morning."

THE VIEW FROM OKLAHOMA

KERR's approach to most political problems is (unlike Bryan's) rather "provincial"; indeed, he volunteers that word himself, with no visible abashment. It appears that his principal criterion in gaging the merit of any political proposal is: What's in it for Oklahoma? His protectionist sentiments, for example, are based on the deleterious effect that foreign imports have had on the Oklahoma lead, zinc, and oil industries. His repeated sponsorship of legislation to expand social-security coverage is related to the fact that Oklahoma has a high proportion of pensioners and older persons. MONRONEY has been preoccupied much of the time with issues that are national in scope, e.g., foreign aid; KERR has not. (Ironically, he has been assigned, against his wishes, to the Senate's new Space Committee.)

There was even an "Oklahoma angle" in KERR's spirited defense of President Truman during the uproar that followed General MacArthur's dismissal in April 1951. At first, KERR was almost alone in the Senate in standing up for the Chief Executive; and he more than held his own against such redoubtable Republican opponents as Robert A. Taft, RICHARD NIXON, and William Knowland. KERR's attack on MacArthur was warmly applauded by the liberal press; and in a book called "Citadel, The Story of the United States Senate," William S. White praised KERR for upholding "the great democratic principle of civil control of the military."

But the liberals entirely misunderstood what KERR was up to. Much of his fury against MacArthur derived from his concern that the General's strategy might call for the use on the Chinese mainland of semitrained National Guard troops then en route to Japan; and about half of these troops were the men of Oklahoma's famed 45th (Thunderbird) Division. KERR had felt strongly that MacArthur was wrong even before the President fired him; in fact, KERR had publicly criticized him and privately asked the President to get rid of the General. His request carried some weight, for Truman owed KERR a real political debt at this time: a year previously, Truman had vetoed KERR's bill to free independent gas producers from regulation by the Federal Power Commission; he had exercised this veto under pressure from northern liberals in his party, and despite the fact that the Kerr bill had originally been "cleared" with the White House.

WIND AND WATER

Actually, the problem that has most engaged KERR's energies since he went into politics is one few citizens outside Oklahoma can be expected to know or care much about. The problem is the development of the State's natural resources, and KERR has dramatized his interest in it by adopting as his political slogan the phrase "Land, Wood, and Water." His opponents have long referred to it, derisively, as "Land, Wood, Wind, and Water," and even KERR's friends sometimes, absentmindedly, repeat the caricature rather than the original. In the last few years, however, the point of this little joke has been blunted by KERR's success in bringing what did, at first, have a visionary look about it somewhat closer to completion.

The principal element in the program is water. Soon after KERR was elected to the Senate, he introduced and secured passage of a bill providing for the establishment of an "Arkansas-White-Red Basins Interagency Committee." The AWRBIAC, as it is actually called, spent 5 years and $7 million devising a program for the development of water resources in Oklahoma and several adjoining States. The program includes some projects previously authorized by Congress; all together, the cost of the water program KERR is working for would be $2 billion, to be spent over about 20 years. The program is "fully integrated," i.e., the projects complement one another, and are intended simultaneously to solve several problems. They include a series of hydroelectric projects, which will give the State 933,500 kilowatts of power by 1980 (against only 166,500 kilowatts installed now); a vast increase in irrigation facilities, especially in western Oklahoma, much of which is now arid; a series of as many as 75 major reservoirs in the State by 1980; a substantial buildup in the State's inland-waterway system, part of which will be attained by making the Arkansas River navigable; upstream flood-prevention and water-control measures throughout the State; and a wide variety of other benefits, including recreational facilities, pollution abatement, and mosquito control.

OUR FUTURE WATCHDOG

Congressional appropriations for this program will have to come piecemeal; thus far, $286 million has been spent on completed projects in Oklahoma, and appropriations are currently running $60 million a year. As chairman of the Public Works Subcommittee on Flood Control, Rivers and Harbors, KERR is in a good position to fight for the program.

The program will, of course, meet considerable resistance from the hated "budget cutters," a fact to which KERR frequently alludes with heavy sarcasm in his Oklahoma speaking engagements. In many of these speeches he will tell this story: "Not long ago I was at a meeting where HARRY BYRD was introduced as the 'watchdog of the Federal Treasury,' and I was introduced as the man who wasn't. So I got up and told them that in all the years since our Federal Union was founded, there had been more U.S. Government money spent in the State of Virginia than in any other State. And I said that just as soon as I got it so that more was spent in Oklahoma than any other State—then I'd become the watchdog of the Treasury." Oklahomans seem to like this story a lot.

KERR is, understandably, a speaker much in demand in Oklahoma. When Congress is not in session he averages perhaps 25 speeches a month all over the State—he travels much of the time in one of several planes provided by Kerr-McGee—and he is ordinarily booked up for 4 to 6 weeks in advance. At 62, he is still a strong man physically, and he is one of those very rare individuals who are both completely relaxed and perfectly disciplined. He makes it look easy. When he flies into some small community in Oklahoma to deliver a speech he will, ordinarily, be met at the airport by several local Democratic personages. He will inquire briefly "what the folks want to hear about," digest the answer, chat for a while about local conditions, and then, on the drive into town, catch perhaps 20 minutes of sleep while sitting in the car. His talks begin and end on time, and consist precisely of what the folks want to hear about.

PARADISE MISSING

KERR is one of the few politicians around these days who was born in a log cabin. This was near Ada, in Indian Territory, 11 years before the Territory became the State of Oklahoma. He weighed 12 pounds at birth, and was the second of seven children (the eldest of five sons). His parents were both of Scotch-Irish extraction. Though KERR grew up in the era portrayed in "Oklahoma!" his boyhood bore little relation to the pastoral paradise celebrated by Rodgers and Hammerstein. Robert never had an overcoat until he was in college and a classmate gave him an old one in payment of a $1.50 debt. However, his father, who was a man of some eloquence and learning had big

plans for the boys. He encouraged them to go into politics, and KERR says that fairly early in life he had resolved that there were three things he wanted: a family, a million dollars, and the governorship—in that sequence. And that was the sequence he got them in.

In 1925, he married Grayce Breene, a pretty, soft-spoken woman, and over the next dozen years the Kerrs had three sons and a daughter. They are a close knit and very happy family. The young Kerrs seem to be neither awed by their father nor inclined to rebellion. The Senator's oldest son, Robert Jr., is a lawyer who, in partnership with the Senator's brother Aubrey, handles some of Kerr-McGee's legal business. Another son, Breene, is a geologist and engineer with Kerr-McGee. Both Breene and Robert Jr. are also directors of the company and, like the Senator's daughter Kay, who is married to a marketing man at Kerr-McGee, and the youngest son, William, who is still attending the University of Oklahoma, they are now substantial shareholders in the company: each of their families owns roughly 20,000 shares of the company's common stock, worth about $1,200,000 at recent prices. If all this has a look of nepotism about it, and it certainly does, there is the mitigating fact that the young beneficiaries are all obviously talented in their own right. (Two of the Senator's brothers also hold executive positions in the company, but one of them, Travis M. Kerr, devotes much of his time to horse racing; his Kerr Stable has been vastly successful, and in 1958 his horses—including the "horse of the year," Round Table—were second only to those of Calumet Farm in purses won.)

Getting his first million dollars took KERR a little more time than raising a family. Although he had never graduated from college, he passed the bar examination in 1922, and later became a law partner of a judge in Ada. He also tried his hand, during the early 1920's, at organizing a produce business in Ada, but his produce house went up in flames one night. When he married Grayce Breene, he was earning $125 a month from his legal business and was $10,000 in debt. KERR was always fearless about going into debt whenever he thought he saw a chance to make big money, and this policy of "aggressive borrowing" has characterized Kerr-McGee over the years.

THE FIRST MILLIONS

The origins of the company, and of KERR's fortune, may be traced back to 1926, when he undertook some legal work for a small contract-drilling firm. The firm's chief fieldman was James L. Anderson, who was married to KERR's sister Mildred. Soon afterward, KERR and Anderson borrowed $30,000 and bought out the local bankers who had the major interest in the firm. KERR gave up his law practice, and the firm, now called Anderson-Kerr Drilling Co., set up headquarters in Oklahoma City. Anderson had a nose for oil, and an ability to drill cheaper than his competitors; and KERR had a talent for finding investment capital, and separating it from its owners.

Their first breakthrough into the big money came in 1932, and was the result of a daring speculation. It had recently been established that there were fabulous oil reserves within the limits of Oklahoma City, but many oil companies refused to go into town lot drilling, because there was danger of serious damage to property and of accidents; the city itself required drillers to post a $200,000 bond for each well. Anderson-Kerr nevertheless borrowed enough money to get four such leases, and it got two more in partnership with a friend of KERR's. The firm did not have enough money to post the required bond, but got it when KERR sold Continental Oil Co. on this proposition: Continental would pay $360,000 for a half-interest in the six wells, and would advance another $15,000 apiece when they were drilled—a total of $450,000. Anderson-Kerr kept the other half-interest, but pledged that any revenues from half of their half-interest would go to paying off the $15,000 advances from Continental. As it happened, all the wells came in, Continental was soon reimbursed, and Anderson-Kerr cleared close to $2 million.

A JOB FOR PHILLIPS

KERR's next big break came in 1935, when he was visited one day by K. S. (Boots) Adams, now the chairman of Phillips Petroleum, but then assistant to President Frank Phillips. At that time Phillips Petroleum held a lot of valuable leases in Oklahoma City—or, rather, leases that would be valuable if the citizens of Oklahoma City could be persuaded to vote for permitting their exploitation. (After some early drilling accidents in the city, an ordinance was passed requiring the voters' approval of any extension of the drilling zone farther into Oklahoma City.) Adams asked KERR how much trouble he thought it would be to win an extension on the Oklahoma City field. KERR said it would be no trouble at all. Adams then asked if KERR would be willing to manage the campaign for extension. KERR said he'd be happy to. Adams then inquired what the fee would be and KERR said he wouldn't charge Phillips for his services—except, he added, there was one favor he would ask for Anderson-Kerr. That was an opportunity for the firm to have first chance, on a competitive basis, to bid for Phillips' drilling contracts in the city. Adams agreed to this condition, and KERR—in his first big venture into politics—ran a whirlwind campaign that ended with an overwhelming vote for extension. In 1936 he managed a campaign for a further extension of the drilling area, and won that too.

Anderson-Kerr made a small fortune drilling in Oklahoma City, and KERR also began his long and profitable history of collaboration with Phillips Petroleum. One immediate byproduct of this association was the acquisition of Dean A. McGee. In 1935, after Anderson had decided to cash in his chips and retire, KERR looked around for someone to take his place. He persuaded two men to leave Phillips; one of them was McGee, who had been Phillips' chief geologist. Both men were willing to leave Phillips because KERR offered them a partnership in his firm. It is a tribute to KERR's diplomatic talents that he was able to take both men and still remain on warm terms with Phillips Petroleum, which correctly regarded McGee as one of the greatest geologists in the oil industry, and felt his loss keenly. Some time later, KERR recalls, he was pressing Frank Phillips for a contribution to a Baptist orphans' home. Phillips agreed to give $100,000, but remarked that he'd "rather give $500,000 and have it that you'd left those boys alone." Over a period of about 10 years KERR's firm had an arrangement with Phillips which provided that the latter would get a half-interest in acreage acquired under McGee's supervision, but would pay three-quarters of the cost of his exploration, lease acquisition, and exploratory drilling. Phillips and Kerr-McGee (this became the company's name in 1946) have gone in together on oil ventures in, among other places, Alaska, Venezuela, and the Louisiana tidelands.

Since 1942, when KERR was elected Governor, McGee has been, in effect, running the company's operations. In 1954, when KERR was running for his second term in the Senate—and facing compaign charges that he was not spending enough time on his job in the Senate—he stepped down as president and McGee took over that title. KERR is still chairman of the board, however, and still participates actively in all policy decisions.

HOW THE CASH FLOWS

Both men are fervent expansionists, and in the pursuit of outside capital they have diluted their original equity in several public stock offerings. (KERR now owns 11 percent of the company's common stock. Mrs. Kerr owns another 8 percent, their children's families own a total of 3 percent, and McGee owns 6 percent.) KERR and McGee have also increased the company's cash flow, recently running about $18 million a year, by building up those parts of the business—for example, refining—that offered depreciation as well as profit possibilities. Kerr-McGee now owns or controls about a quarter of all known uranium reserves in the United States and has a large concentrating mill; it also has an 8-year contract with the Atomic Energy Commission providing for the sale of over $300 million worth of uranium, beginning this year. The company's cash flow from uranium alone over these years is likely to run over $10 million annually.

KERR and McGee, in general, have no interest in applying their growing cash flow against their $70 million of long-term debt; instead, they are looking for areas to expand into, especially new fuels. Boron and beryllium are among their major interests now, and they already have a sizable and intriguing investment in potash, in partnership with a rather incongruous capitalist. This was acquired after James Patton, president of the left-of-center National Farmers Union, called on KERR one day in 1954 and said his organization had acquired leases on over 20,000 acres of land in New Mexico's potash basin north of Carlsbad. The NFU wanted a partner to help it exploit a newly discovered potash deposit. McGee worked out the details with Patton, and Kerr-McGee soon had a half interest in 165 million tons of potash.

Not long afterward, KERR had dinner with his old friend Boots Adams, who said that Phillips might like to get in on the potash too. "I told him," KERR recalls, "that he shouldn't get in on any deal with the Farmers Union. I said he was a big businessman, and his company might not want to get in with people who go around organizing cooperatives, and fighting for public power. I was just needling him, see." When the needling was over, KERR agreed to let Phillips take over half of Kerr-McGee's interest and obligations in potash. KERR expects that even the quarter-interest that his company retains in the potash fields will be a big moneymaker beginning in a few years; it might, he guessed recently, net Kerr-McGee $100 million over a 25-year period. (McGee's estimate is much more conservative.)

HOW TO BECOME GOVERNOR

While he was first building up the company, KERR was also building up a political reputation. He went into American Legion politics and was elected State commander in 1925, and he used the office to make scores of public speeches in all parts of Oklahoma. Almost as soon as he made any appreciable sums of money, he became a steady contributor to the Democratic cause in the State; and by 1940 he was a major source of funds for the party and was elected a national committeeman. In 1935, KERR was asked by the Mid-Continent Oil and Gas Association to direct its public-relations activities in Oklahoma and Kansas. Characteristically, KERR offered to take on the job without pay—if the members of the association would allow Anderson-Kerr to compete for contract-drilling jobs. This deal was struck, and KERR became well known in the late 1930's as a spokesman for the gas and oil industries. When the association asked him in 1941 to serve another term on the job, he declined and informed several of its officials that he planned instead to run for Governor. "I told them," he says with a chuckle, "that

if I lost the election, they wouldn't want me, and if I won it, they wouldn't need a man in the job."

In the 1942 gubernatorial primaries, KERR ran as a Roosevelt Democrat, and beat the other contenders by a narrow margin. In the November election, his margin was again narrow; the majority, some 16,500, was the smallest given any Democratic Governor in 28 years. Its size reflected principally the strength of anti-Roosevelt and isolationist sentiment in the State.

Businessmen who react violently to KERR's current economic pronouncements may be surprised to know that his administration was rather conservative. He reduced the level of State expenditures and applied the surplus to retirement of the State debt. There was a minimum of pork-barreling.

Because of his talent for stemwinding oratory, and the generally favorable impression he was creating as Governor, Roosevelt picked him for keynote speaker at the 1944 Democratic National Convention. KERR seized with delight upon the opportunity to make a national impression. He speedily rejected the 40-page speech prepared for him by a platoon of Democratic writers, and holed up for 3 weeks in Minnesota, working on a new effort. "I saved one sentence from that ghost job they gave me," he says. "It was a good sentence." When he returned to Washington with his own speech, Paul A. Porter, of the Democratic National Committee, tried to make some changes in it. "All right, Paul," KERR said solemnly, "you make the speech." KERR, of course, ended up making his own speech in his own way.

BETTER THAN COTTON

When his term ended, in 1947, KERR was considerably more popular throughout Oklahoma than he had been when he came into office. He easily won the nomination for the Senate in 1948, and easily won the election; Republicans have always had a rough time of it in Oklahoma. In 1954, however, KERR was hard pressed to win the Democratic primary race. He was running this time against Roy Turner, who was also a popular ex-Governor—and who was also a millionaire (oil and cattle). It was widely forecast in Oklahoma, before the primaries, that a Kerr-Turner match would pour more money into the State than a good cotton crop. The spending was indeed fabulous. In this campaign, as in all his others, KERR spent a considerable amount just to buy himself a scientifically conducted survey of voter sentiment in advance of the election. He says his own polls have never been off by more than 1 or 2 percent.

The strands of business and politics have been interwoven in BOB KERR's career in a way that some observers—including some U.S. Senators—consider to be improper. KERR's business interests, after all, are vast and varied, and his fortunes can be seriously affected by the way issues are decided in Congress. Among the odds and ends in his capacious portfolio, for example, are interests in radio and television stations; and KERR must vote on nominees to the Federal Communications Commission. Kerr-McGee does business with the Atomic Energy Commission, whose nominees he also helps to decide upon. And, of course, the company's earnings would be affected by any legislation that reduced the depletion allowance on oil and other minerals. (Several northern liberals have already indicated that they will press for a reduction of the allowance in this session of Congress; KERR does not believe they have any chance of winning.) Since Kerr-McGee also produces natural gas, it had a stake in the Kerr bill, which Truman vetoed in 1950.

KERR AND THE PAUPERS

KERR is not the least bit unwilling to discuss his own situation, if the conflict-of-interest issue is raised with him, and he will cheerfully tell you that the issue is a lot of nonsense. First he will remind you that on the crucial votes affecting his big holdings, any Oklahoma Senator would vote as he does. Then he will point out that every Member of the U.S. Congress has some income that is affected by tax or other legislation; and that unless a man comes to Congress bearing a certified pauper's oath, he is bound to vote on some issues that affect his own property. Finally, he will point out that his own holdings are out in the open and so are his economic convictions; and the voters of Oklahoma have apparently seen nothing amiss about either of them.

He does not think it likely that the voters will reject him when he runs in 1960. Some have speculated that KERR might have trouble that year if Congressman ED EDMONDSON, backed up by his brother Howard, the new Governor—who is a brilliant campaigner—made a race for the Senate. But KERR is supremely self-confident about the race. As he is, in fact, about everything he takes on.

Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. YOUNG of Ohio in the chair). Without objection, it is so ordered.

ORDER FOR RECESS TO TOMORROW AT 10:30 A.M.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that when the Senate concludes its deliberations today it stand in recess until 10:30 a.m. tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE PROGRAM

Mr. JOHNSON of Texas. Mr. President, I should like to inform the Senate that it is our plan to discuss S. 1096, the space bill, which is an authorization bill involving some $48 million. The distinguished Senator from Mississippi [Mr. STENNIS] will explain the bill in detail, and some of my colleagues on the committee will also have remarks to make concerning the bill.

At the conclusion of discussion on the bill we shall have a yea-and-nay vote on passage of the bill.

We then expect to proceed to consider House bill 2260, to provide for an extension of the draft, which bill has been reported by the Committee on Armed Services. The report and the hearings will be available to all Members on their desks. The Senator from Georgia [Mr. RUSSELL], the chairman of the committee, will present the bill. When discussions are concluded on the bill we shall have a yea-and-nay vote on passage of the bill.

It is very difficult to anticipate how long Senators may talk on any subject, but so far as we have been informed we expect to conclude action on both of those bills tomorrow—at least we hope we can—and then proceed to the consideration of S. 50, the bill to provide Hawaiian statehood. We expect to come in early on Wednesday and discuss Hawaiian statehood, and to stay on that until we have acted on the bill.

I shall try to give tomorrow a more detailed announcement about the bills to be considered later in the week.

Mr. President——

The PRESIDING OFFICER. The Senator from Texas.

RECESS TO TOMORROW AT 10:30 A.M.

Mr. JOHNSON of Texas. Mr. President, in accordance with the order previously entered, I now move that the Senate stand in recess until 10:30 a.m. tomorrow.

The motion was agreed to; and (at 6 o'clock and 26 minutes p.m.), under the order previously entered, the Senate took a recess until tomorrow, March 10, 1959, at 10:30 o'clock a.m.

NOMINATIONS

Executive nominations received by the Senate March 9, 1959:

DEPARTMENT OF THE AIR FORCE

Philip B. Taylor, of New Jersey, to be Assistant Secretary of the Air Force, vice Dudley C. Sharp, resigned.

U.S. ATTORNEYS

Kenneth C. Raub, of Indiana, to be U.S. attorney for the northern district of Indiana for the term of 4 years, vice Phil M. McNagny, resigned.

Edward G. Minor, of Wisconsin, to be U.S. attorney for the eastern district of Wisconsin for the term of 4 years. He is now serving in this office under an appointment which expires June 16, 1959.

U.S. MARSHALS

Curtis Clark, of Kentucky, to be U.S. marshal for the eastern district of Kentucky for the term of 4 years. He is now serving in this office under an appointment which expires March 16, 1959.

Lama A. De Munbrun, of Kentucky, to be U.S. marshal for the western district of Kentucky for the term of 4 years. He is now serving in this office under an appointment which expires March 21, 1959.

Robert E. Stockdale, of Ohio, to be U.S. marshal for the northern district of Ohio for the term of 4 years, vice Xavier North, deceased.

IN THE NAVY AND MARINE CORPS

The following-named (Naval Reserve Officers' Training Corps) to be ensigns in the line of the Navy, subject to qualifications therefor as provided by law:

Peter D. Abbott	James M. Anglin
John W. Aber, Jr.	Larry G. Armstrong
William K. Abernathy	Roger W. Armstrong
Alan L. Abramsky	David A. Arnold
Jack J. Ackerman	Donald S. Atkins
Frederick R. Ackley, Jr.	Adrian A. Bahler
	Harold W. Bailey, Jr.
Richard W. Adam	Herbert D. Baker
Douglas F. Adams	Richard R. Baldwin
Lawrence R. Adkins, Jr.	Ronald F. Ball
	Hugh P. Barber, Jr.
Michael G. Alden	Thomas G. Barksdale
David H. Allen	David M. Barrett
Robert C. Allen, Jr.	Basil B. Bartlow
Kenneth M. Allum, Jr.	William H. Bast
John C. Altmiller	Robert E. Baute
Michael J. Ambrose	James L. Beam
David M. Amidon	Stanley A. Beattie
William B. Amis	Geoffrey C. Beaumont

Kenneth N. Skoug, Jr., of Minnesota.
Donnell D. Smith, of Rhode Island.
R. Peter Spicer, of Ohio.
Michael Sterner, of New York.
Ulrich A. Straus, of Michigan.
Joseph O. Streicher, of Illinois.
John J. Sullivan, of Massachusetts.
Herbert D. Swett, of California.
Francis J. Tatu, of California.
Harry E. T. Thayer, of Pennsylvania.
Richard H. Thompson, of Indiana.
Donald B. Wallace, Jr., of Indiana.
Harry Weiner, of New York.
Miss Winifred S. Weislogel, of New Jersey.
Miss Virginia A. Weyres, of Wisconsin.
James W. White, of Florida.
Kenneth D. Whitehead, of Utah.
William M. Woessner, of New York.
Robert G. Wright, of Illinois.

The following-named Foreign Service staff officers to be consuls of the United States of America:

Raymond E. Benson, of New York.
Philip W. Carroll, of Maryland.
Earl Blake Cox, of Washington.
Robert W. Crawford, of Ohio.
Duncan B. M. Emrich, of Nevada.
Arnold C. Hanson, of Maine.
Paul E. Kelly, of Pennsylvania.
Robert F. Lent, of New York.
Edward B. Maguire, of California.
Harold R. Thain, of Oklahoma.
Fred W. Welty, of Maryland.

The following-named Foreign Service Reserve officers to be consuls of the United States of America:

Leland C. Altaffer, of Ohio.
Leon Kelston, of New York.
Louis L. Kirley, of New York.
Boyce E. Powell, of Florida.
Casimir T. Zawadzki, of New York.

Wheaton B. Byers, of Connecticut, a Foreign Service Reserve officer, to be a vice consul and a secretary in the diplomatic service of the United States of America.

The following-named Foreign Service Reserve officers to be vice consuls of the United States of America:

Dale H. Baker, of Arkansas.
Warren P. Cleary, of Michigan.
Joseph O. Eblan, of Massachusetts.
Charles F. McKay, of Florida.
Jack M. Mangham, of Virginia.
William C. Mathers, of Virginia.
Dorwin M. Wilson, of Indiana.

Robert J. Baker, of California, a Foreign Service Reserve officer, to be a secretary in the diplomatic service of the United States of America. (This nomination is submitted for the purpose of correcting an error in the nomination as submitted to the Senate on June 20, 1958, and confirmed by the Senate on July 10, 1958.)

The following-named Foreign Service Reserve officers to be secretaries in the diplomatic service of the United States of America:

John L. Bender, of Virginia.
F. Willard Calder, of Florida.
David L. Gilsinn, of Virginia.
Marcus J. Gordon, of California.
Jerome W. Greiner, of Michigan.
George T. Kalaris, of Montana.
Harrington Littell, of California.
Seymour I. Nadler, of the District of Columbia.
Richard Ober, of Virginia.
William P. Roessner, of New York.
Ted M. G. Tanen, of California.
John H. Terjelian, of Minnesota.
Robert B. Whittinghill, of New York.

HOUSE OF REPRESENTATIVES

MONDAY, MARCH 9, 1959

The House met at 12 o'clock noon.

Rev. Charles W. Holland, Jr., pastor, Fountain Memorial Baptist Church, offered the following prayer:

Eternal God, our Heavenly Father, we thank Thee for Thy Holy Word from which we are able to receive wisdom.

Teach us, dear God, to pray in a manner that is pleasing to Thee.

We pray earnestly this morning for Dr. Braskamp, the Chaplain of this great body, that he may presently be restored to health and active duty here where he serves in such a wonderful way.

We pray also, God, for our Speaker and every lawmaker who serves with him. Guide them and give them the wisdom that can be gleaned only through the leadership of the Holy Spirit.

Help us as members of this great and precious democracy to remember our Government leaders and men in high places prayerfully instead of critically.

These thanks we give and petitions we make in the name of Christ Jesus, our Lord. Amen.

The Journal of the proceedings of Thursday, March 5, 1959, was read and approved.

MEMBER-ELECT WILLIAM J. RANDALL

Mr. CANNON. Mr. Speaker, I ask unanimous consent that the gentleman from Missouri, Mr. WILLIAM J. RANDALL, Member-elect from the Fourth District, be permitted to take the oath of office today. The certificate of election has not arrived, but there is no contest, and no question has been raised with regard to his election.

I have conferred with both the majority and minority leaders.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

SWEARING IN OF MEMBER

Mr. WILLIAM J. RANDALL appeared at the bar of the House and took the oath of office.

CUTS IN THE MARINE CORPS AND THE REGULAR ARMY

Mr. FLOOD. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. FLOOD. Mr. Speaker, it will not be news for you to hear me say that I have protested and will continue to protest the cuts in the Marine Corps and the Regular Army as requested again by the President. I have been introducing for 5 years amendments to the appropriation bill to restore these annual cuts. The House has been restoring the cuts, but the executive refuses to allocate the money to execute these acts of the Congress.

Now, today, on the first page of the New York Times, the Joint Chiefs of Staff have advised the other body in writing that they object to the present budget limitation and state specifically and in detail the reasons for their objections. They are consistent with their personal beliefs. The arm twisting by the Bureau of the Budget and by the Executive is responsible for the impression that the Joint Chiefs of Staff support the President on these cuts. It is my judgment that they do not. These cuts must be restored. I shall introduce the necessary amendments, and I know the House will support them.

JOHN P. TANSEY

Mr. O'HARA of Illinois. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. O'HARA of Illinois. Mr. Speaker, word has just reached me of the passing of John P. Tansey, whose brother, Harry, has well and faithfully served the House for many years. John P. Tansey was my close and beloved friend for more than half a century, and it is my great regret that word of his death in Chicago reached me belatedly so that I was unable to attend the mass at Saint Thomas Aquinas Church and to accompany the remains to the burial place at Saint Joseph's Cemetery.

John P. Tansey was secretary of the Democratic Cook County Central Committee from 1906 to 1908. He was an Army captain in World War I and prior to his commission we served as members in the same company in the officers' training camp at Fort Sheridan. He was a man of tremendous ability and the heart of John Tansey was as big as the universe itself.

During the terrible years of the depression, when everyone was suffering and no one had any money, John Tansey changed his last dollar into 10 dimes and passed these dimes to 10 persons standing in the long lines of the unemployed. That was John Tansey.

Chicago has lost one of her sons that never quite can be replaced. I have lost one of my dearest friends. To his brother Harry, to his widow, Laurette, and to his sons, John P., Jr., and Robert F. goes my deepest sympathy. To these sons I would say that the last time I met with their father he talked of these two fine young men and of his great pride in them. In the memory of their father they have an inspiring and priceless heritage.

SUBCOMMITTEES OF THE COMMITTEE ON THE JUDICIARY

Mr. LIBONATI. Mr. Speaker, I ask unanimous consent that each subcommittee of the Committee on the Judiciary be permitted to sit this week during general debate.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

PROPOSED AMENDMENT TO SOCIAL SECURITY ACT

Mr. BASS of Tennessee. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. BASS of Tennessee. Mr. Speaker, today I am introducing a bill which I hope will correct gross inequities in the Social Security Act. In the amendments to the Social Security Act during the 84th Congress it was made possible for a disabled worker to draw his social security at age 50. In the law the wording is like this: That a person must prove his or her inability to engage in any substantial gainful activity.

The bill I am introducing today will amend the law to read:

> The inability to continue in his normal and usual type of work.

I have found, under the wording of the act as it is today, many people who are physically disabled to perform the type work that they are qualified to do in order to make a living are ineligible to draw disability benefits. In other words, under the present law a man who has been a brickmason all his life, for instance, may still be physically able to operate a typewriter, if he knew how to perform office work, or even to be a bird watcher. In this case, if he is physically capable of doing that type of work, it has been ruled that he is not eligible

for disability benefits under social security.

Mr. Speaker, I hope my bill will be passed.

COMMITTEE ON PUBLIC WORKS

Mr. McFALL. Mr. Speaker, I ask unanimous consent that the Committee on Public Works may have until midnight tonight to file a report on the bill H.R. 1.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

PRICE SUPPORTS ON FEED GRAINS

Mr. McGOVERN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from South Dakota?

There was no objection.

Mr. McGOVERN. Mr. Speaker, like a number of my colleagues I am deeply concerned by the announcement on February 19 of this year that the Secretary of Agriculture was reducing price supports on most feed grains to 60 percent of parity. As I pointed out in a speech on the House floor last week, this will bring about grievous new losses to the American farmer on his 1959 crop. In my own State, based on 1958 crop yields, it will mean a loss of nearly $16 million. In view of the cost-price squeeze that has gripped the farm belt under the present administration, this recent announcement by the Secretary of Agriculture is indeed sad news.

On Friday of last week, I went with a group of my colleagues, including the gentleman from Kansas [Mr. BREEDING] to Secretary Benson's office. We plead with him to reverse this price-cutting action and to restore the feed grain support level. It is the intention of Congress in the present law that feed-grain prices be kept at their equivalent value in relation to corn prices. Since Secretary Benson refused to yield to our pleadings, I am joining with a number of my colleagues today in introducing legislation that will restore feed-grain support levels to a more reasonable point. I do hope that Congress will move quickly to pass this desperately needed legislation.

PERMISSION TO SIT DURING GENERAL DEBATE

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the Committee on Banking and Currency may have permission to sit during general debate in the House today.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

DISTRICT OF COLUMBIA BUSINESS

The SPEAKER. This is District Day. The Chair recognizes the gentleman from Florida [Mr. MATTHEWS].

SISTERS OF THE VISITATION, CORPORATE POWERS

Mr. MATTHEWS. Mr. Speaker, by direction of the Committee on the District of Columbia, I call up the bill (H.R. 4282) to supplement and modify the act of May 24, 1828 (6 Stat. 383, ch. CXII), insofar as it relates to the corporate powers of the Sisters of the Visitation, of Georgetown in the District of Columbia, and ask unanimous consent that the bill be considered in the House as in the Committee of the Whole.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in addition to rights, powers, duties, and obligations granted to and imposed upon the Sisters of the Visitation (hereinafter referred to as "the corporation"), of Georgetown in the District of Columbia, by the Act of May 24, 1828, entitled "An Act to incorporate the Sisters of Charity of St. Joseph and the Sisters of the Visitation of Georgetown, in the District of Columbia" (6 Stat. 383, ch. CXII, Little and Brown's edition), the corporation shall have the power—

(a) to appoint a board of trustees or a board of directors, consisting of such number of Sisters of the Visitation, or other persons, as may be desired; and to appoint a president, secretary, and treasurer for the corporation;

(b) to create, establish, and operate schools and colleges and departments of learning to be connected with and become a part of the corporation, such schools and colleges to be known as Georgetown Visitation Junior College and Georgetown Visitation Preparatory School and by such other name or names as may be appropriate; and to appoint a dean or principal for each of the same, and such professors and teachers and other personnel as may be necessary or desirable, and to displace any of them, as the interests of the institution may require;

(c) to fill vacancies which may happen by death, resignation, or otherwise among such trustees, directors, officers, professors, teachers, and other personnel;

(d) to prescribe and direct the courses of studies to be pursued at such schools and colleges; and the branches of the arts, sciences, literature, subjects, and courses which may be taught in such schools and colleges are the following: Philosophy, natural sciences, mathematics, history, belles-lettres, ancient and modern languages, library science, shorthand and typing, and allied subjects;

(e) to admit any of the students in attendance at the Georgetown Visitation Preparatory School and Georgetown Visitation Junior College, and such other schools and colleges so established, and other persons meriting academic honors, to any degree in the faculties, arts, sciences, and the liberal professions to which such persons usually are admitted in other and similar schools and colleges; and to issue in an appropriate form the diplomas or certificates which may be requisite to testify to the admission to such degrees;

(f) to establish such scholastic boards and offices as may be required for academic operation and direction in education;

(g) to enter into affiliation agreements with any institutions of learning, within or outside of the District of Columbia, for the purpose of making available to the students of such institutions the educational facilities of the corporation upon such terms as are mutually agreed upon by each of the affiliated institutions;

(h) to receive, invest and administer endowments and gifts of money and personal property absolutely, or subject to payments by way of annuities during the life of the donor, for the maintenance of educational work by the corporation and by any school, college, department, or chair thereof now established or which may hereafter be created or established by the corporation.

SEC. 2. (a) The corporation shall not employ its funds or income, or any part thereof, in banking or insurance operations, or for any purpose or object other than those expressed herein and in such Act of May 24, 1828.

(b) The limitation with respect to annual income from real estate, contained in the proviso at the end of section 3 of such Act of May 24, 1828, shall not apply hereafter to the corporation.

SEC. 3. No misnomer of the corporation, or of any of its schools or colleges, shall defeat or annul any donation, gift, grant, devise, or bequest to or from the corporation.

SEC. 4. The right to alter, amend, or repeal this Act or any part thereof, is hereby expressly reserved.

Mr. MATTHEWS (interrupting the reading). Mr. Speaker, I ask unanimous consent that further reading of the bill be dispensed with.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

The SPEAKER. The Clerk will report the committee amendment.

The Clerk read as follows:

Committee amendment: Page 4, line 18, strike out the word "Act" and insert the word "Enactment."

The committee amendment was agreed to.

Mr. MATTHEWS. Mr. Speaker, the purpose of this bill is to supplement and modify the act of May 24, 1828 (6 Stat. 383, ch. CXII), insofar as it relates to the corporate powers of the Sisters of the Visitation, of Georgetown in the District of Columbia.

The Sisters of the Visitation were incorporated by an act of Congress in 1828 because of the fact that at this time there was no general incorporation law. At the time this charter was granted, the original act of incorporation merely stated that certain named individuals should constitute a body corporate, should have the right to have a common seal and make bylaws and to sue and be sued and to acquire and purchase, by bequest, gift or otherwise land and personal property with a limitation on the land in the District of Columbia not more than 200 acres. The school has never owned more than approximately 35 acres and it is doubtful that they ever will.

The Sisters of the Visitation conduct two schools in Georgetown known as the Georgetown Visitation Junior College and the Georgetown Visitation Preparatory School.

The only purpose in this legislation is to modernize and streamline the charter under which these schools are now operating so as to bring them in purview of other schools accredited by the Middle

States Association of Colleges and Secondary Schools and the American Association of Junior Colleges, the National Commission on Accrediting.

These schools are required, under the provisions provided in this bill and the original incorporation act, to operate as a nonprofit, educational and religious corporation.

Mr. Speaker, I now yield to the gentleman from New Jersey [Mr. AUCHINCLOSS].

Mr. AUCHINCLOSS. Mr. Speaker, there is no objection whatever to this legislation. We on this side of the aisle are in favor of it and we hope it passes unanimously.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. MATTHEWS. I yield to the gentleman from Iowa.

Mr. GROSS. Am I correctly informed that this calls for no expenditure of Government funds?

Mr. MATTHEWS. The gentleman is correct.

Mr. GROSS. There is no obligational authority now or in the future?

Mr. MATTHEWS. The gentleman is correct.

Mr. Speaker, I now yield to the author of the bill, the gentleman from Massachusetts [Mr. McCORMACK].

Mr. McCORMACK. Mr. Speaker, I want to express my appreciation to the distinguished gentleman from Florida, chairman of the subcommittee, and to the members of that subcommittee, for the action taken in connection with the hearings on this bill and reporting it to the floor for consideration; also to the chairman of the full committee and to all members of the full committee for their prompt action in reporting the bill to the House for consideration.

Mr. MATTHEWS. I thank the gentleman.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

AUTHORIZING COMMITTEE ON WAYS AND MEANS TO CONDUCT STUDIES AND INVESTIGATIONS RELATING TO MATTERS WITHIN ITS JURISDICTION

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 182, and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That, effective from January 3, 1959, the Committee on Ways and Means, acting as a whole or by subcommittee, is authorized to conduct thorough studies and investigations of all matters coming within the jurisdiction of such committee.

SEC. 2. For the purpose of this resolution, the committee, or any subcommittee thereof, is authorized to hold such hearings, to sit and act during the present Congress at such times and places within or without the continental United States, its Territories, and possessions, as the committee may determine, whether or not the House has recessed, or has adjourned, to require the attendance of such witnesses and the production of such books, papers, and documents by subpena or otherwise, to administer such oaths, and to take such testimony, as it deems necessary. Subpenas may be issued under the signature of the chairman of the committee and may be served by any person designated by the chairman.

SEC. 3. The committee may report to the House at any time during the present Congress the results of any studies or investigations made under authority of this resolution, together with such recommendations as it deems appropriate. Any such report which is made when the House is not in session shall be filed with the Clerk of the House.

With the following committee amendments:

Page 1, after line 5, insert new paragraph as follows:

"*Provided*, That the committee shall not undertake any investigation of any subject which is being investigated by any other committee of the House."

Page 1, line 9, strike out "or without."

The committee amendments were agreed to.

Mr. BOLLING. Mr. Speaker, this is the usual resolution. I know of no objection to it. I yield 30 minutes to the gentleman from Ohio [Mr. BROWN].

Mr. BROWN of Ohio. Mr. Speaker, this resolution has the unanimous support of all members of the Rules Committee. I have no requests for time.

The SPEAKER. The question is on the resolution.

The resolution was agreed to and a motion to reconsider was laid on the table.

AUTHORIZING THE COMMITTEE ON AGRICULTURE TO MAKE CERTAIN STUDIES AND INVESTIGATIONS

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 93 and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That effective from January 3, 1959, the Committee on Agriculture, acting as a whole or by subcommittee, is authorized to make studies and investigations into the following matters:

(1) The restoration and development of foreign markets for American agricultural products and of international trade in agricultural products, and the disposal of agricultural surpluses pursuant to Public Law 480, Eighty-third Congress, as amended;

(2) All matters relating to the establishment and development of an effective Foreign Agricultural Service pursuant to title VI of the Agricultural Act of 1954;

(3) All matters relating to the development, use, and administration of the national forests, including but not limited to development of a sound program for general public use of the national forests consistent with watershed protection and sustained yield timber management, and study of the forest fire prevention and control policies and activities of the Forest Service and their relation to coordinated activities of other Federal, State, and private agencies;

(4) Price spreads between producers and consumers;

(5) The formulation and development of improved price support and regulatory programs for agricultural commodities; matters relating to the inspection and grading of such commodities; and the effect of trading in futures contracts for such commodities.

(6) The administration and operation of agricultural programs through State and county agricultural stabilization and conservation committees and the administrative policies and procedures relating to the selection, election, and operation of such committees;

(7) The development of upstream watershed projects authorized by Public Law 156, Eighty-third Congress, and the administration and development of watershed programs pursuant to Public Law 566, Eighty-third Congress, as amended.

For the purposes of such investigations and studies, the committee or any subcommittee thereof is authorized to sit and act during the present Congress at such times and places within or outside the United States, whether the House has recessed, or has adjourned, to hold such hearings, to make such inspections or investigations, and to require, by subpena or otherwise, the attendance and testimony of such witnesses, and the production of such books, records, correspondence, memorandums, papers, and documents, as it deems necessary. Subpenas may be issued over the signature of the chairman of the committee, or any member of the committee designated by him, and may be served by any person designated by such chairman or member. The chairman of the committee or any member thereof may administer oaths or affirmations to witnesses.

The committee may report to the House (or to the Clerk of the House if the House is not in session) at any time during the present Congress the results of its investigation and study, together with such recommendations as it deems advisable.

With the following committee amendments:

Page 2, line 25, insert:

"*Provided*, That the committee shall not undertake any investigation of any subject which is being investigated by any other committee of the House."

Page 3, line 6, strike out "or outside".

The committee amendments were agreed to.

Mr. BOLLING. Mr. Speaker, I know of no objection to the resolution, and I now yield 30 minutes to the gentleman from Ohio [Mr. BROWN].

Mr. BROWN of Ohio. Mr. Speaker, the resolution as amended has the unanimous support of the Committee on Rules. I know of no objection to the resolution on this side, and I yield back the remainder of my time.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

A motion to reconsider was laid on the table.

RAILROAD RETIREMENT AND UNEMPLOYMENT BENEFITS LEGISLATION AND AIRPORT SAFETY

Mr. WIER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute, to revise and extend my remarks, and include resolutions.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. WIER. Mr. Speaker, as part of my remarks I wish to include House Resolution No. 8 of the State of Minnesota Legislature, which requests Congress to enact railroad retirement and unemployment benefits legislation as incorporated in H.R. 1012. This resolution, adopted by the Minnesota House of Representatives on March 6, 1959, and signed by E. J. Chilgren, speaker, and G. H. Leahy, chief clerk, has my wholehearted support and I sincerely hope my col-

leagues in the House of Representatives will join me in pushing for early and favorable consideration of this much-needed legislation:

HOUSE RESOLUTION 8

Resolution requesting Congress to enact railroad retirement and unemployment benefits

Whereas a large number of residents in Minnesota are employed by railroads and are vitally affected by unemployment and retirement benefits of railroads; and

Whereas H.R. 1012 would provide an increase in retirement and unemployment benefits to employees of railroads;

Whereas we are informed that the retirement fund for railroad employees is actuarily sound and that the increase in retirement benefit proposed in H.R. 1012 would not adversely affect that fund and would not result in increased cost to the railroads or their employees: Now, therefore, be it

Resolved by the House of Representatives of the State of Minnesota, That Congress be requested to enact H.R. 1012 as originally introduced without amendments; and be it further

Resolved, That the chief clerk of the house of representatives be instructed to mail each Member of Congress from the State of Minnesota a copy of this resolution.

E. J. CHILGREN,
Speaker of the House of Representatives.
G. H. LEAHY,
Chief Clerk of the House of Representatives.

Mr. Speaker, under permission granted me to extend my remarks, I wish also to include the resolution passed by the City Council of the city of Minneapolis, Minn., March 3, 1959, relating to Bethel Airport development, which was forwarded to me by Leonard A. Johnson, city clerk.

This resolution expresses the general concern felt by the city of Minneapolis, the users of our international airport, and the general Minnesota public, about a matter of grave importance involving the use and safety of our airport which originally justified the State of Minnesota, in conjunction with the Federal Department of Defense, in taking the preliminary steps to establish the Bethel Airport 25 miles north of the cities of Minneapolis and St. Paul.

RESOLUTION RELATING TO BETHEL AIRPORT DEVELOPMENT

Whereas the city of Minneapolis has been vitally concerned with the imposition of military uses on the Minneapolis-St. Paul Metropolitan Airport at Wold Chamberlain Field, originally established for civil and commercial operations; and

Whereas the growing use of military jet and other advanced types of aircraft increases the potential hazards affecting areas around our local civil airport and aggravates the fears of citizens created by crashes occurring in recent years; and

Whereas the growing needs of airport facilities for the military services continually intensifies the incompatibility of joint civil and military use of local airports; and

Whereas these problems have been recognized by the State of Minnesota in providing for land acquisition in the Bethel area for military airport purposes, and by Federal agencies in approving the Bethel Airport project; and

Whereas there appears to be undue delay in the completion of said Bethel project: Now, therefore, be it

Resolved by the City Council of the City of Minneapolis, That the Federal agencies and the Congress be urged to take all steps necessary to expedite the completion of the construction and installations required at the new Bethel Airport.

Further, that a copy of this resolution be transmitted to the Secretary of Defense, Secretary of the Air Force, and to each Member of the congressional delegation in the House and Senate from Minnesota.

Passed March 3, 1959.

GEO. W. MARTENS,
President of the Council.

Approved March 3, 1959.

P. KENNETH PETERSON,
Mayor.

LEONARD A. JOHNSON,
City Clerk.

PUBLIC BUILDINGS ACT OF 1959

Mr. JONES of Alabama. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

Mr. JONES of Alabama. Mr. Speaker, as chairman of the Subcommittee on Public Buildings and Grounds of the Committee on Public Works I have today introduced a bill which, if enacted into law, will facilitate the early construction, at the least possible cost, of Federal buildings in the large number of communities scattered across the Nation for which an urgent need has been clearly demonstrated. My colleague, the distinguished Member from Wisconsin [Mr. WITHROW], the ranking minority member on the subcommittee, has introduced an identical bill.

This bill, in essence, would repeal the Public Buildings Act of 1926 while retaining, however, the features of that bill which have proved to be workable and essential for public buildings construction. It is, in short, a Public Buildings Act of 1959.

I am certain that the Members of this body are fully familiar with the public buildings situation but for the record I would like at this time to submit a short history of the public buildings program.

The first omnibus Public Buildings Act was approved by the Congress on June 6, 1902. The last of these so-called omnibus bills was passed on March 4, 1913. Then as a result of World War I for all practical purposes the entire building construction program was suspended. Not until 1926 was a bill for public building construction enacted into law. In that year the Congress passed and the President signed a bill which was to become known as the Public Buildings Act of 1926. From that day this has been the basic authority for direct appropriation construction of Government buildings.

This law had barely begun to move into full effect when the country was plunged into the great depression that began in the latter part of 1929 and which continued up until the advent of World War II in 1939. During this depression period most of the public building construction was done under emergency building legislation. This work was handled by the Public Buildings Administration. During World War II the entire building program came to a halt. Thus from the period of 1939 up to 1949 no work of any importance was accomplished in the Federal building construction program. During this same period the activities of the Government grew by leaps and bounds paralleling the tremendous increase in the Nation's business activities, complete with an above normal increase in population during the war and postwar years. As a result the Federal Government found itself with a highly inadequate physical establishment to carry on its multitude of activities in an efficient and businesslike manner. In 1949, the Congress enacted the Public Buildings Act of 1949, known as Public Law 105 of the 81st Congress and it further enacted Public Law 152 of the 81st Congress. Public Law 105, which in essence, provided as follows: An authorization of $40 million for acquisition of sites and preparation of plans for Federal public buildings outside the District of Columbia, and $30 million for improvement of existing federally owned buildings.

Public Law 152 created the General Services Administration headed by an Administrator, appointed by the President with the advice and consent of the Senate. The Federal Works Agency, the Public Buildings Administration, and the Office of Commissioner of Public Buildings, among others, were abolished and their functions were transferred to the General Services Administration.

The last significant change in public buildings construction law came about in 1954, when the Congress enacted the so-called lease-purchase program which, for all practical purposes, expired in July of 1957 when the Congress failed to continue it.

The brief history that I have just outlined shows that for a period extending back to 1929, a 30-year span, there has been no direct action taken by the Congress either to carefully examine the public buildings program of the Government or to enact into law a workmanlike procedure that will bring about a building program that will benefit all sections of the country. The bill I have introduced today aims to accomplish that purpose and I believe that it does. For the benefit of the Congress I have inserted a short explanation of the salient features of the bill in this statement.

The bill is given the short title of "The Public Buildings Act of 1959." It grants to the Administrator of General Services necessary authority to construct, alter, repair, and improve public buildings, including authority to acquire necessary buildings. It necessarily grants him authority to acquire sites for these public buildings where necessary. The authority granted the Administrator in this bill is in this respect similar to his existing authority which is contained in the act of May 25, 1926, and other provisions of acts relating to public buildings. For the purposes of this bill a public building is defined to mean any building including its grounds, approaches, and appurtenances necessary for the functioning of a Federal agency with certain exceptions, the principal ones being buildings on certain domain lands, buildings on military installations,

and buildings used as hospitals under the jurisdiction of the Veterans' Administration.

Section 7 of the bill represents a major change in the present law on direct appropriation construction of public buildings. It provides generally that no appropriation shall be made to construct, alter, or acquire any public building if the construction, alteration, or acquisition has not been approved by resolutions adopted by the Committees on Public Works of the Senate and House of Representatives. The Administrator of General Services would be required to submit to these committees detailed prospectuses for such approval. The Administrator would be permitted to increase the cost of a project above the approved cost, but not to exceed 10 percent, without further approval if increased construction costs require it. Further, the Committees on Public Works are authorized to rescind their approval if no appropriation has been made for an approved project within 1 year after the date of approval of the project. The Committees on Public Works are prohibited from approving any project at any time when there are more than 15 projects which have been approved for more than 1 year and for which appropriations have not been made, until, either by rescission of approval, or by reason of the fact that appropriations are made, the number of such approved, but unappropriated for, projects becomes less than 15.

The bill establishes boundaries within the District of Columbia within which the Administrator may acquire real property. It further provides that in carrying out the act in the District of Columbia it shall be done as nearly as practicable in harmony with the L'Enfant plan. Authority is also granted to close certain streets in the District of Columbia in accordance with agreements entered into with the Board of Commissioners of the District of Columbia and the National Capital Planning Commission. These provisions of the bill are substantially the same as existing law today.

The bill also contains a requirement of an annual report to Congress on uncompleted public buildings, and would permit the Administrator to perform his functions by contract, to employ on a temporary basis the services of established architectural or engineering corporations, firms, or individuals, and would require that he keep continually informed on the public building needs of the Federal Government.

Those public buildings for which direct appropriations were made in the Independent Offices Appropriations Act, 1959, and those lease-purchase projects specified in that act are not to be subject to the provisions of this bill but are to be completed in accordance with the laws presently applicable to them.

The last section of the bill repeals a number of laws which are obsolete, or are in duplication of, or in conflict or otherwise inconsistent with, the provisions of the bill.

I believe that this is a necessary bill. I believe it is one that the Congress wants and that the people want. I believe this bill sets up a method whereby a direct and effective program of public building construction can be brought about in the shortest possible time. I trust that when this bill is reported out from the Committee on Public Works and brought to the floor of this House, it will receive the support of all those Members who are anxious to once again activate a program that is now badly in need of a stimulus. This bill will give the public buildings program in this country the impetus that it now requires.

PRICE OF GRAIN SORGHUMS

Mr. BREEDING. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Kansas?

There was no objection.

Mr. BREEDING. Mr. Speaker, I would like to rise and make a few remarks in behalf of legislation which I and other Members are introducing today in support of feed grain prices other than corn.

Last Friday, March 6, a delegation of 17 Members of the House and Senate, or their representatives, met with the Secretary of Agriculture in his office to protest the action taken by the Department of lowering price supports on barley, oats, and grain sorghums far below their actual feed value.

Mr. Speaker, I represent a grain sorghum area, and the Secretary of Agriculture stated flatly that the $1.52 grain sorghum figure would not be increased. This means that the only hope we have for saving farmers from economic disaster is to ask Congress to change the formula upon which the feed grain price support is figured.

Mr. Speaker, the feed grain price support should be related directly to corn through the comparative feed value of the commodities.

However, seven other factors were also considered by Mr. Benson in arriving at the $1.52 figure for grains. It is obvious, Mr. Speaker, that the feed value relationship did not receive the weight Congress intended it should.

Therefore, Congress should limit the discretion of the Secretary in considering other factors and direct him to rely more upon the feed value relationship.

Mr. Speaker, the new price support for corn is $1.12 a bushel, or $2 per hundredweight. Inasmuch as grain sorghums have 95 percent of the feed value of corn, the support price should be around $1.90 per hundredweight.

Yet, the Secretary fixed the support at $1.52—a reduction of 31 cents from the 1958 level.

Mr. Speaker, bankers throughout the Southwest are refusing to make production loans in view of the lower support price. The bankers are convinced the $1.52 price is lower than production costs.

Mr. Speaker, the lower price will mean economic disaster for many farmers.

Therefore, Mr. Speaker, I am sure that legislation should be enacted by this Congress to set feed grain prices in comparative relation to their feed value to corn.

Mr. Speaker, under leave to extend my remarks, I include some remarks that I made to the Secretary of Agriculture on March 6, 1959.

The matter referred to follows:

Mr. Secretary, this meeting with you today is to discuss recently announced feed grain price supports for 1959.

All of these Members who are here today or represented here today, Senators and Representatives, are interested in these prices. We feel that it is a price support below the cost of production. Some of the Members here represent barley producing areas, others, oats production areas, and I myself represent a grain sorghum area. I come from an arid part of the United States where we have very little choice in the selection and growth of agricultural crops. Principally, my area grows wheat and grain sorghum.

I have had many letters from constituents and organizations in my district protesting your announced price support of $1.52 for grain sorghums for 1959. Just this morning I had a wire from the secretary of the Southwest Irrigation Association, which speaks for hundreds of dryland farmers and some 2,000 irrigation farmers, in protest of this price. Also, I have had similar wires from the chambers of commerce, other civic clubs, and many individuals in protest to this price.

I live on a farm myself, and my two sons operate my holdings in Morton County, Kans. Knowing the conditions that exist, and the cost of operating, we all are seriously interested in these prices.

In connection with the 1959 support prices for feed grains as recently announced, I believe the following questions are pertinent:

1. Why were grain sorghums subjected to a cut of approximately 18 percent while corn, for approximately 80 percent of the producers, enjoyed better than a 5-percent increase in the support price?

2. How does the Department justify a support price of $1.12 per bushel for corn against approximately 85 cents per bushel for grain sorghums? Both weigh the same number of pounds to the bushel and both have approximately the same feed value.

3. Does the Department take into consideration the freight and marketing differentials in the fixing of support prices on these two comparable grains? The large corn-producing States are also large livestock-feeding States and much closer to terminal markets for both. Producers of grain sorghums do not enjoy this advantage of location.

4. In fixing these prices, does the Department take into account these relative factors:

(a) That our major corn-producing areas are that because they enjoy abundant annual precipitation, enough in fact, to permit them to produce a wide range of crops. That in contrast the bulk of our grain sorghum production comes from the semiarid sections where producers have little or no choice as to what they plant.

(b) Corn production is no longer subject to planting restrictions, whereas wheat is produced under a strict penalty-loaded acreage allotment plan. Because of the production restrictions imposed by nature and the production restrictions imposed by law, is it fair then to further penalize the wheat-grain sorghum farmer through the medium of price?

Mr. Secretary, this is not a request to reduce the announced price of corn, but to

increase the price of other feed grains in line with corn based on relation of feed value and also save farmers of the grain sorghum area from economic disaster.

CONSTRUCTION OF NEW FEDERAL BUILDING, SPRINGFIELD, ILL.

Mr. MACK of Illinois. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. MACK of Illinois. Mr. Speaker, I have today introduced a bill to provide for the construction of a new Federal building for Springfield, the capital of Illinois. For the past 10 years the Government has had under consideration a proposal to build a new building in Springfield to house the Federal agencies which are scattered all over the city. These agencies occupy rental quarters, which are in some cases expensive and inadequate.

Some time ago I requested that the General Services Administration conduct a survey as to the amount of money being spent each year by the Federal Government for rental facilities in Springfield. This survey revealed that a total of $323,422.34 was spent last year. In view of this fact, it is imperative that the Government continue its plans to construct a Federal building at an early date.

This bill would direct the General Services Administrator to acquire and erect a suitable building for use as a U.S. post office, a Federal court building, and for other Federal offices, in accordance with plans and specifications approved by the Postmaster General, the Administrator of General Services, and the Administrative Office of the U.S. Courts.

Under this bill, the savings of rent through construction of such a building would be $300,000 a year, or $6 million over a 20-year period.

Mr. Speaker, I am hoping that the administration will move forward with the Federal building construction and that the building at Springfield will be one of the first orders of business.

DISCLOSURE OF EXPENDITURES BY MEMBERS OF CONGRESS TRAVELING OVERSEAS

Mr. GROSS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Iowa?

There was no objection.

Mr. GROSS. Mr. Speaker, I am today introducing legislation to require full disclosure of expenditures of Government and counterpart funds by Members of Congress traveling in oversea areas.

The bill provides that within 30 days after the return to the United States of any Member of the Senate or House, he or she must file a statement of expenses, including an accounting of counterpart funds used, either with the Committee on Rules and Administration of the Senate or the Committee on House Administration.

There has been a great deal of criticism in the Congress, and rightly so, of secrecy in the executive branch of Government. Last year I supported wholeheartedly the so-called right-to-know bill, which was designed to meet the problem of secrecy in the executive branch.

But what about Congress? Surely the public has a right to know how much Members of Congress, and persons accompanying them, spend on oversea junkets and the purpose of these expenditures. It is difficult for me to believe that any Member would object to scrutiny of his spending for any purpose from public funds.

Now before anyone tries to argue that this matter of secrecy with regard to expenditure of public funds by Members of Congress overseas has already been resolved, let me say emphatically that it has not been resolved.

A distinguished former Member of this body, Mr. Dawson, of Utah, tried his best to lift the lid of secrecy on this spending last year, at least as far as counterpart funds are concerned. An amendment he offered to the Mutual Security Act of 1958—H.R. 12181—was adopted by the House to require individual statements by Members of the Senate and House on the spending of counterpart funds.

However, when the bill came back from the conference committee his amendment had been watered down to the extent that it was practically meaningless.

As adopted by the conference committee and Congress, this provision in the Mutual Security Act of 1958 provides only that the total itemized expenditures of foreign currency by each committee and subcommittee are to be reported to the Committee on House Administration or the Committee on Appropriations of the Senate and published in the CONGRESSIONAL RECORD.

As an example of the type of reports submitted under this provision, I refer my colleagues to page 2905 of the February 24, 1959, CONGRESSIONAL RECORD. These reports do not provide the information to which the public is entitled. Expenditures by individual Members are not itemized either as to appropriated or counterpart funds.

I am confident that Members who feel trips overseas are important and in the public interest have nothing to hide. I would hope, therefore, that they will lend their support to my bill and that it will be speedily enacted, because surely these Members would not want to deny the taxpayers of this country knowledge as to how they spend public funds in foreign countries.

WHERE TERROR REIGNS

Mr. BENTLEY. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. BENTLEY. Mr. Speaker, a recent issue of Life magazine contained an editorial entitled "Where Terror Reigns." The editorial reads as follows:

Just who's running this country, anyway? Is it the legal government, elected by the citizens, or is it an invisible government of hoods, thugs, gangsters, terrorists, and murderers?

The question is raised anew by the testimony of Sidney Saul, owner of 22 Brooklyn jukeboxes, before the McClellan committee. Three thugs from one of Jimmy Hoffa's paper unions, seeking a cut on Saul's take, slugged him until his nose was bent "like a horseshoe." He surrendered.

This sounds like the treatment Hungarian patriots get in the dungeons of secret police cells. But it happened in America, in its biggest city, in a public place (a luncheonette called Wagon Wheels), and was observed by others who dared not interfere. They knew who was boss.

An unusual occurrence? Hardly. Last week Life showed in detail how the national crime syndicate muscles in on numerous essential services, from garbage collecting to towel supplies—and especially jukeboxes, easy to control and easy to damage. And last week Ralph Kelly, an Elgin, Ill. jukebox operator whose income was cut from $14,000 to $7,000 when gangster Rocco Pranno became his partner, sat cowering before the McClellan committee, too terrified to talk. The sinister-looking Pranno was right beside him. "This is a tragic state," said Senator SAM ERVIN, JR., as Kelly refused to testify, "when a man in the shadow of the Nation's Capital cringes in fear." Pranno, another witness testified, had threatened to put cement weights on Kelly's legs and drop him in the river.

Terror is nothing new in the world. Neither is crime. What is new, in the land of the free, is terror and crime organized on such a staggering scale that its overlords even hold their own secret conventions (as at Apalachin, N. Y. on November 14, 1957) and pass their own laws (one member, whose sentence was death, waited shuddering in the garage until he learned that it had been commuted to a $10,000 fine for trespassing somebody's jukebox shakedown territory).

That convention was flushed out only by the accident of a State policeman's curiosity at the sudden influx of expensive cars. But the accident revealed frightening facts about America's health, strength, and security. It revealed that a conspiracy, as secret as the Communist underground and certainly as dangerous, was operating without any of the surveillance and penetration which has all but destroyed the latter. The delegates came from all parts of the land, even from Cuba and faraway Italy. But nobody was following them. Nobody knew what they were up to. All the vaunted crime detection agencies—city, State, Federal—were equally in the dark and made to look equally impotent and foolish.

This has been going on for years, but a complacent public, conditioned by a prosperity, expense-account, tax-dodging psychology, seemed to think the rich racketeers were simply smarter than themselves, and even gave them a sort of envious admiration. Local officials, whose political bosses had alliances with the underworld, shut their eyes. Federal officials either lacked authority to break this invisible government or ducked it as too tough to tackle.

At long last Attorney General William Rogers is doing something about it. He has set up a special squad of prosecutors to go after the top 100 leaders of this syndicate,

and is planning also to use the antitrust laws as a special weapon against them (for example, where they have monopolized garbage collecting). But Congress ought to go further than this with appropriations and legislation for a permanent program of gangbusting, either by the FBI or some new agency assigned to penetrate the crime conspiracy as efficiently as the FBI has already penetrated the Communist conspiracy.

Even that will not be enough. When the people themselves drop their indifference and rise up in anger against this intolerable rottenness—when the Ralph Kellys of America not only have the courage to talk but to strike back at the goons of Hoffa and of Apalachin, then there will be a proper answer to the question:

Just who's running this country, anyway?

I think, Mr. Speaker, that the American people are becoming justly aroused against the revelations of organized crime and widespread corruption that are being exposed by an investigating committee of this Congress. I call upon the Judiciary Committee to consider legislation which would permit either the Federal Bureau of Investigation, as suggested by the editorial, or another Government agency to take direct action against this organized criminal conspiracy. I also call upon our Appropriations Committee to make available the necessary funds to combat this evil which is no less a threat to our American way of life than the international Communist menace.

URBAN RENEWAL

Mr. ALGER. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks and include a report on urban renewal.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. ALGER. Mr. Speaker, while presented in relation to Dallas, this study of the urban renewal program is appropriate to other cities and urban areas in other congressional districts.

THE URBAN RENEWAL PROGRAM, MAY 2, 1958

Admittedly Dallas has need for improvement of some homes and other buildings, and perhaps whole areas. Most cities throughout the nation have such problems. Urban renewal, the improvement of homes and neighborhoods, is approved and applauded by everyone. Many cities are now engaged in slum clearance and rehabilitation through local private and public initiative without Federal aid. The lessons to be learned from these urban renewal programs and the others, using Federal funds, are quite clear. From these lessons all can benefit.

Since Congress acts as the city council for Washington, D.C., for 3 years I have been, in effect, a councilman studying an urban renewal program in progress in Washington. In addition, we study other projects throughout the Nation as part of the housing bills.

Even earlier, I was a realtor, land developer and builder, working in conjunction with the city, conforming to city restrictions on building and developing. I am interested in urban renewal by natural inclination and as a Member of Congress. A Member must study the effects and size of Federal expenditures to fulfill his oath to uphold the Constitution. I seriously doubt (1) the constitutionality of this law, and (2) that the Federal Government can afford urban renewal expenditure.

In Congress I observe, vote on, and report to the citizens of Dallas County the legislation considered, the Federal encroachment upon, and the violation of personal and States rights, the boondoggle and political tradeouts, the hasty and wasteful spending. My interest in Federal assistance programs was sharpened by the attack upon Dallas by a California Representative who accused Dallasites of grabbing greedily for Federal money for the fifth district. This erroneous attack was answered and laid to rest on only one test—the facts.

The facts and documentary evidence on urban renewal are here presented in several parts:

1. The Federal and State urban renewal laws.
2. Eminent domain—of the right and use.
3. The relocation problem (of people affected by urban renewal).
4. Cost and time factors.
5. A constructive plan—how to do it locally.

The question is how best to do the job. Do it we can, I am confident, in the spirit of Texas and Dallas. As our mayor said:

"Dallas' greatest resource is its people. Dallas will remain bright because of its people."

My hope is to see that job done, and done well, for our community, even to set an example for others who face the same grave problems. Everyone in Dallas has a part, if only as taxpayer.

Those who doubt the job can be done locally might listen to Representative CHARLES VURSELL, of Illinois, a member of the subcommittee responsible for urban renewal:

"Mr. Chairman * * * what I am questioning is the necessity of forcing the Federal Government to continue this program (urban renewal) that, in my judgment, and I believe in the judgment of most of those who understand it, never should have been started in the first instance.

"It is my judgment that the average small cities or the larger cities of the Nation generally are more able to build their own improvements than is the Federal Government, which has had to undergo the expense of financing the recent World War II, the Korean war, and now has to maintain the most expensive military force we have ever had to have in peacetime, because of world conditions, and the Russian threat of communism.

"It is unfair to extort taxes, so to speak, from millions of people who are housing themselves, and financing their own places of business, and force them to contribute to cities all over the land, hundreds of miles distant from the taxpayer.

"It is the responsibility, so to speak, of the officials in the city halls throughout the Nation, the mayors, the aldermen, the city commissioners, and the taxpayers to take care of their own community and housing needs. All cities, with the cooperation of their citizens, should take care of their own needs, and in the end will make the most progress. The citizens and public officials who turn to the Government deaden their own morale and the morale of the citizens of the community."

For those who say we must competitively get all the money back from Uncle Sam that we can, I quote President Eisenhower:

"The completely spurious argument is frequently advanced that because the Federal Government skims off so much of the valuable tax revenue, it must, as a consequence, bear more of the local expenditure. This is putting the cart before the horse. If local communities do their job, then there will be no need for additional centralized revenues for nationwide subsidies of an essentially local character; and we will avoid the certain pitfalls of extreme centralization.

"Very frankly, I firmly believe that the army of persons who urge greater and greater centralization of authority and greater and greater dependence upon the Federal Treasury are really more dangerous to our form of government than any external threat that can possibly be arrayed against us. I realize that many of the people urging such practice attempt to surround their particular proposal with fancied safeguards to protect the future freedom of the individual. My own conviction is that the very fact that they feel the need to surround their proposal with legal safeguards is in itself a cogent argument for the defeat of the proposal."

Before any referendum, I hope these matters will be carefully studied by all Dallas residents. This material is intended to be of some help.

THE LAW

The pamphlet, "Federal Laws Authorizing Assistance to Slum Clearance and Urban Renewal" contains the major pertinent Federal statutes involved, including public housing (pp. 74–76) and FHA mortgage insurance for rehabilitation and construction of privately owned homes (pp. 64–73). A helpful summary is contained on the page following the table of contents. The Federal loan and capital grant program for land clearance operations (title I of the Housing Act of 1949 as amended) which would be applicable to the project under discussion in Dallas, is contained on pages 2–25.

The mechanics under the Federal law are:

1. The Federal Urban Renewal Administration, bypassing the appropriations process of Congress, lends money (currently at 3½ percent interest) to a local authority authorized to accept Federal aid to make preliminary studies (sec. 109, Federal law).
2. The URA similarly lends additional money for detailed planning of a project.
3. The URA lends large sums, to acquire by condemnation under power of eminent domain and otherwise, land and buildings now belonging to private citizens and used for their homes and businesses.
4. The local authority generally demolishes and clears all the structures from the project area.
5. The cleared land is then offered for sale, generally at tremendous loss, for reuse by other private citizens for sites for their businesses and homes.
6. The loss (the difference between what the cleared land will bring when resold, and the cost of acquisition, demolition, preparation for reuse, plus all project overhead) is made up by the taxpayers. One-third of the loss is paid by taxpayers in their local taxes, as a so-called local grant-in-aid (sec. 104, Federal law). The other two-thirds is paid by taxpayers in their Federal taxes.

That Federal control and dictation follow Federal aid is abundantly clear. For example, section 109 on pages 15 and 16, details instructions for wage payments according to the United States Secretary of Labor in Washington under the Davis-Bacon Act, by which local officials must abide, and from which wage setting there is no appeal, no court protection. The Secretary of Labor is prosecutor, jury and judge.

"Aids to Your Community" lists the programs of the Housing and Home Finance Agency (HHFA), an attractive presentation, and explains the program more readably. The problem, planning, financing, housing for displaced families (public housing and FHA assisted private housing) and community facilities help (streets, sewers, schools, etc.) are presented. Lots of Federal aid is offered.

An HHFA news release outlining the seven-point workable program and the Dallas "Little Mexico" project, gives credit to Dallas

for having the Nation's first nonfederally assisted urban renewal project. Dallas already has a tradition to maintain.

The Texas urban renewal law (ch. 298, General and Special Laws of Texas, 55th Legislature) is the act enabling Texas communities to participate under the Federal urban renewal law. The law became effective August 22, 1957. The eminent domain sections are quite significant (see especially sec. 10 on p. 11 of the Texas law and sec. 2 of this statement).

EMINENT DOMAIN

Private ownership of property is a basic right to be jealously guarded, as we do personal freedom. We are most aware of this when confronted with the power of eminent domain, by which law, property can be condemned and taken. Basic protection is given individuals by the fifth amendment to the Constitution which says (1) "No person shall * * * be deprived of * * * property without due process of law; (2) nor shall private property be taken for public use, without just compensation." The Constitution thus assures protection of individuals and minorities from majority rule.

The Supreme Court upset this protection in 1954 in reinterpreting the traditional application of eminent domain. In this case, in a district court, the owner of a department store challenged the validity of the act which gives the local redevelopment authority the right to condemn property which is not substandard or slum property merely because the property is part of an overall redevelopment plan. The Supreme Court then upheld this right to take property because in its concept of public welfare "the values it represents are spiritual as well as physical, aesthetic as well as monetary. It is within the power of the legislature to determine that the community should be beautiful as well as healthy, spacious as well as clean, well-balanced as well as carefully patrolled." Losing your property through eminent domain because of someone else's judgment of these values seems quite contrary to the fifth amendment. Further, this decision means that the courts, generally the final repository of the peoples' rights against arbitrary action of the legislature, are not available to those whose property is taken and destroyed for redevelopment purposes. The remedy is in the legislature which may impose whatever restrictions on redevelopment authorities it may deem necessary. So the Court seems to switch the historic roles of legislature and judiciary.

As the district court said: "We are of opinion that the Congress, in legislating for the District of Columbia, has no power to authorize the seizure by eminent domain of property for the sole purpose of redeveloping the area according to its, or its agents', judgment of what a well-developed, well-balanced neighborhood would be. This amounts to a claim on the part of the authorities for unreviewable power to seize and sell whole sections of the city."

A congressional committee then commented about the inequities and injustices involved.

The Urban Land Institute editorialized on this new Supreme Court application of eminent domain, police power, public welfare, and public purpose rather sagely, summarizing the scope of legislative determination.

Later, the Richmond News Leader took "A Hard Look at Redevelopment" declaring "private property is losing its importance."

Very significant are the decisions of the supreme courts of Florida and Georgia, both of which declared eminent domain in urban renewal to be unconstitutional according to their respective State constitutions. While Georgia modified its constitution, the basic reasoning of the supreme court decision was not altogether set aside.

Finally, the statements of Marshall Heights residents demonstrate the unfairness and inequity of this application of eminent domain.

Another example which illustrates the inequities of eminent domain is provided by the Washington renewal agency which took property from one private business (Standard Oil) and transferred it to another (an auto parts dealer).

The major danger, therefore, is the taking of private property for private use.

RELOCATION AND PUBLIC HOUSING

Relocation housing is a basic requirement of the urban renewal law. The seven part workable program requests "the city's plans for relocating families to be displaced by slum clearance."

There are two basic types of housing available: (1) private construction through FHA insured mortgages; (2) public housing, existing or new units, constructed with Federal money. The FHA help (sec. 220) is specifically designed for help whenever urban renewal is involved or whenever any government action results in displacing families (FHA, sec. 221).

Public housing, the other alternative, may be used to relocate families, either in existing or in new housing units. The Housing Law of 1949 established urban renewal as title I and Public Housing as title III. In practice the two are closely linked, as the congressional hearings show, almost by definition.

Dallas now has 6,372 public housing units. At the national average of 30 percent yearly turnover Dallas would have 1,900 units available per year for dislocated families as new occupants. Further, there is a remarkable connection between urban renewal and more new public housing units. The attached list shows some urban renewal projects by location and date and the new public housing units which were contracted for shortly thereafter. That this may be more than coincidental is documented by the Chattanooga case. The mayor was given assurance from insurance, banking, and real estate leaders that private enterprise stood ready to supply the necessary housing. Yet the fieldman of the HHFA stated that they first must file an application for 1,000 public housing units before they could qualify for urban renewal funds (see p. 1002, congressional hearings, Appropriations Committee). This has been variously called the "entering wedge," the "shoehorn," the "blackjack," or "the trap," whereby urban renewal is used as the entree for public housing.

Texas law prohibits the use of the redeveloped land for public housing, but this does not prevent the construction of public housing on other sites. The net result could be Dallas being forced into the position of reluctantly accepting more public housing in order to get the Federal money for urban renewal. Federal aid means Federal control. This is the lesson taught by experience. Welfare programs by Federal Government are replete with "administrative determinations" or "decisions."

Why not have public housing? The lessons learned from approximately one-half million units do not make a pretty picture. The inherent weaknesses of public housing are sociological, economic, and political. The attached exhibits clearly state the case (19 through 31).

The Dallas public housing figures are rather interesting. The unused subsidy of $568,000 raises the question, Are these units presently housing the families in direct need, for whom the projects were intended?

Some communities have already decided against public housing. Attached are the articles recounting these expressions of disapproval of public housing in other localities. Shreveport, La., slum-property owners promised to clean up their properties; a Natchez, Miss., alderman applauded the rejections of the direct dole from government; a Rockford, Ill., alderman pointed out that public housing costs more to construct than private, and the newspaper declares Federal money shouldn't be taken just because it's available; the High Point Enterprise editorial on Federal housing says "socialism is socialism" and Federal housing does more harm than good; the South Haven (Mich.) Tribune editorializes that the city commission rescued the city from a welfare project of great expense and entanglement in rejecting public housing. These arguments are doubly applicable to public housing and to urban renewal with or without public housing.

There are inherent dangers in public housing unthought of by the average citizen. This is brought out by a former chairman of a housing authority himself. Further proof is seen in the fact that a number of former executive directors of public housing authorities are now in prison, including the former directors of Houston, Galveston, Los Angeles, Contra Costa County, Calif., and others.

COST AND TIME FACTORS

Cost and time factors are most revealing in the study of urban renewal. The cost is truly fantastic, almost without limit. Practically every community throughout the Nation has older buildings. Every building ages, and some have the built-in weaknesses of faulty construction. Inspection, repair, and rehabilitation are needed.

No matter who foots the bill the cost of complete and immediate urban renewal would be prohibitive, so redevelopment and rehabilitation must be accomplished gradually. The cost must be spread equitably. And this costly program is added to a long list of existing programs of all kinds at all levels of government demanding heavy expenditures of the taxpayers' money.

The Treasury isn't just broke; it has one-fourth trillion dollars less than nothing. It is a tricky job in fiscal management just to pay current operating expenses of Government. Only the borrowing power of Government makes possible the continuation of the deadly overspending spree. Federal bills are to be paid from future revenue, gambling on the continued high income of taxpayers. Simultaneously Congress adds to the Federal spending to help the financially drained taxpayers from whom the money is taken. Any sign of local financial trouble is the signal for more Federal spending with little thought that the aid distributed must first be taken from the same people in taxes. So the burden increases. (Tax cuts could be substituted for Federal spending.)

The cost of urban renewal authorized to date approaches $2 billion. The administrative expenses are running approximately $5,730,000 a year and increasing. The public housing bonds as of March 1957 total $2,268,723,000. The yearly cost to taxpayers who must pay the principal and interest on these bonds is $193,446,405. This means that the taxpayers over the 40-year program will pay $7,737,856,200 for projects which originally cost $2.2 billion.

The Federal grant contribution to urban renewal will be two-thirds of writedown or loss, the difference between the resale or reuse price and the expenses of acquisition, demolition, and clearing. This writedown of two-thirds will be paid by the citizens of Dallas as Federal taxpayers and one-third by citizens of Dallas as local taxpayers. And almost no one escapes being a taxpayer.

The slum clearance or land preparation is just the start of heavy expenses for the local community. True, if the job must be done, the cost must be borne. Yet the very costliness is all the more reason for trying to cut every corner, to exercise judgment and discrimination in how best to do the job. Other costs include the relocation housing

that will be added, either privately or publicly through public housing, the latter approach again on the taxpayer. Some of the folly of governmental invasion of private enterprise may be seen in castles in the air applicable to public housing and urban renewal.

The fiscal danger can be shown by the fact that if communities sought all the Federal money available under existing law, there wouldn't be enough to go around, not with printing presses running ceaselessly. The competitive inducement to States and communities to seek and bid for this money postpones realistic appraisal of the facts, and heightens the potential danger of complete socialism.

The write-down or shrinkage of value which occasions the Federal loan and grant is subject to serious question in itself. Why the excessive drop in value when raw land, strategically located, is cleared and ready for use. Generally, the availability for a higher use should enhance the land values sufficiently to offset the cost. At the least, an appreciable write-down suggests some question of judgment on the part of the urban renewal authority's setting a reuse value not in conformity with the highest and best use of the land. Misuse of land is always reflected in lower value.

Another financial danger is the windfall, the heavy profit which might be made by individuals in the private development after purchase of the land. Profit in free enterprise is one thing but profit off the taxpayer is another. Existing cases (see eminent domain sec. 2) show the inequities already occurring. Would it not be possible under this law to buy up older areas, as older downtown sections, sell them under eminent domain valuations with the possibility of tidy profit, then buy them back from the urban renewal authority at a written down price, to redevelop and make a handsome profit?

The time factor of Federal urban renewal is another drawback which is unlike the Texas and Dallas spirit of performance. Even if the people of Dallas were to overlook the unconstitutional, financial, and Government administration aspects, there would be the same old story of redtape and delay. For example, local initiative built a Dallas-Fort Worth highway in the time that Federal Government would have been preparing and signing forms. In Washington it took 7 years to get an urban renewal project under way (exhibit 41). Admittedly, this may be longer than some, but the pattern is there. It just isn't the Dallas pattern of doing business. In fact, it's worth a chuckle just to think of our first citizen, Mayor Thornton, trying to put up with Federal forms, endless consultations, and bureaucratic determination from Washington. No, the Texas spirit, seen in Bob Thornton, and the cut of all Dallas citizens is in performance, in "get the job done—now." It's one thing for the scope of the job to slow us down; it's entirely another to be delayed by redtape.

CONSTRUCTIVE PLAN AND SUMMARY

The job of urban renewal in Dallas can be done locally, even the most skeptical must agree. The proof—the accomplishments of the people of other cities who have met and overcome terrific slum problems—without Federal aid. What other communities can do, Dallas can do. Indeed, Dallas already is the pioneer, gaining nationwide recognition for the "Little Mexico" project, the first of its kind accomplished, without Federal funds. Let's not abandon our leadership. Even without this success in our background Dallas can match or outdo the efforts of those cities listed in the "Blueprint for Neighborhood Conservation" as the Tale of 7 Cities, which are New Orleans, Los Angeles, Charlotte, Chicago, Cincinnati, Newark, and Kansas City. These projects here mentioned were without Federal money.

Take Charlotte, N.C., for example. As of today 12,000 residences have been rehabilitated (10,000 bathrooms were added). Two thousand buildings could not be saved and were demolished, at the owners' expense. Meanwhile the city did its part by paving 65 miles of streets, adding street lights, and providing playgrounds, parks, and other needed improvements. Two thousand families were relocated in privately owned homes, rehabilitated or new. Two thousand new private housing units were built—all of this without Federal aid. Note also the financial impact with increased revenue to the city. There are expenses, but urban renewal also generates revenue.

The New Orleans story is much the same, so is the Los Angeles story and the others—each without Federal aid. In fact, the cases where there was no Federal aid involved suggest that the other areas getting Federal aid could have done it on their own.

The case of Memphis, Tenn., is another example of the local people—bankers, insurance men, builders, realtors, and citizens doing the job—without Federal aid, and without eminent domain. The power of eminent domain, the taking of private property, does not necessarily have to be used in urban renewal, where owners are given a chance to participate. True, they must be told to clean up, sell, or have the city clean it up at the owners' expense. The result is greatly increased property value so the owner can hardly object. Even in cases where property does not conform to the zoning requirements, the owner can be given a chance to abate the nonconformance through remodeling or removal of the building, still retaining the land ownership. The property is not taken away without his having a chance to participate.

In Gadsden, Ala., it is my understanding that no right of eminent domain was used in redeveloping a rundown area. Neither did this city have a proper housing code or proper enforcement (compared to Dallas). City teams talked to owners about rehabilitation. When the owners refused to clean up the slum-like property, the city teams went directly to the property tenants. Each tenant was asked if he wanted a new home in a nearby residential development to be built with FHA financing under section 221. When most tenants signed up the realtors, builders, mortgage men and bankers went to work. A lovely new development was completed. The tenants moved into the new homes. The old shacks were left vacant. The owners then agreed to cooperate.

The definition of bad housing and what can be done about it is meaningful to property owners, as outlined in the pamphlet, "The Real Estate Man and Housing Reform." Another good summary of a positive program without Federal aid is described in the Washington Star article entitled "Realtors Have a Plan for Better Housing." Their way is neighborhood conservation carried out by private enterprise. It requires areawide, communitywide planning embracing a good housing code, proper zoning, a suitable assessment and tax structure, health and safety code with the necessary enforcement inspection. This is simply good city operation, something understood by Dallas people and their officials.

Two pamphlets put out by the chamber of commerce entitled "Urban Development Guidebook" and "City Planning and Urban Development" further outline the necessary program to accomplish urban renewal—and without Federal aid, although such aid is recognized as available. The need for private enterprise and local initiative has been rediscovered by the residents of Gary, Ind., who have offered for sale Duneland Village, a complete public housing development of 165 units. Upon the sale of public housing these advantages would accrue: (1) Revenue from the sale would be realized, (2) Stop further Federal subsidy using the taxpayers' money, (3) The property would start to pay its full share of local taxes, (4) The morale of occupants would be greatly boosted, no longer ashamed over others helping to pay the rent, (5) And no political worry over being evicted if their salary is increased.

Section 406 of the Housing Act of 1954 permits a resolution or ordinance by the city council or a referendum by the citizens to call for the liquidation of a project. The city would then negotiate with the Federal Government and the project will be sold by the public housing authority to the highest bidder after public advertisement. The bonds supporting the project would be repaid and any receipts above the indebtedness would be paid to the city and Federal treasuries.

CONCLUSION

Urban renewal is a local problem, concerning local property, and local property owners. The local citizens, as property owners and taxpayers, also foot the bill in every instance. "That government is best beset that is closest to the people" is no empty axiom. Our mayor and city council backed by local judgment can better solve our local problems than the distant Federal Government. Further, Federal aid weakens local government, costs more to do the same job, and violates the individual and States' rights guaranteed by the Constitution.

We shouldn't try to transfer our problems to the Federal Government for solution. The Federal Government will accept them always and try to do the job; this is the politically expedient thing to do.

In our conscientious recognition of the need for slum elimination, a view we all share, we must beware of dubious means to a very justifiable end.

The matter of Federal regulation following the use of Federal funds will no doubt continue to be misunderstood by some in Dallas, just as in Washington. So let me point out examples of controls we must accept: (1) Forced integration is part of public housing, so the Court has ruled; (2) the wage rates on urban renewal land clearance will be set by the Secretary of Labor, not by local people or the local economy, and there is no legal recourse from such wage predetermination. These are just two examples of imposed control.

I believe the acceptance of Federal money for purely local projects to be wrong. So I oppose this use of Federal money. Can I take any other course than to oppose what I think wrong? If, in fact, Federal aid is wrong and those who think it is wrong fail to oppose it, what is our Nation's future?

As I see it, the truth is the job will be done locally. It is just a question of recognizing responsibility and properly labeling what must be done, and then doing it. This will require responsible property owners (and responsibility accompanies ownership); it will require a courageous mayor and city council; it will require an understanding and willing citizenry.

All these ingredients of success Dallas has, no less than any other city. We can do the job locally, without Federal aid.

SPECIAL MILK PROGRAM

Mr. LANGEN. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Minnesota?

There was no objection.

Mr. LANGEN. Mr. Speaker, I am today joining certain of my colleagues by introducing a bill which would increase the amount of funds made available for the special milk program for fiscal 1959 to cover expected deficits, as well as for fiscal 1960 and 1961, to provide for the larger school enrollments which these years will bring.

Under the extension of the Agricultural Act of 1954, which covers this and the succeeding 2 fiscal years, funds in the amount of $75 million annually were made available for this program. However, it has recently been brought to our attention that no less than 38 States are facing deficits for this fiscal year under their present allocation. With the increased numbers of children enrolled in elementary and secondary schools which the next 2 years will bring, even greater deficits will be forthcoming unless we prepare now for them.

Under the proposal which I am today introducing, an additional $5 million will be made available for this program during the remainder of this fiscal year. This will cover the present deficits. The proposal would then also amend the present allocation to provide for an additional $10 million in fiscal 1960 and $15 million in 1961 to provide for the increased enrollments for which we must be prepared.

The special milk program is a good program. Since its inception in 1954, it has provided increased numbers of children in nursery, elementary, and secondary schools, as well as those in child care centers, settlement houses, summer camps, and similar nonprofit institutions devoted to the care and training of children, with increased amounts of milk to satisfy their health needs. In 1954, almost 450 million half pints were consumed. In 1956, this consumption was increased to more than 1,394 million half pints. And this year over 2 billion half pints will be consumed under the plan.

We must provide for this increase in both children and milk consumption, for unless we do, this fine program will be severely curtailed to the extent that States will be required to tell their schools and camps to decrease the amount of milk provided for their children. And the health of these children demands this milk.

Not only is the special milk program a good program from the aspect of the health of our children, it is a successful program with regard to the dairy industry and our dairy products surplus. Taken together with the school lunch program, it represents 3.5 percent of all the fluid milk consumed by our nonfarm population. The choice we have to make is whether we want to continue to encourage this drinking of milk by our schoolchildren or use the money to purchase surplus dairy products under present price-support programs.

Because this program benefits both our schoolchildren and our dairy industry, I respectfully urge the early consideration and approval of this amendment.

SHOULD PUBLIC HOUSING BONDS BE TAX EXEMPT, WHILE FARM CREDIT BONDS ARE REQUIRED TO PAY TAX?

Mr. McDONOUGH. Mr. Speaker, I ask unanimous consent to address the House for 1 minute.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. McDONOUGH. Mr. Speaker, last week I called the attention of Congress to the glaring tax loophole created by federally assisted public housing financing and pointed out the public housing authorized in the proposed housing bill could result in a tax windfall of over $1 billion for wealthy investors.

Today I would like to direct the attention of Congress to the unfair competitive advantage which public housing financing is privileged to enjoy over other programs which the Congress has set up and in which the Congress takes great pride. I refer to five Federal agencies which sell their own securities in the private investment market but not on a tax-exempt basis. I hope Members of Congress from farming districts will give earnest consideration to this problem because three of the five Federal agencies affected are farm credit agencies; namely, the Federal intermediate credit banks, the banks for cooperatives, and the Federal land banks.

Last year, calendar year 1958, sales of federally assisted public housing securities in the private investment market totaled $1,856,964,000. That includes both short-term note and long-term term bond financing. That huge volume of financing was done on a tax exempt basis notwithstanding the fact that the basis of the credit was a pledge of Federal credit.

Last year, calendar year 1958, sales of Federal intermediate credit bank securities in the private investment market totaled $1,560,300,000. Those securities were short-term notes with 3- to 9-month maturities. Even though these securities represented credit of a Federal agency they all had to be sold on a taxable basis. Why should federally assisted public housing securities enjoy a tax exempt privilege status in competition with the taxable securities of this fine agency in seeking the private investors' dollars?

Last year, calendar year 1958, sales of the banks for cooperatives securities in the private investment market totaled $329,500,000. Those securities were notes with 7- to 9½-month securities. Why should the securities of this fine Federal agency, which must sell its securities on a taxable basis, have to compete for funds in the private market with federally assisted public housing securities sold on a tax-exempt basis?

Last year, calendar year 1958, sales of Federal land-bank securities in the private investment market totaled $800 million. Those securities consisted of both short-term notes and bonds, with maturities ranging from 6 months to 12 years. Again we have a fine Federal agency selling its securities on a taxable basis in competition with tax exempt, federally assisted public housing securities. Why do we permit such unfair competitive advantage to continue?

The other two Federal agencies which finance in the private market and have to sell their own securities on a taxable basis promote private enterprise housing. These are the Federal home loan banks, and the Federal National Mortgage Association. Members interested in the private enterprise approach to housing will find the situation here most interesting.

Last year, calendar year 1958, the Federal home loan banks sold $808 million of their securities in the private market—all on a taxable basis. Maturities ranged from 6 months to 5 years. These taxable securities had to compete in the private market for the investors' dollar with the tax exempt federally assisted public housing issues.

Last year, calendar year 1958, under the secondary market operations of the Federal National Mortgage Association, sales of taxable securities in the private market for this function totaled $1,100 million. Maturities ranged from 3 months to 10 years. It is the same story. Taxable securities of another of the Government's own agencies having to compete with tax exempt federally assisted public housing issues.

Think of it. The $1.85 billion of federally assisted tax exempt public housing financing almost equalled the $1.9 billion combined total of the financing of the two Federal agencies which have to do their financing on a taxable basis to obtain funds to assist private enterprise housing.

For the convenience of the Members I am summarizing the above-mentioned financing in the following tabulation:

Program	Securities issued, 1958	Tax status of securities
Public housing	$1,856,964,000	Tax exempt.
Farm:		
Federal intermediate credit banks	1,560,300,000	Taxable.
Banks for cooperatives	329,500,000	Do.
Federal land banks	800,000,000	Do.
Private housing:		
Federal home loan banks	808,000,000	Do.
Federal National Mortgage Association (secondary market)	1,100,000,000	Do.

Unfortunately the Congress cannot do anything about the tax-exempt status of existing federally assisted public housing securities or about those to be issued pursuant to already signed Federal assistance contracts. However, if the Congress is to approve any additional public housing authorization, the Congress certainly should plug this tax loophole on public housing securities to be issued in the future and thus make a start on wiping out the unwarranted, tax-free competitive advantage which otherwise would exist for such securities. In all fairness to our Federal agency farm and private housing programs the Congress can do no less.

UNJUST TAX DISCRIMINATION AGAINST DEBIT LIFE INSURANCE AGENTS

Mr. CURTIS of Missouri. Mr. Speaker, I ask unanimous consent to extend my remarks in the body of the RECORD in two instances explaining two bills introduced by me.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. CURTIS of Missouri. Mr. Speaker, I have today introduced a bill, H.R. 5390, to recognize so-called debit life insurance agents as outside salesmen under section 62(2)(D) of the Internal Revenue Code. My bill is identical to H.R. 5122 introduced on March 2 by my distinguished colleague from Texas [Mr. IKARD]. As I shall explain, the purpose of these bills is to eliminate an unjust tax discrimination against debit life insurance agents.

Under section 62(2)(D), an outside salesman is permitted to deduct all of his ordinary and necessary business expenses from gross income in computing his adjusted gross income. Then, in computing his net income from adjusted gross income he can and does claim the 10 percent standard deduction where that exceeds the amount of his actual deductible nonbusiness expenses for taxes, interest, contributions, and the like.

Like so-called ordinary life insurance agents, who are correctly considered to be outside salesmen within the meaning of section 62(2)(D), debit life insurance agents are salesmen in every sense of the term. Both types of agents hold the same kind of licenses; both sell the same lines of insurance—except that only debit agents can sell what is known as industrial insurance; both conduct their activities away from their employers' places of business; and both are generally required to defray their business expenses out of their own pockets.

Yet, despite the fact that the functions of both types of agents are basically identical, the Internal Revenue Service has ruled that debit agents are not outside salesmen. As a result there are a number of business expenses which they can deduct only from adjusted gross income rather than from gross income. In order to do this, however, they must forego the right to claim the 10 percent standard deduction from adjusted gross income. In many cases this means that debit agents are in effect denied the full benefit of their business expense deductions and consequently have higher taxable incomes than ordinary life insurance agents and other salesmen with exactly the same amount of gross income and business expenses.

Actually the only real respect in which the debit agent differs from the ordinary agent is that normally the debit agent personally collects the premiums falling due on one type of insurance that he sells—that is, industrial insurance, which is sold on a weekly or monthly premium basis. It is because of his activities in collecting premiums on this one type of insurance that the Internal Revenue Service has ruled that the debit agent is not an outside salesman within the meaning of section 62(2)(D).

Now, many debit agents devote only a relatively small amount of time to these collection activities and derive the major share of their income from the sale of new insurance. Moreover, anyone familiar with the life insurance business will tell you that even when making his premium collections, a debit agent is actually still "selling" insurance. This is because the policyholders are under no legal obligation to pay their premiums and are completely free to let their insurance lapse if they choose not to pay. Thus, in order to collect a premium on an existing industrial policy, the agent very often has to make as thorough a sales presentation as was made when the policy was originally placed in force.

In summary I believe it to be beyond question that debit life insurance agents are outside salesmen and are entitled to the same tax treatment as all other such salesmen under section 62(2)(D). The bills introduced by the gentleman from Texas [Mr. IKARD] and myself are designed simply to give explicit statutory recognition to this fact. I might add that I am confident that this equitable result can be accomplished with a very insignificant loss of Federal tax revenue.

FLOOD CONTROL AND CONSERVATION

Mr. BREEDING. Mr. Speaker, I ask unanimous consent to extend my remarks in the body of the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Kansas?

There was no objection.

Mr. BREEDING. Mr. Speaker, I would like to call to the attention of this distinguished body a resolution adopted by the Kansas State Legislature urging the continuance of sufficient appropriations necessary to the control of floods and conservation of soil and water in the State of Kansas.

The resolution is as follows:

"HOUSE CONCURRENT RESOLUTION 20

"Concurrent resolution petitioning the Congress of the United States to take appropriate action to assure the continuance of surveys and planning and cooperation in the construction of projects in the State of Kansas that are vital and necessary to the control of floods and the conservation of soil and water by sufficient appropriations being granted for this purpose to the Bureau of Reclamation, the U.S. Department of Agriculture, and the Corps of Engineers, and other Federal agencies and Departments

"Whereas water and soil are the most valuable natural resources in Kansas; and

"Whereas the citizens, industries, farms, and cities of Kansas have always been subject to flood and drouth but more recently they have experienced severe hardships and great financial losses from floods and drouths during the years 1951, 1952, 1953, 1954, 1955, 1956, 1957, and 1958; and

"Whereas many cities, industries, and farms have recently suffered from a critical shortage of water and at the same time are exposed to the further hazards of flood and drouth; and

"Whereas the nature of rivers is such that storms occurring in headwater regions of a stream in one State frequently inflict damage to areas in other States, and the benefits of stream stabilization resulting in adequate and dependable water supplies in one State become beneficial to areas in other States; and

"Whereas it has become evident that we must use every means available and feasible to conserve and control all of the sources of water supply for agricultural, municipal, industrial, and recreational use; and

"Whereas land treatment and watershed development have been increasingly emphasized as vital to all programs for the conservation of water and soil by the executive and legislative branches of State government, the State water resources board, State department of agriculture and other agencies, and the program is lagging because of the insufficiency of Federal funds for planning purposes; and

"Whereas the Federal Government through acts of Congress has delegated to three agencies, namely, the Bureau of Reclamation, the Soil Conservation Service of the U.S. Department of Agriculture, and the Corps of Engineers the principal responsibilities for the conservation of water and soil, and more specifically, such matters as water supply, irrigation, pollution control, soil conservation and flood control: Now, therefore, be it

"*Resolved by the House of Representatives of the State of Kansas (the Senate concurring therein)*: That we respectfully urge, request and petition the Congress of the United States to take such action necessary to assure (1) continuance of surveys, planning, and cooperation in the construction of projects in the State of Kansas that are vital and necessary to the prevention of floods and to the conservation of water and soil, and (2) that Federal funds for this purpose be appropriated in sufficient amounts to the Soil Conservation Service of the U.S. Department of Agriculture, the Bureau of Reclamation, and the Corps of Engineers, and also other Federal agencies and departments; and be it further

"*Resolved*, That the secretary of state be instructed to transmit enrolled copies of this resolution to the President of the United States, the Vice President of the United States, each Member of Congress of the United States, and the Director of the Bureau of the Budget of the United States."

I hereby certify that the above concurrent resolution originated in the house, and was adopted by that body.

February 16, 1959.

JESS TAYLOR,
Speaker of the House.
A. E. ANDERSON,
Chief Clerk of the House.

Adopted by the senate February 27, 1959:

JOSEPH W. HENKLE, Sr.,
President of the Senate.
RALPH E. ZARKER,
Secretary of the Senate.

NATIONAL TRANSPORTATION WEEK

Mr. HARRIS. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. HARRIS. Mr. Speaker, I have today introduced a resolution which would authorize the President to annually proclaim a National Transportation Week.

National Transportation Week, to be celebrated for the fourth consecutive year, is sponsored by the Associated Traffic Clubs of America, a national organization of over 250 clubs located in cities from coast to coast with total individual memberships of 50,000 men and women engaged in transportation work with major shippers and all modes of carriers.

For 1 week each year it would be appropriate that the American people be reminded that the transportation system of the United States, which is indispensable both to continuing economic development and adequate national defense, is strong and vigorous and always stands ready with its services to meet the needs of the Nation.

Through this annual celebration, in which shippers, railroads, motor carriers, airlines, water carriers, as well as those who labor in transportation, will participate, it is hoped that Americans everywhere will gain a better understanding and appreciation of the vitally important role played by transportation, in our everyday lives, our national economy, and in the national defense.

We should be proud to recognize that this Nation has the finest transportation system in the world, and the only such system in the world privately owned and operated. Observance of a National Transportation Week should also remind Americans that all segments of our transportation system must remain strong if the maximum contribution is to be made toward maintaining a vigorous free enterprise economy in the United States.

This means that the carriers serving the inland areas of our country are to be maintained in full vigor. In addition, the national policy must be such that the American merchant marine will be able to carry the flag of the United States to all corners of the world, in both time of peace and in event of a national emergency.

The observance of a National Transportation Week will go far toward renewing in the minds of the American people the realization that adequate transportation is the lifeline of our existence. Likewise, it should reawaken the continued need for policies that will sustain the system.

B'NAI B'RITH WOMEN CELEBRATES ITS 50TH ANNIVERSARY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. McCORMACK. Mr. Speaker, I should like to ask the House to join me in a tribute to B'nai B'rith Women, which observes its 50th anniversary on March 9.

This group—137,000 strong—has long been devoted to educational, humanitarian, patriotic, and philanthropic causes. Although an organization of Jewish women, its benevolence has always been extended without reference to religion, race, or creed.

It is not surprising, then, that B'nai B'rith Women has chosen to cast fanfare aside and commemorate its anniversary in keeping with this tradition of service. No elaborate celebrations will be held, and instead of receiving anniversary gifts on March 9, the members will give one—the gift of blood. In cities throughout the United States and Canada, they will make mass donations through American National and Canadian Red Cross blood banks and other community facilities.

This worthy undertaking, especially as it occurs during Red Cross Month, may well serve as an example to other organizations—men as well as women.

Another outstanding anniversary project will be sponsorship of a youth conference in Washington, D.C., April 12–14, in which representatives of 150 women's organizations have been invited to participate. The conference is being planned in consultation with the White House Conference on Children and Youth and with the cooperation of leading organizations dealing with the problems of youth.

I should like to tell you a little about the remarkable evolution of B'nai B'rith Women during its half century. The organization was born inauspiciously of a handful of women in San Francisco. On March 9, 1909, they founded its first chapter as a ladies' auxiliary of a local B'nai B'rith men's lodge. Its stated objective was to promote sociability in the order of B'nai B'rith.

As time passed, similar women's auxiliaries sprang up in all parts of the country, and as it grew the nature of the organization changed. Most notable was the shift from sociability to philanthropy and community service as its predominant theme.

In the 1930's, the plight of the Jews in Europe, depression at home, and threat of another major war, combined to stimulate an explosive growth in the organization and its activities. In 1940, it officially became a national organization. By 1942 membership reached 50,000.

During the war years, B'nai B'rith Women earned its reputation as a national service organization. Activities were devoted almost exclusively to war and civil defense work, from selling war bonds to driving Red Cross trucks and working in war plants. For these and other undertakings the women were presented with many government and private citations.

The postwar period brought expansion rather than depletion of activities. The creation of the State of Israel opened new opportunities for service, and in 1949, B'nai B'rith Women established a home near Jerusalem for emotionally disturbed children. The organization has continued to maintain this home as one of its major projects.

At home, international tensions, campaigns to conquer disease, veterans' programs, care of helpless and handicapped, vocational guidance, and other youth activities have absorbed members' energies.

As it passes the half-century mark, B'nai B'rith Women has 856 chapters in the United States, Canada, and 15 other countries, with a membership of 137,000. In the last few years, it has raised more than $1 million annually for its widely varied programs, projects, and philanthropies.

When B'nai B'rith Women finally sit down to their golden anniversary banquet April 17, they will well deserve their celebration.

PASSPORT LEGISLATION TO FACILITATE THE CITIZEN'S RIGHT TO TRAVEL

Mr. CURTIS of Missouri. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. CURTIS of Missouri. Mr. Speaker, during the past year there has been a considerable amount of discussion relating to the need for adequate passport legislation. In my opinion, the present laws are inadequate to provide for the travel needs of our citizens. In response to this need, I have this day introduced my bill, H.R. 5455, to establish a national policy relating to the United States citizen's travel abroad; to establish a service within the Department of State which shall be responsible for the direction, administration, and execution of passports and travel documentation for American citizens and nationals in the United States and abroad; to prescribe procedures relating to the issuance of passports; to establish terms of validity of passports; to establish fees for passports; and for other purposes.

Following the recent Supreme Court cases—Briehl, Dayton, and Kent—a plethora of legislation has been introduced in both Chambers of the Congress relating particularly to various types of limitation on the individual citizen's right to travel. In view of this, I think it incumbent upon us to give serious consideration to the nature of the individual's right to travel. In my opinion, the right to travel is of equal dignity with our basic freedoms set forth in the first amendment. The constitutional basis for this conclusion is the provision contained in the fifth amendment wherein it is provided that no person shall be deprived of life, liberty, or property without due process of law. Certainly "liberty" means that the individual citizen has the right to do what he wants, go where he wants, say what he wants as long as in so doing he stays within the respected mandate of "the general welfare of the people." It is only when a clash arises between the individual rights of a citizen on one hand and the collective rights of the citizen on the other, that the former must yield to the latter, but only to the extent that the former will, by so doing, more fully realize his rights as a member of the latter. This yardstick that is applied to measure the length and breadth of the individual rights of our citizens finds application in the area of this right to travel. We erect stop signs and street lights and promulgate rules of procedure for conduct in

and on our highways. We do this not with the express purpose in mind of encroaching on the individual's freedom to travel but we do so with the purpose of facilitating travel to enable the individual to more fully enjoy and make use of his individual right to travel.

Stop signs and street lights facilitate travel and passports facilitate travel. The real reason we require passports is because foreign countries require passports. These countries want to know just who the person is that seeks entry into their country. The passport, then, is really nothing more than an identification card indicating to the particular country that the bearer is a citizen of the United States. It is also a request from the traveler's country that the foreign country extend to its citizen the protection of its laws during the citizen's travel and sojourn in their country. So the passport, then, is an aid to travel. The issuance of a passport to a citizen permits the citizen to more fully enjoy his right to travel. The Government's refusal to issue a passport to an individual restricts and limits the citizen's right to travel, the effect of which is to deny to the citizen his constitutional and natural right of locomotion. It becomes apparent, then, that the Federal Government's right to limit or deny the full enjoyment of a constitutional and natural right is governed by the aforementioned general welfare of the people yardstick.

In my opinion, the promotion of international travel of U.S. citizens and the encouragement of our citizens to know and to understand all peoples throughout the world is in the individual and the public interest and conduces to a more amicable and understanding relationship between all peoples and their respective countries. This, of course, is a policy decision to be made by the Congress. It is certainly consonant with the prior congressional pronouncements relating to our country's international programs.

Travel by citizens abroad should be as free of governmental restraint as possible consistent with requirements of national security. The Government should facilitate such travel and should provide for the protection of citizens abroad by providing passports, by negotiating with other countries to minimize travel formalities, and by other appropriate means to implement this salutary principle.

In section 3 of my bill, H.R. 5455, there are certain findings and declarations made by the Congress. You will note that the Communist Party in the United States is characterized as not being a political party or a political philosophy as such, but it is defined as "an instrumentality of the world Communist conspiracy whose purpose is to overthrow the Government of the United States." It is further characterized as being under the direction, domination, and control of a foreign power whose aims are the overthrow of any legally constituted governments not Communist dominated.

A further finding is made by the Congress that all U.S. citizens who "knowingly and willfully participate in the world Communist conspiracy in effect repudiate their allegiance to the United States and transfer their allegiance to the foreign power in which is vested the direction and control of the world Communist conspiracy and the Communist Parties of the world." A final finding is also made by the Congress that the issuance of passports to U.S. citizens who support the world Communist conspiracy presents a "clear and present danger to the security of the United States."

In view of these findings, the provision is made that during any period when the United States is at war or during the existence of any national emergency proclaimed by the President, a passport shall not be issued to any U.S. citizen if such citizen is a member of the Communist Party or is a member of any organization which is registered or as to which there is, in effect, a final order of the Subversive Activities Control Board requiring registration with the Attorney General of the United States as a Communist action, Communist front, or Communist-infiltrated organization, or has terminated such membership under such circumstances as to warrant the conclusion that such citizen continues to act in furtherance of the interest of the Communist conspiracy. Prohibition is extended to those who knowingly engage in activities which support the world Communist conspiracy under such circumstances as to warrant the conclusion that such citizen continues to act in furtherance of the interest of the world Communist conspiracy. These findings are consistent and in accord with the Internal Security Act of 1950. This act makes it unlawful for any member of the Communist conspiracy to make application for a passport or the renewal of a passport to be issued or renewed by or under the authority of the United States or to use or attempt to use any such passport.

It is the opinion shared by many that before the Congress can lawfully limit a citizen's right to travel because of his affiliation with the Communist movement, it is necessary that the aforementioned findings of fact be made as conditions precedent to any such restrictions. You will note further that these prohibitions will only be effective under the Passport Act of 1959, during a time when the United States is at war or during a period of national emergency proclaimed by the President. It is my opinion that if further restrictions are found to be necessary by the Congress that it is more appropriate that these restrictions be contained in the Internal Security Act of 1950 as is presently provided rather than encumber the Passport Act of 1959 which is designed to facilitate the travel of U.S. citizens abroad.

In my bill, H.R. 5455, the Passport Act of 1959, is proposed the stated policy of the Congress of the United States "that the promotion of international travel of U.S. citizens and the encouragement of its citizens to know and understand all people throughout the world is in the individual and public interest and conduces to a more amicable and understanding relationship between all peoples in their respective countries. This policy dictates that travel by citizens abroad should be as free of governmental restraint as possible, consistent with the requirements of national security. In accordance with this overriding principle, in my opinion, passport facilities should only be denied in the following instances, to wit:

First. Where such travel would:

A. Further the world Communist conspiracy as provided in the bill;

B. Violate the laws of the United States or of any State or Territory thereof;

C. Would aid in the evasion of any order issued by any court of record of the United States or of any State or Territory thereof;

D. Aid in the evasion of any information or indictment for a felony duly found by the United States or any State or Territory thereof;

E. Be prejudicial to the national welfare, safety, or security; or

F. Permit such citizen to use a valid passport while there is outstanding any sum of money owed by such citizen to the Government of the United States for previous transportation back to the United States.

Section 5 defines the passport and section 5(b) contains a new concept in our passport laws. This provision provides that a passport issued under this act is nontransferable and becomes the sole property of the citizen to whom issued, but is valid only for the period for which issued. This provision is significant in that it is a break from the philosophy presently contained in the regulations expressing the Federal Government personal property concept. The present concept in my opinion is misleading. The right to travel belongs to the individual citizens subject, of course, to certain limitations as hereinbefore recited, but basically this right belongs to the citizen. A passport is an essential aid to travel abroad. In my opinion, the emphasis must be placed on the individual's right to exercise this freedom of locomotion. It is therefore a matter of emphasis. This new emphasis is based on what can we do at the Federal level to facilitate the individual's right to travel, rather than vesting a personal property interest in the individual citizen's passport in the Federal Government. This is important from the point of view of policy. The emphasis changes from the concept of a privilege granted by our Government to the free exercise of a constitutional right by the citizen.

My bill makes further provision for the issuance of regulation by the Secretary of State and significantly it provides for the establishment of "the United States Passport Service." Our present passport office, in my opinion, is doing an outstanding job. The United States Passport Service is established under this act as a service to the American citizen to facilitate the citizen's travel abroad and in aiding him to communicate with all people throughout the world.

There has been a great deal of discussion in the recent past relating to certain area restrictions imposed by the Secretary of State. Section 16 of my bill provides for restrictions of travel to,

first, places where armed hostilities are in progress; second, countries with which the United States is at war, and third, countries to which the President finds that travel should be restricted in the national interest. It is important, however, that certain exceptions be provided for and subsection (b) of section 16 provides that the Secretary of State may make exceptions to general travel restrictions for individuals and for classes of persons including the classes of professional newsgatherers, missionaries, and doctors on medical missions.

Before general travel restrictions can be imposed, however, section 17 of my bill provides that travel abroad of any citizen shall not be restrained and passports shall not be limited in validity with respect to any place unless the President has made an appropriate declaration under subsection (a) of section 16. In each such case, the President shall report the reasons for such declaration to the Committee on Foreign Affairs of the House of Representatives and to the Committee on Foreign Relations of the Senate and such declaration shall be effective for a period of not more than 1 year unless such time is extended by law.

In accordance with the provisions of my bill, certain serious limitations are placed on the citizen's constitutional right to travel. When a determination has been made that a passport should not be issued to a citizen it is absolutely essential that the Congress make certain that the review procedures provided will accord procedural due process to the passport applicant. In accordance with this belief, section 18(a) of my bill provides for the establishment of a Passport Review Board within the State Department consisting of five officers of the Department to be designated by the Secretary of State. Further provision is made that no person shall be eligible to serve on such Passport Review Board in any case under this section in which he shall have participated in investigative functions or in which he shall have participated in the original refusal to issue, renew, or extend such passport or in the original action of withdrawal, cancellation, revocation, limitation, or restriction of such passport.

The Passport Review Board shall establish its own rules of procedure which must be approved by the Secretary of State. Subsection (b) of section 18 requires that the rules accord the applicant or passport holder the right to appear personally, to be represented by counsel and to offer oral or documentary evidence. Applicant or passport holder must receive a copy of the transcript proceedings and be permitted to cross-examine all of the witnesses against him and examine all other evidence which is made a part of the open record in the case. In accordance with the overall policy, the Board must insure, consistent with national security, that all evidence and witnesses relied upon are produced and made a part of the open record.

In the event of an adverse ruling by the Review Board, provision is made that the U.S. District Court for the District of Columbia shall have jurisdiction to hear and determine any appeal from a final decision of the Passport Review Board.

Mr. Speaker, these are the primary provisions contained in my bill. H.R. 5455, nominally called the Passport Act of 1959. In our society truth can be found in the full expression and enjoyment of the freedom of the individual. Free and unfettered travel will help the individual in his quest for truth. It should be the Government's position to encourage all of its citizens who are able to leave its borders and communicate with their world citizens abroad. It is this dynamic peoples to peoples approach that cuts through the restrictions of protocol and brings about an understanding that cannot be achieved from the executive directives of both sides of the waters. The Passport Department can be a real boon to this great peoples to peoples movement. Its fundamental purpose is service to the American citizen. The Department was not established to restrict this right to travel. On the contrary, it was established to facilitate the right to travel. When we think in these terms, many of the artificial rules and regulations and limitations proffered by some of our colleagues fall away and lose their alleged significance. It is with this great hope in mind of facilitating this worldwide movement of peoples that I have this day introduced my bill, H.R. 5455.

AS URGENT AS THE MOSCOW THREAT

Mr. SMITH of Mississippi. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

Mr. SMITH of Mississippi. Mr. Speaker, it is obvious that part of our preparation for whatever might come in Berlin should be a strengthening of our NATO alliance. We cannot hope to meet the challenge of Berlin unless we are unified in our firm resistance to any step that would yield any part of the freedom of the people of West Berlin.

I hope that our Government is in the process of taking steps which will strengthen our military forces in being in Western Europe and providing reassurance to our European allies that we are fully willing to take whatever risk is necessary in the defense of Berlin.

Under unanimous consent, I include an article by Mr. Henry A. Kissinger from the New York Times of Sunday, March 8:

AS URGENT AS THE MOSCOW THREAT—THE IMMEDIATE TASK ARISING OUT OF THE BERLIN CRISIS IS TO STRENGTHEN THE UNITY OF NATO, FOR EUROPEAN DOUBTS OF AMERICAN DEPENDABILITY HAVE WEAKENED THE ALLIANCE

(By Henry A. Kissinger)

There can be little doubt that Western policy has reached a turning point. Soviet pressure, which began with Moscow's threat to turn over control of the routes to Berlin to its East German satellite, has placed into question some of the basic assumptions of Western policy. One of the most comforting of these has been that Western Europe was so vital to our security that the Soviet Union would not dare to menace it. Now that idea has been shattered and, in the process, a fundamental threat to the future of the Western alliance has arisen.

Strangely enough, in the debate about foreign policy in the United States, little attention has been paid to this challenge. The discussion has proceeded from the premise the western unity is a root fact of political life; that our basic problem is to develop flexibility and new approaches in our relations with the Soviet bloc.

A month's visit to Germany and France has convinced me that these assumptions are of very dubious validity. Conversations with political leaders of both government and opposition, editors of major newspapers, and representatives of the academic community, indicated that the Western alliance is in serious danger, partly because of confusion about our purposes. In the present situation strengthening the unity of the West is a task as urgent as Moscow's threat.

European criticism of the United States is not new, of course. What is new is that, for the first time, there exists grave doubt about our willingness to run risks on behalf of our allies, and even about our ability to understand what might constitute a threat. For purposes of immediate policy it is beside the point whether this attitude is justified; it is the psychological environment in which our actions will be interpreted and with which we must reckon.

The extent of the uneasiness in Germany and France about the future course of United States policy is striking. To take two examples: A French editor, to whom I remarked on what seemed to me the excessive suspiciousness of high officials, replied: "They think you are about to commit treason in a war that has already started." The moderate intellectual German weekly Die Zeit, which had been a frequent critic of the rigidity of Western policy in the past and an advocate of disengagement, carried a front-page headline: "How Soft Is the United States?"

Even if recent consultations have produced some agreement on immediate tactics, the underlying suspicion remains. These fears can be summed up in the following questions that are constantly being asked:

"Is the United States unwilling to run risks?"

Europe has suddenly awakened to the implications of our concept of massive retaliation. Until fairly recently, American strategic superiority was taken for granted as the chief deterrent to Soviet aggression. A greater European military effort was regarded as irrelevant or dangerous, because it might encourage the Soviets to believe that an attack on Europe might evoke only a limited, local response. As long as European security was thought to depend entirely on United States willingness to engage in all-out war, the European powers could rely on our nuclear capability without participating in it. They even could afford the luxury of criticizing us for alleged bellicosity.

With the Soviet's development of long-range missiles, the steady shrinking of the U.S. capability for limited war and the widely advertised "missile gap," confidence in American power and in our willingness to run risks has been gravely shaken. A high German official said in a television interview that 1959 was perhaps the last year in which the United States would risk war in defense of Berlin or even of Europe. Newspapers, officials, and opposition leaders in both Germany and France constantly raise the question: What objective in Europe would seem

to the United States worth the destruction of Washington and New York? This fear has already produced the conviction (particularly in France) that, in order to be able to assure their security, the European powers must develop a nuclear arsenal of their own. A U.S. policy that our European allies interpret as irresolute will inevitably result in a redoubled effort to develop a local deterrent; in other words, in a vain and therefore demoralizing attempt to make the United States strategically dispensable. And the political corollary will be an increasing tendency to loosen Atlantic ties.

"Is a separate United States-Soviet agreement possible?"

Whatever the effect of the Mikoyan visit in the United States, it accomplished a major Soviet objective on the Continent: It gave strength to the argument that direct Soviet-United States negotiations, to the exclusion of Europe, were possible. European press reports painted a picture of eminent American businessmen abjectly seeking to prove to a commissar that they were "regular" fellows; of conservative circles eagerly welcoming his presence and seemingly desiring agreement on almost any terms. An official summed up the European attitude in the phrase: "How could you behave this way, at this particualr time?"

This bewilderment, in turn, has been exploited by the Soviet Union. Soviet diplomats continually suggest direct talks to both Germany and France to forestall a separate American-Soviet arrangement. In short, Moscow seeks to split the Western alliance by citing to us the rigidity of our European allies while warning them of our unreliability.

"Has Britain a special position in NATO?"

The continental powers, especially France, resent what they consider Britain's special status within NATO. Since they ascribe this status largely to Britain's possession of her own atomic deterrent, an additional incentive is created for them to divert resources to the creation of nuclear arms.

Our continental allies fear that matters vital to European interests are being settled by direct United States-British negotiations, and, at the same time, that Britain has become the least resolute major partner in NATO. They are convinced that, with an election imminent, Britain will seek to avoid a showdown at almost any price; that it is exerting pressure on the United States to make concessions which would amount to a major western defeat. A prominent European said: "Britain is not conducting foreign but domestic policy."

"IS AMERICAN POLICY RELIABLE?"

The question that German and French editors, officials and political leaders asked most frequently was: What does the United States really want? There was concern that the U.S attitude toward Europe had become confused and uncertain. Even some of those who had criticized us most severely for rigidity were now troubled by the circumstances in which the clamor for flexibility has come about, policies which had been declared sacrosanct seemed suddenly in flux because of a Soviet threat to sever the lifeline to Berlin. The reiteration of slogans such as "elasticity" and "new approaches" seemed less a constructive policy than a panicky reaction to a Soviet menace. The impression was that we have neither a new policy nor the courage to stand by our previous convictions.

It is easy to share the dismay of many critics about our unimaginative foreign policy of the past 6 years. There is no doubt that we have defined our position more by what we oppose than what we stand for, that every Soviet initiative has drawn Western energies into essentially sterile, defensive countermoves. Neither German unity nor European security nor the problems of the emergent nations have evoked a dynamic, consistent American response. We seem to be prisoners of circumstances rather than their creators.

But in making these criticisms we stand in danger of overestimating the degrees of flexibility open to us in Europe. Our European allies would very likely interpret any basic shift in our policy now as a sign of American vacillation under stress. The common feature of such proposals as the substitution of German troops for those of the West in Berlin, disengagement, or the Rapacki plan for a neutral zone in middle Europe is that each of them became a subject of intense controversy only after the Soviet threat to Berlin.

Each of these schemes is based in some measure on the dubious premise that the danger to European security is Western rearmament even though the opposite proposition is more nearly true: Soviet pressure has become possible precisely because the Western defense effort has been all to inadequate. And each disengagement proposal would involve a withdrawal of American forces at a time of intense Soviet menace. Under current conditions, an American guarantee could not be substituted for the presence of American troops. If serious doubts already exist about our willingness to honor our commitments—at a time when United States forces are in the direct line of Soviet advance—a withdrawal in the face of what Europeans consider a Soviet ultimatum would inevitably be interpreted as a U.S. attempt to escape its responsibilities.

Because many Europeans doubt our steadiness and reliability, the repeated declarations that the United States will stand firm on Berlin have proved relatively ineffective, all the more so as our deeds are so inconsistent with our words. It is difficult to convey determination while reducing our Armed Forces and focusing the national attention on a balanced budget.

What, then, can be done to reestablish allied unity? Our most immediate task must be to strengthen the cohesion of the Western alliance. We should demonstrate that we are a reliable partner in time of stress. Only to the extent that we succeed in building confidence can we undertake the long overdue reexamination of Western policy.

In this sense, the present situation represents not only a threat but also a great opportunity. For while many of our European allies are uneasy about our course, they have no definite program of their own and are eager for American leadership. A diplomat of one of the smaller European countries said to me: "Do not come to us and ask what you should do. We do not know your resources and cannot assume your responsibilities. Whether you want to or not, you are the leader of the Western alliance."

In the absence of clear American purposes the demand for leadership has a demoralizing effect: some of our Allies develop proposals in which they do not fully believe in response to what they take to be American desires, while we, in turn, treat these proposals as expressions of European wishes.

On the other hand, if we behave imaginatively, as in the days of the Marshall Plan and the Greek-Turkish aid program, we can lay the basis for a new era of ever deeper Western cooperation—and not only in Europe. The Far East, the Middle East, Africa and Latin America all require "new approaches." But the area under attack is hardly the place to prove our flexibility.

The most crucial task before the West is therefore to get its own house in order. The challenge is not simply to devise a hurried proposal to meet a Soviet demand. We must not delude ourselves that a negotiating position can remedy the lassitude of nearly a decade or that clever bargaining can substitute for the effort and dedication that have been lacking heretofore.

While it is beyond the scope of this article to develop a detailed program, some general guidelines can be sketched:

The Berlin issue: Free access to Berlin will be the touchstone of all other measures. If the sequence of events initiated by the Soviet threat ends with what is interpreted by our Allies as an American defeat or withdrawal, NATO will prove no stronger than the French system of alliance in the interwar period.

To say that we will be firm on Berlin is not a policy. Our task is to give this term concrete content. We should make specific proposals defining guarantees of free access, to be given either by the Soviet Union or by a four-power agreement. The guarantee should be registered with the United Nations. With such a guarantee, it would make little difference whether Russians or East Germans man the check points. But in the absence of such an assurance we cannot escape the problem by designating the East Germans as Soviet agents.

At the same time, it is essential to make clear the seriousness of the situation to our people, to our allies and to the Soviet Union. During the Soviet warning period on Berlin, the West has been bemused with determining Soviet intentions, first by marking time until the Mikoyan visit, then waiting for the 21st Party Congress, then for the result of Prime Minister Macmillan's sojourn in Russia.

We are sliding toward a crisis for which the American people have not been prepared. Our allies are becoming nervous about the lack of a tone of urgency in the United States and the Soviet Union may be misled into the belief that the issue of Berlin can be pressed with impunity.

A congressional resolution affirming our determination to maintain our rights in Berlin and an increased alert of our Armed Forces would seem minimum requirements.

Negotiating tactics: We should always be ready to negotiate not only for substantive but also for psychological reasons: To convey our peaceful purposes to the rest of the world. Negotiations, even if they fail, can at least project to other nations the issues for which we are prepared to contend. At the same time, it is important that, rather than expend energies on debates over abstractions like rigidity or flexibility, we concentrate our efforts on developing a concrete program.

Rigidity is surely not helpful. But neither is flexibility an end in itself. Indeed, it may sometimes make agreement more rather than less difficult. If we base our negotiations on the principle that the West has an obligation to break any deadlock with new proposals, we shall encourage Soviet obstinacy, for we will nurture the belief that if Soviet negotiators hold out long enough they will elicit ever more favorable Western offers.

We have no obligation to make only proposals that the Soviet Union says it will accept, for this would turn diplomacy into a device for surrender. We do have a responsibility to make proposals that express our values and take into account legitimate Soviet security concerns. In short, the West requires a sense of direction more than negotiating skill. Only the purposeful can be flexible.

Western cohesion. The Western Powers should not confine themselves to issues raised by the Soviet Union; they should act boldly to strengthen unity among themselves. In particular, this time seems opportune to make another large advance toward European integration, especially in the field of foreign policy.

A permanent committee of European diplomats should be created charged with developing a common European foreign pol-

icy. To the extent that Western Europe considers itself a political unit, its policy will gain in assurance: Such an institution would counteract the persistent Soviet efforts to play off the allies against one another. With Great Britain's participation, it would remove the suspicions created by the alleged special British position within NATO.

At the same time, we should use this crisis to encourage creation of a Western European atomic force. The West could then negotiate much more flexibly about the precise location of nuclear arms. For then any threatened member would feel protected by the voice it has in the control of the overall Military Establishment. Such a force would also be the best, and probably the only, means to prevent the proliferation of national atomic forces, which is almost inevitable if present trends continue.

Toward a larger Europe: We should advocate the concept of a greater Europe, open to the Soviet satellites. This initiative might be particularly effective in the social and cultural field. But there are opportunities in the strategic area as well. NATO could immediately give Poland a military guarantee of the Oder-Neisse line, its postwar boundary, against German aggression. Such a move would lessen the Soviet ability to control Poland through its fear of Germany. I advanced this idea in many public talks in Germany and encountered very little opposition.

A reexamination of NATO strategy: A basic cause of allied disunity is the weakness of NATO and the ambiguity of its strategy. It is no doubt correct that we need not match the Soviets in every strategic category. But we are reaching a situation where we are not keeping up in any category. Against the background of this weakness, declarations of firmness ring hollow and the sense of insecurity of our allies must inevitably increase.

Moreover, NATO has never resolved the question whether it is a device to unleash all-out war or a means to prevent Soviet occupation of Europe should deterrence fail. By adopting an uneasy compromise, NATO is in danger of paralyzing itself. The doubts of our allies as to our willingness to risk all-out war for the defense of Europe while five U.S. divisions are stationed there underline the inherent lack of plausibility of the doctrine of massive retaliation.

In fact, current strategy has two contradictory but equally dangerous consequences—either it leads to resignation and hopelessness on the part of our allies or it causes them to make strenuous efforts to develop their own nuclear deterrents, a field where their own contributions can be marginal at best. Current strategy produces either inadequate effort or wasteful duplication.

Two sets of measures are, therefore, required: (1) An immediate strengthening of the U.S. overall deterrent with respect to its size, its mobility, and its dispersal (such a program is the prerequisite for all other measures); (2) a common effort to devise a defense of Europe which does not have the aspect of suicide. While we require the capability for massive retaliation to prevent a Soviet surprise attack on the United States, we should not rely on it as the sole deterrent to an attack on Europe or the chief means of defense against Soviet aggression should deterrence fail.

A defensive alliance which cannot protect the territory of its members without destroying them is inherently brittle. There is no reason why the United States and Western Europe, whose combined resources, human and material, still far exceed those of the U.S.S.R., cannot create an adequate force for a local defense of Europe. The obstacle is not capability, but lack of will.

These ideas indicate a direction and not a program. Nothing is possible, however, without a more dynamic conception by the United States of its role in the world. For too long we have treated our problems as technical ones; we have sought courses of action which involved the least effort and sacrifice.

As a result our military program is inadequate; continued at its present scale it will doom our diplomacy to futility by creating constant opportunities for Soviet pressure while reducing the means to resist them. Our economic program, both domestic and foreign, is too tentative and too conscious of the obstacles in the path. Our diplomacy lacks dynamism.

We are living through a period which, in retrospect, will undoubtedly appear to be one of the great revolutions in history. We cannot withdraw from it; we can only contribute to shaping it constructively. The great challenge of our time is that the self-sufficient nation-state is breaking down. No nation—not even the largest—can survive in isolation or realize its potentialities, material or spiritual, on its own.

In the past, the Soviet threat has often produced Atlantic unity. It may again. But ultimately the unity of the West depends on what we affirm rather than on what we reject. It must flow from our convictions and hopes, not our fears.

We of the West, who bequeath the concept of nationalism to others, must show the way to a new international order by initiative in setting our own house in order and by imagination in helping the newly independent states to realize their aspirations. Vacillating policies will prove disastrous to everybody. The West must raise its sights; it must develop policies which will make of it a true community.

NATIONAL MILK SANITATION LEGISLATION WOULD BENEFIT BOTH CONSUMERS AND FARMERS

The SPEAKER. Under previous order of the House, the gentleman from Wisconsin [Mr. JOHNSON] is recognized for 60 minutes.

Mr. JOHNSON of Wisconsin. Mr. Speaker, of the 2,000 and some items handled in a grocery store, milk is the only food sold in large quantities in the United States which is not allowed to move freely in interstate trade. Over the years, the various States and municipalities have set up and added to their milk sanitation regulations until we have a regular crazy-quilt of rules that hamper the free flow of high-quality milk from State to State. Unfortunately, human nature being what it is, some milksheds are using these health standards as an excuse to maintain a neat little milk monopoly for themsevles.

CONSUMERS COULD SAVE 1 TO 3 CENTS ON MILK

Like most monopolies, this one does not serve the public interest. In the areas affected, Mrs. Housewife is paying from 1 to 3 cents more per quart for milk than she would have to pay if the market was open and competitive.

In my home State of Wisconsin, the farmland is uniquely suited to the production of milk. Yet our class 1 milk, which meets the highest quality standards, is kept out of many markets because of health regulations that date back to the horse and buggy days. This class 1 milk is then relegated to lower price uses like the manufacture of cheese, butter, and dry milk—and as such is labeled surplus.

Mr. Speaker, class 1 milk testing 3.5 brings Wisconsin farmers $3.14 per hundredweight when it can find a market as bottling milk. However, because of these trade barriers I have just mentioned, much of this class 1 milk must be used for class 3 or manufacturing purposes. There it brings the farmers only $2.90 per hundredweight.

I use Wisconsin as an example, but the same thing has happened in Minnesota and Iowa and in other States where dairying is the logical choice for farmers. Sure, a dairy plant can ship milk to some out-of-State markets—but the plant and the milk have to meet a different set of standards for every market. One of the dairies in my district sends milk to 10 different markets—and has 10 different inspectors trooping through the place in the course of a year.

MAZE OF REGULATIONS FACE PLANT MANAGERS

Pity the poor plant manager, who has to weave his way through a real maze of regulations to satisfy each of the 10 inspectors. For instance, one city may demand that a plant's equipment be sterilized by steam, while another may say that the equipment must be sterilized chemically. Clearly, it is an imposition on the plant operator to make him sterilize the equipment both ways in order to qualify for both markets.

Then there is the case where a city refused to accept milk produced under the jurisdiction of another because one ordinance required four farm inspections a year, while the other required only three. California refused to take milk from farms approved by the Arizona health authorities because Arizona regulations permitted a one-room milk house, while California law required a two-room milk house.

To ship milk to Ardmore, Pa., Wisconsin producers must have a 2-inch outlet value on their bulk milk coolers. Certain parts of California have the same requirement, but in 46 other States, the 1½-inch valve is accepted.

In many cases, the cost of the multiple inspections is charged against the plant selling the milk. The plant in turn has to pass this charge on to the consumer or the farmer.

Naturally, we need sanitary regulations to protect the consumer against milk of dubious quality. But I protest the way some milksheds are using antiquated health rules to maintain a milk monopoly at the expense of the rest of the milk producers and the consumers.

U.S. MILK CODE WOULD BE QUALITY YARDSTICK

During the 85th Congress, I introduced a bill which would have made the proven U.S. Milk Ordinance and Code the single standard for fluid milk and fluid milk products shipped in interstate commerce. Hearings were held before the Health and Science Subcommittee of the House Committee on Interstate and Foreign Commerce. Following those hearings, the Association of State and Territorial Health Officers, formerly opposed to the idea of Federal legislation in this field, came out with a series of recommendations for Federal milk sanitation legislation. Also, at the request of the subcommittee, the U.S. Public Health Service furnished the committee with recommendations for legislation in this field. I have incorporated these two sets

of recommendations in my revised milk sanitation bill—H.R. 3840—which I introduced on February 2 of this year.

Mr. Speaker, in many respects, I feel that my revised bill is a much better bill than the original. The revised version does not insist that all fluid milk moving in interstate trade must conform with the U.S. Milk code. However, it does provide that milk which meets the requirements of the U.S. code cannot be kept out of interstate commerce on health grounds. Of course, milk shipped within the boundaries of a State would still be completely under the control of State and local sanitarians.

This bill would not add another layer of inspectors on the present inspection setup. Dairy plant inspections would continue to be carried on by the State and local health officials. They would be thoroughly trained in the application of the United States Code to insure uniform inspections all over the United States. The results of their inspections would be certified by the U.S. Public Health Service, which could also conduct spot checks from time to time. Milk from certified plants could move freely from State to State.

EIGHTEEN REPRESENTATIVES AND FOUR SENATORS HAVE INTRODUCED MILK SANITATION LEGISLATION

Mr. Speaker, the crying need for milk sanitation legislation is demonstrated by the fact that 17 of my colleagues have joined me by introducing companion bills in the House. They are:

H.R. 3841: BYRNES, Wisconsin.
H.R. 3842: FLYNN, Wisconsin.

H.R. 5264: WOLF, Iowa.

Over in the Senate, a similar bill is being sponsored by Senator HUMPHREY, of Minnesota, and cosponsored by Senator MCCARTHY, of Minnesota, and Senators WILEY and PROXMIRE, of Wisconsin. This bill is S. 988.

Since the revised bill was introduced, I have had mail from organizations and individuals who feel that this bill is the logical and long-overdue answer to the problem of these artificial trade barriers against high-quality milk. Among the organizations which have come out in support of Federal milk sanitation legislation are the Wisconsin Farm Bureau; the Wisconsin Farmers Union; the Wisconsin Grange, the Wisconsin Association of Cooperatives; the Wisconsin Conference on Intra-State Milk Shipments, and the Pure Milk Products Cooperative, of Fond du Lac, Wis.

Two of Wisconsin's leading farm magazines, the Wisconsin Agriculturist and Farmer and Hoard's Dairyman also favor the idea. W. A. Gordon, editor of the Dairy Record, St. Paul, Minn., has enthusiastically endorsed it.

WASHINGTON MILK SQUABBLE SHOWS USE OF SANITARY STANDARDS AS TRADE BARRIERS

We do not have to look any further than the current Washington milk squabble for a prize example of how health standards can be used—and are being used—to allow the establishment of a local monopoly. My interest in the present controversy relates to the charges made against the U.S. Milk Code and the charge that Wisconsin and Minnesota milk is inferior in quality to milk produced anywhere else. When anyone attacks the quality of class I fluid milk produced in Wisconsin and Minnesota, my fighting blood is up.

Mr. Speaker, I want to point out to Members of the House that the Ninth District of Wisconsin has more up-to-date, modern dairy plants than most areas of the country. Many of these plants cover more than a city block and are models for the industry.

Sale of milk in the Nation's Capital is governed by the Milk Act of 1925 and its regulations. Many of these regulations are outdated and do not take into consideration the tremendous technical advancements which have been made in recent years in the production, handling, and shipment of milk. These regulations, in effect, set up a trade barrier against high-quality milk from other areas and give a distinct advantage to producers in a restricted local area. This enables a small number of local operators to control 90 percent of the District of Columbia's milk supply.

Currently, Washington dairies are paying $6.62 per hundredweight for class I or bottling milk. In the past week, I have received letters from two modern dairy plants in Wisconsin's Ninth District. Each of them could deliver top-quality 3.5 percent class I bottling milk to Washington for $5.50 per hundredweight.

That price includes the cost of transporting the milk from Menomonie and Turtle Lake, Wis., to the District of Columbia. Even taking into account the $1.80 per hundredweight shipping charge, the Wisconsin milk would cost $1.12 a hundredweight less than the bottling milk now being purchased by local distributors. This would represent a saving of at least 2 cents a quart which could and should be passed on to the consumer.

WISCONSIN MILK IS CHEAPER IN PRICE BUT NOT CHEAP QUALITY

On March 3, the Maryland-Virginia Milk Producers ran a full-page ad in Washington papers—an ad which referred to the inadvisability of "importing cheaper milk from the outside which we believe to be of lower quality." The price of Wisconsin milk is cheaper, but there is nothing cheap about the quality.

Mr. Speaker, it is now possible to have any plant in the United States rated voluntarily according to the requirements of the U.S. Milk Ordinance and Code. The U.S. Public Health Service periodically checks and certifies the inspection, rating, and laboratory procedures of the reporting States. The purpose of such spot checks is to insure a uniform approach in certifying interstate milk shippers. The ratings are listed in a booklet called "Sanitation Compliance Rating of Interstate Milk Shippers." Plants all over the United States, including the District of Columbia, are rated in this booklet.

The sanitation compliance ratings for the two Wisconsin dairy plants I have just mentioned prove my point about the topnotch quality of Wisconsin milk. Wisconsin Cooperative Dairies, Inc., has the following ratings: Raw milk, 95; receiving station, 100; enforcement rating, 97.

Turtle Lake Co-op Creamery Association's ratings run as follows: Raw milk, 95; receiving station, 100; enforcement rating, 97.

These ratings are higher than the ratings of the two major dairies serving the Washington market. Chestnut Farms Dairy has the following rating: Raw milk, 91; receiving station, 100; enforcement rating, 94.

Thompson's Dairy rates as follows: Raw milk, 91; enforcement rating, 94.

HIGH-QUALITY MIDWESTERN MILK SHOULD BE ALLOWED TO BE SOLD IN NATION'S CAPITAL

I beg to differ with the newspaper ad on another point—that of importing milk. According to a reliable source—namely, Webster's Dictionary—import means "to bring wares from one country into another in commerce." Since when has Washington, D.C., not been a part of the United States? Matter of fact, if there is one place that does belong to all the citizens of the country, it is our Nation's Capital. I feel most strongly that if Wisconsin and other Midwest dairies are willing and able to ship high-quality milk to Washington, they should not be prevented from doing so by a set of local health rules that are as outdated as they are arbitrary.

Under leave to extend my remarks I would like to insert the letters I received from Wisconsin Cooperative Dairies, Inc., and the Turtle Lake Co-op Creamery Association in the RECORD at this point:

TURTLE LAKE CO-OP
CREAMERY ASSOCIATION,
Turtle Lake, Wis., March 3,1959.

Congressman LESTER JOHNSON,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN: We have been watching the problems that are arising in the fluid-milk markets throughout the country and notice with particular interest the arguments presented by the Maryland and Virginia Milk Producers Association.

Our farmers price for a better quality of milk receives less than one-half of what the producers in the Maryland and Virginia shed do.

It does not cost but a few cents more per hundred to produce milk in the East than it does out here. These costs are based on D.H.I.A. records.

We would like the privilege to ship milk into Washington, D.C., and could deliver milk that is approved for Philadelphia, Pennsylvania, New Jersey, and Ardmore, Pennsylvania U.S.P.H. the highest inspection in the country.

Our price delivered to Washington, D.C., is $5.50 per hundred weight of 3.5 percent milk with a 7.2 cents per point butterfat differential.

Yours very truly,

R. E. MILLER,
General Manager.

WISCONSIN CO-OPERATIVE DAIRIES, INC.,
Menomonie, Wis., March 5, 1959.

Hon. LESTER JOHNSON,
House of Representatives,
Washington, D.C.

DEAR MR. JOHNSON: We have checked the price necessary to deliver grade "A" milk from Menomonie, Wis. to Washington, D.C.

Price of milk to Washington, D.C., for March is $3.70 per hundredweight f.o.b. Menomonie. Transportation rates on 35,000 pounds load is $1.80 per hundredweight or $5.50 per hundredweight delivered at Washington, D.C.

Our sanitation compliance ratings:

(Chicago shed) raw milk, 94; receiving station, 99; enforcement rating, 96. November 26, 1958, survey.

(Wisconsin shed) raw milk, 95; receiving station, 100; enforcement rating, 97. November 5, 1958, survey.

This is all bulk tank pickup.

Thanking you for your continued interest in behalf of the dairy industry, I remain,

Very truly yours,

H. K. OLSON,
Manager.

Milk is either pure or it is not. There's no halfway in-between about it. By the same token, milk that is rated as pure in Wisconsin should be considered pure in Washington. That is why we need a single standard like the U.S. milk code as a yardstick for evaluating the quality of milk shipped from State to State. The national milk sanitation bill—H.R. 3840—provides this yardstick.

U.S. MILK CODE IS MODEL FOR THE INDUSTRY

The U.S. milk code, regarded as a model for the industry, was the result of the work of top technical experts in both the health and dairy fields. It was not a product of the U.S. Public Health Service alone, since the code was developed with the aid of an advisory board of experts in the fields of dairy technology, veterinary medicine, agriculture, and public health—in addition to State and local agencies who use the code, industry and interested Federal agencies, including the U.S. Department of Agriculture, which has approved the present edition.

Mr. Speaker, the code is revised frequently to keep pace with the rapid improvements in milk processing, handling, and shipment. Since the first code was published in 1924, it has been completely revised 12 times.

Currently, the U.S. milk code is being used as the basis for milk sanitation regulations in 35 States and has been voluntarily adopted by some 1,900 cities and counties. It is used as the quality standard for milk purchased for our Armed Forces.

At Walter Reed Hospital here in Washington, D.C., the milk served to patients must meet the specifications of the U.S. code rather than the District of Columbia's sanitary regulations. Many of this country's distinguished citizens have been treated at that hospital, and I have never heard of any of them suffering ill effects from the milk they drank there.

FACTS SPEAK FOR THEMSELVES ON DIFFERENCES BETWEEN U.S. CODE AND DISTRICT OF COLUMBIA REGULATIONS

Much talk has been floating around to the effect that the District milk regulations are superior to the U.S. code. Both sets of health rules deal with essentially the same sanitation items, but differ in detail. I would like to examine these differences on four specific items and let the facts speak for themselves.

First of all, it has been said that the District of Columbia regulations are superior because they call for annual testing of cattle for tuberculosis, whereas testing once every 6 years satisfies the U.S. Public Health Service. Early editions of the Public Health Service's milk code required annual testing for tuberculosis. In 1933, the code was changed to recognize and utilize the bovine tuberculosis control program of the U.S. Department of Agriculture.

Under this program, the incidence of positive reactors has dropped from 5 percent to less than one-fifth of 1 percent during the 40-year period from 1918 to 1958. Frequency of testing has been varied by the U.S. Department of Agriculture according to the need as shown by the occurrence of tuberculosis. The milk code now provides that milk may be accepted from herds located in accredited tuberculosis-free areas providing the herd is tested at least once every 6 years. If a herd is not located in an accredited area, annual tests are still required.

TWO TOWELS PER COW DO NOT INSURE CLEAN MILK

Secondly, it has been said that the District of Columbia regulations are superior because they require the cow's udder to be washed and wiped with two towels not used on any other cow. The U.S. milk code states that the cow's udder must look and feel clean and shall have been rinsed just prior to milking with an antiseptic solution approved by the health officer. In practice, this requirement is met by wiping the cow's udder with a cloth that has been dipped in an antiseptic solution before use on each cow. This solution provides an additional margin of safety if harmful bacteria are present. In addition, the U.S. code insists that the flanks, bellies, and tails of the cows be cleaned before milking. The District code is silent on this point.

Mr. Speaker, defenders of the District of Columbia regulations point out that they call for annual physical examinations of milk handlers on dairy farms. The U.S. code does not require these annual physicals for dairy farmers and their helpers because studies on the subject indicate this procedure is both expensive and ineffective from a public health standpoint. Diseases of significance in milk sanitation are the communicable diseases, and a milk handler who does not have one of these diseases at the time of the examination could very well get it during the ensuing year.

CODE HAS PRACTICAL METHOD FOR ELIMINATING SPREAD OF DISEASE THROUGH MILK

The U.S. milk code authorizes the health officer to impose control procedures, including laboratory examination of body specimens, if he has reasonable cause to suspect the possibility of transmission of infection from a person handling milk or milk products. It also prohibits a person having a communicable disease or any infected cut or lesion on the hands or arms from working in any capacity which brings him in contact with milk or milk equipment.

In the fourth place, the District regulations have been passed off as superior because their bacterial count standard for raw milk is 100,000 per milliliter, while the U.S. code limit is 200,000. The validity of the standard used in the U.S. code has been confirmed by the National Research Council's study on milk regulations and milk quality, published by the National Academy of Sciences.

I quote from page 123 of this report:

A total bacterial plate count of not more than 200,000 per milliliter for raw milk is recommended as a standard—at the receiving plant. There is no exact scientific or public health basis for deciding on this bacterial standard other than the fact that experience has shown this common standard can be readily attained with reasonable facilities and good methods of production. Compliance of milk with this standard generally meant that the utensils, especially the milking machines, were given proper cleaning and antiseptic treatment and the milk was well cooled.

FARM COOLING TANKS ARE NOT USED EXCLUSIVELY BY WASHINGTON AREA PRODUCERS

Mr. Speaker, recent newspaper articles have made a great to-do over the fact that District of Columbia milk producers have gone to considerable expense to install farm cooling tanks in order to cool their milk more rapidly than in the past. Readers are led to believe that this is something unique, something that is not a common practice in other milksheds. The fact is you can find milk cooling tanks on farms all over the United States. Recent figures of equipment manufacturers show that more than 100,000 of these tanks have been installed in recent years.

I cannot leave the subject of the controversy over the District milk regulations without making one more observation. Although area milk producers claim the District of Columbia regulations are superior to the U.S. milk code, these producers nonetheless use the U.S. milk code as the standard when shipping surplus class I milk into other areas. So we end up with the peculiar situation where the U.S. code is ridiculed as being inadequate for milk coming into the District of Columbia but is considered amply adequate for milk being shipped out of the area.

Mr. Speaker, the whole milk controversy in the District of Columbia arose when certain dairies asked for a revision and modernization of the District Milk Code. Even if the District of Columbia Code is revised, this will only remedy the situation here—and the same situation exists in cities all over the United States. That is why we need Federal milk sanitation legislation. What is going on in Washington, D.C., today in regard to health regulations shows how the consumers of the country are being boxed in and, in my opinion, are paying more for the milk they drink than they would have to pay if high-quality milk could move freely in interstate trade.

One group of milk producers should not be allowed to use these trade barriers I have been talking about to profit at the expense of other milk producers. I am not opposed to farmer-owned milk marketing cooperatives. The bulk of the milk in my district is handled by farmer

cooperatives. I firmly believe in the cooperative bargaining technique. Farmers should be able to use collective bargaining just as the workers in the farm equipment factories are able to bargain collectively.

During the last session of Congress, I did a lot of work on a dairy bill—H.R. 13800—that would provide a way in which all dairymen could get together and develop nationwide bargaining power. In this way, they could earn and receive parity incomes on all the milk they sell.

After the election last fall, I was studying the poultry situation in the southern part of the United States. The manager of a poultry processing plant praised highly the Federal inspection law passed in the last session of Congress. He commented that with modern transportation and refrigeration methods, he was now shipping federally inspected poultry from Alabama to California. I pointed out that all the midwestern dairy farmers wanted was the same chance for the interstate sale of their top-quality milk. Our midwest farmers are interested in fair play for everyone.

Mr. LAIRD. Mr. Speaker, will the gentleman yield?

Mr. JOHNSON of Wisconsin. I yield to the gentleman from Wisconsin.

Mr. LAIRD. Mr. Speaker, during the past few years we have been hearing a great deal of talk about eliminating trade barriers which have been built up between various countries of the world. It seems to me to be important that the trade barriers which have been built up right in the backyard of our Nation's Capital, through the use of unrealistic milk sanitation codes should be immediately corrected.

The so-called Laird-Johnson bill is a step in that direction and should be adopted. The monopolistic practices that have grown up within milk marketing areas in the form of trade barriers are not fair to the milk industry as a whole or are they fair to the consuming public in America.

The purpose of H.R. 3843 is simply to fix one clear and uniform standard for purity for milk in interstate commerce. It is a high standard but it is designed solely to assure wholesome milk and not to create artificial trade barriers. The U.S. Public Health Service in cooperation with the State public health officers have worked out a recommended uniform milk code. The legislation which is presently before the Interstate and Foreign Commerce Committee places this code in effect to cover the shipments of all milk and milk products in interstate commerce. Congressman JOHNSON and I are working cooperatively on this bill because we feel that no State or local government has the right to obstruct the free movement in interstate commerce of milk and milk products of high sanitary quality by the use of unnecessary sanitary requirements or other health regulations. The officers of the U.S. Public Health Service in testimony before the Health, Education, and Welfare Appropriations Subcommittee this past week clearly stated that the Milk Sanitation Code as is recommended by them will completely protect the health and well-being of the milk-consuming public throughout the United States.

I regret that in the last few weeks certain spokesmen for the Maryland and Virginia Milk Producers cooperative have levied unjustified criticism against the U.S. Public Health Service Milk Sanitation Code. This criticism has been a disservice to a large majority of America's dairy farmers. By raising misleading questions in the minds of the public on the quality of milk produced under this recommended code, the Maryland and Virginia Milk Producers are in effect unjustly attacking the milk producers under this sanitation code in 33 States that are producing the major portion of our fluid milk.

Consumers should have assurance that the glass of milk they drink anywhere in this country is a pure product. The adoption of H.R. 3843 will give every consumer that protection. The legislation merely points up the fact that the Congress recognizes that the sanitary control of fluid milk and certain milk products is necessary to protect the public health. The legislation recognizes that the sanitary regulations are primarily the responsibility of the State and local governments, but no State or local government, including the Board of District Commissioners, has the right to obstruct the free movement of high quality milk in interstate commerce by the use of unnecessary sanitary requirements or other health regulations.

Mr. JOHNSON of Wisconsin. I thank the gentleman for his statement. At this time, Mr. Speaker, I yield to the gentleman from Minnesota [Mr. BLATNIK].

Mr. BLATNIK. Mr. Speaker, I thank the gentleman for yielding to me.

Mr. Speaker, I join our colleagues on both sides of the aisle from the Midwest and other parts of the country in support of the legislation to which our friend and colleague from Wisconsin [Mr. JOHNSON] has given such able, effective and reasoned leadership. I want to commend him for the fine work he has done and for the leadership he has taken to protect the public from unsanitary milk and milk products. This problem is coming to a head in several areas of the country already including, of course, the District of Columbia and immediate vicinity.

Mr. Speaker, facilitating the flow of high quality milk in interstate commerce and preventing the use of arbitrary, tailormade milk sanitation requirements to be used as trade barriers, are problems that justify and require the attention not only of the Federal agencies but of the Congress.

Recently the Association of State and Territorial Health Officers and the Conference of State Sanitary Engineers enlisted the cooperation of the United States Public Health Service in a study of these problems. I have worked very closely with these very same groups for the past 4 or 5 years on the problem of water pollution control and I can attest without qualification to their high standards, and to the sound, thorough and objective manner in which they go about studying the problems confronting them and the Nation.

The recommendations of these agencies are embodied in this legislation which we are sponsoring and which is being spearheaded by the gentleman from Wisconsin. This bill will give the American consumer the assurance that the milk they drink will be of dependable and uniform quality.

I urge that full hearings be held on this important problem which will only get more severe, and result in more crises developing in other areas of the country unless something is done.

Mr. JOHNSON of Wisconsin. Mr. Speaker, at this time I yield to the gentleman from Wisconsin [Mr. O'KONSKI].

Mr. O'KONSKI. Mr. Speaker, I wish to commend the gentleman from the Ninth District of Wisconsin for bringing this matter to the attention of the public. The need for Federal legislation in the field of milk sanitation is desperate. I join the gentleman from Wisconsin in supporting that type of legislation, and I am hopeful that this session of Congress will take some action along the lines suggested by him and others who have collaborated with him in introducing this legislation.

Mr. JOHNSON of Wisconsin. Mr. Speaker, I thank the gentleman, and at this time yield to the gentleman from Wisconsin [Mr. BYRNES].

Mr. BYRNES of Wisconsin. Mr. Speaker, I thank the gentleman for yielding to me.

Mr. Speaker, I think it should be said that dairy farmers, as much as anybody else in this country, are concerned that the milk that is sold on the market, and the dairy products that are sold on the market come up to high standards of wholesomeness. But what has happened in recent years has been the development of local regulations based, not on the necessities of health or wholesomeness or proper sanitary standards, but the development of local regulations for only one purpose; that is to create or to preserve a local monopoly. That is the only reason for many of these regulations and standards. They are simply efforts to create a local monopoly.

If we want to do something worthwhile and which will be of real help in solving the dairy problem, and if we want to do something for the consuming public, we will take action in this Congress to break up these monopolies that are maintained under the pretense of health standards and establish national uniform standards for the sale and transportation of milk. That is the objective and the sole objective of the legislation which a number of us have introduced in this Congress. We certainly do not want to break down any justifiable sanitary standards. We only want to make sure that the American consumers and the American farmers generally get the proper break and that the standards we have are needed for the purpose of providing the consumers with wholesome milk.

I would hope that the committee would see fit to give immediate attention to

this problem in order that we can move in the direction of giving the consumers the protection they deserve, while at the same time eliminating a lot of fictitious regulations which can only create monopoly and high prices to the consumers.

Mr. JOHNSON of Wisconsin. I thank the gentleman for his very fine statement.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. JOHNSON of Wisconsin. I yield to the gentleman from Iowa.

Mr. GROSS. I, too, want to commend the gentleman for the remarks he has made here today and for the legislation he has introduced, and which I have also had the privilege of introducing.

I want to reemphasize what the gentleman from Wisconsin [Mr. LAIRD] and the gentleman from Wisconsin [Mr. BYRNES] have said about the adoption of regulations which make it virtually impossible to sell milk from outside in the District of Columbia and other urban centers of the Nation. The Maquoketa Valley Creamery in northeast Iowa, one of the largest in the country, is now truckings thousands of gallons of milk each week to El Paso, Tex.—that is, from northeast Iowa to El Paso, Tex.—from northeast Iowa to St. Louis, Mo., and also into the State of Florida. That milk is good milk, grade A milk. There is no reason why the farmers of northeast Iowa, providing a pure, wholesome product, should be cut out of the market in the District of Columbia or anywhere else in the country.

The people of St. Louis, the people of El Paso, Tex., and the people of Florida know it is good milk. There is no reason why it is kept out of here, except for unreasonable regulations.

I would say further to the gentleman that I have inquired into the price of the product if it could enter the District of Columbia, and I am told by the Maquoketa Valley Cooperative in northeast Iowa that it could deliver good, wholesome milk to the District of Columbia for a maximum of $6 per hundred pounds and perhaps at a figure somewhat less.

I thank the gentleman for yielding to me.

Mr. QUIE. Mr. Speaker, will the gentleman yield?

Mr. JOHNSON of Wisconsin. I yield to the gentleman from Minnesota.

Mr. QUIE. Mr. Speaker, we see what has happened here in Washington, D.C., when sanitary regulations are used as an economic barrier. The dairy cooperatives got hoggish in the price they were asking; $6.62 is quite a high price when you compare that with prices of manufactured milk of about $3 per hundred and for class 1 milk in Minnesota at $3.72 per hundred. We in the Midwest can bring high quality milk into the District at a considerably lower price. A dairy cooperative in Minnesota has made an offer to furnish milk here in the District of Columbia market for $5.80 per hundred. Subtract the transportation expenses of $1.57 per hundred from that and it reflects a price in Minnesota of better than $4 per hundred. Nobody can say we would be trying to sell cut-price milk out there in the Midwest, for we could furnish milk at a lower price than District of Columbia plants have to pay right now.

Some say higher sanitary regulations prevail in the District than we have in the Midwest. This is not true except that milk must here be below a bacteria count of 100,000 under the District sanitary regulations, while the U.S. Public Health Service provides that it is to be below 200,000. Midwest milk can meet this standard even though it is shipped long distances. During the hot months of the year we sent milk to the southern part of the country, Dallas, Tex., and San Antonio, Tex., and the milk averaged a bacteria count of about 75,000, substantially below the sanitary regulations here in the District of Columbia.

We can send fluid milk of high quality to any part of the country and keep it below 100,000 bacteria count. It is further from Minneapolis to San Antonio, Tex., than it is from Minneapolis to Washington. We have plenty of milk out there and we can furnish high-quality milk. On my own farm, for example, the milk tests below 10,000 bacteria count as high quality as any milk produced near Washington, D.C. Minnesota has plenty of milk and there is plenty of milk between here and Minnesota that is of high quality that can come into the District of Columbia and provide more milk for the consumer at a lower price if sanitary regulations were standard. This would mean greater consumption and a lesser amount would have to go into manufacturing purposes if we could compete on an economic basis.

I would like to include in the RECORD also an article "Are Transportation Costs the Barrier to Milk Shipments?" appearing in Minnesota Farm Business Notes, prepared by the Department of Agricultural Economics and Agriculture Extension Service and published by the University of Minnesota Agricultural Extension Service. I urge at this time that the bills providing for uniform sanitary regulation for milk be given early consideration.

ARE TRANSPORTATION COSTS THE BARRIER TO MILK SHIPMENTS?

(By James H. Hammill and Willard W. Cochrane)

Minnesota dairy farmers have expressed concern over the difference between the fluid milk prices they receive and the prices received in other parts of the country. Milk prices in the East and South are higher than those in the Midwest. Many Minnesota farmers feel that returns to dairying would be increased if fluid milk could be shipped into these markets on a year-round basis.

On the other hand, transporting fluid milk is expensive. A recent study at the University of Minnesota indicates that transportation costs are sufficiently high to discourage milk shipments to eastern markets. However, higher milk prices in some southern markets make transportation costs less restrictive.

Barriers other than transportation costs also impede the shipments of Minnesota milk to other markets. The purpose of this study was to determine the extent to which transportation costs deter milk shipments. Other barriers, therefore, are not considered here.

Transportation costs are based on the use of tank trucks suitable for long-distance milk hauling. Tractors and insulated tank semitrailers provide the best means of delivering milk to distant markets without quality deterioration. Sleeper cabs on the tractors enable two drivers to make nonstop milk delivery. Costs have been determined for two sizes of tank trucks: A two-axle diesel tractor equipped with a 4,150 gallon tandem axle tank trailer, and a three-axle diesel tractor equipped with a 5,000-gallon tandem axle tank trailer.

TOTAL COSTS

The cost of operating these vehicles was estimated to be 29.11 cents per mile for the smaller truck and 31.42 cents per mile for the larger unit. Individual cost items are shown in table 1.

These costs are based upon the following assumed conditions: (1) the vehicles are operated 10,000 miles per month, (2) the tractors are driven a total of 600,000 miles, and (3) each trailer will travel a million miles. An additional cost is included to cover miscellaneous taxes, tolls, and road expenses.

These cost estimates compare favorably with actual operating costs incurred by private trucking firms engaged in long-distance milk hauling.

TABLE 1.—*Cost of operating a tractor-trailer combination suitable for long-distance milk*

Item	Cost per mile	
	Gross weight 59,000	Gross weight 65,000
Driver costs	$0.1062	$0.1062
Tractor costs:		
Fuel and oil	.0383	.0415
Maintenance	.0379	.0379
Depreciation	.0183	.0240
Tires	.0063	.0102
License	.0059	.0067
Insurance	.0138	.0162
Overhead	.0307	.0363
Trailer costs:		
Depreciation and maintenance	.0145	.0155
Tires	.0083	.0083
Insurance	.0048	.0051
License	.0001	.0001
Cargo insurance	.0010	.0012
Miscellaneous costs	.0050	.0050
Total costs	.2911	.3142

TABLE 2.—*Differences between average Twin City class 2 prices and blend prices in 3 cities, average June 1955 to May 1958, compared with transportation costs*

[In dollars per hundredweight]

Destination	Shipping cost per hundredweight, Twin City to destination	Differences between Twin City class 2 and blend at destination											
		June	July	August	September	October	November	December	January	February	March	April	May
Dallas, Tex	1.73	1.62	[1]1.92	[1]2.01	[1]2.10	[1]2.17	[1]2.26	[1]2.13	[1]2.09	[1]2.02	1.69	1.65	1.62
Philadelphia, Pa	1.88	1.34	1.75	1.79	1.82	[1]2.12	[1]2.17	[1]2.12	1.81	1.78	1.73	1.43	1.34
Baltimore, Md	1.96	1.40	1.55	1.53	1.53	1.71	[1]1.97	[1]1.99	1.89	1.73	1.69	1.57	1.34

[1] Greater than transportation costs.

COSTS PER HUNDREDWEIGHT

The total cost per hundredweight of shipping fluid milk from the Twin Cities to each of three cities was estimated to be:

1. Philadelphia, Pa	$1.88
2. Baltimore, Md	1.96
3. Dallas, Tex	1.73

In these estimates it is assumed that no back haul is involved. Because of weight restrictions, the smaller truck is used for the trips to Philadelphia and Dallas. The larger unit can travel to Baltimore. Payloads to each of these cities are as follows: Dallas, 34,820 pounds; Philadelphia, 35,500 pounds; and Baltimore, 40,000 pounds. Toll charges are approximately $45 and $70 for the trips to Philadelphia and Baltimore, respectively.

In addition to trucking costs, a handling charge of $0.10 per hundredweight is added. This charge covers the cost of cooling, storing, and reloading milk into tank trucks. This charge is estimated for the following conditions: at least two truckloads of milk will be shipped per day for a year, with the possibility of further shipments after the year has elapsed. Moreover, milk from farmers is received in bulk, within an 8-hour time period which enables one man to operate the receiving station. The handling costs would probably be greater for plants not operating specifically for this purpose.

PRICES RECEIVED FOR MINNESOTA MILK

To determine whether or not transportation costs to the three cities are prohibitive, Twin City class 2 prices are compared with the blend price in each city on an average basis for the most recent 3 years (see table 2).

When the differences between these prices are compared to shipping costs, the advantages that might be realized by shipping milk is quickly seen. The eastern markets of Philadelphia and Baltimore offer only limited opportunities for shipping milk. The Baltimore blend price minus the Twin City class 2 price exceeds transportation costs only 2 months of the year. The Philadelphia market offers a return over transportation costs 3 months of the year.

The Dallas, Tex., market appears more favorable. Here returns exceed transportation costs 8 of the 12 months. The advantage resulting from shipping milk to Dallas ranges from 19 cents to 53 cents per hundredweight, depending upon the time of the year.

It must be recognized, however, that as milk is shipped into other markets, the blend price in those markets will decline. The magnitude of the decline will depend upon the quantities of milk moving into the market.

For example, it was found that the best returns to Twin City producers from shipping milk to Dallas would result from shipping 10 million pounds per month into that city. In this example the Twin City blend price would then increase 5.5 cents per hundredweight, and the Dallas blend price would decline 28.2 cents. Thus, advantage in shipping milk to Dallas is not as sizable as a first glance might suggest.

THE PRICE COMPARISONS

The question might be asked—are the appropriate prices being compared here? In the Twin Cities, some of the milk produced for the order market is consumed as fluid milk and is allotted the class 1 price. The remainder is used largely for manufacturing purposes and is allotted the lower class 2 price. Farmers receive the weighted average of these prices or a blend price.

All of this milk is grade A in quality. A higher price received for class 2 milk would increase the blend price and therefore increase returns to all Twin City producers. Therefore, if the returns resulting from shipping milk out of State are above the Twin City class 2 price, a price advantage accrues to Twin Cities producers.

The blend price in each of the out-of-State markets is assumed to be the attainable price for Minnesota producers. Class 1 price cannot logically be expected for Minnesota milk, since producers in these markets receive only the blend price. Therefore, the blend price in each city is compared to the Twin City class 2 price plus transportation costs, to see if these cities can be profitably supplied with Twin City milk. It is emphasized that this comparison is made under the assumption that milk is shipped on a year-round basis and other barriers impeding milk shipments do not exist.

CAN TRANSPORTATION COSTS BE REDUCED?

Some reductions in transportation costs are possible. Concentrating milk before shipment would result in considerable savings. Because of high concentration costs and consumer resistance to concentrated milk, few such shipments are made at the present time. But should concentration become feasible, transportation costs could be decreased by as much as two-thirds.

Transportation costs may also be decreased by carrying larger payloads per truck. For example, the truck going to Baltimore can be licensed in Minnesota for a gross weight of 72,500 pounds. If this weight were permissible in other States, it would mean an increase of 20 percent in payload capacity with very little increase in the costs of operation.

Mr. JOHNSON of Wisconsin. I thank the gentleman from Minnesota.

Mr. FLYNN. Mr. Speaker, will the gentleman yield?

Mr. JOHNSON of Wisconsin. I yield.

Mr. FLYNN. Mr. Speaker, it is with a deep sense of pride that I rise to join the gentleman from Wisconsin [Mr. JOHNSON] and my colleagues on both sides of the aisle in speaking in behalf of the greatest group of farmers in this Nation—the American dairy farmers. When I think of the great Southland, I think of land flowing with cotton. I think of peanuts, I think of oranges. When I think of the great West country that has contributed so much to these great United States, I think of flowing fields of wheat. I think of the products of the forest—timber; and a great fishing industry. When I think of milk, I think of Wisconsin which is truly the land of milk and honey. I think of green fields dotted with the Holsteins, the Jersey, and the Guernsey cows. I think these cows are herded and cared for by the most skilled dairymen that live any place in the world. They are producing a quality and sanitary product under a code more stringent than any in existence and a code which I helped to write in the Wisconsin State Legislature. A group of men in various parts of the country, in the South and in the East and various places, both producers and processors, have gotten together in various communities and have caused the city councils and the city fathers of these communities to write restringent regulations—fence me out bills, if you will—to keep the products of these dairy farmers of Wisconsin off the markets of the country. We would not think of keeping the western lumber out of Wisconsin nor the Florida or California oranges off our market. But, the milk of Wisconsin is kept off the markets from one side of the country to the other. For what reason, Mr. Speaker? The reason is that through this monopoly, they are able to charge the consumer higher prices than he should be paying. The price ups the profit both of the producer and the processors. According to one of the ads in the Washington Post that has been appearing here daily; to the one dairy involved in the District of Columbia case, this profit will mean more than $3 million on their financial statement in 1 year's time. I have in my hand a letter from the Pure Milk Association which is a national association with headquarters in Chicago. This association is joined and has as members most of the farmers in the producing area of Wisconsin, and this letter states that they can send milk into the District of Columbia at a price of $5.64 a hundred or less than $1 a hundred cheaper than they are getting it here and with approximately 47 quarts of milk in 100 pounds, this is more than 2 cents a quart cheaper than the dairies are receiving the milk here. These same ads show the dairies and the farmers' co-ops got together—God bless them, they are fine organizations—and agreed to share the excess charge with the dairy if they just would not start this trouble. But no, the dairy is insisting on the entire benefit of this 2 cents. They are insisting on a profit to which they are not entitled in excess of $3 million a year. This is in but one city. Multiply this by other cities in the Nation, in the South and in the East, and you see what is happening to the Wisconsin and Minnesota farmers.

I plead on their behalf that this product of the Midwest may be sold in the free market throughout the entire United States, just as the oranges of Florida and California and the products of your State are sold upon a free market. Let us terminate this monopoly in the interest of all of us.

I have a letter on this matter from Senator Lynn Stalbaum, of the Wisconsin Legislature, who also is secretary-treasurer of the Racine County Milk Producers Association, which I ask unanimous consent to include at this point in my remarks.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

(The letters referred to follow:)

WISCONSIN LEGISLATURE,
SENATE CHAMBER,
Madison, March 4, 1959.

The Honorable GERALD T. FLYNN,
New House Office Building, Washington, D.C.

DEAR CONGRESSMAN FLYNN: I am pleased to see that you are strongly supporting Congressman LESTER JOHNSON along with other of our Representatives and U.S. Senators in attempting to establish a more uniform method of inspection for the movement of milk throughout the country.

This is a subject which has long interested many of the agricultural groups in Wisconsin. A year ago, Congressman JOHNSON was kind enough to send me a copy of the hearing on this bill. The letters and resolutions which he had received read almost like an honor roll of farm organizations throughout our State, covering every political spectrum and all sizes of cooperative groups. Basi-

cally, the proposal he had at that time, which I understand has been modified and improved, is a sound one. The U.S. Public Health Service has established a model milk ordinance and code which has been used as a standard for local inspection ordinances for some period of time, dating back, I believe, to 1941. The Racine Board of Health has basically adopted this as their milk ordinance, as have Chicago, Milwaukee, Madison, and most of the other large communities in our area. Bear in mind that this is listed as a model milk ordinance and has been so designated on various occasions. We feel that it is truly that. While many of its requirements are not liked by certain producers, nevertheless, it has established standards at a very high level obtainable by a reasonably diligent effort. From time to time we in Racine have farmers who fail to comply with these standards and lose their market, some permanently and some only temporarily until they make the necessary corrections. This I know to be true on all of the other markets which use this as a model.

This brings us to the problems which the dairy farmer and dairy organizations of this area face. Actually, there are two problems: the first is a situation where certain markets will refuse to accept the U.S. Public Health Service ordinance and code as an inspection standard and insist that they make their own inspections. This activity on the part of a number of markets, particularly when an organization is attempting to expand its sales, does harass the farmers to a great extent. I have heard of one milk plant in Wisconsin that was visited by 10 different inspectors in a short period of time. With your background in farming, I am sure you can realize the reaction of a farmer when two or three, or more, different inspectors would call on him within a very short period of time, each asking for something different in some minor way. Small wonder that farmers at times become discouraged and leave the farming field.

Along with this there is sometimes the requirement that markets will not permit milk to be received unless they are reimbursed for the cost of this inspection. You can well realize the cost to bring an inspector to Wisconsin, let us say, from New York or Texas, or Washington, D.C.

The second obstacle, somewhat related to the first, is that in certain markets the refusal to adopt the model ordinance and code is deliberate, with the intent of limiting the source of supply of milk. Many of these markets have done this by requiring certain types of equipment which are not normally used (and certainly not needed) in the production of milk. I well recall the statements of some equipment manufacturers on this point. A Madison firm pointed out, for instance, that one Pennsylvania market and a California market required a 2-inch outlet on bulk milk coolers whereas the other 46 States only required a 1½-inch outlet. This is only one of a number of illustrations which have been cited by manufacturers, but it is a relatively easy one to understand to show this point. If I recall correctly, the Washington, D.C., market is one in which certain equipment items are required which apparently were placed in use only to limit the area or the patrons from whom the market obtains milk.

I could go on citing many more illustrations, but I trust that this letter has given you a good explanation of the broad basic reasons for supporting the bill. When we consider that Wisconsin is a surplus milk producing area with a great share of our sales outside of the State, you can readily understand why this matter is so vital to the fluid milk producing farmers and their organizations here in Wisconsin.

Any help you can give toward changing this will be of great potential benefit because it will not only open up markets which are restricted to us, but it will eliminate the harassment of milk producers by numerous inspectors calling upon them with varied requests.

Very truly yours,

LYNN E. STALBAUM,
Secretary-Treasurer, Racine Milk Producers Cooperative Association.

PURE MILK ASSOCIATION,
Chicago, Ill., March 5, 1959.

Hon. GERALD T. FLYNN,
New House Office Building,
Washington, D.C.

DEAR SIR: Following up our telephone conversation of Wednesday afternoon we are submitting the following information which we hope will be of value to you in your effort to break down barriers to the free movement of milk from the Middlewest to other markets.

The price of milk for bottling purposes in the Chicago market is based each month on the price of milk for manufacturing purposes. This in turn, as you undoubtedly know, is based on the support prices for butter and powder as announced by the Secretary of Agriculture. Milk used for bottling purposes receives a premium above the manufactured level.

During the period of March 1, 1958, through February 28, 1959, Pure Milk Association could have delivered grade A milk under the inspection of the Chicago Board of Health from a receiving station in the State of Wisconsin to Washington, D.C., at a price of $5.649 per hundredweight. This price would be for milk testing 3.5-percent butterfat and is based on a daily delivery of 36,000 pounds of milk—the limit allowed by law for transporting milk through States involved to get it to Washington, D.C. This averages out to 12.12 cents per quart.

Referring to information which we have available from the Fluid Milk and Cream Report put out by USDA for class I milk in the Washington, D.C., market, we have determined that the average price for this same period is $6.65 per hundredweight, or 14.27 cents per quart for 3.5-percent milk.

Assuming the margin taken by handlers in the market remained unchanged during this period of time, milk shipped into the Washington, D.C., market from our area could be sold to consumers in Washington, D.C., for 2.15 cents per quart below the prices which were paid.

In determining the retail prices of milk—home delivered and through stores—we referred to Fluid Milk and Cream Report above mentioned. These prices gave a range as to the resale price which we averaged together to arrive at a representative price for the market. The average price to the consumer was 26.83 cents per quart for milk delivered in glass to the homes and 25.85 cents per quart for milk sold out of stores in paper.

We trust that this information will be helpful to you. If we can be of further service to you please contact us.

Yours very truly,

H. L. EDWARDS,
Director of Sales.

Mr. FLYNN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include the letters referred to.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. JOHNSON of Wisconsin. Mr. Speaker, I yield to the gentleman from Minnesota [Mr. NELSEN].

Mr. NELSEN. Mr. Speaker, the legislation under discussion has a direct application to the situation that now exists in the immediate area.

In order that I might be fully advised as to sentiment at home and the provisions of the order for the District of Columbia, I personally contacted Alfred Stedman, of St. Paul, for information contained in this letter which I ask consent to insert in the RECORD with my remarks. Mr. Stedman was formerly with the Government and has long been recognized as a sound analyst of agriculture.

I would further like to insert a letter from the Land O' Lakes Creameries relative to prices and quality of milk handled by this organization in Minnesota and Wisconsin.

Mr. Speaker, I wish to further insert the testimony from the hearings before the Subcommittee on Dairy Products in the 84th Congress. This is very complete and detailed as to the objectives which we seek to gain in this measure.

Mr. Speaker, in support of the position advocated by Mr. JOHNSON, I wish to say that this legislation finds wide support in the dairy industry and wide support in both political parties as evidenced by the many authors among Democrats and Republicans, including myself. That is a healthy situation and I believe a heartening sign for the dairy industry.

I am very much concerned about the problem that we seek to correct in the measure referred to, representing a dairy State, a dairy district, and being a dairy farmer.

For 14 years I represented McLeod County in the State senate and for a number of years I was chairman of the Committee on Dairy Products and Livestock. In this committee we sought to propose legislation which would set up adequate standards which would guarantee to the consuming public quality milk and dairy products, and all of the time with proper regard to reasonable and fair competitive tactics in the field that we represented.

We set up provisions in our State for marketing areas, but sought also to protect the producers as well as the consumers. The result has been that Minnesota milk and dairy products today are of high quality and find wide acceptance all over the United States.

The premise that we should also seek to insure is adequate health standards to protect the consumer. However, today we find in isolated instances phony standards which go far beyond the requirements set up by the Surgeon General of the United States. Obviously these phony standards are inserted for the purpose of providing an economic monopoly for producers in certain areas.

The dairy industry has spent millions of dollars in research, in ways and means to provide for the consuming public palatable, low-cost products, and it is my understanding that under the proposed marketing order for the District of Columbia, obstacles will be placed in the way which will prevent a free flow of commodities to this area, denying the housewife and the consumer a product within his means to buy. If such a procedure is endorsed, there is little premium as a reward for research and

better merchandising and the public interest is lost in the shuffle.

The legislation the distinguished Congressman from Wisconsin has offered, along with many of his colleagues, including myself, seeks to set up proper, adequate national health standards, protecting the consumer and at the same time seeking to protect producers in all parts of the country in securing markets when they meet those standards.

I have had recent contacts with the dairy industry in the State of Minnesota and I can report that they are in unanimous agreement that this legislation has merit and should be considered by the Congress of the United States.

I am further advised that the proposed marketing order for the District of Columbia would even affect the sale of dairy products to the Department of Defense, and I believe there is no one who would deny that the military should be an open market to the people of the United States. The same could be said of the District of Columbia. We should and will appropriate millions of dollars for the District of Columbia. Thousands of people live here who work for all of the people of the United States. If the producers of other areas have quality milk they should be entitled to a part of this market.

Incidentally, I also have a personal reason for my interest—my son is milking 50 cows on our farm back home—it is grade A and would meet the tight standards required to protect the health of the consumer.

STATEMENT OF ALFRED D. STEDMAN, OF ST. PAUL

The nature of the proposed Washington milk order will be plain to anyone who has the patience to read it.

The order says that "with the increase of milk supplies locally and in adjacent markets, Washington handlers who purchase their milk on a classified basis have encountered increasing competition in their regular route distribution as well as on contract sales to Federal installations," which it says represent a substantial part of the class I sales in the market.

The order restricts, and authorizes surrounding municipalities to use their milk inspection regulations to restrict, this complained-of copetition from outside.

The order specifically covers sales of milk to all Government institutions, Federal, State or municipal, to all defense agencies, installations and bases, wharves, piers, docks and ships in the District of Columbia, Alexandria, Silver Spring and eight surrounding counties of Virginia and Maryland. It applies to milk except in hermetically sealed containers, to unfrozen or frozen concentrated milk such as has often been sold at economical prices to defense agencies, and to skim milk, buttermilk, and fresh cream.

The prices stipulated in the order are not the prices that milk buyers can be made to pay if the Federal system of restricting competition is placed and kept in effect. The order contains no requirement of any kind that the real prices charged in the area shall be those named in the order. The real prices will be based on exclusion or reduction of competition. They will be substantially higher than the order prices, as they are today.

Of course the 2,000 or so dairy farmers living nearest the District of Columbia have a natural advantage in that market due to location and hauling costs which nothing can take from them.

But why should the United States Government that claims to be dedicated to freedom of competition and of commerce, impose artificial restrictions on top of the natural ones?

In the past it has been considered prudent, right, and fair to all citizens, businesses, and taxpayers for the U.S. Government and its defense agencies to buy competitively and as economically as it can. Now the necessity for Government economy is driven home by the Federal Government deficits and resulting inflation.

Midwest farmers ask that the principle of free competitive enterprise be applied in the instance of milk for their National Capital and its defenses. These farmers are Americans, too. They pay taxes to support the National Government. Their sons help man its defenses.

They ask Congress to assure that the Government does not now, through this Federal milk order, discriminate harmfully against them and their farm products in ways that would be expensive to all District area consumers and to all U.S. taxpayers.

LAND O'LAKES CREAMERIES, INC.,
Minneapolis, Minn., March 4, 1959.

Hon. ANCHER NELSEN,
U.S. Congress, House of Representatives, Washington, D.C.

MY DEAR MR. CONGRESSMAN: In response to your telephone conversation with me today, Land O'Lakes current price quotation on grade A milk from two sources follows:

1. We offer grade A milk from our plant at St. Michael, Minn., at the Federal order class 1 price for the month of March at $3.63 per hundredweight for 3.5 percent butterfat. Contract hauling charges would be $2.10 per hundredweight in loads of approximately 40,000 pounds. The total cost therefore to a purchaser buying this milk on a delivered basis would be $5.73 per hundredweight delivered Washington, D.C.

2. We offer grade A milk from our plant at Whitehall, Wis., quoted at $3.50 per hundredweight for 3.5 percent butterfat. This plant is not under Federal order regulation. The trucking charges from Whitehall, Wis., to Washington, D.C., would be $2.10 per hundredweight, making a total cost to a purchaser in the Washington, D.C., area of $5.60 per hundredweight.

The U.S. Department of Health, Education, and Welfare, Public Health Service, in its "Sanitation Compliance Rating of Interstate Milk Shippers" shows the ratings of these plants. The Land O'Lakes plant at St. Michael, Minn., is shown on the bottom line of page 14 of the October 1958 Compliance Ratings Publication. Our St. Michael plant has a 94 percent compliance rating on raw milk, 98 percent on receiving station, 98 percent on pasteurization plant, 96.6 percent on pasteurizing milk, and an enforcement rating of 93 percent.

Our plant at Whitehall, Wis., is shown on page 30 of this same publication. It shows that we have a compliance rating of 95 percent on raw milk, 100 percent on receiving station, 96 percent on pasteurization plant, 95.6 percent on pasteurized milk, and an enforcement rating of 97 percent.

One hundred percent of all our producers receipts in each plant comes from bulk tank installations on grade A dairy farms in the respective areas. We are presently selling milk from both plants into areas such as St. Louis, Mo.; Omaha, Nebr.; San Antonio, Tex.; Shreveport, La.; Wichita Falls, Tex.; Houston, Tex.; Springfield, Mo.; Lake Charles, La.; New Iberia, La.; and other locations quite distant from our procurement area.

We would have available at present two tank loads a day from the two above-mentioned plants. We would also have another tank load a day available from our plant at Luck, Wis., on the basis of $3.58 per hundredweight f.o.b. Luck, Wis., plus trucking charge to Washington, D.C., of $2.10 per hundredweight. The USPH rating of our Luck, Wis., plant is shown on page 30 of the same Compliance Rating Publication and it shows that our raw milk has a rating of 95.9 percent, receiving station 100 percent, enforcement rating 97 percent.

This volume of milk, of three tank loads a day or approximately 120,000 pounds a day of grade A milk, would be available on a year-around basis rather than only during the surplus period of the year that we are now in.

Providing that there are no restrictive clauses in any Federal or State regulation governing the sale or purchase of milk in the Washington, D.C., area, we would be happy and willing to sell milk at the above-quoted prices and if the purchaser is willing to accept milk on the basis of U.S. Public Health Service compliance ratings.

Certainly during this time of the year when we are in the flush season, we would actually have available until the fall months at least double these quantities. Naturally, the price would change month by month from now until July 1; however, if there are no changes upward in support prices of dairy products from now until July 1, 1959, it would be reasonable to believe these prices would stay quite static during the months of March, April, May, and June 1959.

We thank you for the privilege of being able to quote our current grade A prices.

Your very truly,

R. H. BONDE,
Manager, Fluid Milk and Ice Cream Department.

[From serial M, pt. 2, hearings, Subcommittee on Dairy Products, 84th Cong., June 1, 2, 3, 1955]

STATEMENT OF C. M. DEGOLIER, DEERFIELD, WIS., PRESIDENT AND GENERAL MANAGER OF THE DEERFIELD CREAMERY CO., AND PRESIDENT, MADISON DAIRY PRODUCE CO., MADISON, WIS., PRESIDENT, WISCONSIN CREAMERIES ASSOCIATION

Mr. DEGOLIER. Chairman ABERNETHY and members of the subcommittee, my name is C. M. DeGolier. I am president and general manager of the Deerfield Creamery Co., Deerfield Wis., president of the Madison Dairy Produce Co., of Madison, Wis., and president, Wisconsin Creameries Association.

I am making this statement on behalf of the joint committee of the National Creameries Association and the American Butter Institute. This committee and its member units, has been described to you heretofore by other witnesses.

My purpose in asking the subcommittee for time to appear before you was in the belief that I may be able to give you information, developed from my own experience and my knowledge of the problem, which would add to the material already furnished this subcommittee by previous witnesses.

Let me say at the outset that I am not a dairy sanitarian. I operate a fluid milk (grade A) plant, which also manufactures dairy products, and am part owner of a plant at Madison engaged in large-scale packaging and merchandising operations for butter. In view of my experience, it is not my purpose to pose as an expert able to tell you what features should be incorporated in a sanitation code for milk—this has been quite capably handled by Mr. Dahlberg and others, and there is a significant amount of technical information available in reports published by the National Research Council, which has conducted several very fine, technical studies of this subject, and from many other sources. Rather, I desire to bring to you the experience and knowledge of a businessman who has had direct experience with this matter of sanitation regulations, and who, in the course of his business career, has had brought to his attention many ex-

amples of the manner in which these sanitation regulations operate.

I would like to state that the public is entitled to be fully safeguarded with regard to the sanitary qualities of its milk supply. No responsible persons in the dairy industry would recommend the adoption of procedures which do not give the public this assurance. Milk, which we think is the finest natural food for humankind, also may be the very efficient carrier of bacteria which are inimical to the health of the people. This means that we in the industry, public officials, and all connected in any manner with the production and distribution of milk for human consumption, must be ever alert and in fact must demand that we be subject to regulations regarding the sanitation of milk which will assure that the milk supply of the consuming public is safe and pure.

SANITATION REGULATIONS—THEIR ORIGIN AND JUSTIFICATION

There is no need to launch into a lengthy discussion of the justification of sanitation regulations applicable to milk and its products. We take it for granted that anyone involved in the matter would agree that a clean, pure, and wholesome milk supply is a factor of paramount importance in the health and well-being of our people. Since milk, in addition to being one of our finest foods, also is a very fine medium for the growth of harmful bacteria, it follows without further argument that we must be sure our milk is produced and handled so that it is pure and wholesome.

Sanitation regulations, it would appear, first were developed by cities and municipalities in order to assure that the milk supply for consumers in such cities and municipalities was pure and wholesome, and that the milk supply purity was so protected in both the farm production and the processing end that pure, wholesome milk reached the consumer, free from milk-borne diseases.

It is but natural that, due to the development of sanitation regulations by a multitude of cities and towns, looking largely to local conditions, there were and still are very material differences between sanitation regulations applicable throughout the country. For many years, the commerce in milk was very largely of a strictly local character. Techniques for the handling and shipment of milk long distances while still maintaining its purity and wholesomeness had not been developed. Therefore, it is not until comparatively recent years that variations between sanitation regulations, and the manner in which they were applied from market to market, have become factors of very great significance in impeding the flow of good quality milk between markets in the United States.

We can take it for granted, I believe, that local sanitation regulations were conceived solely for the protection of the consuming public in cities and municipalities. Unfortunately, it is my belief that quite frequently, local producer groups and others have endeavored to use such regulations, and have them interpreted and enforced, as a tool for the protection of the local market supply of fluid milk against legitimate competition from qualified milk producers and processors from other areas.

And here, I want to make it quite clear that, in those instances where it would appear beyond a reasonable doubt that sanitation regulations have been and are being used as trade barriers, it is not the fault of the local sanitarians. My experience with these officials is that they are primarily interested in seeing to it that the supply of milk in their area is pure and wholesome—not in seeing to it that their regulations have the effect of excluding pure and wholesome milk from other areas from their own area. The fault for such use of sanitation regulations, I feel quite certain, is the fault of local producer and processor groups who desire to limit the competition of qualified milk from other producers and other areas. In this respect, the dairy industry, I think, is to be criticized for not getting its own house in order.

Of one thing we can be sure, and it should be a matter of pride to all of us, that the milk supply generally throughout the United States is safe and pure. Epidemics of disease traceable to the milk supply have, to my knowledge, ceased to exist. When one considers that one can travel from one end of this country to another, and always be able to secure a supply of pure milk which one does not hesitate to feed his children, in spite of the various conditions of production in this country, we can truly state that we have something to be proud of that is perhaps unique in the world.

To summarize to this point: We have a fine milk supply, and it is through the efforts of our technical people, the milk sanitarians, and through the cooperation of milk producers and processors that this is so. I wish to emphasize this so that the subcommittee will understand that the interest of the people I represent is not to complain of sanitation regulations as such, nor to recommend anything that will reduce in any way or by one iota the degree of effectiveness of our sanitary control of the milk supply in the United States. Nor do I complain of the actions of sanitarians which have been the subject of court controversies, some of which I will treat as examples for the subcommittee in the following pages of this statement. These controversies are understandable when taken in their historic perspective. My statement is pointed toward showing the subcommittee certain features of sanitation regulations which need to be corrected and at the same time to point out that some promising strides have been made in recent years toward a more uniform, more widely applicable sanitation system.

INCREASED MOBILITY OF MILK—ITS RELATION TO SANITATION REGULATIONS

Some years ago, when I first started in the dairy business and particularly when my family developed the plant at Deerfield, Wis., milk was not very mobile. By this is meant the fact that techniques and equipment had not been developed which would permit the movement of milk for long distances and at the same time maintain its purity and quality so that it could be used by consumers as fluid milk.

In the dairy industry we have made steady progress in sanitation practices through the development of better equipment, more research, and better knowledge of the factors that cause the production of pure and wholesome milk, a more widespread understanding of the fact on the part of both producers and processors that the public—our customers—are entitled to purchase our commodity in the secure knowledge that it is pure and wholesome, and, last but perhaps of even greater importance, has been the development of our vast highway system and high speed refrigerated trucking industry which enables us to ship our milk longer and longer distances with the assurance that at destination the milk be pure and wholesome and entirely safe for consumption by the public.

The increased mobility of fluid milk was greatly encouraged by developments during the war. With the vast shift that took place in the population—the development of large plants, with their large numbers of workers in areas previously relatively sparsely settled—it became necessary, if these people were to have milk, to develop techniques for the movement of such milk from areas of heavy supply to areas of deficit supply. When I first started this business, it was quite unusual for milk to move much farther than from my plant at Deerfield to Chicago. During the war and for some time thereafter, it became commonplace for milk which had originated in Wisconsin, or Minnesota, to be transported by refrigerated truck to southwestern markets such as Dallas and Fort Worth, there bottled and loaded on refrigerated trucks, and shipped as far west as Las Cruces, N. Mex. I might add that, when the consumers in Las Cruces drank such milk, they found it pure, palatable, and wholesome.

In addition to the foregoing, there has been a phenomenal improvement in the quality of milk on our farms. More and more of our farmers are equipping their farms and following production practices that meet the requirements for grade A milk, or milk that meets the sanitation requirements recommended in the U.S. Public Health Service Milk Code. In Wisconsin, for example, we now have a law under which milk which meets our grade A requirements, based on the U.S. Public Health Service Code, may be shipped from city to city within the State without hindrance from local regulations. So far, all but four cities in the State have accepted this code, and we fully expect the remaining four cities to come into the program in the near future.

But from the viewpoint of the interest of the subcommittee, I think it important to note that due to the greater mobility of milk previously described and the ever-growing development of compliance of grade A ordinances which are based on the U.S. Public Health Service Milk Code the existence of barriers to the free movement of qualified milk from one market to another are becoming more important, and the need for greater standardization of sanitation codes and practices of inspectors thereunder is becoming more and more necessary if sanitation regulations are to fulfill their primary and I might say their only function of assuring that the milk distributed in the various areas is pure and wholesome, rather than to assume a secondary function of standing as barriers to the movement of qualified milk. This movement is becoming more and more important every day as our techniques for handling milk, and shipping it long distances while still maintaining its purity and wholesomeness, improves with the many technological developments in the field. I think it would be a wonderful thing that we could look forward to the day when the milk supply for any town or city in this country would be of such assured purity and wholesomeness that it would be readily accepted for distribution as fluid milk in any other town or city in the country. It is in the interest of promoting the early realization of such a state of affairs that I am appearing before this subcommittee.

PROGRESS IN THE DEVELOPMENT OF UNIFORM SANITATION CODES AND INSPECTION THEREUNDER

There has been considerable progress in the development of more uniform sanitation codes and inspection practices thereunder in recent years.

Sanitarians have taken a leading role in recent years in this development. Each year, there is held a National Conference on Interstate Milk Shipments, at which a great deal of attention is devoted to sanitation codes, methods of securing more uniformity in codes, inspection thereunder, and rules to be followed in developing a greater degree of reciprocal inspection, that is, where a municipality accepts the inspection techniques of another municipality in determining the eligibility of milk from the latter municipality to be distributed as fluid milk in the former. There can be little doubt that these conferences, and the actions following thereafter, are exerting significant influence

in developing a more uniform system of sanitation and inspection in this country.

TYPES OF SANITATION REGULATIONS THAT RESTRICT THE MOVEMENT OF MILK BETWEEN MARKETS

As I indicated heretofore, I do not claim to be an expert sanitarian. However, there are some features of sanitation regulations that I believe are restrictive in character, although the list of such restrictive types of sanitation set forth below may be far from complete. The list follows:

1. Many sanitation codes, or if not the codes, then the health authorities, limit the area wherein they will inspect plants and farms. While it might appear that there could be good reasons for such restriction of inspection area, say on the ground of cost of some other factor, the fact remains that judging from the court cases filed to invalidate such restrictions, the area limitation is one of the most important barriers to the movement of qualified milk between markets.

2. Refusal to accept reciprocal inspection. This makes the area limitation really very effective as a barrier to milk movement.

3. Requirements that milk must be pasteurized within a certain distance of the city. Judging from the list of court cases which we have compiled, this is the restriction that has been involved in litigation more than any other. Obviously, in this day of good refrigeration and rapid transportation, a regulation that provides that milk must be pasteurized a small distance from the city is ridiculous, and most assuredly restrictive.

ROUGH MEASURES OF GEOGRAPHIC SCOPE OF RESTRICTIVE DEVICES

I wish I could pinpoint for the committee the scope of these restrictive sanitation devices throughout the country, but researching the health codes in towns and cities of the United States is obviously beyond our powers.

It is my opinion restrictive devices such as those named above are a factor of paramount importance in slowing down or stopping completely the movement of milk from area to area and market to market. While no fully comprehensive research of this particular character has been done recently, the U.S. Department of Agriculture in a bulletin dated March 1939 entitled "Barriers to Internal Trade in Farm Products," found widespread evidence of the use of sanitation regulations as devices to restrict the entry of outside milk into milk markets. Both State governments and local municipal governments were so using their sanitation regulations, and such restrictive practices were found to be very widely spread throughout the United States.

Although this bulletin is quite old, and may therefore be assumed to be out of date in some respects, I have taken certain excerpts from this bulletin and have included them in the appendix. The findings are startling. We do not, however, have to rely entirely upon the bulletin just discussed for information concerning the current importance of the manner in which sanitation regulations are being used as devices to restrict the movement of milk between markets in this country.

Starting with the July 20, 1949, issue, I have had the weekly issues of the Dairy Record, a periodical devoted solely to news and information concerning the dairy business in this country, checked in order to list the cases brought before the courts regarding sanitation regulations. I do not claim that this list is a complete record of all the court cases regarding sanitation regulations that were started during the period since mid-1949, but in any event a number of them were reported in that magazine.

Since mid-1949, a total of 35 separate court actions were reported by the Dairy Record. These actions involved municipalities or States in 17 States and the District of Columbia. Other facts regarding these cases follow:

1. Eleven of the cases involved the refusal of the municipality to inspect plants and farms outside its usual area.

2. Thirteen of the cases involved suits brought to enjoin the local health authorities from enforcing rules in their ordinances which provide that milk for use in the municipality must be pasteurized within a given distance, usually a very short distance, of the market. The most important of these, as far as establishing legal precedent is concerned, was that brought by the Dean Milk Co., of Chicago, against the city of Madison, Wis.

I will go to No. 3 on page 10:

3. There were six cases involving the efforts of State governments to limit the entry of milk from other States, ranging from such activities as providing that out-of-State milk must be in its original containers as received from the farm up to dyeing out-of-State milk some color.

4. Two of the cases involved unspecified discriminatory practices.

5. One case turned upon the failure of the local authorities to permit reciprocal inspection.

6. Two cases could only be classified on the basis of miscellaneous objections. Practically all of these cases were won by the plants desiring to ship milk into the markets, previously forbidden them by the local health authorities.

In addition to the foregoing, the Dean Milk Co. gave us some information concerning suits it has brought against city and State authorities which had denied the Dean Co. permits to sell in the markets involved. The Dean Milk Co. secured the greater part of its milk supply from sources approved by the Chicago Board of Health.

The cases concerned a number of different complaints. Several of them were brought because the company considered the inspection fees levied against them were exorbitant. The regulation generally in these instances provided for the payment of a certain fee per hundredweight for all milk going over the weight deck of the Dean plant. When it is considered that in many of these instances the volume sold by Dean in the markets where these suits were brought was a small, sometimes almost an infinitesimal, portion of the total volume of milk received at the plant or plants involved, yet the Dean Co. under the ordinance would have had to pay a fee on large volumes of milk not intended for use in the particular market involved, the restrictive nature of the fee as levied is obvious. Many of these cases have been settled on the basis of payment of a relatively small annual fee, such as $275 per year in one case, as compared to the thousands of dollars the company would have had to pay on the basis of the original provision of the ordinances.

Other cases brought by the Dean Milk Co. involved provisions of ordinances, or practices thereunder, whereby inspection was refused outside the usual inspection of the particular health authority involved. Still other cases involved refusal of health authorities to grant the company a permit because the local ordinances required the milk to be pasteurized in or only a short distance removed from the market. There were other bases of some of the suits mentioned, but the above reasons cover the majority of the cases brought by this company. I think the important fact for this subcommittee to bear in mind is that there is one fairly large milk company which, in its endeavor to expand its marketing system to a number of different markets, and when the quality of the milk supply of the company was not open to question, found itself stopped by capricious and restrictive local health codes and practices thereunder. The company advised me that they have instituted a number of suits in recent years, and that 16 of these complaints actually became the subject of court trials. I have mentioned before that one case went clear to the U.S. Supreme Court before being resolved in favor of the company.

CONCLUSIONS

On the basis of the foregoing facts and considerations, I think we may well reach the following conclusions:

1. While much progress has been made in developing more uniform sanitation codes in this country and the practices under such codes, we still have far to go. Most assuredly we should do our best to encourage the milk sanitarians to continue and accelerate their good work in this connection.

2. The evidence indicates quite clearly that many sanitation regulations serve no useful purpose as far as purity of the milk supply is concerned, but rather serve as devices to restrict the entry of pure and wholesome milk into markets from areas outside their usual sources of supply. Such regulations tend to wall off the local markets from the legitimate competition of other areas and grant local producers a high degree of monopoly. This leads to arbitrary pricing, overproduction within the milkshed, reduced consumption in the markets, and greater surpluses of milk which must be manufactured into dairy products such as butter, cheese, and the like.

It seems to me that the evidence is so conclusive that it warrants notice and action by the Congress. I do not know what the action should be, but the goal of any action by Congress, in my view, should be that of securing more uniformity in sanitation regulations throughout the country and more uniformity of application by inspectors. The United States Public Health Service, in cooperation with milk sanitarians and many other persons, has developed a standard ordinance or code which is recommended for use in municipalities. Many of the States and municipalities have adopted this code or codes based very largely upon it. I firmly believe that the United States Public Health Service code is gaining in scope, but am equally firmly convinced that we should endeavor to speed up its acceptance and application throughout the country. Once this is done, sanitation regulations will revert to their original purpose—that of assuring the public a pure and wholesome milk supply as far as sanitary practices are concerned, rather than being perverted to use as devices which restrict the movement of high-quality milk between areas and markets.

Whether the bills now before the Congress, which provide that the United States Public Health Service code will be the determining factor in the quality of milk shipped in interstate commerce is the final answer, I do not know.

Most assuredly, however, this problem is of great importance, and we urge the Congress to take whatever action it deems advisable pointed toward its solution.

I wish to thank you for your courtesy in permitting me to make this statement.

Mr. Speaker, I ask unanimous consent to revise and extend my remarks and to include a letter from the Land O' Lakes Creamery quoting quality and price of milk, also to include the comments of a friend of mine, whom I recently contacted, asking of him information relative to the marketing order under consideration in the District of Columbia, and to also include testimony that appeared in the hearings before the committee in 1955.

The SPEAKER pro tempore (Mr. THORNBERRY). Is there objection to the

request of the gentleman from Minnesota?

There was no objection.

Mr. JOHNSON of Wisconsin. Mr. Speaker, I yield to my colleague from Wisconsin [Mr. KASTENMEIER].

Mr. KASTENMEIER. Mr. Speaker, I am happy to join with the distinguished gentleman from Wisconsin and my other colleagues in proposing this legislation. I compliment the gentleman from Wisconsin [Mr. JOHNSON] in taking the initiative in this endeavor to establish more uniform standards to provide for the free flow of fluid milk in interstate commerce without unduly burdening such commerce.

I am favorably impressed by the reasonable aim of this legislation. Its effect will be, I am convinced, to benefit both the American consumer whose shopping dollar will buy more dairy products and the efficient dairy producer who will have an expanded market for his product.

This bill is designed to eliminate the use of arbitrary sanitation regulations as an economic barrier to control the shipment of sanitary fluid milk. Under provisions of this measure, State and local health authorities will be prohibited from denying the entry of milk which qualifies under the U.S. Public Health Service's milk sanitation regulations. Furthermore, the bill provides for many safeguards for the States and local communities which receive milk from plants qualifying under the code.

Mr. Speaker, I am confident that this amendment to the U.S. Public Health Service Act, if adopted, will have far-reaching and affirmative effects on the marketing of dairy products.

Mr. JOHNSON of Wisconsin. Mr. Speaker, I ask unanimous consent that the gentleman from WISCONSIN [Mr. ZABLOCKI] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. ZABLOCKI. Mr. Speaker, I am pleased to join with my distinguished colleague from Wisconsin [Mr. JOHNSON] in cosponsoring and supporting legislation to establish uniform sanitation standards and to encourage the free interstate flow of quality milk.

At the outset, I want to congratulate the gentleman from Wisconsin [Mr. JOHNSON] for his outstanding work on this legislation. He has worked tirelessly in an effort to break the artificial and discriminatory barriers which keep high quality Wisconsin milk and dairy products away from consumers in other areas. His endeavors in this direction are not only very important to the dairy farmers of Wisconsin, whose interests he has represented so ably in this House, but they are also important to the consumers of dairy products throughout our Nation.

Surely the consumers have a considerable stake in this legislation. There is no reason why the consumer should be penalized, through high prices on milk and other dairy products, for the benefit of a particular group of producers. The consumer is entitled to receive quality milk at the lowest possible price, and such a price cannot be achieved as long as deliberate barriers will continue to impede the free flow of quality milk in interstate commerce.

The legislation which I have cosponsored with the gentleman from Wisconsin [Mr. JOHNSON], and with other Members, would remedy this situation. It would protect the public health. It would assure that only quality milk would move freely in interstate commerce. And, further, it would make possible substantial reduction in milk prices to the consumers in various areas.

I believe that there exist ample reasons for the enactment of this legislation. I sincerely hope that it will be reported to the full House as promptly as possible. and enacted without delay.

Mr. SPRINGER. Mr. Speaker, will the gentleman yield?

Mr. JOHNSON of Wisconsin. I yield to the gentleman from Illinois.

Mr. SPRINGER. Mr. Speaker, may I say to the gentleman that I do not have anyone who is sending milk into this area from my particular part of the country, so I do not have anything particularly at issue which is important to me. I ask questions at this point more in the public interest, being a member of the Committee on the District of Columbia, in order to see if some of these things could be clarified by questions and answers insofar as the public welfare of the District of Columbia is concerned.

It does appear from what I have been able to learn on the floor here today that Minnesota, Wisconsin, and that area have a surplus of milk which they can supply to other parts of the country.

My question is: Why is it that your milk can be supplied to Washington, as you say freight prepaid from that area to Washington, and still be able to sell at approximately 2 cents a quart cheaper than can the producers in Maryland and Virginia?

Mr. JOHNSON of Wisconsin. It is because our farmers are taking less for their milk than are the producers supplying this market.

Our Wisconsin farmers would rather supply fluid milk for the Washington area than make this milk into butter, cheese, and dry powder.

Mr. SPRINGER. They are taking less for their milk than those who are selling here?

Mr. JOHNSON of Wisconsin. Yes. And they will take still less if that class I milk has to go into butter and cheese.

I referred in my speech to a letter that came from the Turtle Lake Creamery, in which it was stated that the milk coming to Washington would be sold as class 1 milk and the farmer would receive $3.14 per hundredweight, but if that milk had to go into butter and cheese, it would net the farmer only $2.90 per hundredweight.

Mr. LAIRD. Mr. Speaker, will the gentleman yield?

Mr. JOHNSON of Wisconsin. I yield to the gentleman from Wisconsin.

Mr. LAIRD. In answer to the gentleman's question, it might be well to point out that what we complain about more than anything else is the fact that the Virginia-Maryland milk producers are attacking sanitation standards recommended by the USPHS which 35 States of this Nation are using. They are using a separate set of standards here in the District of Columbia, from those recommended by the U.S. Public Health Service, in order to restrict the movement of milk into this area. My complaint is that Maryland-Virginia producers are in effect attacking the milk producers in other sections of the United States that are using the recommended standards of the USPHS. They are raising phony questions in the minds of the consuming public everywhere. This will hurt and not help milk consumption. We want to compete on the basis of price and not on phony standards.

Mr. JOHNSON of Wisconsin. Let me tell the gentleman from Illinois this. The only reason we are using the District of Columbia as a example is that you have this going on right in front of the Congress of the United States. We could use other cities, such as New York and Philadelphia, where the same thing is taking place. However, we have a perfect example here in the District which is why I am referring to the District.

Mr. SPRINGER. May I ask, in connection with the standards set up for the District of Columbia, is there anything basically more secure or more safe in the regulations that have been provided for the District of Columbia than there would be in the milk standards which have been set up, we will say, by the U.S. Department of Agriculture?

Mr. LAIRD. Mr. Speaker, if the gentleman will yield, standards are not set up by the Department of Agriculture. They are recommended by the U.S. Public Health Service. Last week, in testimony before the House Appropriations Committee, a similar question was asked. The committee was assured by the U.S. Public Health Service that in the standards which they have recommended and which have been agreed upon by the health officers in the various States, the health of the consuming public is adequately and effectively protected. This is the important point to keep in mind.

Mr. SPRINGER. Now, one further question. Will the gentleman tell me what, in essence, are these excess standards which you say burden the District of Columbia?

Mr. JOHNSON of Wisconsin. I covered them all in my speech.

Mr. SPRINGER. Can you wrap that up in just a bundle?

Mr. JOHNSON of Wisconsin. One is two towels to wipe each cow's bag. Another one is the annual health test for the men that work on the farm. Still another is the 200,000 per milliliter bacteria count. I did not take all the differences. I just took some of the outstanding ones.

Mr. SPRINGER. May I ask the gentleman if this is one, that the milk had to be inspected by somebody in the District of Columbia and that, in essence, excludes other milk from coming into the area?

Mr. JOHNSON of Wisconsin. That is true. That is done all over the United States. It is not only in the District of

Columbia, but it is done in other cities that want to keep milk out.

Mr. SPRINGER. Now, there is another question that has been raised publicly in the newspapers, so it ought to be discussed for a moment. At the present time, the surplus milk in the Wisconsin-Minnesota area can come into the Washington area and be sold at a cheaper price, and one thing that is disturbing some of the people in the District of Columbia is, Will this always be true?

Mr. JOHNSON of Wisconsin. Are you referring to the editorial in the Post of last week?

Mr. SPRINGER. I think the Post incorporated that, but I have heard it from several other sources as well.

Mr. JOHNSON of Wisconsin. I do not believe the man who wrote that editorial is too well versed on the dairy business. There is too large of a spread between the price paid for class 1 of bottling milk and the price of class 3 or manufacturing milk. I doubt that those two prices would ever get close enough together so that Wisconsin and Minnesota farmers would willingly sell bottling milk for manufacturing purposes.

The SPEAKER pro tempore. The time of the gentleman from Wisconsin has expired.

Mr. JOHNSON of Wisconsin. Mr. Speaker, I ask unanimous consent to extend my remarks and include some letters.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

AREA REDEVELOPMENT AND DEPRESSED AREAS LEGISLATION

The SPEAKER pro tempore (Mr. THORNBERRY). Under previous order of the House, the gentleman from Alabama [Mr. ELLIOTT] is recognized for 20 minutes.

Mr. ELLIOTT. Mr. Speaker, five other Members and myself have secured for this afternoon equal periods of 20 minutes in which to discuss the area redevelopment and the depressed areas legislation which is now before the Congress. The area redevelopment bill was, as I understand, recently introduced in the Senate by some 39 Senators. It has also been introduced in the House by several Members who represent the areas that are afflicted by unemployment and the economic ills that go with unemployment. The leading proponent, or one of the leading proponents, of the bill in the House is the gentleman from Pennsylvania [Mr. FLOOD], whom all of us will remember for his valiant fight last year which led eventually to the passage of the bill.

My own bill on this subject is H.R. 5107.

These bills, Mr. Speaker, are based on the philosophy expressed in the Employment Act of 1946. This act recognized the continuing responsibility of the Federal Government to utilize its resources to establish conditions which would promote maximum employment, production, and purchasing power throughout the United States. Despite this commitment to a full employment economy certain areas of our country have not participated in the general economic growth and prosperity that has prevailed almost consistently in recent years.

Mr. JONES of Alabama. Mr. Speaker, will the gentleman yield?

Mr. ELLIOTT. Mr. Speaker, I yield to the gentleman from Alabama [Mr. JONES].

Mr. JONES of Alabama. Mr. Speaker, I am delighted to see my colleague, the gentleman from Alabama [Mr. ELLIOTT], devoting his skill and legislative ability to a very trying and very important question which concerns our economic plight, which has sprung up in various sections of the country.

I know he will be interested to be informed that the gentleman from Wisconsin [Mr. WITHROW] and I today have introduced a public buildings bill, which, by its enactment, will give job opportunities, if we can initiate this program and can have a uniform schedule of public buildings construction enacted during this session of Congress.

Mr. ELLIOTT. Mr. Speaker, I want to thank the gentleman from Alabama [Mr. JONES], for his statement that a public buildings program bill has been introduced by him. I would like to say that the 50 or so Members of the House who met this last week and week before last on this subject were most anxious to see such a bill introduced. As a matter of fact we passed a resolution urging that such a program be undertaken. I want to thank the gentleman for his announcement. It will bring hope to all areas where there is economic distress and unemployment. The gentleman from Alabama [Mr. JONES], has always battled for full employment for his people. In his efforts in this direction he has been singularly successful.

Mr. FLOOD. Mr. Speaker, will the gentleman yield?

Mr. ELLIOTT. I yield to the gentleman from Pennsylvania.

Mr. FLOOD. Mr. Speaker, I appreciate, of course, very deeply the very kind things the gentleman has just said in connection with my efforts last year on this bill. However, I want to make it clear that I was the humblest and merest house detective or traffic agent for a joint committee of Republican and Democratic Members. It was entirely a nonpartisan effort. There were the same number on both sides of the aisle who worked with this steering committee that we put together during the 30 days before the House passed the bill and after it passed the Senate.

So I would like to make it clear, and I am sure my friend hastens to join me in saying that at no time during the entire debate last year or in the hearings, was there any suggestion of partisanship or politics. And I am sure he hastens with me to emphasize again that that is our position; we who are the proponents of this legislation hasten to emphasize that that atmosphere prevails today and will prevail all through these debates to the successful passage of this legislation in the House again this year. Out of an abundance of caution we hasten to emphasize that.

Mr. Speaker, I might say as well that the hearings on this bill will start, as far as House Members are concerned, before the great Committee on Banking and Currency of the House tomorrow morning. I will have the privileges, I hope, of leading off for the Members of the House in support of this bill.

This is not a narrow piece of legislation. My friends from a dozen States have been active just as long as I have been active in support of this legislation.

I hope the gentleman will permit me another minute or two. I must leave for an appropriations hearing for the Department of Defense, and I will not have the advantage and the pleasure of hearing the extended discussion the rest of the afternoon that will go on among my colleagues.

I am particularly interested in pointing out to my colleagues the significance of the agricultural phase of this bill. There will be Members from both sides of the aisle, I am advised, who will discuss with great intelligence, great ability, and sincerity the important agricultural phase of this bill.

I should like to indicate in passing that of the four great farm agencies that we have known for many years, all great and all sincere in their efforts in behalf of farm legislation, the Farmers Union, Russell Newman, of the great National Grange, and the National Co-ops, those three great farm organizations are vehement in their support of this legislation. It is opposed by the United States Farm Bureau.

I heard Mr. Herschel Newsome say last year before the other body, and I am sure he will say it again before the Committee on Banking and Currency of this body, that he considers this legislation the most important piece of farm legislation that will pass this Congress this year. He said that last June 12. He went to some length to establish that. So did the spokesmen for the National Co-ops and the Farmers Union.

I believe in the integrity and the sincerity of the distinguished spokesmen for the Farm Bureau. I know their thinking is very much the same as that of the spokesmen for the United States Chamber of Commerce and the National Association of Manufacturers. At no time do we question the deeply felt sincerity or the complete integrity of the spokesmen of those bodies in behalf of their positions on this bill, but I say that their position resolves itself immediately down into a clear demarcating line of philosophy of government. Those gentlemen have a distinct and very clear and recognized philosophical position vis-a-vis this kind of legislation. Traditionally we recognize and respect it, but that it what it is. We respectfully beg to differ with them on that broad question.

I might add that the yardstick that has been introduced in this bill to examine the acceptability of the rural areas is not a gimmick. It is not a new thing. It is not something that we who support the bill thought up. This has been an old, tried and true yardstick in the Human Resources Bureau of the great Department of Agriculture for many, many years. The only trouble has been, and we hope we solve it in this

bill, that the Department of Agriculture has never presented an adequate or a proper program to permit the yardstick to be applied. This bill, borrowing the yardstick or measurement factor, provides such a program.

This is seed money. This is seed money for these rural areas. My friends who know the problem of the rural areas will develop the importance to them of this legislation.

As a Pennsylvanian, I should like to indicate this condition: It has been suggested in the other body that the administration figure of $50 million was not actually picked off the fence somewhere. The figure was the result of an investigation made by them in my home State. They went there and they say that from examining the Pennsylvania problem they came up with a figure of $707 which is necessary to provide a job; that is, the capital investment of $707 is the condition precedent to give birth to a job, which in turn will supply a service job to serve the man that you create the job for.

Well, the fact of the matter is that the distinguished secretary of commerce for the State of Pennsylvania, who was here many years in the Department of Commerce and who because of his great work here was recognized by the State of Pennsylvania and was named by Governor Leader for 4 years as the secretary of commerce has been renamed by Governor Lawrence because of his brilliant work, testified that for my State alone, sir, for Pennsylvania alone, a minimum of $57 million is the only way that we can attack this cancer. That is $7 million more than the total figure proposed in the administration bill. So the Pennsylvania figure of $707 was the cream on the top of the thing. They went into districts where we had already done the work for 20 years, and they used that figure as a yardstick. I point out to you, to refute that, that in the State of Pennsylvania the Governor in his budget, which is now before the general assembly, has asked for four times the amount that was the basic figure upon which my friends reached their conclusions. The Governor has asked for four times the amount, and he is asking for $10 million this year in his budget to help us in Pennsylvania to do what they want us to help them with. These are some of the problems.

The suggestion of the NAM is that the important thing here is what is known as business climate, that the business climate of a community must be good. There is no doubt about that. But, these areas which you and I are speaking of, sir, are not in any condition to be recognizable as having a business climate. They have exhausted themselves. Their resources are exhausted. They cannot pay their taxes. Their juvenile delinquency rates are going up. They do not have parks. They do not have public facilities. There is no business climate for a great American industrial resource to come in and build there. And in your town and in many other towns throughout these 20 States, we have heard testimony that a plant was about to locate there but the family or the wife of the president would come in and say, "I will never live here. There are no parks, look at the schools and look at the conditions. These are distressed areas. We cannot live here and we will not let you build your plant here." So you see there is no business climate.

This bill hopes to create that condition precedent. I am grateful for the time you have given to me, sir, and I regret that I cannot remain on the floor so that I may hear my colleagues develop this very important subject.

Mr. ELLIOTT. I thank the gentleman from Pennsylvania. I want to reiterate what the gentleman has so well said that this is a bipartisan effort. That is indicated, among other things, by the fact that the gentleman from West Virginia [Mr. MOORE], the gentleman from West Virginia [Mr. SLACK], the gentleman from Kentucky [Mr. SILER], the gentleman from Pennsylvania [Mr. SAYLOR], and the gentleman from Oklahoma [Mr. EDMONDSON] all join in this joint effort to discuss this very important problem this afternoon.

Mr. ANDERSON of Montana. Mr. Speaker, will the gentleman yield?

Mr. ELLIOTT. I yield.

Mr. ANDERSON of Montana. Mr. Speaker, I thank the distinguished gentleman from Alabama [Mr. ELLIOTT], particularly for recognizing me at this point as I must leave shortly to attend a meeting of the Armed Services Committee. Before I go I would like to associate myself with the position which the gentleman has taken this afternoon and to state that certainly there is a clearly evident need in my district and in my State for legislation which the gentleman is supporting. It is designed to meet a need which cannot be met except by the Federal Government.

There is chronic unemployment throughout my State, much of which does not appear in the statistical reports because it involves Indians, farmers, miners, and frontier-type individuals, many of whom eke out a precarious living.

One of the primary needs of my district, which has six of the seven Indian reservations in Montana, is employment for these people. These reservations, at present development, will not support the numbers of people living on them. A few do have resources.

These resources, generally speaking, have been known to pass into the hands of other people prior to their development, with little or no attempt to utilize the Indians as a labor force. They require carefully selected industries with specialized, on-job training.

Because of the low education level of these people, they need some real effort to secure them jobs. Many are drifting off the reservations because there is no work, and they are gathering on outskirts of our cities, near dumpgrounds, riverbanks, and newly created slum areas. Both the Federal and State Governments shun their support in this nether-nether land these Indians are drifting through. Still others, under a relocation program whereby they are shipped off to big cities along the Pacific coast and in the Midwest, are finding themselves unable to cope with urban life, and they, too, are drifting back to edges of Montana towns, because there is no opportunity for them to gain employment on their reservations.

Indian unemployment, while a large factor, is not the only one in Montana. We have economically depressed areas in our mining communities and the communities which depend on these mining activities. They have good, honest, hard-working people possessing many skills. They have the other natural resources available. Under the provisions of the pending legislation, I believe there can be a favorable new reemployment created.

I would like to commend for the consideration of my colleagues on the floor the position that the eminent economist, Mr. Galbraith, presents in his book, "The Affluent Society," in which he indicates that if we are to fully utilize both the manpower and the great natural resources of our country, the Federal Government must take additional responsibility in fields where local governments or private enterprise are unable to get the job done.

I think the gentleman from Alabama [Mr. ELLIOTT] is doing a fine job for his area and for the whole country in pushing this legislation. The gentleman is recognized throughout America for his outstanding work in the field of education legislation. It is most encouraging to see the enthusiasm and skill which he is bringing to solve the problems of area redevelopment and depressed areas legislation.

Mr. ELLIOTT. I thank the gentleman from Montana for his very kind remarks.

Mr. Speaker, I now yield to the gentleman from Pennsylvania [Mr. DENT].

Mr. DENT. Mr. Speaker, I want to thank the sponsor of this legislation who has been so kind as to yield to me now rather than to wait until the end of the presentation.

There is one piece of legislation I think all of us had better look at. Of recent date a group in the Senate offered an amendment to the Senate bill, which is intended to do the same thing as the House bill sponsored by the gentleman from Alabama [Mr. ELLIOTT] and others. The Senate bill carries the number S. 22. I wish to read just one part of the amendment to you and its purpose to set up a new classification of areas that will be eligible for funds coming from the developmental bill. I quote from the amendment:

> There shall also be included among the areas so designated any industrial area in which a substantial part of the employment is or most recently was in an industry adversely affected by the reduction of trade barriers under the Trade Agreements Extension Act.

Now I want to point out to you that it is difficult enough to subsidize an industry that cannot move, such as farming and agricultural pursuits. You cannot move a cornfield. Under another act that is before this House, however, it is entirely possible, not only possible but probable, because of recent history, that we can finance competitive industry abroad, be injured in our own domestic production facilities, and then

come before the Congress of the United States and get relief under this amendment.

I mention this because I am a sincere believer in area redevelopment legislation and do not want to see an amendment passed that will in my judgment completely destroy the whole intent of the legislation.

The field of international trade and reciprocal trade have absolutely no business being injected into an area redevelopment bill which is intended to help communities that cannot help themselves redevelop their areas so that they can induce, if possible, some kind of payroll to come to their area. I believe all of us had better take another look at this frank admission by the sponsors of what I have been talking about for the short year of my service here. They definitely now admit that we have to tax the citizens of these United States to aid communities that have been eliminated or their welfare injured.

Mr. ELLIOTT. Mr. President, may I say to my friend from Pennsylvania, Mr. DENT, that his remarks are deeply appreciated. Though he has only been here a short time, he is proving himself to be a most able and valuable Member.

There are dozens of urban communities which have been classified as chronic depressed areas because of their persistently high level of unemployment. Many more rural communities have also been subjected to low income and low standards of living. The area redevelopment bill is designed to establish a constructive program to alleviate such conditions of unemployment in industrial areas and underemployment in agricultural areas as well.

Mr. Speaker, in line with what I have just said I wish to call the attention of the House to the fact that according to the latest report by counties and States for the distribution of surplus agricultural commodities that there are today, or were at the time of this report, as of the end of last November, 210 counties in 24 States in which the recipients of the commodities constituted 15 percent or more of the population. Six of the counties which I am privileged to represent here are on that list. It is with this background that I speak this afternoon. I urge the House to pass the distressed areas bill at the first opportunity.

AREA REDEVELOPMENT

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Pennsylvania [Mr. SAYLOR] is recognized for 20 minutes.

Mr. VAN ZANDT. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from Pennsylvania.

Mr. VAN ZANDT. Mr. Speaker, I thank the gentleman from Pennsylvania for yielding me this time to join him in his support of this area redevelopment legislation.

Mr. Speaker, there is no doubt in my mind that the need for area redevelopment legislation is one of the most pressing problems confronting the 86th Congress. With national unemployment reaching over 4.7 million it is of interest to point out that there are 2,499,100 of the total number of the unemployed living in the 269 distressed areas of the Nation.

It is revealed by the U.S. Department of Labor that 76 of the 269 areas are classified as major labor surplus areas with 1,937,100 persons unemployed. It is in these 76 areas that unemployment has brought misery and despair to nearly 2 million good Americans and their families.

From the standpoint of unemployment in my own State of Pennsylvania as of January 1959 out of a labor force of 5 million there were 508,000 unemployed or an average of over 10 percent of the labor force.

Bringing the picture a little closer home, in my congressional district the Altoona area as of January 1959 had a labor force of 53,600 with 7,700 unemployed or an average of 14.4 percent of the labor force; while in the Clearfield-DuBois area in my congressional district out of a labor force of 37,000 there were 5,200 unemployed for an average of 14.1 percent.

Summarizing the unemployment situation in my congressional district, out of a labor force of nearly 91,000 there are 12,900 unemployed or 14.3 percent of the labor force.

In speaking of this chronic unemployment condition, in my congressional district there were periods during the past several years when the number of unemployed exceeded 18 percent of the total labor force.

Mr. Speaker, having closely observed for many years the ravages of unemployment I can assure you that like a deadly plague this chronic and persistent unemployment has had death-dealing effects since it destroys the faith and spirit of good American citizens, and in so doing, it is no respector of age.

Not only are our youth being robbed of their rightful heritage, to live in a nation traditionally known as the "land of opportunity," but older citizens, after years of toil and service, find themselves in the army of the unemployed.

It is pathetic to see vast numbers of good Americans trying to exist on public assistance and surplus commodities.

In this connection, nearly 22 percent of the 281,700 residents of my three-county area are recipients of surplus commodities.

One often hears the question: Why is it that these areas of chronic unemployment cannot help themselves?

The answer is that while some 1,800 communities throughout the country have active area redevelopment corporations, I can only speak for my own congressional district where such groups have been active for years and have enjoyed a measure of success.

For example, since 1946 in my home town of Altoona, Pa., a result of an active industrial redevelopment group that raised nearly a million dollars mostly through voluntary payroll deductions, 11 new industries have been brought into the Altoona area solely through community, State and Federal effort.

These new industries have provided 3,600 new jobs and a $12 million increased annual payroll.

Seventy percent of the new jobs are for men.

This highly successful effort stems from what is commonly known nationally as the Altoona plan.

Mr. Speaker, in attaining this remarkable record the Altoona group like other groups in my congressional district has borrowed at the banks to the legal limit.

In addition, the Pennsylvania Industrial Development Authority, as well as the Small Business Administration, have assisted to their legal limit.

Therefore, in my congressional district these area redevelopment groups are in need of further financial assistance such as is provided for in the area redevelopment legislation now before Congress.

I think I can speak for all area redevelopment groups in my congressional district when I say that they do not want any Federal handout.

What they need primarily is additional borrowing power which coupled with other forms of Federal assistance as contained in the pending bills will enable them to assist in wiping out these pockets of unemployment and their human wastage.

Mr. Speaker, before I conclude I should like to read a statement I made on the floor on February 24 concerning my compromise bill, H.R. 4878, and I quote:

Mr. Speaker, on February 23 I introduced H.R. 4878, a bill to aid depressed areas.

It might be said that what we need right now is not new bills to aid depressed areas but an act signed by the President which would bring Federal assistance to the scores of communities in the United States which have for years been plagued with chronic unemployment. I fully agree with this view.

My record in favor of depressed area legislation is crystal clear.

For years I have cooperated with my colleagues on both sides of the aisle interested in this type of legislation and my disappointment was as great as theirs when the President vetoed the Douglas-Spence bill last fall.

Mr. Speaker, on the subject of Federal aid to depressed areas there are some excellent bills pending before this session of Congress. In this connection, it would not be difficult for me to support the bill introduced by my colleague, Mr. FLOOD, of Pennsylvania, and its companion bill in the Senate introduced by Senator DOUGLAS, of Illinois.

At this point, however, it is pertinent to ask—and I do so in all sincerity—why solicit a repetition of last year's veto by having the Douglas-Flood bill given similar treatment since it resembles to a marked degree the Douglas-Spence bill in the 85th Congress.

Frankly, the possibility of another veto is cause for great concern.

While there is no one in the Senate or the House who would stoop to playing politics with the misery of unemployment, we cannot ignore the fact that unless a bill is enacted the suffering of the people in the depressed areas is not going to be alleviated.

Mr. Speaker, among the sponsors of depressed area legislation there exist two conflicting points of view.

To begin with, in principle the administration has endorsed aid to depressed areas.

In addition, the two great major political parties also endorsed the principle in their 1956 platforms.

Therefore, the question that Congress must resolve is the extent of aid to the depressed areas of the Nation.

In an effort to reach this common objective, it is imperative that reasonable people should be willing to compromise.

In this connection, it is my belief that the President will find it possible to accept a reasonable compromise between the administration bill and the Douglas-Flood version of the legislation.

In my plea for a reasonable compromise, it must be thoroughly understood that I am not presuming to speak for the administration nor have I had any consultations with administration leaders on the subject.

Mr. Speaker, let us be practical and face the facts concerning depressed area legislation.

In the event of a Presidential veto of the Douglas-Flood bill, I have been unable to find anyone willing to flatly predict that the veto will be overridden by the House of Representatives.

The fear of being unable to override a veto is based on the fact that it requires two-thirds of the votes cast to accomplish that purpose.

Therefore—looking the facts right in the face—when you review the position of those Members of the House today in relation to their last year's vote on the Douglas-Spence bill, one finds that the margin of victory would be insufficient to override a possible Presidential veto of the Douglas-Flood bill.

Mr. Speaker, to improve our chances of enacting depressed area legislation, I introduced H.R. 4878, a bill which represents a compromise between the administration's approach and the Douglas-Flood bill.

With a few exceptions, my compromise bill, H.R. 4878, offers the same types of aid contained in the Douglas-Spence bill vetoed last year.

For example, instead of making every depressed area eligible for the same types of assistance, my bill provides different degrees of Federal assistance based upon the level of chronic unemployment and the need in such areas.

In this connection, it is my belief that areas which have suffered greater levels of unemployment should be entitled to a greater degree of aid than those communities whose problems of unemployment are of a lesser degree.

Briefly, my bill, H.R. 4878, provides for the following programs:

(1) Technical assistance: Depressed areas would be eligible for technical assistance to help the communities to appraise their physical and human resources, which would prepare them to plan constructive programs to attract new businesses and expand existing businesses in these areas.

(2) Community loans: Depressed communities would be eligible to receive loans from a revolving fund of $100 million.

We know that the conventional lending facilities in depressed areas are not as venturesome as those in growing and expanding communities.

The fund would put the depressed areas on a more equal footing with other communities in attracting new jobs.

(3) Public facilities: Some communities need improvement in public facilities before they would become sufficiently attractive to new businesses which might desire to locate in these areas.

My bill provides for an establishment of a $25 million revolving fund from which these communities would be able to borrow.

While the figure may appear modest, attention is called to the fact that legislation is pending before the House which would establish special funds for community facilities.

Meanwhile, under my bill, H.R. 4878, a small fund would be allocated and earmarked to aid depressed areas.

In addition, the most depressed communities which do not have sufficient resources to borrow funds would be eligible to receive grants up to a maximum of $25 million.

At this point, let me stress that this is not an annual appropriation but is intended to be a $25 million revolving fund from which these communities would be able to borrow.

The administrator of the program would be expected to limit the grants only to communities with the greatest need for aid and which do not have sufficient resources to repay the loans in the foreseeable future.

It should be stressed that this is no giveaway program; under the provisions of my bill grants would be made only for projects which would provide lasting improvements and thus broaden the economic base of the communities.

(4) Vocational training and subsistence: One of the big problems of the people in depressed areas is the fact that many of their industries have declined or disappeared and, consequently, the demand for the skills acquired by the people in these areas has also diminished or vanished.

In order to enable these people whose skills have become obsolete to gain new employment, we must provide facilities to retrain them.

But many have been unemployed for a long period of time, and it would be unreasonable to expect that they could undergo an effective period of vocational training without any means of support.

Consequently, while the unemployed are undergoing training and if they are no longer eligible for unemployment compensation, they would be receiving subsistence payments equal to the average unemployment insurance in their State during the period while they are undergoing training, but not for a period exceeding 13 weeks.

Only the unemployed residing in the communities with the highest level of unemployment would be eligible for this type of aid and the total amount that would be appropriated for this program would be limited to $5 million a year.

Mr. Speaker, in brief, these are the provisions of my compromise bill, H.R. 4878.

They are modest, but at the same time will provide a sound program of Federal assistance to depressed areas.

All of us are deeply concerned by the latest reports about the rise of unemployment.

Experience has shown that the people in depressed areas are the ones that are mostly hit by any rise in unemployment and are the last to recover from the onslaught of recession.

Therefore, it is urged that we enact the program contained in my compromise bill, H.R. 4878, as a realistic means of providing an effective program to aid the chronically depressed areas of the Nation.

Since the cost of depressed area legislation has proved a stumbling block in the past and impeded our efforts, let me point out that the cost of the Douglas-Flood bill is $389.5 million as compared to the cost of the administration bill which is $53 million.

By way of contrast, my compromise bill, H.R. 4878 will cost $158 million or just about midway between the cost of the Douglas-Flood bill and the administration bill.

Mr. Speaker, in connection with depressed area legislation, let me state that I have no pride of authorship.

My sole desire is to aid the people in the depressed areas and to attain such a laudable objective the spirit of compromise should be dominant in our minds.

As one who represents two chronically depressed areas in Pennsylvania with unemployment as high as 14 percent of our labor force and which has plagued us for years, my goal is that Congress enact without delay an effective bill in a form acceptable to the President, thereby eliminating the prospects of another Presidential veto.

Mr. Speaker, the residents of the 269 depressed areas of the Nation are entitled to this type of legislation, and it is my sincere hope that we can compromise any differences and enact a depressed area bill without further delay."

This concludes the statement I made on the floor of the House February 24.

Mr. Speaker, in concluding my remarks on area redevelopment legislation, it is my firm conviction that as long as we have "pockets of persistent and chronic unemployment" in the Nation, the Federal Government has a responsibility to assist in alleviating the misery and despair that follow in its wake.

For that reason it is no longer possible to justify further delay by quibbling over the merits of this or that bill.

Therefore let us face the facts and in good conscience proceed to work out a reasonable bill that can be enacted into law at the earliest possible date.

Mr. STRATTON. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from New York.

Mr. STRATTON. Mr. Speaker, I desire to join the gentleman in stressing the importance of the various area redevelopment bills which have been introduced in the House and in the other body and to urge their very speedy approval.

Unemployment has become a very serious matter in the 32d Congressional District of New York, which I have the honor to represent, and while no individual can ever say with certainty which factors were responsible for his own election, I think it is safe to say that the failure of the distressed areas legislation, which passed both Houses in the last Congress, to be signed into law was one of the important elements in the dramatic change that took place in our district last November and saw the first Democratic Member sent to Washington in 42 years. The people of our area are disturbed about unemployment and they quite properly look to the Federal Government for some assistance in their need.

I desire to bring to the attention of the House one change which I have offered in the bill which has been introduced in this body by the distinguished gentleman from Pennsylvania [Mr. FLOOD], and in the other body by the distinguished Senator from Illinois [Mr. DOUGLAS]. This change, which is incorporated in H.R. 3698, would make communities which have been suffering from 6 percent or more unemployment, a percentage which is defined by the Labor Department as substantial unemployment, eligible for relief after 12 months, rather than waiting for 18 months. In this type of relief, as in other forms of relief, a stitch in time often saves nine. Communities which today are continuing to suffer a level of unemployment as high as 6 percent are clearly undergoing serious, rather than temporary, conditions, because they are moving against the economic tide of the rest of the Nation, and it is, therefore, all the more important that the help which this bill provides should come quickly so as to be effective.

I was particularly happy to note that several distinguished Members of the other body have already offered their

own amendment to this legislation which would make this type of assistance available particularly to communities which have been hard hit because of foreign imports. The problem of low-wage competition from abroad is an increasing problem in my district, too, and in many other sections of the country, and it is important that the Government take steps to rectify the harm which has been done by this competition from overseas. I would heartily support such an amendment.

There is one other aspect of this depressed-areas legislation which I believe needs attention. While these bills do provide substantial assistance, I think it is also necessary that we create additional incentives to encourage new businesses to move into areas of heavy unemployment and also to encourage existing businesses to expand where they are rather than to move out to new locations. For that reason, I intend to introduce within the next day or so legislation to provide for fast Federal corporate tax writeoffs for businesses which construct new facilities in unemployment areas or which expand existing facilities in unemployment areas. At the present time, these provisions of our Internal Revenue Code as now applied sometimes actually make it cheaper for a manufacturer to build a new plant in another section of the country, rather than expand or modernize his existing plant. If we are to really help unemployment areas and help them keep their jobs, we need to reverse this process and give them special attractive features which any practical businessman will recognize. I believe that my bill will be a necessary companion of the other depressed-areas bills, and I urge the House to make it part of an overall legislative package to restore the economies of those communities which are today still suffering heavily from unemployment.

Mr. MORGAN. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from Pennsylvania.

Mr. MORGAN. Mr. Speaker, for some time I have been working to aid the plight of the unemployed in my district. Therefore, I have a vital interest in this legislation because I believe that it will be helpful in offsetting the chronic unemployment in surplus labor areas not only in my district, but in other parts of the country.

I cosponsored legislation of this kind during the 85th Congress and introduced a similar proposal at the beginning of the 86th Congress. I have also cosponsored the Douglas-Flood bill.

I represent the 26th Congressional District of Pennsylvania, comprised of Washington, Greene, and Fayette Counties. Under the provisions of this bill, Uniontown and Connellsville both in Fayette County, are eligible for aid. The average rate of unemployment in this area as of January 1, 1959, was 26 percent—the highest rate in the State.

The economy of Fayette County, as well as the other two counties in my district, is dependent in a large part upon the coal industry. During the past several decades, however, the coal mining employment has been steadily declining. As an example, in Fayette County in 1945 there were 14,433 people employed in the coal mining industry. Today there are 2,500.

The problem facing these communities in my district is the same problem which faces every community in the country—providing jobs for those willing and able to work and attracting and holding good employers who can supply these jobs.

Extensive efforts have been made by local groups to rehabilitate our depressed areas. They have had programs for industry promotion and plant building. They have had fund raising programs and other self-help activities. While these efforts have produced creditable results, they have not been sufficient to stem the rising tide of unemployment from continued job losses.

Mr. Speaker, I believe that legislation to establish an effective program to alleviate conditions of excessive unemployment in certain economically depressed areas, if passed, would be an incentive for communities with a surplus labor force to try to solve their problem. It offers the prospect of work, of new jobs and new industries and holds real promise of practical and effective assistance. It has my wholehearted support and I hope that the legislation will be adopted by Congress and enacted into law at the earliest practicable time.

Mr. SAYLOR. Mr. Speaker, ample proof of the need for distressed-area legislation is contained in the report of the Surplus Labor Region published by the Department of Labor and the reports that have been submitted by various committees of Congress.

My remarks this afternoon will be brief. When the executive branch of Government's own figures justify the position that this bipartisan group of Members of the House is taking, I do not think it is necessary to go into detail and point out State by State and district by district these blotches upon the escutcheon of labor.

These people in the various areas are unemployed not of their own volition. They are able-bodied men and women, American citizens, who have rendered to their country a service in time of war and a great service to various companies in time of peace when they had employment. What they are saying to the American public now, through their duly elected representatives, is that having fulfilled their obligations as citizens to the best of their ability, they now find that they have no ability through their own means to get employment in order to support their families, to pay their taxes, to repair their homes, to make their contribution to the welfare drives in their own communities. They are asking that the Government not give them a handout in the same sense it is given to foreign lands, with no hope of ever getting anything back, they are merely asking that these people who live in the depressed areas be given a helping hand so that they once more can take their rightful place as citizens in this great land of ours and participate in every phase of the public endeavor.

I have previously appeared before the House on many occasions in support of this proposition. I have appeared before various committees of the House and Senate in support of bills to provide economic stimulation for distressed areas. I even arranged with the late Senator Neely, of West Virginia, who was a great champion of this cause, to go up into Pennsylvania and to hold a series of hearings throughout the length and breadth of that State, and have been constantly bringing this urgent need to the attention of Congress.

And, it is interesting to note that in the report which Senator NEELY filed following those hearings he stated that while he was convinced of the need for this type of legislation from having visited towns in his own State, that he was surprised to find a similarity existing between the problems in the State of West Virginia and the problems in the great State of Pennsylvania.

Mr. FOLEY. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from Maryland.

Mr. FOLEY. I want to commend the gentleman for his presentation of the bipartisan approach to the solution of this pressing problem. Representing western Maryland, which I have the great honor of doing, I wish to join with your statement on this important problem and merely emphasize that the conditions that obtain today and did obtain in the great State of West Virginia and in the great State of Pennsylvania also obtain, sadly so, in the western part of Maryland. We have, as you well know, in our five counties, an economy very similar to yours. It is my hope that through your efforts and the efforts of your colleagues this Congress this year, and in the not too distant future, we will go back and ask ourselves the question: What did we mean in 1946 when the Full Employment Act was enacted? And, I call it the "Full Employment Act" because that is what the citizens of the United States expected it to be, and I hope that through your efforts and the leadership that you and your group are showing, a proper answer will be found. I will say that I introduced, to show my interest in this program, a companion bill to the Flood area redevelopment bill. And, if a better answer is found to take care of the 4.5 million unemployed folks who are out of jobs today—and multiply that by 3 or 4 to indicate the total number of people afflicted by this unemployment, which brings it up to 15 million, plus those youngsters coming out of school this year, hoping and expecting jobs in this land of the free and home of the brave—I say, if a better solution is offered, I am for the better solution, but if not, I am for this bill. I want to associate myself with the remarks the gentleman has made.

Mr. SAYLOR. I want to thank the gentleman from Maryland. I think that the bipartisan approach that my colleagues are presenting here this afternoon clearly indicates that no one has pride of authorship in the type of legislation or whose bill will be reported to the floor. This problem, I believe, is big enough that each person who supports it will be able to stand up and not only defend it, but speak about it proudly

in his home community. In the course of the speeches that you will hear here today you will hear numerous accounts of the widespread hardship, but is a proven fact that the mining and railroad centers in Pennsylvania and the other coal-producing States are in serious condition. Industrial idleness set in a decade ago, and except for a brief period during the Korean conflict, has persisted even through the peaks of general business activity elsewhere in the country. I can take you into home after home where there has been no paycheck for years. Here you will find the most willing and industrious people in all the world, skilled workers, intelligent workers, strong workers, solid American citizens, who through no fault of their own are without job opportunities. The majority of them are coal miners and railroad workers, but of course personnel in adjacent market places and service industries suffer a similar fate when these customers are deprived of buying power. You have heard theorists suggest that surplus labor in chronically depressed areas move elsewhere in search of employment.

I want to say to you in all sincerity that there is no more heartless approach to the problem of relieving unemployment and distress than to ask people to move into a new era. It is perfectly all right to ask the young folks, the young men who are not married, the young married people who have no children to worry about, to move. But after all, if you have lived in a community, were married in that community, brought up your family in that community, belong to the church and the lodges in that area, how in good conscience can you say to them, "Well, the solution to your problem is to move; your area is depressed and cannot be handled in the usual way."

That, to me, is completely unjustifiable and not in the best interests of the welfare of the people who live in this great nation of ours.

The district which I represent is rich in natural resources and ideally situated to maintain its vital role in a normal peacetime economy as well as in the great defense structure. A considerable part of the coal industry's ills, for instance, are directly attributable to Government policies which have deprived coal of a great deal of its traditional market. I do not propose to discuss the need for a restriction on residual oil imports at this time. I merely point out that a foreign product is displacing a domestic fuel, causing serious unemployment in our part of the country.

In the first two months of this year shipments of foreign residual oil entered the United States markets at an annual rate equivalent to an energy value of more than 70 million tons of bituminous coal.

For the sake of those persons who are in favor of free trade I might remark that for the first time, believe it or not, there was sold in the New York market in the first 2 months of this year residual oil that came from Russia. Even they are finding out that this country is an easy market to dump these foreign products.

When these conditions are corrected, our unemployment problem will, in a sense, disappear. In the meanwhile it is a sad commentary on this Government to permit wholesale unemployment to persist in these affected areas. We are spending billions of dollars to fight poverty in far off lands while many of our own people are destitute. More billions are being spent to broadcast and publicize the American story. But what I would like to know is how we explain away the fact that from four to five million of our own people are unemployed. How do our information experts convince the foreign people that everything is rosy among the ten or fifteen million American men, women and children who have no means of support?

It is the duty of Congress, Mr. Speaker, to provide for our own general welfare before undertaking any world welfare programs. I suggest that we now enact a program that has been neglected entirely too long. Depressed area legislation, regardless of what bill is approved, will go a long way to get our own communities back on the road to recovery. I solicit you to endorse before the House Committee on Banking and Currency this legislation, and I sincerely urge that the great chairman of that committee hold expeditious hearings. Let us go forward as quickly as possible to put this measure into law. Our people have waited a long, long time, and I know that they will appreciate Congress' early action in relieving their distress.

Mr. PATMAN. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I am happy to yield to my colleague from Texas.

Mr. PATMAN. I think it should be pointed out that if any one of these distressed areas was in any other country of the world outside of the Iron Curtain countries, we have five agencies that would come to the aid and rescue of such a distressed community.

I refer to the World Bank, and we certainly have made a great contribution of billions of dollars that have gone to this bank. The International Cooperation Administration, 100 percent U.S. money. The Export-Import Bank, 100 percent U.S. money. The International Finance Corporation. That is substantially U.S. money. The Loan Development Corporation.

Any one of those agencies backed by billions and billions of dollars of our own money would go to the aid and rescue of any one of these distressed communities were it in any other country of the world except an Iron Curtain country. I think that is certainly worth consideration.

I agree with the gentleman that it is all right to have foreign aid. I am for a foreign-aid program. I voted for it in the past. I do not feel so good over it right now because we are denying our own people, just as the gentleman suggested, the same kind of aid that we are giving people in other countries. I am not going to vote against the foreign-aid program entirely on that account. I certainly will not do that. But it is certainly disappointing to the gentleman, I know from what he said, and it is disappointing to me that we have plenty of money to help similar communities under comparable circumstances in all other countries of the world outside of the Iron Curtain countries, except here in the United States. We cannot find money to help our own.

Mr. SAYLOR. That is correct. I may say that on several occasions groups of Congressmen have met informally to discuss what could be done. Although it was said in a joking manner, nonetheless it has a serious tone to know how our own country has ignored our own people. The suggestion has been made, Let us get together and withdraw from the United States for 48 hours, make an application for a loan to one of the five agencies the gentleman has mentioned, get the loan, and come back into the Union.

Mr. PATMAN. If any community the gentleman mentions that is a distressed area now were in Mexico or Canada it would be eligible for aid, or, as the gentleman suggested, it could secede and become a foreign republic for a temporary period of time and then would be eligible to receive aid from any one of these five agencies.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from Iowa.

Mr. GROSS. I am very much interested in the remarks of the gentleman from Texas. Apparently he wants to have his cake and eat it too. I do not know how you can pour more money into foreign countries. I am sure he has been voting for it for years. How can we do that and take care of our own people, too? We cannot have it both ways, we have to have it one way or the other. I should like to see the gentleman from Texas join some of the rest of us around here in trying to cut off this flow of money to foreign countries.

Mr. PATMAN. We can have plenty. It is possible we might have to cut down on foreign aid, and if so we could do it, but we have enough money for our own people as well as the foreign people. We have billions of dollars. It is all right.

Mr. GROSS. No, it is not all right.

Mr. PATMAN. I say it is in certain respects, but I am going to look into this situation very carefully.

Mr. MEYER. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from Vermont.

Mr. MEYER. It seems to me very logical that when any of our actions in the field of foreign policy or defense policy or general American policy do contribute toward creating distressed areas or at least accentuating the problems of distressed areas, we should try to do something about it to help out those areas at home.

Mr. SAYLOR. I thank the gentleman.

THE CHRONIC UNEMPLOYMENT SITUATION

The SPEAKER pro tempore (Mr. BOLLING). Under previous order of the

House, the gentleman from West Virginia [Mr. SLACK] is recognized for 20 minutes.

Mr. SLACK. Mr. Speaker, there has been a great deal said today and in previous sessions of the House regarding the problem of consistent unemployment in those areas in which employment does not respond to the normal business cycle. I represent one of those areas, and the betterment of this problem is my No. 1 interest as a Member of this House. As a first-term Congressman, however, I will defer to my colleagues with greater experience for the discussion of the specifics, and confine my comments to the convictions I have reached after careful observation of the situation in my own district.

We have in our country today these several areas in which unemployment is chronic.

Most of us have heard the details of mechanization and its effect on employment in the coal industry, which on an industrywide basis, has been first and hardest hit. I do not intend to review those facts, but rather to try to define the scope of the situation.

The Congress has made several efforts to deal with the results of this trend. There have been enacted measures to provide surplus commodities for needy families, to liberalize school-lunch programs, to provide supplementary unemployment compensation and the like. These measures are a sign that we of the Congress are interested, and willing to lend our help. Unfortunately, we have not yet come to grips with the core of the problem. We have been devising temporary pain killers, but have not isolated the disease and undertaken a cure for it.

I believe we are dealing here with several kinds of a problem at once, and on the record to date the problem cannot be solved by a piecemeal approach, no matter how well intended.

In efforts to chart a course which will lead to a cure, we must recognize that this is a fiscal problem, a technical problem and a human problem, all combined.

As a fiscal problem, it has a bearing on inflation, and on our national budget, and on the economic stability of the several affected States and communities. It represents continuing and growing costs for surplus foods for the needy, for unemployment compensation, for direct relief payments. The money expended is unproductive in the sense that it adds nothing to our gross national product, and it is therefore another force encouraging inflation. It is a continuously growing charge against the budget, and consequently a demand note against the tax structure.

It is a technical problem because it is the direct outgrowth of a process which we support and actively encourage—the increase of technical skill and productivity in business and industry. Much has been said recently about the threats of our enemies overseas, and fear has been expressed that they will surpass us in technical skills. All of us know that we as a nation cannot afford to be second best in the international race for top industrial skill.

But some byproducts of this progress are, as in this case, problems in terms of displaced human beings. The advance of the machine adds musclepower to our national strength, but at the same time forces some of our people into permanent idleness. They become casualties of the battle for international survival, but with none of the protection afforded the casualties of any other type of conflict or disaster.

The generosity and humanity of the Congress in dealing with human problems has been demonstrated many times, and is already in evidence at this session.

We will again appropriate funds for more surplus commodities for needy families. To what purpose, if no long-term improvement is in sight?

We will appropriate funds for school-lunch programs. To what purpose if the children have no shoes and cannot attend school?

We will no doubt act to extend the supplemental unemployment compensation measure set up by the last Congress. Indeed, the honorable Speaker has stated publicly that this is "must" legislation, and is so important that, if worst came to worst, he would suspend the rules and bring up the measure at once. To what purpose, if each month additional thousands exhaust these benefits without hope of employment in sight?

In short we will be spending millions of dollars to deal temporarily with the undesirable results of the problem, but undertaking no general assault on the core of the problem itself.

Many of you who represent depressed areas have proposed legislation dealing with one or more aspects of the situation, as I have myself. I am not speaking today in behalf of any particular bill. Rather, I am attempting to emphasize the need for forceful and deliberate action, through the medium of such legislation as finds favor with a majority of the membership.

I am speaking strongly, however, in behalf of a total recognition by this House of the total circumstance, an expression of the need for Federal policy directed at its solution, and implemented by measures that promise adequate immediate temporary relief and long-term solution.

It is not accurate to think of such measures as spending devices. They are not spending measures at all. Whatever measures are adopted will require funds, of course, but such funds will be an investment in human beings, a support for our national strength, an amortization of a growing debt that requires more temporary adjustments each year.

The objective must be a transformation of the unemployed worker and his family who exist on a dole of surplus commodities, and who constitutes a drain on our economy and a black mark on our national status, into a taxpaying employed worker who contributes his share to our economic and social advancement as a nation.

Mr. STAGGERS. Mr. Speaker, will the gentleman yield?

Mr. SLACK. I yield to the gentleman from West Virginia.

Mr. STAGGERS. Mr. Speaker, I would like to reemphasize what the gentleman has just stated about conditions in our State and others in different parts of the country.

The Second District of West Virginia consists of 15 counties—Barbour, Berkeley, Grant, Hampshire, Hardy, Jefferson, Mineral, Monongalia, Morgan, Pendleton, Pocahontas, Preston, Randolph, Tucker, and Webster.

Unemployment in the Second District is the highest now than it has been since the depression during the late twenties and early thirties. Many thousands are on relief and on the rolls for receiving surplus commodities. Others are trying to obtain at least some small aid from this source in an effort to keep body and soul—and family—together; however, they are declared ineligible for receiving this help inasmuch as they are "physically employable." They are certainly willing to work, but jobs are not available.

We are rich in natural resources and water supply—and have thousands of persons available to supply manpower.

Mr. Speaker, the importation of residual oil has indeed hurt the economy of the Nation. According to the Congressional Quarterly, as of February 20, 1959, residual oil imports were flowing into this country at a rate equivalent to 71,832,000 tons of coal produced during the average work-year of 200 working days. This amount of coal, if it were actually produced, would provide jobs for 32,650 coal miners whose pay would be $158,352,500 computed on the same annual basis. This would represent revenue to the coal producers and railroads which haul coal.

This also means an additional loss of many millions of dollars in tax revenue to the Government.

The importation of cheap residual oil not only hurts the people of the coal-producing State of West Virginia and the Nation, but also impairs the ability of the country to produce coal in the time of an emergency and means many of the railroads would not be prepared for transport of coal at the time of a national emergency.

There are many other items in the Second District of West Virginia which if proper attention could be given them, would be helpful in alleviating the desperate economic and unemployment situation now existing.

I would like to call attention to the following projects in the second district which, if funds are made available by Congress, will help alleviate the present economic and unemployment situation.

Rowlesburg Dam-Cheat River: I hope funds will be made available for the Cheat River resurvey, with the objective of building a dam for flood control in the Rowlesburg section of Preston County, W. Va.

This area is now considered one of the greatest depressed sections, not only in West Virginia, but in our Nation.

The Rowlesburg Dam project would not only help in providing flood control protection, but would assist greatly in helping to some degree the desperate economic situation in the area. It

would provide employment, attract industry to the section which has a wealth of natural resources, is on the main line of the Baltimore & Ohio Railroad, and would attract tourists who could enjoy the natural beauty of the area.

Hildebrand lock and dam project: The Department of Defense, Army Corps of Engineers civil works program, has requested approval of funds for continuing this project on the Monongahela River in Monongalia County.

The completion of this important waterway will provide an important link to the vast coal fields of West Virginia and Pennsylvania and will directly and indirectly render service to the whole United States in time of war or national emergency.

Opekiska lock and dam project: Approval for the construction of this project was given during 1957, and planning for the Opekiska lock and dam is ready to get underway as soon as funds are available.

I hope action may be taken to make funds available to cover the initial costs of planning and for beginning actual construction of this project on the Monongahela River, about 10 miles south of Morgantown, W. Va.

North Branch of Potomac River flood control program: Some study has already been made for this program. I hope action may be taken to provide approval and funds for a flood control program for the city of Keyser, Mineral County, W. Va., on the North Branch of the Potomac River.

Morgantown ordnance works: This chemical facility was constructed for the Federal Government by the Du Pont Co. It began operations in 1941 and terminated May 28, 1958. It is now in the hands of the General Services Administration for disposition.

I feel the U.S. Government has a moral obligation to see that the Morgantown ordnance works at Morgantown, Monongalia County, W. Va., is sold or leased to an industry which will put the $63 million plant back into operation immediately.

The small farmers: Attention must be given to the plight of the small farmers in West Virginia and the Nation. I believe the present program must be changed to alleviate the desperate circumstances of this worthy group which has been struggling to earn a livelihood for themselves and try to keep filled the "breadbasket" of the Nation. Believe it or not, many of them are now on lists for receiving surplus commodities because their families are so in need. I think some action must be taken in passing legislation to concentrate on this group of small farmers—and taken now.

As I have said many times, the small farmer is the fundamental strength of our Nation. History has shown that when small farmers get in trouble, sooner or later the rest of civilization is in trouble. Today the small farmers are at the danger point.

Many people in my area have been complaining about the billions of dollars in subsidies which are now being paid to the big-city absentee farmers—the farm barons of America. For instance, many of them are getting, and have been getting, tens of thousands of dollars for not farming their lands, or in subsidies—what the small farmer, in essence, feels is helping the man who least needs it in the Nation.

As I have said many times in the past few years—and I say it again—revision of our farm laws are going to have to be made, and now, aimed at correcting these inequities and to benefit the small farmers of the Nation who are so worthy and so in need.

Mr. WALTER. Mr. Speaker, will the gentleman yield?

Mr. SLACK. I yield to the gentleman from Pennsylvania.

Mr. WALTER. Ordinarily, the majority of the Members of this body would oppose legislation of the sort that we are discussing today because we do not like to see local communities endeavoring to shift responsibility to the Federal Government, but it seems to me that this legislation is an encouragement to local communities to take up where they have been unable to function heretofore. I know of many communities in the United States where the citizens in their desire to help themselves without appealing to any agencies of the Government or any political subdivision thereof have raised large sums of money in an endeavor to do something about the plight over which they have no control.

I hope we may be able to work out some kind of legislation that will fit these communities into a whole fabric so that the resources that our Republic enjoys can be made available for all of its people.

Mr. HECHLER. Mr. Speaker, will the gentleman yield?

Mr. SLACK. I yield to the gentleman from West Virginia.

Mr. HECHLER. Mr. Speaker, it is high time we take positive and constructive action to put people back to work by passing the area redevelopment bill.

All of us want to balance the budget and fight inflation. When we get the people back to work they can balance their personal budgets and this is the best road toward balancing the national budget. When we get people back to work they can start adding to national production and that is the best way to fight inflation. When we get people off the breadlines and onto the assembly lines, Mr. Speaker, that is the way to balance the budget and fight inflation.

Although my home town of Huntington, W. Va., is more than 400 miles away, in the 9 weeks that Congress has been in session I have been home on nine different occasions because my people are in economic trouble. Last week, I missed two quorum calls because I was in West Virginia participating with West Virginia's junior Senator, ROBERT C. BYRD, in Senate Banking and Currency Committee hearings on the area redevelopment bill which is so vital to the interests of West Virginia.

In the past few weeks I have visited hundreds of people in their homes, not only in the cities and towns but out in the rural areas. I have presented to the Senate Banking and Currency Committee tape recordings of what these people have said about their economic plight.

Mr. Speaker, these people want to work. They have worked in the past. They want to work in the future. They don't want a dole or handouts. They want jobs. But right now most of them are keeping body and soul together on surplus commodities.

Surplus commodities are not designed to provide a balanced diet, yet 15 percent of the total population of my State of West Virginia are living, subsisting is a better word, on surplus commodities. This is the highest percentage of any State in the Union.

I have had scores of letters from these people. They are deeply disturbed. They are crying out not for relief, but for work, useful productive work. Here is a letter written on February 11, 1959:

> I am a young girl of 20 and I am writing on behalf of my parents and family. My father is a former coal miner and like all the rest has been unemployed for quite a while. I have a brother of 10 who goes to school. We are not as bad off now at least not at the present, but worry is the big burden and hope is something almost forgotten. We have been let down so many times. I have tried to find work in every place I have had a chance to. I'm trained to be a medical technician. We have lived on the same thing for so long we seem to get weaker as the days go by. Rice and cornmeal with a little butter is something you can soon grow tired of but because you are hungry you try to eat. If we could only have some meat or eggs even once a week it would help and give us the strength to hope for a better day.

Here is another letter from a man who wrote me on February 18, 1959:

> There are six in my family. I haven't worked for 22 months. I have been everywhere, but it seems like there just are no jobs to be found. People holler about the taxes. I tell you if I had a job I could pay them. I wouldn't worry about taxes. I'd be thankful I could pay them.

And another letter from a lady who wrote February 18:

> I am president of our PTA here and I know there are just plenty of people like my husband who have been out of work more than a year. We are in debt head over heels and still see no way out of the situation. We are fortunate in one way. I did a lot of canning from my garden last summer and we have some of it yet. People need shortening or lard for seasoning, also potatoes and beans, canned meat and fruits. They also need white meal. That yellow meal won't bake done and most of it stinks until you almost have to hold your nose while eating it. Something should be done. It's not our fault we are in this situation and that includes most of the people who are out of work. My husband has been everywhere he can hear of work but it's always the same comeback and you know you can just walk so far. And we lost our car last June. So I'm hoping something can be done.

I have many more letters, Mr. Speaker, which I will make available to the appropriate committee on a confidential basis, because I do not wish to embarrass any of these good people in their home communities by publishing their names and addresses.

Nearly 17 percent of the labor force in Huntington, W. Va., is unemployed. Huntington, West Virginia's largest city, the hub of the Tri-State area, a great

river port, located so strategically from the standpoint of natural resources, transportation, and markets, is today in serious economic trouble. Huntington has just been named an all-America city because the cooperative efforts of thousands of citizens pulled up the standards of this great municipality almost by the bootstraps—yet today Huntington is a sleeping economic giant, stricken by heavy unemployment.

Twenty-four manufacturing plants have closed their doors in the Huntington area in the past 10 years. The largest of these, the Sylvania Electric Products Co., closed down a year and a half ago and threw 3,200 men and women out of work. Many of them are specialists and technicians; now they are roaming the streets for work. Some leave their families to get jobs in other States.

Mr. Speaker, public and private relief agencies are working around the clock to alleviate these problems. State and local authorities and private individuals are doing their utmost. It is no answer to say that all of these problems must be solved by more local initiative because we have already overworked Old Man Initiative until his back is breaking. We need the area redevelopment bill to furnish loans for redevelopment financing. We need to modernize existing plants. We need technical assistance through studies and surveys of the area. The vocational training and retraining features of the area redevelopment bill would give new hope to thousands who are currently immobilized with no opportunity to work or to retrain for future usefulness.

This bill is not the magic wand which will bring us prosperity. It is not the final and complete answer. But it is a bold beginning.

In West Virginia we have the will. Now give us the way and pass the area redevelopment bill.

The Eisenhower administration has asked us to continue billions for foreign aid. I am heartily in favor of foreign aid. But I am tired of ignoring our people here at home, and I am tired of hearing that administration refrain which seems to say, "Billions for foreign aid, but not one cent for tribulation."

Mr. Speaker, West Virginia and the Nation need the area redevelopment bill. There have been threats that this bill will be vetoed unless it is watered down.

In these times of grave economic crisis there are timid men who cry out that half a loaf is better than none. But, I serve notice, Mr. Speaker, that if this bill is vetoed I intend to go out, up and down every creek and hollow in my district and pound the pavements of the cities, and 300,000 strong people of my district will tell the President and the Congress "We need this bill to put our people back to work again."

Mr. FOLEY. Mr. Speaker, will the gentleman yield?

Mr. SLACK. I yield to the gentleman from Maryland.

Mr. FOLEY. Mr. Speaker, I wish to associate my remarks with the remarks of the distinguished gentleman from West Virginia, Mr. STAGGERS, whose district parallels mine on the south side of the Potomac River. I wish to associate myself with him for the reason that many of his constituents come across the river to Cumberland, up and around Keyser, and at Western Port and to Hancock, and Hagerstown, and spend their money when they have jobs. Consequently, the small merchants and gasoline station owners in our district would like to see the West Virginia people back on their feet again. But, I want to associate my remarks particularly for the reason that we in the Sixth District of Maryland up in Washington County, now have a 15 percent unemployment ratio, which is one of the highest, sadly, in America. We hope that the folks in my district again can come back to the fine, prosperous condition that they had previously, and join with the West Virginians in sharing in a full measure of prosperity, but we cannot do it unless the Congress this year sees that jobs are created by enacting this legislation providing for area redevelopment.

Mr. OLIVER. Mr. Speaker, will the gentleman yield?

Mr. SLACK. I yield to the gentleman from Maine.

Mr. OLIVER. I would be remiss in my duty, Mr. Speaker, representing the southwestern district of the State of Maine, if I did not rise and take advantage of this opportunity to state that the people of my district are wholeheartedly in support of this area redevelopment legislation. It was only a couple of weeks ago that I made an appearance before a committee of the other body and made a similar statement. At that time I had associated with me a very strong and aggressive leader from a textile area in my State which is adversely affected to the extent of about 30 percent of unemployment to the total labor force. On March 3 I received permission from this House to include in the CONGRESSIONAL RECORD that statement that this constituent of mine made. It fully expresses the problem which confronts us and the great need for this legislation. And, I wish, Mr. Speaker, to take this opportunity to say the gentlemen from West Virginia that I heartily commend him for the initiative and the leadership which he has taken with reference to this particular problem that affects not only his own State, but many other areas of the country, including my own. I wish to associate myself with you, my good friend from West Virginia, in what you are doing, and I shall support you to the fullest extent of my ability.

Mr. SLACK. I thank the gentleman from Maine for his remarks.

Mr. BAILEY. Mr. Speaker, will the gentleman yield?

Mr. SLACK. I yield to the gentleman from West Virginia.

Mr. BAILEY. Mr. Speaker, I want to compliment the freshman Congressman from the 6th West Virginia District for what he is doing here today in calling the attention of his colleagues in the Congress to the bad economic situation in certain areas of the country, which most certainly applies to the area he represents in central and southern West Virginia. It just so happens that my district adjoins that of the freshman Congressman, and I, too, encounter all kinds of difficulties, particularly in the area in which coal is king, where coal is the major activity and the major industry.

I want also to compliment the Members of Congress from all over the States that are affected at present by chronic unemployment and unstable economic conditions for joining in this program this afternoon and calling the attention of their other colleagues in the House and the attention of the admistration to the necessity for action and action at once. I am glad, Mr. Speaker, that we can do this on a nonpartisan basis; that we are participating here as representatives of the people and not as representatives of the Democratic Party or the Republican Party.

I am going to add one little item here to indicate to my colleagues here in the House just how serious this situation is. Following the close of the Korean war the State of West Virginia voted a bonus to pay the Korean veterans. Today 41 percent of all the checks going to veterans of the Korean war are being paid to people and mailed outside of the State of West Virginia. This is clear indication of what has happened in the State of West Virginia that 41 percent of your Korean veterans are now living in other States, who have left West Virginia in the hope of finding employment elsewhere.

The SPEAKER pro tempore. The time of the gentleman from West Virginia has expired.

The SPEAKER pro tempore. (Mr. THORNBERRY). The time of the gentleman from West Virginia [Mr. SLACK] has expired.

AREA REDEVELOPMENT LEGISLATION

The SPEAKER pro tempore. Under previous order of the House, the gentleman from West Virginia [Mr. MOORE] is recognized for 20 minutes.

Mr. JENNINGS. Mr. Speaker, will the gentleman yield?

Mr. MOORE. I yield to the gentleman from Virginia.

Mr. JENNINGS. Mr. Speaker, I want to join my colleagues in this bipartisan effort to get some effective distressed-area legislation. For the past several years I have supported this legislation because I have distressed areas. It is very much needed. We are approaching this matter on a bipartisan basis. We have approached the relief which we have been able to give the unemployed on a bipartisan basis; namely, unemployment compensation, the distribution of surplus agricultural products, and the other things we have been able to give those people in need.

Certainly I am in favor of distressed-area legislation. I want to associate myself with my colleagues in the general remarks they have made, and especially

at this time with the gentleman from Texas [Mr. PATMAN], who pointed out that if these areas were outside the continental limits of the United States they would have a place to petition and they would get help.

Mr. Speaker, I commend each of the gentlemen who has spoken on this legislation today and associate myself with them in their remarks. I thank the gentleman for yielding to me.

Mr. MOORE. Mr. Speaker, here today we have seen presented not only a bipartisan effort but certainly an effort which has been joined in by a number of different areas of this great country of ours, in an endeavor to bring to the attention of Congress the need for area redevelopment legislation.

Members in this House have heard on numerous occasions the plight of us in West Virginia. I think at this time they are entitled to know what, if anything, we have been doing over the past several years in an effort to help ourselves to get out of the serious situation which is now confronting our State.

Actually, while the majority of the country is responding to new vigor in the economy of the Nation, the State of West Virginia is still in economic doldrums. During the first 11 months of 1958 there was a decline in the value of manufactured products in our State of over 9½ percent which, in terms of dollars or manufactured prices, is approximately $196 million. This was much lower than during the same period of 1957, when the recession in our State was really being felt.

While other areas of the Nation have shown signs of steady and strong recovery my State apparently continues, as I have said, in the doldrums. The average monthly unemployment rate has increased by more than 35,000 workers; and, in view of this mirroring of our distressed condition, electric energy, which plays a major part in our economy, by reason of the great natural resource of coal that we have in abundance, has dropped 7.9 percent during the first 11 months of 1958.

These figures, I remind the Members of the House, come officially from the West Virginia Chamber of Commerce and were compiled by its experienced and its skilled statisticians.

Of the 707 retail reporting outlets in West Virginia that presented figures, they show that their sales during the same period were down by some 6 percent. Of the State's 95 largest banking institutions, some of which have assets of more than $100 million, checking transactions during these 11 months of 1958 were down by some 6 percent. Building permits in the State of West Virginia have been off during a like period of time by as much as 8 percent.

I believe it can therefore be readily seen that the economic situation in West Virginia is a blight, as we look at it, upon our overall economy.

Mr. Speaker, I represent a district in West Virginia that is perhaps the most economically diversified district of our congressional districts. We do not depend completely upon the coal industry as the backbone of our economy. But, even in the diversified area I represent, great companies and corporations producing steel and chemicals, aluminum, coal, and glass, to mention just a few, the problem of unemployment exists today. In two of my counties the seriousness of this situation of economic distress is evidenced by the sum of the unemployment figure. For instance, the figures bear out the fact that in Taylor County, W. Va., there is an employment factor of 22 percent of the total employable laborers, and I call to the attention of the Members of the House that Taylor County is not a large producing coal county, by any means. As a matter of fact, it produces little coal. In Marion County the percentage of unemployment today is approximately 18 percent, and this, in my opinion, is tremendous when you consider that this congressional district I have the privilege to represent is diversified industrywise.

We have certainly heard many times in the well of this House arguments against foreign-trade programs of this country and the ills that they are wreaking upon the various industries in West Virginia. I do not believe that reiteration of any one of the particular problems we confront as a direct result of that program and the manner in which it has been handled since its inception would serve any useful purpose today. However, we have shown a disposition in our State to handle our problems on a local basis, which seems to be the suggested approach to most problems, or a great defense to most problems that are presented to Congress by those who would like to see the States undertake their own particular problems and solve them rather than encourage Federal legislation of any sort.

Presently the Governor of our State has submitted to the legislature, now convening, an economic recovery program wherein he has asked for over half a million dollars for the purpose of attempting to study the problems of excess unemployment, and to bring about relocation of those where we find there are no jobs, and where the mineral wealth which has heretofore held them in that particular geographic location of our State has been depleted. Also in the State of West Virginia our legislature this past week passed and sent to the Governor another increase in our gasoline tax. We are one of the few States in the Union today whose people are paying 7 cents for every gallon of gasoline that is purchased in the State of West Virginia. We are trying to make a very objective effort to take care of this problem we have in West Virginia, which, I may say, does not contain itself as far as our problems of industry and jobs and employment are concerned. But we are also attempting to answer our problems of better schools and better roads. Nevertheless, the condition today is such that we are getting no help whatsoever nor encouragement from the Congress of the United States in answering any one of our problems, however earnestly we attempt to undertake answering these problems on a State or local basis.

Tomorrow and the following day in some of the great committee rooms of this Congress, legislation will be heard to increase the area of operation of TVA. Now, why should I inject that in an area redevelopment bill? I believe it is a classic example of what is happening to us in our State wherein we feel the abuse of existing Federal programs perpetrated which were passed and now expanded daily here in the Congress. A further expansion of the TVA prevents us, a great coal producing State, from using that very great magnet of ours, our mineral wealth, to bring additional industry into our State, however attractive our picture might be from the standpoint of available work force, our mineral wealth, and generally our tax structure. We cannot compete with Government-sponsored programs such as TVA. We lose industries daily to other areas served by TVA. Legislation to further increase the area and make possible the expansion of the TVA, all of which legislation, if it is eventually adopted, will further curtail the State of West Virginia that I am proud to be a native of and which I speak for partly in the Halls of Congress, along with the rest of my colleagues, in our effort to answer our own problems.

An example of what is happening to us. Some months ago a Chicago newspaper printed a series of articles relating to the social and humanitarian problems generated by wholesale immigrants of West Virginia mountaineers to that city, and I daresay there are a number of Members of Congress here today from such areas as the rubber industry of Akron, the steel mills of Pennsylvania, and the automobile factories of Detroit that are experiencing this mass migration of West Virginia mountaineers. With this legislation we can keep our problems at home and solve the problem of losing our population to our neighboring States. Today only a part of the story has been painted. A genuine effort is being made by the people in West Virginia to answer their problems themselves. The question of area redevelopment legislation will provide us with the key that we must have to actually and sensibly work out our problems ourselves.

Mr. Speaker, I do not want this time to go by without taking the opportunity to state that here this afternoon when so many areas of the country are being made a part of this presentation of the need for this legislation, that it is not simply the continual voice of the dire circumstances and the needs of the people of the State of West Virginia in this instance, but that generally you have here a presentation of a need of some 20 States across the country for the legislation in favor of which we are speaking here today. I would like to make this remark. I am interested in writing into the law of this country of ours an opportunity for the people of our State

with the aid of Federal legislation to answer their own problem. I am not interested in adopting any legislation that is going to be vetoed. I am not interested in adopting legislation that is going to be impossible to administer or which, for any reason whatsoever, the executive branch of the Government does not necessarily feel compatible with the type of government and system that we have. But, I am just as firmly interested that we here in the Halls of Congress shall write legislation which shall give us an opportunity, in the light of some of the programs that we have instituted in our State that we have legislation that we can use and which is of benefit to us here in 1959.

My colleague from the Sixth District of West Virginia, Mr. SLACK, made what I think is a very valuable contribution to the picture in West Virginia by a series of articles which I had the privilege of inserting in the CONGRESSIONAL RECORD calling attention particularly to the economic plight of the area of West Virginia which is the coal producing area. Approximately 5 counties of our State have 60,000 unemployed people. They are and they do represent the coal producing area of our State. The conditions pointed out in these articles are startling and should alert all that some of our people are not sharing the prosperity of our country. However sound the argument against a program providing help for the poor, the unemployed, the hungry children and the shoeless child, there is no substitution for the food, for the shoes and for the opportunity that this legislation could provide.

I believe the gentleman has performed a great service in pointing these matters out to us because it certainly shows that in this great land of plenty and prosperity there are dangerous circumstances and situations which can be read into the facts disclosed by his trip.

I want also to make this one observation, by reason of conditions in my State of West Virginia and several parts of our Nation. I have consistently opposed further expansion of and further additions to the foreign aid program, as enacted by this Congress, because I believe we have problems, as all of us see it and particularly as I see it, of aiding the people of our Nation in their economic problem. To me we have here today presented a more grave problem and presents us with a far greater problem in this country than any one of the problems that may arise from day to day in some one of the foreign lands across this great globe. If we do not do our best in this country to make sure that the beliefs of this great Republic are sown in the minds of the youth of our country and express to them that this land of plenty does have an interest in them and does hold promise for all of the people regardless of their race, their color, their creed, or their national origin. This we must do. Billions of dollars spent in an effort to bolster the bulwark of democracy without the continental limits of the United States and failing to do this at home, then we are going to lose the battle of the minds of our youth here at home.

I ask you to look at our budget today wherein $77 billion is presented and of this sum some $40 billion is for defense—I am reminded of the only other time in the history of the world when a similar situation arose: That was in the days of the great empire the Romans built some generations ago. They were prepared to meet any aggressor from without; they had the greatest weapons of their day; they had the ability and the know-how; they had the production facilities, and they were prepared to meet that aggressor from without; but they made one mistake, they were not able to meet, they were not capable of meeting the aggressor from within.

If we allow these circumstances that exist in the State of West Virginia and other parts of our Nation to multiply in that great country of ours, no jobs, no food, no promise for the future, I can think of no greater area for the growth of communism or communistic thinking to flourish than in these areas of economic distress. So while it is impressed upon us that there is great need for this country of ours to be defense-minded, to be cognizant of the fact that we are in a race for survival in the event of war with the Soviet Union, I think it is well in this day and at this time that we certainly alert the people of the United States to the fact that while we do have a duty to keep our defense system efficient and potent, that we certainly have an obligation to do everything we possibly can to safeguard within the continental limits of the United States this great system of government of ours.

I believe that area redevelopment legislation, as has been discussed here today, is as important to many of the economic parts of the United States and is as important to my State of West Virginia as any of the most necessary elements of the defense system of this country of ours. I therefore urge that this Congress immediately take up this much needed legislation for area redevelopment, that we certainly must and should do everything we possibly can as a Nation to help ourselves, to provide our States and communities with this necessary Federal legislation.

It is my belief that this discussion today may be fruitful in that our joint endeavors may result in something constructive in the way of legislation that might correct this grave problem confronting us.

This legislation will certainly provide us with a partial answer to the many problems which go far beyond the borders of simply the economy of West Virginia. This legislation is not only a must for West Virginia, but you have heard expressions here today from Congressmen representing other parts of the country, which certainly should lead one to believe that this is a problem that is shared by a great number of the people and areas of our country.

Mr. GRAY. Mr. Speaker, will the gentleman yield?

Mr. MOORE. I yield to the gentleman from Illinois.

Mr. GRAY. Mr. Speaker, I deeply appreciate the distinguished gentleman from West Virginia yielding to me in order that I might have the opportunity to join with him and my other colleagues here today in urging expeditious action by the Congress to provide assistance to areas suffering from chronic unemployment.

First, I want to congratulate the distinguished gentleman from West Virginia for his inspiring and forthright speech.

I have the honor of representing the 25th Congressional District in Illinois, comprising the 15 southernmost counties of the State. In my district we have approximately 20,000 able bodied persons unemployed. Mr. Speaker, this is frightening—to think that we live in a land of plenty where people are actually forced upon relief rolls and wards of the State through no fault of their own. In addition to the tremendous amount of unemployment existing at the present time, we have seen over 30,000 residents of southern Illinois say goodby to their loved ones and move to other parts of the country to find work, leaving behind home, family ties, local schools, and other things near and dear to them. This, Mr. Speaker, is not a good situation.

You may ask what are we doing to help ourselves. In answer to that I may say that through our chambers of commerce, Southern Illinois Inc., Southern Illinois University, and other industry-seeking groups, we have made some wonderful headway. However, the decline has been greater than the progress. Therefore, the Federal Government must give much needed assistance if this condition is to be remedied. We are using every resource available, but we need many projects to help make our communities more attractive to industry. We are not asking for doles or handouts but only the tools with which to help ourselves.

Getting back once again to necessity, I received in this morning's mail a petition signed by 217 persons concerning Government surplus food. Every signature represented from 1 to 12 in a family and pointed out that the meager allotment of cheese, butter, dry fat milk, flour, rice, and corn meal is not adequate to round out the needed diet under the Government's surplus food program. All of these people who signed this petition reside in the small communities of Colp and Carterville, Ill., and through no fault of their own are forced to subsist on Government surplus food. It is a crying shame. All that these people ask is a chance to earn a decent livelihood for their families. I hope that the Congress will see this need and pass area redevelopment legislation in the early part of this session. I have introduced a bill that is now pending before the House Committee on Banking and Currency and I would like to see this legisaltion, or any other that is adequate, passed without delay. The time is late, the need is urgent.

Mr. O'HARA of Michigan. Mr. Speaker, will the gentleman yield?

Mr. MOORE. I yield to the gentleman from Michigan.

Mr. O'HARA of Michigan. Mr. Speaker, I was interested in the gentleman's comments concerning the migration of West Virginia workers to other parts of the country. It is true that many of these workers have come to the State of Michigan to find employment in the auto plants and associated industries and we are happy to have them. However, they are discovering, as are many others, that the hope of finding employment in Michigan is illusory.

Figures released last week by the Michigan Employment Security Commission indicate that Michigan has had an increase in unemployment for the third consecutive month in spite of a slight increase in automobile production. Our unemployment rate rose from 11.9 percent in January to 12.4 percent in February.

In the metropolitan Detroit area, unemployment stood at 229,000 persons, or almost 16 percent of the working force.

I believe that the Douglas-Flood area redevelopment bill will be a benefit to the people of West Virginia, to those natives of West Virginia now in Michigan and other places, and to the economic well being of all citizens of our great Nation. It is for this reason that I am supporting the Douglas-Flood bill to assist depressed areas. I hope that the Committee on Banking and Currency will soon be able to favorably report this measure and that it will be acted upon promptly by the Congress.

DEPRESSED AREAS

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Kentucky [Mr. SILER] is recognized for 20 minutes.

Mr. SILER. Mr. Speaker, I do not propose to take all of the 20 minutes granted to me by special order of the House for this date. However, I would like to call to the attention of this body the plight of some of the counties of our different States, and of my own congressional district in particular, in the matter of economic conditions and the unemployment situation existing in some of those various counties. I hope and trust that this session of Congress may produce some tangible, beneficial legislative efforts for the assistance of depressed areas and for the alleviation of unemployment pockets throughout the entire Nation. Abraham Lincoln once said our Nation could not continue to exist half slave and half free. And I feel that it should now be said in this year of 1959 that our country cannot continue as a great Nation of power and prestige if we are half poverty stricken and half prosperous or partly unemployed and partly employed.

INDICATED NEEDY FAMILIES

According to the U.S. Department of Agriculture, there are 24 States having counties in which 15 percent or more of the people are receiving Government commodities. Of these 24 States, my own State of Kentucky has the largest number of counties, 34 counties, in which 15 percent or more are receiving these commodities. Of the congressional districts in Kentucky, my own district has the largest number of counties, 11 counties, in which 15 percent or more are receiving these commodities. And of all the counties in the entire country, one of my own counties, Jackson County, has the second largest percentage of people, 44 percent of the people, receiving these commodities. These figures show the need, as I see it, for legislative help from Congress to stimulate prosperity and to decrease unemployment in a total of 24 States of our Nation and in 210 counties of those States and among the 5,947,036 people living in those needy counties. According to the same report from which I have been giving the foregoing statistics, there were a total of 1,298,201 recipients of free commodities in the mentioned counties as of last November. And in my estimation, there was perhaps nearly 1 million of those recipients that could be classified as poor people that were unemployed and yet employable had they had jobs. The Bible says, "He that hath pity upon the poor, lendeth unto the Lord; and that which he hath given will he pay him again." I think it would be well if the Congress would lend something to the Lord by helping to provide some jobs for our people in the depressed areas of our Nation. I am certain our Treasury Department will be repaid again by increased tax receipts from every one of the 210 counties where help may be extended through legislation that may be enacted by this Congress.

UNEMPLOYMENT

Unemployment is a blight. And it always produces a plight. There is too much of it in my district and in many other districts throughout the United States. Sometimes it comes from mechanization that puts a one man machine in place of a crew of 25 human workers. Sometimes it comes from supplanting the traditional products of a community with new and different and cheaper products that come from elsewhere. But whatever the cause, the blight of unemployment creates a real plight among the people. About 5 years ago 13,000 men worked in the mines of one of my counties, Harlan County, and each brought home $22 to $27 per day for family food or a family car or family furniture or family jackets and blue jeans or family permanent waves. But now the number of those employed men in that one county has dropped to about 5,500, which represents nearly a 60 percent cutoff. One or two other counties of my district that formerly had a dozen or more railroad mines have seen that same number of mines decline to zero and the number of unemployed people rise into the hundreds.

Now I know that no country can ever reach the Utopian perfection of having none unemployed, not any more than a man can reach perfection in his life and conduct, but I do feel that a country should continually strive for a uniform spread of employment among all of its people that are able and willing to work, just as a man should always strive to be a little better each day he lives.

REMEDY

I am not a socialist nor a political dreamer that would have the Government do everything for everybody. Therefore, I have proposed a very simple remedy for this entire situation that I believe would produce immediate results in many of the depressed areas across the country. My bill, H.R. 3696, would ask no Federal funds, would add no Federal employees to the payrolls at the taxpayer's expense, would create no new bureau or Federal agency, would move no industry so as to rob one area for the benefit of another, and yet would start operating at once against this bad situation. My bill would provide Federal income tax forgiveness up to 5 years for new industries or industries locating in labor surplus areas and producing employment for 200 or more people in each instance.

But, of course, if the majority of all those interested in this big problem of depressed areas should think that my bill is not the best remedy, then I will gladly join with others seeking to promote a good, sound piece of legislation for the good of our country and for the benefit of its various places of distress and unemployment. Let us all work together to help the unemployed workers so that they may "trace the rainbow through the rain and feel the promise is not vain that morn shall tearless be," in that good time when many of the jobless will again have jobs and many communities will see the sunshine of happiness once more.

Mr. BAILEY. Mr. Speaker, will the gentleman yield?

Mr. SILER. I yield to the gentleman from West Virginia.

Mr. BAILEY. I think the gentleman from Kentucky, who has made a very fruitful suggestion, might follow it up by asking to be heard before the Committee on Banking and Currency, which will begin hearings tomorrow on this legislation. I would like at this time to urge all of my colleagues who have problems connected with the distressed-area situation to appear before the committee, if at all possible. Time is short for them to qualify to be heard individually. The committee hearings start tomorrow, and I think they are hearing Congressmen tomorrow. How long they will continue those hearings I do not know, so if any Member has any intention of asking for time he had better ask for it immediately.

I thank the gentleman for yielding.

Mr. JOHNSON of Colorado. Mr. Speaker, will the gentleman yield?

Mr. SILER. I yield to the gentleman.

Mr. JOHNSON of Colorado. The Committee on Banking and Currency actually started hearings today. We have just finished the first day's witnesses, from both labor and farm organizations. Members of Congress will be heard tomorrow and succeeding days. The hearings will continue through Friday of this week before Mr. PATMAN's subcommittee.

Mr. SILER. I thank the gentleman.

DISTRESSED-AREA LEGISLATION

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Oklahoma [Mr. EDMONDSON] is recognized for 20 minutes.

Mr. EDMONDSON. Mr. Speaker, I ask unanimous consent to revise and extend my remarks; and I also ask unanimous consent that all Members may extend their remarks in connection with this discussion at the conclusion of my remarks.

The SPEAKER pro tempore. Without objection, it is so ordered.

There was no objection.

Mr. CARNAHAN. Mr. Speaker, will gentleman yield?

Mr. EDMONDSON. I am happy to yield to my colleague from Missouri.

Mr. CARNAHAN. Mr. Speaker, I want to associate myself with all the Members who have spoken this afternoon and who will speak in support of area redevelopment legislation. I am glad to have supported this legislation in the last session of Congress and want to call it to the attention of the whole membership for their serious consideration.

In my opinion, this legislation is one of the most important issues facing us at this session of Congress. In my opinion the legislation deserves your support on its own merits without any association with any other pieces of legislation. I direct it to your attention and invite your support of it and hope that the Congress will move toward the consideration of this legislation.

Mr. EDMONDSON. I thank the gentleman.

Mr. Speaker, I believe the discussion this afternoon of the problem of distressed areas has emphasized two cardinal features about the problem. The first is that it is a national problem. It is a problem that we find in many States of the Union. The second is that it is a bipartisan problem. The unemployed are not confined to Republican districts or Democratic districts. We have them all over the United States and we find their champions in the ranks of both parties in this House. We must approach this problem as a national problem and we must approach it in bipartisan fashion if we are really to accomplish what needs to be done in this session of the Congress.

You do not have to examine very many statistics on unemployment to be convinced of the fact that the unemployment rolls are not respecters of regions or of political areas of the country. And you do not have to examine many of those statistics either to reach the conclusion that this situation has become chronic in many sections of our country. The fact of the matter is that the condition is chronic both with regard to unemployment and with regard to sagging farm income.

One of the strong features of this proposal as it is now written is the fact that it provides an answer in part at least to the problem of depression in the rural areas of the country as well as in the metropolitan areas where we have skilled labor unemployed in large numbers. This, I think, is as it should be, and I think this is a bill on which the Representatives of farm areas can join hands with the Representatives of metropolitan areas to try to accomplish something substantial in this field.

I was looking a few minutes ago at the statistics that show which of the counties in the United States meet the rural development test of the bill that was passed in the last Congress for aid under this bill. The rollcall of the States demonstrates the national character of the problem. Mississippi has 58 of its counties under the bill that passed the last Congress; Alabama, 44; Tennessee, 38; Kentucky, 35; Arkansas, 28; West Virginia, 17; North Carolina, 16; Georgia, 14; Louisiana, 11; Missouri, 11; Oklahoma, 11; Virginia, 11; South Carolina, 10; Texas, 5; Florida, 4; and Illinois, 2.

That is under the rural redevelopment section of this bill, and you find a number of other States that qualify under the urban redevelopment section because they have an unemployment problem and have had it for a long time.

Someone who lives in Michigan might be inclined to say, "We don't have any rural problem in the State of Michigan from an economic standpoint, so there is no reason to be concerned about the rural development section of this bill." But is there any doubt about the fact that the inability of the farmer down in the State of Louisiana or in Missouri or Oklahoma to buy an automobile or to buy a new pickup truck is contributing directly to the unemployment we find in Detroit, Mich., today?

Is there any doubt about the fact that the unemployment among the farmers of Alabama or Tennessee or Kentucky, the problem they have in getting enough income to meet their problems on the farm, is contributing directly to the unemployment that has existed in the steel industry or in the farm equipment manufacturing industry in other sections of the country?

This is a problem of national significance and of national import. I think unless we can meet it, unless we can solve it with an American approach, which this bill provides, we are not going to be in a position to carry the story of America across the world as effectively as we should in combating the propaganda of the Soviet Union and the Communist states.

A long time ago during the debate on the Underwood tariff bill in 1913 on the floor of this House the man who later became our beloved Speaker and who has served as Speaker longer than any other, had this to say:

> It is now my sole purpose here to help enact such wise and just laws that our common country will by virtue of these laws be a happier and a more prosperous country.

Mr. Speaker, this area development legislation affords an opportunity to all of us to adopt the national point of view with regard to the problem that is affecting the prosperity of this country. Let us act in that spirit as we approach this problem. Let us legislate not only for the depressed areas of the country, but let us legislate to make the people of those depressed areas stronger parts of our economy, contributing parts of a great, productive system the strength of which is the best guarantee of American security today.

May I call the attention of the Members of this House to one particular feature of the bill that is now under study by both the House and Senate committees, and that is an amendment I have had the pleasure of offering before the Senate committee and in the bill I introduced on this side, H.R. 3622, an amendment which adds as an additional qualification for rural redevelopment areas a standard by which any Member could determine readily the qualification of his county for participation under this program. This would in the suggested proposal provide that in any rural area where 12 percent or more of the population has been receiving public assistance, that county is eligible on the basis of the heavy percentage of people who are necessarily receiving assistance payments or welfare.

Some Members in discussing this bill in the last session had difficulty in determining whether or not a particular district contained counties that would qualify for the rural development program. There is an amendment which is being considered now in the other body and which I hope will receive consideration on the House side that would give us a standard, a yardstick under which we could determine the counties in our own States and our own districts which would definitely qualify for this program. I hope it will receive careful consideration by the House when we do consider this legislation.

Mr. CARNAHAN. Mr. Speaker, will the gentleman yield?

Mr. EDMONDSON. I yield.

Mr. CARNAHAN. Under the bill, as passed last year, was there a ceiling on the number of counties that could be classified as eligible under the program?

Mr. EDMONDSON. I am unaware of any ceiling numerically that was placed on the number of counties. But, what we found was a standard in terms of living standards and income. That was a little bit difficult to pin down and determine as to just how many counties would qualify.

Mr. CARNAHAN. There is no such ceiling in the proposed legislation?

Mr. EDMONDSON. I am unaware of any ceiling at all although I have heard that discussed as something that should be given consideration. I have never heard of any ceiling mentioned as being present in this law except a ceiling that would necessarily be present by the amount of funds that were appropriated and the limitation that that would impose upon the scope of the bill.

Mr. CONTE. Mr. Speaker, will the gentleman yield?

Mr. EDMONDSON. I yield.

Mr. CONTE. Mr. Speaker, I should like to compliment and congratulate the gentleman from Oklahoma for his fine presentation. I generally join with him in his remarks. I would like to ask the gentleman from Oklahoma whether his bill provides for outright grants such as the Douglas-Flood bill?

Mr. EDMONDSON. The bill which I have introduced is predominantly a loan bill, a bill, over three-fourths of which would be in the form of interest-bearing loans.

Mr. CONTE. Does it have any provisions for outright grants?

Mr. EDMONDSON. There are some provisions for grants, but they are a minor portion of the bill.

Mr. CONTE. Does the gentleman agree with me that it is certainly establishing a very bad precedent to make outright grants to States, counties, and towns for public facilities and thus destroying local initiative?

Mr. EDMONDSON. I think definitely the better procedure is to provide loans in the main part and to provide that those loans carry interest—and not on a subsidy level of interest, in this type of operation but rather a rate of interest that is commensurate with the rate of interest we are having to pay on our Government obligations.

Mr. CONTE. I am happy to hear the gentleman from Oklahoma take that position because, Mr. Speaker, I have introduced a bill together with Senator SCOTT to provide $200 million for an area redevelopment bill without any feature for outright grants, such as the Douglas bill which includes $75 million. We have a very serious situation in Massachusetts, especially in the First Congressional District which I represent, whose unemployment is about equivalent to West Virginia, Oklahoma, Pennsylvania, and the other States that have been mentioned here today. We have areas in the First Congressional District with unemployment up to 20 percent.

Mr. Speaker, most of these areas were depressed areas long before this so-called recession. The recession came about, Mr. Speaker, and my colleague from Oklahoma, as a result of the Southern States stealing our soft goods industries from New England such as cotton, wool, and leather. Mr. Speaker, as long as I have breath in my body, I will stand on the floor in this House and oppose any legislation which will give outright grants to any State to help induce industries to leave New England.

The danger of outright grants is borne out by recent statistics. The last statistics show that the amount of income tax paid by the State of Florida was $736 million. They received in grants $65 million. That is a ratio of 11 to 1. Georgia paid $650 million and received more than $92 million, or a ratio of 7 to 1. Louisiana paid $644 million and received grants of $95 million in return, or a ratio of 7 to 1.

Mr. EDMONDSON. Will the gentleman permit me to clarify one point? The gentleman, I am sure, is aware of the fact that the Douglas bill provision with regard to grants does not make provision for grants for the purpose of establishing an industry or a factory or any type of competing business.

Mr. CONTE. It is for public facilities.

Mr. EDMONDSON. It is for the establishment of public facilities of one kind or another strictly for the public facility usage, and this certainly would not be a subsidy of an industry competing with an industry in a neighboring State. As a matter of fact, there are provisions in the bill designed to prevent the use of these funds for drawing an industry from one State into a depressed area.

Mr. CONTE. I agree with the gentleman, but with the provision for outright grants the danger is always there.

Mr. EDMONDSON. I agree with the gentleman that this bill should not be written into law to create a more favorable situation in one area over another area with regard to the operation of a business or a factory. That certainly would be unfair, and I do not think you will find anybody supporting this bill who feels that that would be a sound national policy.

Mr. CONTE. I appreciate the gentleman's candid remarks; however the whole of the $75 million is for outright grants for public facilities which are to be used in designated industrial redevelopment areas for the express purpose of attracting industries.

I am pleased that the gentleman from Oklahoma agrees with me almost in toto because the next item I am going to mention is his own State of Oklahoma which paid $640 million in taxes and received $37 million in Federal grants, ratio of 7 to 1.

Now, listen to this: The State of Massachusetts which has been suffering and whose people have been unemployed for years because of the exodus of the soft-goods industries such as the cottons, wools, and leathers, paid in taxes $1,800 million and received back in grants $91 million, a ratio of 20 to 1. Compare that to the preferential treatment extended to the Southern States, Mr. Speaker. I think all of us on the eastern seaboard must raise objection to certain parts of the Douglas-Flood bill. We should be against this provision of outright grants in the bill. While we hope that an area redevelopment bill will be passed, and while we recommend this type legislation, we are opposed to the inclusion of direct grant provisions. Experience has shown that direct grants are all too often channeled into the Southern States which are competing directly to get our industries.

Mr. EDMONDSON. I will close by reading a statement made by Speaker RAYBURN in 1913:

> I have always dreamed of a country which I believe this should be and will be, and that is one in which the citizenship is an educated and patriotic people, not swayed by passion and prejudice, and a country that shall know no East, no West, no North, no South, but inhabited by a people liberty loving, patriotic, happy, and prosperous with its lawmakers having no other purpose than to write such just laws as shall in the years to come be of service to humankind yet unborn.

Mr. CONTE. Mr. Speaker, will the gentleman yield?

Mr. EDMONDSON. I yield.

Mr. CONTE. Certainly we have no prejudice to the West, or the South; our interest is in the welfare of all Americans; it transcends the borderlines of Massachusetts. We are very sympathetic to the problems of the South and West. The only thing we ask of the South and the West is that you let our industries alone. All we ask is that in equity and good conscience Massachusetts be given back its proportionate share of the tax revenues paid by its citizens into the Federal Treasury.

Mr. MORRIS of Oklahoma. Mr. Speaker, will the gentleman yield?

Mr. EDMONDSON. I yield.

Mr. MORRIS of Oklahoma. I wish to commend the gentleman for his splendid presentation and also for the tireless effort he has made. I think this is an extremely important matter for the Congress to study. I know that the gentleman has done a lot of research, has spent a lot of time and energy in regard to this matter. I want to compliment him and commend him for what he has done.

Mr. EDMONDSON. I thank my friend from the Sixth District of Oklahoma, who has certainly been a stout champion of all progressive legislation during his distinguished career in Congress. I might say we have had wonderful help with regard to this bill from representatives of the Legislature of Oklahoma who have come to Washington to study it in order to be able to support legislation in the State Legislature that will correlate the State's efforts with those of the Nation to try to lift the living standards of the people in depressed areas.

Oklahoma is not proud of its depressed areas; I assure you of that. Oklahoma wants to do all in its power as a State to try to lift the standards of those areas and make them productive parts of our economy. Also we want to cooperate with our colleagues in other States. A number of them have spoken here today and have considered various facets of the problem as they affect other areas, New York, California, and from all over the country.

Mr. CEDERBERG. Mr. Speaker, will the gentleman yield?

Mr. EDMONDSON. I yield.

Mr. CEDERBERG. I recognize the problem that has been so ably presented by the gentleman from Oklahoma. I have only one comment to make, and that is to raise the question with regard to States that are in real financial trouble and expect to get needed relief under this bill, the kind of relief it is designed to give: Has anyone introduced legislation to raise the necessary funds to pay for the cost of this bill? Where are we going to get the money?

Mr. EDMONDSON. The gentleman is about as aware as I am, I know, maybe more so, of the conditions regarding appropriations. We do not introduce bills to finance particular authorizations. They are entirely separate and apart.

Mr. CEDERBERG. The gentleman recognizes that the Federal Treasury is depleted as far as finances are concerned. Should we not put as much emphasis on raising the money to do the job as we are in implementing the authorization legislation? I think we have to put the two together if we are going to be fiscally consistent.

Mr. EDMONDSON. I will not quarrel with the gentleman about the fiscal problem that we face in many States, as well as in Washington. But I will take issue with his position as to the relative importance of a balanced budget and either the problem of dealing with

unemployment or the problem of national military security.

Mr. CEDERBERG. It seems to me we have reached the point where ir our fiscal affairs we are going to have to get our house in order. If we are going to have these programs, and I am not questioning the merit of the various programs, we ought to have the willingness to raise the taxes, if necessary, to pay the bills, and I find very little sentiment in that area. I do not see how we can give money away that we have to borrow, on the other hand. It is not consistent to me. Maybe I am a little old-fashioned, but that is the way I see it.

Mr. EDMONDSON. The gentleman is always frank in stating his point of view, and I find a lot of merit in his views on many occasions.

Mrs. KEE. Mr. Speaker, the Fifth District of West Virginia—the Nation's second largest coal producing district—is in critical economic condition because of unemployment.

In accordance with official figures obtained from the Agricultural Marketing Service of the United States Department of Agriculture—as of November 1958—in six of my seven counties, with their 1950 population of 317,327, there were 82,419 individuals dependent in whole or in part on the distribution of surplus commodities to avoid actual starvation. We have approximately one out of every four citizens dependent upon surplus commodities, and it is distressing to have to report that each day unemployment continues to increase throughout this entire area.

In Mingo County alone, in my congressional district, 41 percent of the total population is dependent upon surplus commodities. Because of lack of adequate food, clothes, and other necessities of life, many of our children have been unable to attend school. McDowell County—the largest coal producing county in the United States—had a population of 98,887 persons in 1950. In November 1958, 31,981 persons were receiving surplus commodities—or 32 percent of the population as listed in the 1950 census. It is important to note that it is generally accepted that the population in this county has decreased to 90,000 or less. Therefore, it is reasonable to assume that the percentage of those individuals who are dependent upon these commodities is considerably higher than the 32 percent which is listed in this official report from the Agriculture Department.

Mr. Speaker, it is my understanding that these depressed conditions which have been existing—and constantly growing worse—for the past few years are now worse than at any time in the history of southern West Virginia.

West Virginia needs help both for immediate assistance and long range planning. Our West Virginians do not want a dole or a handout—they merely want job opportunities in order that they may provide the necessities of life for their families.

Therefore, I enthusiastically join in this effort to pass constructive legislation which will help our distressed areas throughout the United States to help themselves.

We must do this in order to justify the confidence placed in us by the American people.

Thank you, Mr. Speaker.

REPORT OF JOINT ECONOMIC COMMITTEE ON THE PRESIDENT'S ECONOMIC REPORT OF 1959

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Missouri [Mr. CURTIS] is recognized for 60 minutes.

Mr. CURTIS of Missouri. Mr. Speaker, before beginning I might say that this topic has to do with the report of the Joint Economic Committee which was filed today in both the Senate and House on the President's Economic Report of 1959.

Because I am going to make some critical remarks on the majority report, I invited my colleagues of the House who are members of that committee and also because I was going to make some remarks in regard to a speech made on the floor by the gentleman from Connecticut [Mr. BOWLES], in which other Members on the majority side joined, I invited them to be present when I make this talk today. I also refer to some of their remarks and I hope they are present in case they would like to have me yield after I have delivered these remarks.

Mr. Speaker, this noon the Joint Economic Committee filed its report on the President's Economic Report of 1959, as required by the Employment Act of 1946.

Regrettably this report was not unanimous, even for the majority side. The six Republican minority members felt constrained to file a minority view in order to present a clear report to the Congress to set forth "findings and recommendations with respect to each of the main recommendations made by the President in the Economic Report" as required by the statute.

The basic recommendation to the Congress in the President's Economic Report was to balance the budget. The President advised the Congress in his report that the economic indicators showed clearly that—

> A recovery (from the recession) began in May 1958, and by the end of the year most of the ground lost had been regained.

And—

> As 1959 opens, there is reason for confidence that the improvement in business activity will be extended into the months ahead.
>
> The revenues projected in the 1960 budget are substantially higher than those estimated for the current fiscal year, reflecting the confident expectation that economic recovery will be extended into the calendar year 1959 and beyond.

The staff of the Joint Economic Committee's analysis of the economic assumptions underlying the President's outlook include the following:

First. Gross national product for 1959 will be about $473 billion and the annual rate will reach the range of $480–$485 billion by the fourth quarter—page 49—of report.

In other words, that 1959 will set new records of prosperity based upon GNP. Implicit in the report is the assumption that properly nutured 1960 will be an even greater year of prosperity measured by this standard.

Now, what findings have the Democrats who control this committee by a ratio of 10 to 6 found in regard to the predicted prosperity in the President's report? On page 8 is this sentence "The projected balance in the budget for fiscal 1960 depends on a sufficiently large expansion of economic activity this year to add $9.1 billion to net budget receipts. The President's Economic Report is scarcely a month old but these optimistic estimates of increased revenue may not now be borne out * * *" Other than this snide and unsubstantiated remark, the majority neither affirms nor disaffirms its belief that the economic recovery will reach the growth figures projected in the President's report.

It is important for the Congress to have the finding of the Joint Economic Committee on this basic forecast. In fact, if the majority make no assumption of whether there will be this very rapid increased economic growth, how indeed can it make any appraisals of what should or should not be done to stimulate economic growth? Furthermore, just as a detail the majority in estimating what economic growth will occur in relation to the balanced budget should recognize the beginning date is July 1, 1959, not January 1, 1959.

Moving on to the major recommendation contained in the President's Economic Report, the need for a balanced budget, the majority of the committee have no recommendation to make to the Congress. The majority avoid grappling forthrightly with this question and try to hide this dereliction of statutory requirement by oblique attacks on whether the President's budget is really balanced or not.

The question for the Congress is not so much whether the President's proposed budget is balanced, but rather whether the Congress believes a balanced budget is essential to adequate economic growth, maximum employment, and price stability. If the President's budget is not balanced, and its so-called balance is a hoax, as I have heard some of my Democrat friends state, the question still remains: Does the Democrat Congress want a balanced budget? If so, let the Democrat majority on the Joint Economic Committee so advise the Congress and let the Democratic leaders of the Congress so state to the Congress and the people of the country.

The Republican minority of the Joint Economic Committee, unanimously with the modification that Senator JAVITS applies for his own views, does recommend to the Congress that a balanced budget in times when prosperity and full recovery seem clearly in the offing is basically necessary in order to have maximum employment, economic growth, and price stability.

The minority therefore do recommend to the Congress that the budget be balanced and if the Congress does not believe the President's proposal is in balance, then the Congress should balance it.

Second. The President has recommended on the expenditure side certain increased governmental expenditures within the balanced budget—

For research and development, an increase of $600 million.

For Federal programs to improve education, significant rises.

For conservation and development of land and water resources, an increase of $200 million.

Civil works programs, including grants to States, $700 million increase.

Other grants and long-term loans to foster community development, larger expenditure.

Federal airway system, increase of $100 million.

Economic and technical cooperation—foreign aid—higher expenditure.

The majority report blandly ignores all of these recommendations for increased Federal expenditures in these areas and discusses Federal expenditures in these areas with no reference point whatsoever as if nothing were being done at all. In a similar fashion the majority report seems to discuss the needs of our society as if nothing was being done if the Federal Government is not doing it.

In order for the Joint Economic Committee to make meaningful recommendations to the Congress in the area of Federal expenditures, it must refer first to what is being spent; second, to whether this is an increase over what has been spent; third, what is being done to meet the same needs in the private sector of the economy. This it has not done.

The minority approves the recommendations of the President's expenditure levels in these areas. The Joint Economic Committee, of course, should make no attempt to go beyond general expenditure levels and rates of increase or decrease into the specific aspects of these programs. That is a job for the legislation and appropriation committees of the Congress.

Third. The President has recommended certain actions by the Congress to give effect to the 1960 financial plan: First, in respect to taxes, and user charges; second, in respect to more flexible interest rates for various credit programs; third, improvements in appropriation procedures.

The majority report discusses the tax recommendations to a degree but fails to refer to the very important area of user charges. Neither the Joint Economic Committee, the Ways and Means Committee, nor Senate Finance Committee have gone into the question of Federal user charges, but it appears to be an important area on which the Congress should be getting some economic and political philosophy.

The majority report ignores the request in regard to maximum interest rates in Federal credit programs while skirting the question of tight and loose money. This is a specific area where the Congress is entitled to a recommendation from the committee. The minority of the committee strongly recommend more flexibility in interest rate in the various Federal credit programs.

The President's report emphasizes strongly the need for maintaining price stability in order to maintain economic growth and maximum employment. The majority has misrepresented this interest in maintaining price stability as being at the sacrifice of economic growth and maximum employment.

Here indeed is the nub of the difference between the left wing of the Democratic Party and the entire Republican Party. The majority report of the Joint Economic Committee is half horse and half jackass and its product is just as sterile. On one hand the report expresses a concern for inflation and the economic damage it causes and on the other hand it presents price stability as if it were removed from the field of economic growth and maximum employment and indeed was in competition with these goals.

On one hand, the report recognizes the need for savings and capital formation in order to finance economic growth and the need for incentives and on the other hand it blithely ignores the effect of high taxes and Government spending programs on private savings and capital formation.

The minority has recommended to the Congress the President's Federal fiscal program which recognizes price stability to be one of the most important factors in producing economic growth and maximum employment. Indeed, that is the most important aspect of price stability economically. Conversely it is price instability that stunts economic growth and gives rise to increased unemployment while at the same time causing decreased standards of living of the older citizens and those on fixed incomes.

Let us get the Democratic majority's position out in the open. Do those who compose this group believe that price stability is important to economic growth and maximum employment? If they do not then we are arguing in a vacuum. If they do, then we are talking about balance. The majority report should discuss balances, not opposites.

Now, Mr. Speaker, is the Democratic Party as we see it represented here in the Congress run by the horse or the jackass? Or is it a composite of the horse and jackass, a mule, a sterile coalition for power?

Mr. PATMAN. Mr. Speaker, will the gentleman yield?

Mr. CURTIS of Missouri. I should prefer to complete my statement, but I shall yield to the gentleman at this time; yes.

Mr. PATMAN. The gentleman mentioned price stability.

Mr. CURTIS of Missouri. Yes.

Mr. PATMAN. Does not the gentleman think that one of the main issues is whether or not price stability should be ahead of unemployment?

Mr. CURTIS of Missouri. No; the gentleman has misunderstood what I am saying. It is like a three-legged stool. You have to have all three legs. What I am trying to point out is that continued economic growth and maximum employment are dependent upon price stability.

Mr. PATMAN. The gentleman misunderstood me. If it is a question of price stability or unemployment does the gentleman insist that we should have price stability despite 7 percent unemployment?

Mr. CURTIS of Missouri. No; you see, the gentleman still has not listened or has not absorbed what I was trying to say.

Mr. PATMAN. I am sorry.

Mr. CURTIS of Missouri. I am saying that you get increased employment through price stability and you will get more unemployment through price instability because through that process you discourage savings, you discourage capital formation and economic growth. Economic growth is where our new jobs come from, and economic growth comes, I might say to the gentleman—and I think he is aware of it—from business expansion; small business building new facilities, taking on more men. There is where your employment comes from. And that is why I am saying that economic growth and maximum employment are dependent upon price stability. They are not in conflict. They are part and parcel of an economic structure.

Mr. PATMAN. Suppose we have an emergency such as we have now, with 7 percent of our people unemployed. Are you going to wait for business recovery entirely along the process the gentleman has mentioned, or should you do something about it now? Should you put the unemployment ahead?

Mr. CURTIS of Missouri. We are putting unemployment right up at the top, but we say we gain more employment by following out these fiscal programs. I may say to the gentleman everything is predicated upon what we anticipate is going to occur in this particular year in the way of employment. The prognosis is very encouraging. That is the first thing I said in my statement. Why did the majority of the Economic Committee not say something about whether they agreed or disagreed with the prognosis for rapid recovery, which is going on, which means more employment? We are taking care of that.

Mr. PATMAN. Will the gentleman yield for one further comment, and I will be through. I appreciate the gentleman's yielding to me. I have great respect for the gentleman. I know he is sincere in what he is advocating. However, with all due respect to the gentleman, he is advocating the trickle-down theory.

Mr. CURTIS of Missouri. No, that is the gentleman's theory.

Mr. PATMAN. I have heard that advocated many times back in the depression during President Hoover's administration. The gentleman's speech now is right along that line.

Mr. CURTIS of Missouri. The gentleman completely misunderstood.

Mr. JENSEN. Mr. Speaker, will the gentleman yield?

Mr. CURTIS of Missouri. I yield to the gentleman from Iowa.

Mr. JENSEN. I am sure the gentleman will agree and I am sure everyone will agree who has studied economics that the ultimate consumer of goods pays all of the tax bills that are imposed on the people. He pays the whole bill.

Mr. CURTIS of Missouri. He naturally foots the bill.

Mr. JENSEN. Hence, every dime that we appropriate here in Congress and every dime that is appropriated by and spent by county governments, State governments, municipal governments and the Federal Government, must be paid by the ultimate consumer sooner or later. The laboring man, the wage earner, the little fellow, constitutes the greatest consuming group in America. Hence, it is the so-called little fellow who is going to pay ultimately most of the money which all the spending agencies of the Government, municipal, State, county, and Federal, spend, because it is their money. When people talk about trying to help the little fellow, they should be down here pounding the Congress and every Member of Congress to quit the spending that is not necessary for the proper business management of Government. Does the gentleman agree?

Mr. CURTIS of Missouri. I certainly do, and I thank the gentleman for those remarks.

The gentleman of course is emphasizing the deleterious impact of inflation upon the individual person. Of course, that is the emphasis that is usually made. I have been trying to point out that other area of damage inflation causes, which is equally bad and in the long run even worse.

That is in the manner in which inflation or price instability cuts into economic growth and cuts into maximum employment. And pointing out how continued economic growth and maximum employment depends to a large degree on the maintaining of reasonable price stability.

Mr. JOHNSON of Colorado. Mr. Speaker, will the gentleman yield?

Mr. CURTIS of Missouri. I yield.

Mr. JOHNSON of Colorado. I simply want to join with the gentleman in stating not only for myself but my colleagues on this side that we have a very keen concern that inflation be brought to an end. I do not think that any Congressman cheerfully contemplates a rise in price level. Many of us are deeply aware of the impact that this does have upon anticipation, and I hope to address myself at some length to that in the future. I think in the context of the gentleman's remarks here, I would like to offer an observation at least and have your comments, sir, as to the significance and the relationship between price stability and economic growth. It seems to me that this may be a precondition, as you suggest, but I doubt it. We certainly managed to have a substantial amount of economic growth without price stability. Therefore, I am inclined to question whether it is as great a precondition as the gentleman assumes in the light of history since 1941; and secondly I think the concern on this side, if I may speak for my colleagues on this point, has to do with the nature of the policies being pursued by the administration in its very strong preoccupation with price stability, and that these policies have stood in the way of economic growth. Most recently, for example, the increase in interest rates by the Federal Reserve is going to make it still harder for small business firms of which you speak to find capital. Those firms which are self-financed can ignore what has happened to interest rates under this administration, but these small businesses in my district and elsewhere which must borrow find it more difficult and our concern is not with the very desirable goal of price stability, but our concern is with the method the administration pursues. It seems to us only two methods are regularly proposed. One has to do with raising the interest rates and making money harder to come by and the second has to do with balancing the budget. In a period of full employment, the budget should not only be balanced but probably should be overbalanced and some application to retiring the debt should be followed as a matter of public policy, but in a period when we still have almost 5 million people unemployed, it seems to us some concern about the unemployment ought to motivate our thinking about the budget.

Mr. CURTIS of Missouri. I thank the gentleman. I would like to develop the theme that the gentleman is propounding there. If the gentleman would refer to my original remarks, he would find I started on the predication in the President's report that we were looking forward to a fiscal year beginning in June 1959 of prosperity and relatively high employment.

Mr. JOHNSON of Colorado. Perhaps I should confess that many of us on this side do not fully share that assumption.

Mr. CURTIS of Missouri. All right, now we are getting down to it. The statute requires the Joint Economic Committee to make findings and recommendations on this and my criticism of the majority report is that they skirt the issue. If your side does not believe that, then in fairness you should come forward and say, "We do not. We feel that the economic indicators do not point to that, and on that basis we are arguing this other and we do not recommend to the Congress a balanced budget." The President is recommending to the Congress a balanced budget predicated on the assumption and based upon these economic indicators that this is going to come about, and I must say in our hearings it looks as if most of the economists in the country seem to agree with that. These things are a matter of balance, as I have tried to point out, and not a matter of opposites. I think it is very basic in economic growth, and we are not talking about rapid upsurges in growth because you can stimulate what is an unnatural or artificial growth which is not healthy—we are talking about a sustained growth because this artificial growth can produce along with it the drops which then produce unemployment. That is why I say this price stability factor is very important in preserving that combination not just economic growth but also maximum employment. There are many people who argue and many economists argue that rapid growth actually has with it higher incidence of unemployment. I think there is a lot of merit to that argument.

I wonder if the gentleman will permit me to go on with the rest of my remarks and then, perhaps, we can have further discussion?

I read the report of the majority on the Joint Economic Committee and I read the remarks of the Congressman from Connecticut [Mr. BOWLES] of February 26, joined in by no less a person than the majority leader, the gentleman from Massachusetts [Mr. MCCORMACK], and the gentlemen from California [Mr. HOLIFIELD and Mr. COHELAN], the gentleman from Wisconsin, and one of the majority on the Joint Economic Committee [Mr. REUSS], the gentleman from California, [Mr. ROOSEVELT], the gentleman from South Dakota [Mr. MCGOVERN]. The theme there is that balancing the budget at this time is not very important to economic growth and maximum employment.

The claim seems to be made that price stability is in competition with these goals rather than a basic necessity to attaining these goals.

This kind of thinking would have this Congress disregard the expenditures side of the ledger and promote economic growth and maximum employment through Federal expenditures. The effect this kind of program would have on incentives for private savings and capital formation let alone private investment in competition in many instances with the Federal expenditures is left up in the air.

Just where does the private sector of the economy fit in with this kind of economic thinking? Theoretically, according to Mr. REUSS it is to be the wellspring that makes all this possible, because the increased Federal expenditures are to be balanced off with increased taxes, and taxes of course come only from the private sector of the economy.

But maybe the speech of the gentleman from Texas [Mr. WRIGHT] just a little before the speech of the gentleman of Connecticut [Mr. BOWLES] is the philosophy of the Democratic Party. Many Democrats in the Senate and the House join in with this line of thought, which says that a balanced budget is important, that paying off on the Federal debt is important, and that President Eisenhower already has been spending too much Federal money? That the charge President Eisenhower made that the Democratic Party is controlled by the spenders is untrue.

I will say one thing, Mr. Speaker. Both views cannot be the views of a party that wants to be a responsible party before the American people. Anymore than can the view that President Eisenhower should not have sent troops to Little Rock, as advanced by one segment of the party, also be the view that he should have sent the troops down there sooner than he did, as advanced by the other segment of the Democratic Party.

I want now to comment a little more in detail on the end of the Democratic Party which I regard as the jackass end, at least as far as economic policies are concerned. On the issue of civil

rights I am not certain either segment has demonstrated horsesense. I want to go over the philosophies of the gentleman from Connecticut's speech.

The speech of the gentleman from Connecticut, Mr. CHESTER BOWLES, on this floor, reflects the schism within the Democratic Party. Ever since the Eisenhower administration budget messages demanded that the American Congress take a stand against a runaway Federal expenditures, higher taxes, and crippling debts, the Democrats seem to have panicked. They zigzag between almost every political and economic philosophy imaginable.

The gentleman from Connecticut calls for a sincere and nonpartisan approach to both the foreign and domestic challenges. I suggest that he review his own speech for its many contradictions, because it illustrates the need to medicate the two-faced virus of their party.

The gentleman made some very refreshingly sound observations. At one point he noted the threat of a runaway economy:

> There are many mistakes that we may make in these coming years. But none, Mr. Speaker, would be more dangerous than to minimize the implications and the danger of inflation.

But then he flopped over to the opposite conclusion only a few moments later:

> Mr. Speaker, I believe that we have raised a dangerous hobgoblin out of our own fears and uncertainties about inflation.

It is shocking that Mr. BOWLES would call inflation fears a hobgoblin.

His hobgoblin caused the dollar to decline, with 1933 as a base, to 48 cents by 1953, when President Eisenhower took office and managed, with the help of the Republican-controlled 83d Congress, and the sounder thinkers in the 84th Congress, to harness the runaway economy. From 1953 to date, the dollar has lost only about 3 cents of its value, and this cheapening has been largely due to the expenditures of the Democrat-controlled Congresses.

The junior Senator from Virginia [Mr. ROBERTSON] has said that he anticipates a genuine flight from the dollar both here and abroad if deficit financing is continued. If inflation continues at only 3 percent a year, he notes, the savings and life insurance of young people will be wiped out when they need them 30 years from now. This is Mr. BOWLES' hobgoblin.

If Mr. BOWLES continues to turn his economic platform into a seesaw by first calling inflation a major danger, and then a hobgoblin, he will confuse further both his perspective and that of the American people. The gentleman states:

> Let us boldly, honestly, and without partisanship examine where we have gone wrong and pledge ourselves not to repeat these mistakes at a time when we can least afford them.

He says that he wants to establish a perspective with which his colleagues might meet forthcoming legislation. Then discard the shackles of doubletalk, devoid of clear policies, and take one consistent stand. The gentleman should chastise those members of his party, for example, who vote against the President's balanced budget and at the same time say that the Republicans are the big spenders. The gentleman's initial comments about the importance of incentives are sound and wise indeed:

> Mr. Speaker, our economy needs incentives to lift it out of our paralyzing, self-induced fears. It needs incentives to encourage growth and to make competition palatable, just as consumers need the encouragement of fair prices and better values.

After this generalization, he apparently fears that specific recommendations on his part to maintain and increase incentives in our Republic would be embarrassing to his party. Indeed it appears that actually it is not more incentives that he wants for the American citizen, but that it is simply more Government spending that he desires.

How is this spending to be financed so that the financing will not kill incentives? These questions the gentleman zigzags around.

His associate, Mr. STEWART UDALL, of Arizona, has noted that:

> If the debt remains about the same and we follow current debt policies, by 1987 we will have paid out in interest the total amount of the debt—that we will still owe the debt.

The gentleman from Arizona [Mr. UDALL] continues a consistent position even though his stand may be embarrassing to the Democrat philosophy of unlimited deficit financing. He advocates increasing taxes. This, of course, would curb private spending, limit the growth of the markets, disperse capital formation, and kill the stimulus for a growing America.

Since the gentleman from Connecticut is concerned about increasing incentives at home as a means of meeting the Russian economic challenge, it is doubtful that he would subscribe to this high-tax theory of his fellow Democrat, the gentleman from Arizona [Mr. UDALL].

This leaves the gentleman from Connecticut with the highly controversial solution of Leon Keyserling, of the Democratic Advisory Council. The Keyserling anesthesia that our Government can blithely spend itself into a larger gross national product completely skips by the warnings of Democrat Representative UDALL and even worries Keyserling's fellow associates, Kenneth Galbraith and Arthur Schlesinger, Jr.

The nice thing about the Democratic Party's confusing and mutually conflicting financial philosophies is that each piece of quackery is answered by another member of the same party. Senator LYNDON JOHNSON has said: "We cannot afford to 'go broke' in tinkering with our economic system merely because an idea is appealing or attractive. The idea must be tested in the marketplace of ideas."

The Keyserling theory has been tested and has flunked. According to the Tax Foundation, total Government expenditures have risen almost 50 times since 1913. If Keyserling were right, the gross national product would have risen a hundred or so times within that period. The hard fact that the gross national product rose only 11 times during those years indicates that Keyserling's theories are delusions of grandeur.

Apparently, the gentleman from Connecticut subscribes to the Keyserling delusion. He cannot understand why the Republicans say that the greatest blunder we could commit in this cold war is to follow the concept that wild spending in all directions is the efficient way to meet the Soviet challenge.

He admonishes the Eisenhower administration by saying:

> More and more we see those who sincerely stress the critical need to meet the challenges of this nuclear age deliberately denounced as "spenders."

I say in all sincerity that the Republicans and those who believe with them should continue to denounce as spenders all those who think that spending is the way to meet the nuclear age threat. This is not partisan politics, for there are too many Democrats who decry the Keyserling delusion. I quote from Mr. WILBUR MILLS' subcommittee report—H.R. 647—of the Joint Economic Committee of the Democrat-controlled 85th Congress:

> The Congress and the administration, therefore, should increase their efforts to find means for reducing the scope of present Federal spending program. These efforts will have to go beyond elimination of waste and inefficiency. Close review of the substance of present programs, prospects for their future expansion or contraction, and their contributions to the Nation's economic progress compared with private uses of the resources they demand will be necessary to effect major reductions in Federal expenditures.

The Democratic congressional leadership seem to lose this objectivity, however, once it becomes enmeshed in the political tactics of opportunism. The Republican demands for a balanced budget in order to restore the healthful economic conditions necessary for accelerated national progress and prosperity have embarrassed the Democrats into camouflaging their efforts to sabotage the budget. Typical of these strategems is a letter that Mr. OTTO PASSMAN, of Louisiana, has distributed to his associates, including the spenders. After complimenting the gentleman from Connecticut [Mr. BOWLES] on his speech, the gentleman from California [Mr. HOLIFIELD] praised the Passman letter. In this burlesque, the Republican budget balancers are charged as being the big spenders. The letter read in part:

> When will the wild spending spree in which our Government is indulging be halted? Will we continue during this period of peace and prosperity to borrow money to give away, when our public debt exceeds the combined public debts of all other nations of the world, or will we work together to bring about a sound fiscal policy in Government before our Nation's economy has been totally wrecked?

Then Mr. BOWLES told Mr. HOLIFIELD that he agreed with his remarks; and, of course, his remarks had included the praise of the Passman letter. This schizophrenic approach one minute endorses Democrat spending and budget busting and the next minute condemns Republican spending, or what at least

existed in Mr. PASSMAN's imagination as Republican spending. And the gentleman from Connecticut says he wants to avoid partisan politics.

The numerous zigzags and equivocations in the February 26 speech reflect very well the subconscious of the Democrat Party. Riddled with squabbles and cross-purposes, this party has abandoned taking a constructive stand on the vital issues and has resorted to the tactics of dancing between issues to the tune of political expediency. Their prime Machiavellian feat seems to be to destroy the balanced budget while at the same time charging the Republicans with being the spenders.

The humor of the comedy, however, is destroyed by President Eisenhower's sobering remark recently that he could not imagine anyone unbalancing the budget for political reasons.

If the gentleman from Connecticut and his colleagues who think as he does are genuinely in search of a positive perspective for the challenging days ahead, they will find that perspective clearly reflected in the Republican philosophy, that the Government is to serve and not to dominate, to encourage and not to retard, to be economical and not to be extravagant. Applying this progressive philosophy, the Eisenhower administration in 6 short years is reversing the New Deal trend toward killing initiative and stifling private enterprise.

I want to stress one other aspect of the speech of the gentleman from Connecticut [Mr. BOWLES] which is so typical of statements by the wing of his party which holds to his philosophy.

Underlying the speech is the bogeyman of Soviet economic and educational achievements. I say bogeyman because the picture of Soviet Russia accomplishments are couched in the same pat phrases repeated over and over again by people who have never taken the trouble to find out if the description is true or false. The gentleman states:

> Our educational system, which even now is turning out far fewer engineers and scientists than the Soviet Union.

Apparently this unsubstantiated bit of sensationalism is not enough, because later he states:

> While we are arguing about the inadequacy of our school system, the Soviets are turning out twice as many engineers and scientists.

Elsewhere he makes these statements:

> While we are debating the problem of maintaining a 2-percent annual growth rate, the Soviet Union is expanding at a rate of nearly 7 percent. While we are considering cuts in our economic aid to the critical uncommitted countries of the world—possibly Congressman PASSMAN, of the gentleman's own party is, but not the President—the Soviets are substantially expanding their loans and grants to these same countries.

The gentleman from Connecticut earlier stated:

> Anyone who attempts to spell out what needs to be done to meet the challenge at home and abroad and suggests the consequences of our failure to do it lays himself open to the charge of peddling gloom or undermining our national confidence.

I disagree with the gentleman. We need all the honest self-criticism we can get. But we certainly do not need exaggerations and unweighed statements about Soviet Russia's achievements. Anyone making statements about Russia's abilities without having carefully examined into what the truth of these statements are certainly does lay himself open to the charge of peddling gloom and undermining our national confidence. And, what is worse, these kind of statements play right into the hands of Soviet Russia's propaganda programs to wean away the uncommitted nations of the world.

As a result of these loose statements that seem to overwhelm this country, the following entry appears on page 20 of the Joint Economic Committee's report:

> The committee has approved a project requested by Congressman CURTIS to develop through hearings or other appropriate means further materials in the area of statistics and statistical comparisons examined in the Joint Economic Committee print on "Soviet Economic Growth," a comparison with the United States, a study published in September 1957.

I was one of the prime movers in having the 1957 study made and I suggest that anyone interested in fact rather than propaganda about the serious question of the extent and nature of the Soviet's economic growth read this document. On the subject of Soviet education I recommend the study "Soviet Professional Manpower, Its Education, Training and Growth, and Supply," by Nicholas DeWitt, Russian Research Center, Harvard University, published by the National Science Foundation in the fall of 1955. And then weigh the fact that since that date the Soviets have completely overhauled their educational system because of what they themselves thought were its basic inadequacies.

Finally, I want to call everyone's attention to an article appearing in the February 1959 American Federationist, a publication of the AFL-CIO, by George Meany, "Reply to Trud"—the central organ of the Soviet trade union federation. Mr. Meany does not sell America short. It is time all Americans stopped selling her short. Honest criticism based upon adequate research is one thing—we need plenty of that—and open debate on it, but mouthing Soviet Russia's own propaganda line about her prowess is something else again.

Mr. Speaker, I ask unanimous consent to place in the RECORD immediately following my remarks this article by Mr. Meany to which I have referred.

The SPEAKER pro tempore (Mr. ALBERT). Without objection, it is so ordered.

There was no objection.

The matter referred to follows:

REPLY TO TRUD

(By George Meany)

Trud, the central organ of the Soviet "trade union" federation, has recently answered my article, "American and Soviet Economy—Contrast and Comparison," which was published in this magazine several months ago. Trud's reply, issued as a special supplement, seeks to refute my evaluation of Soviet economic progress and what it has actually meant to date for the working people and the peasantry of the U.S.S.R.

From the tone and substance of Trud's remarks, it seems that the Kremlin rulers have been quite irked by the contrast which I drew between the American and Soviet economies. Thus, in its attempted refutation, Trud boasts:

"Our Soviet industry is developing at a pace so fast that it is inaccessible to capitalist countries. A strong and healthy man will always overtake a sickly old man, however far ahead the latter may be. So will our Soviet economy certainly overtake American economy."

Bombastic bragging cannot make up for defects and imbalance in Soviet planning. Time and again whoever happened to be the top Soviet boss has made unfounded claims of economic successes, only to have his successor expose and disavow him as a purveyor of falsehoods.

For example, in his address to the plenary meeting of the central committee of the Soviet Communist Party last December, Nikita Khrushchev admitted that his former intimate friend and leader, his predecessor as party general secretary, Malenkov, "deceived the Communist Party and the Soviet people when he told the 19th party congress (1952) that the grain harvest in the country had reached 8 billion poods[1]—whereas, it actually had been less than 6 billion."

At the closing session of the Supreme Soviet in August 1953, Malenkov, in his report (for which Khrushchev and all the others in the Kremlin ruling clique voted), boasted before the entire world that "our country is assured of grain." But 6 months later Russia was in the throes of a grain crisis. Obviously, in the Soviet "paradise" not only do figures lie but lies also do figure.

Khrushchev, in his aforementioned report, confessed to the serious imbalance of Soviet planned economy. He admitted that by 1953 "Soviet industry had * * * made considerable headway, while agriculture was suffering from a number of major shortcomings. This gave rise to a certain disharmony between industrial and agricultural development, between the state's real requirements in grain and other products and their actual production."

The facts of life are stronger than the fancies of the most fanatical Communists. The fact is that the Kremlin was forced to abandon the 6th 5-year plan which the 20th Soviet party congress, under the leadership of Khrushchev, had adopted unanimously. To hide this abandonment and retreat, the Kremlin's new so-called 7-year plan now speaks only of "control figures for the development of the national economy for 1959–65."

The maximum projected increase in industrial production is 8.6 percent a year for 1959–65. In 1959 the Soviet gross industrial output is scheduled to rise 7.7 percent. This is a slower rate than the 13.1 percent claimed for the fifth 5-year plan (1951–55) or the 10.1 percent which had been envisaged in the abandoned sixth 5-year plan.

How much the Soviet rate of increase has been slowing down can be seen from the Official Soviet Index of the Annual Increases of Gross Value of Output. For 1948 it was 26 percent; in 1950 it was 23 percent; in 1951 it was 16 percent; in 1956 it fell to 11 percent; in 1957 it was 10 percent. (Pravda, Jan. 27, 1958.)

Thus, the rate of growth in 1957 was 60 percent less than in the early postwar years when Russia was rebuilding its war-ruined economy.

In recognizing the great expansion of Soviet industry, it would be false to conclude,

[1] One pood is the equivalent of 36.1 pounds.

as Trud has, that such a rate of expansion has not been equaled in non-Communist countries.

Alex Nove, of the University of London, has pointed out that "both France and Germany have been averaging more than this (8.6 percent annual increase) in the past decade." (Manchester Guardian Weekly, Dec. 4, 1958.)

Prof. Gregory Grossman, of the University of California, has cited the fact that: "Over even somewhat longer periods, South Africa (1911–40) averaged 9 or more percent and Japan (1910–37) 8.5 percent per year. Over shorter spans of time, Sweden equaled and (significantly) Russia herself approached the long-term Soviet rate in the late eighties and nineties of the last century." (Soviet Survey, October–December 1958, p. 17.)

Yet Trud persists in boasting:

"A comparison between the pace of economic development of the Soviet Union and the United States fully warrants our saying that in 15 years we shall overtake America and even leave it behind in the production of many key industrial items."

This is merely echoing one of the many Khrushchev prophecies. But let the U.N. Yearbook for 1957 give us some instructive comparisons—in figures, not percentages. Between 1937 and 1956, the United States increased its crude steel production by 53,142,000 metric tons. During the same period the Soviet increase was 30,860,000 metric tons.

According to the December report of the Central Statistical Board of the U.S.S.R. Council of Ministers, Soviet steel productive capacity and total production for 1958 were estimated at nearly 55 million tons. During this largely recession year the United States produced 86,167,000 tons of steel, according to the American Iron and Steel Institute. What is more significant is that in 1958, a poor year, the United States increased its annual capacity to produce steel by nearly 5 percent—from 140,742,570 to 147,633,670 tons.

Lenin and the succeeding Soviet rulers have put the expansion of electricity generating capacity in the foreground of their economic tasks. From 1950 to 1956—a period of frantic Soviet heavy industry expansion—the U.S.S.R. increased its installed electrical energy capacity by 23,186,000 kilowatts. During this period our country raised its electrical energy capacity by 54,408,000 kilowatts.

During these years the production of electrical energy in the United States increased by 295,396 million kilowatt-hours and in the Soviet Union by 100,774 million kilowatt hours. Our present total production is 683,970 million kilowatt-hours. The Soviet total is 192 billion kilowatt-hours.

Even if the Kremlin fulfills all its plans in the next 7 years, it will increase its capacity by 58 million to 60 million kilowatts and attain a maximum electrical power output of 500 billion to 520 billion kilowatt-hours. Thus, even by 1965 the U.S.S.R. will be well below the present American level. The projected Soviet goal for 1965 is only 73 percent of the 1957 output of electricity in the United States.

During the last 5 years the American rate of increase in electrical output has been higher than that of the Soviet. Furthermore, there are signs that the Kremlin cannot maintain its present rates of increase in the production of electricity. Khrushchev recently indicated that Moscow was considering the abandonment for 10 years of some of its plans for the construction of huge hydroelectric stations (Krasnoyarsk).

Let us now turn to coal. From 1937 to 1956 the United States increased its total coal production by 28,530,000 metric tons, while the Soviet increase amounted to 193,822,000 metric tons. Our present coal production totals 476,842,000 metric tons; that of the Soviet Union is 303,700,000.

These figures do not mean that American industrial development is lagging and that the Soviets are overtaking us. We must consider here an important phase of technological progress. In 1955 coal provided the U.S.S.R. with about 70 percent of all its energy. In contrast, during 1955, coal constituted only 33 percent of the energy sources used in the United States.

In our country much greater progress has been made in utilizing oil and natural gas as sources of energy. With American progress in industrial modernization, coal is declining in importance for our economy.

The continued greater dependence on coal as a source of energy in the U.S.S.R. is reflected in the figures we have cited. These figures attest to the backwardness of the Soviet economy in comparison with the American economy in a very vital respect.

On the basis of official Soviet statistics, it can be shown that the trend is not different in the production of oil, cement, textiles, and meat.

In all his talk about the Soviet economy catching up with and overtaking American industrial production, Nikita Khrushchev has been emphasizing that Russia's rate of output increase in coal and steel is greater than America's. But the omniscient Khrushchev must know that, as a result of the developing second industrial revolution (automation), coal and steel, while still very important, are no longer as decisive in the economy of highly developed countries.

Light metals, plastics, chemicals, oils, and natural gas are assuming increasing significance because of progress in electronics and automation. In these fields the Soviet Union is backward in comparison with the United States, which continues to be the world's pacesetter. Here we have another reason why Khrushchev is so eager to have American corporations export to the U.S.S.R. entire chemical and plastic plants—and technicians to teach the Russians what we already know. Moreover, the Soviet Union still suffers from an acute shortage of highly skilled workers, without whom there can be no automation.

When Josef Stalin launched his plan for speedy gigantic industrialization, it was clear that it could be carried out only through ruthless exploitation of the workers and at the heaviest human cost for the rural population. However, there were limits here, as shown in the shortage of capital and manpower by the time of the third 5-year plan (1938–40).

The postwar 5-year plans were made possible only through plundering the resources and manpower of the annexed territories and satellites. But then came the stormy Polish events and the Hungarian revolt in 1956. The deep-going discontent among the satellites forced Moscow to resort to less naked and more indirect, but nonetheless intense, forms of economic plunder and control.

Simultaneously, the Kremlin was faced with a critical dearth of Soviet manpower as a result of the low birth rate during the terrible purges in the thirties and in the war years, heavy war casualties, and high mortality among the slave laborers in the concentration camps. The combination of these factors meant very serious trouble for the sixth 5-year plan, which had to be scrapped.

This critical turn had more serious implications for Soviet economic plans and their targets than the recent recession in our country had for American economic development.

The Kremlin rulers soon launched a terrific propaganda barrage about great Soviet economic successes in order to hide their difficulties. Khrushchev made desperate efforts to overcome the bottlenecks. He resorted to sweeping industrial reorganization in order to eliminate redtape, paralyzing bureaucracy, and wastefulness which are inherent in the totalitarian centralized economic system of the U.S.S.R.

To overcome the shortage of industrial manpower and the deficiencies of Soviet agriculture, Khrushchev had the Kremlin adopt a sweeping policy of ordering the youth into the factories and to distant farmlands. This policy is, in effect, a reversion to child labor in the U.S.S.R. at a time when the trend in the so-called capitalist countries is away from it and is for keeping the youth longer in school.

This backward trend is confirmed by "Theses of the Central Committee of the Komsomol (Communist Youth Federation)" for the occasion of its 40th anniversary on October 29 of last year. Here we have a clear revelation of the current Kremlin policy to use juveniles—boys and girls—for work in the coalfields and similar occupations. We read:

"One of the most important tasks of Soviet youth in this struggle consists in the further active participation of juveniles in the construction of large industrial plants, power stations, coal pits, and ore mines in the east, in Siberia, in the north of the country, and in the Donets Basin. * * *

"The Komsomol organizations must guarantee that no youth brigade reaps less than 400 double hundredweight (about 40 tons) per hectare (2.47 acres) of green fodder from maize. By the year 1962 there must be laid out at least 500,000 hectares of gardens and vineyards to be used on a cooperative basis, as well as 200,000 hectares of forest belts." (Komsomolskaya Pravda, October 9, 1958.)

The above "Theses" also provide the "ideological" justification for such massive recourse to child labor by a State which boasts that it is the most advanced in the world.

We are told by the "theses" that "communism is a social order in which work constitutes the most vital requirement of man."

Admitting opposition to his plan, Khrushchev declared as follows in his recent memorandum on education:

"It will be necessary to break the bureaucratic redtape which prevents the employment of adolescents in our economy and to instruct GOSPLAN to draw up a long-term plan for the employment of adolescents who we leave the 8-year school." (Pravda, September 21, 1958.)

However, Khrushchev is not relying on "ideological" weapons alone. He has appointed Nikolaivich Shelyepin, former Communist youth leader, to replace General Ivan Serov as chief of the dreaded Soviet security organization.

Khrushchev means business in his massive child labor drive.

Trud repeatedly asserts that the American economy is "gravely sick and its disease is chronic" and that "a most serious crisis is again developing in America." Trud refuses to admit that economic recovery has been quite rapid and that the recession in the United States is almost over. Personal income in November of last year reached a new high of $360 billion per year. This was an increase of $14 billion from the recession low in February of 1958 and $8 billion over the previous high of August of 1957. Industrial production has recovered about two-thirds of the drop experienced during the recession, although there is still considerable unemployment in our country. Productivity is now increasing at a rapid rate—perhaps as much as 6 percent a year.

Our trade unions have continued to obtain substantial wage advances, while prices have remained relatively stable. For the first half of 1958 almost 55 percent of the wage adjustments provided an hourly increase of 10 cents or more. More than one-fourth of the hourly wage increases were 13 cents or more. Real wages are showing very significant increases. This means a continuously rising American standard of living.

For years it has been a favorite pastime of Soviet leaders and their Communist followers outside the Iron Curtain to prophesy the doom of American economy. But even Trud is now compelled to admit that the end is not yet in sight. And why? Said Trud:

"American economy is primed by intensifying the arms drive, by increasing military orders."

This is simply not true. The Department of Commerce and the Council of Economic Advisers have studied this question thoroughly and authoritatively. The United States in 1958 was actually spending less of its gross national product for national security than in previous years. Such expenditures have fallen from 14 percent in 1952 to 11 percent in 1954 and to 10 percent in 1957 and 1958. On the other hand, during these years in particular the U.S.S.R. military budget has been rising—absorbing about 25 percent of the Soviet gross national production. The Kremlin rulers continue to give top priority to arms production.

Trud laments that more than 108 million Americans do not earn even the subsistence minimum as calculated by the Heller committee of the University of California. What are the facts? Actually, the Heller budget is not a subsistence budget but a rather good standard of living budget for American families. This subsistence minimum of American families includes such items as a daily egg, 2½ quarts of milk for each member of the family, plus the normal meat and vegetables. It also includes a washing machine, an automobile, a refrigerator, movies every other week, etc.

Not even Trud should have compared the housing shortage in the United States with the dreadful dearth of decent and adequate housing in the Soviet Union. In the United States more than 60 percent of the homes are owned by the people who live in them. In our country over 90 percent of the homes do not have more than one person to a room.

The Moscow Government has yet to produce statistics depicting the true state of Soviet housing. Yet even from its own admissions and generalities about the present Soviet housing situation and boasts about the future, the world can see one of the most shameful consequences of the Communist dictatorship.

We would like to see all mankind enjoying freedom and well-being. We of American labor would like to see the Soviet workers become free and strong and struggle militantly for wages as high as we have in the United States.

We would like to see the Soviet workers attain a purchasing power to have, as we have in the United States, more than 38 million homes with television sets, more than 41 million homes with washing machines, more than 45 million homes with refrigerators, and more than three-fourths of the families owning automobiles.

It is in this spirit that I have criticized the Soviet economy and the paucity of benefits its technological progress has brought to the Soviet peoples. Trud has chosen to be silent about my specific criticism of the exploitation and plight of the Soviet workers and farmers. Trud simply ignores their fate.

Trud was just as silent about the regimentation to which the Soviet worker is subjected, the type of unions he is forced to join, the continued existence of slave labor camps, and my condemnation of the Soviet regime as a government by terror and dictatorship.

All Trud had to say in answer was:

"Our reality is inspiring the working folks of the bourgeois states to fight exploitation for a better future."

This is what the Kremlin rulers would like to have their subjects believe.

Long before the Communists seized power in Russia, American labor struggled militantly, using its democratic right to strike, picket, and organize unions in order to secure high wages, shorter hours, and better conditions of employment. Our fight "for a better future" is not at all inspired by the Soviet "reality." On the contrary, the higher standards of life and labor we of American labor have achieved are now being threatened by what Trud calls reality in Russia. This Communist "reality" in the U.S.S.R., with its very low wage economy and dumping of low-priced goods, is becoming a menace to the living standards of American and other free workers.

Furthermore, with the Kremlin government—which has a total monopoly of all Soviet economic life—foreign, even more than domestic, trade is not only an economic undertaking but also a political weapon. Recent Soviet dumping of tin, aluminum, and rice are revealing in this respect—as Burma, Indonesia, and Malaya have so recently and sadly learned.

The "reality" Trud boasts about may actually inspire some American employers to demand that labor in the United States accept lower wages and give up some of its fundamental democratic rights.

The Russian Labor Front which the Kremlin calls unions are under the thumb of the Soviet bosses (Communist state) and function primarily as agencies for promoting production. Some of our Nation's powerful employers would like to have our trade unions reduced to a similar status.

Let me cite the report of the American steel industry delegation which visited the Soviet Union last year and the remarks made by A. S. Glossbrenner, president of the Youngstown Sheet & Tube Co., on October 1, 1958, before the regional technical meeting of the American Iron & Steel Institute. Mr. Glossbrenner said:

"How did the Soviet Union gain this competitive advantage over us? The report of the American delegation clearly indicates the answer. The Russian state is operating one big steel company.

"The management of this company, the employees of the company and the union [sic] which represents the employees are all on the same team. All are beholden to the same supreme boss, the Communist state. As a result, there is no division of loyalty. * * *

"The American steel industry is facing its greatest challenge, competition to the bitter end with the slave steel industry of the Soviet Union. * * * If this challenge is to be met, this industry of ours, great as it is, must be in the hands of managers who are strong and who can make hard decisions without wavering.

"Above all, it must be in the hands of managers willing to turn away from the easy road in their relations with their employees—that road being appeasement for the sake of economic expediency."

Some American steel company employers are thus inspired by Soviet reality to make hard decisions without wavering and not to take the easy road in their relations with their employees.

We of the AFL–CIO believe in loyalty to trade unions which are free and clean, and we fight militantly for better conditions of life and labor for the working people. Loyalty to such unions is loyalty to the best interests and highest ideals of our Nation. Such trade union loyalty makes for a healthy, efficient American economy, an economy without low wages, inadequate purchasing power and cutthroat competition—an economy serving the entire American people.

The reduction, division, or transfer of such trade union loyalty would only hurt America's free economy and thus help the totalitarian Communists.

Of course, Mr. Glossbrenner stressed that he was not "advocating some similar system" for the United States. He realizes that "some similar system" would mean abolition of free enterprise in the United States.

Yet, along with some other bosses in our country, he does look with envy upon labor relations in Communist Russia where, as pointed out in the report of the American steel industry executive delegation to Russia, "a great deal of the union's time and effort is spent in developing and promoting plans for increasing steel production, and they indeed formed the opinion that this may be the union's most important function."

This reality of the Communist economic system—with its intense exploitation and enslavement of the Soviet workers—is no inspiration to freedom-loving American labor. This reality is a growing threat to American labor which enjoys the benefits of free trade unionism. This Soviet reality is a grave menace to the democratic rights and living standards of American labor and all other workers outside the Iron Curtain empire.

Mr. RHODES of Arizona. Mr. Speaker, I ask unanimous consent that the gentleman from Florida [Mr. CRAMER] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Arizona?

There was no objection.

Mr. CRAMER. Mr. Speaker, any consideration of inflation comes down in the end to this question: Which party has done the better job of steadying prices and the value of the dollar?

The record clearly is in favor of the present administration.

The Truman administration's policies burned up about 50 percent of the dollar's value. Under this administration, the value shrinkage has been less than a nickel in practically the same number of years.

Under the preceding administration, prices soared approximately 50 percent. The rise in the cost of living under this administration, in sharp contrast, has been held to less than 9 percent and the present plateau of price stability is one of the longest on record.

I agree generally with the statement on AFL–CIO President George Meany in the February issue of the Federalist:

> Our trade unions have continued to obtain substantial wage advances while prices have remained relatively stable. * * * Real wages are showing very significant increases. This means a continuously rising American standard of living.

All this could be destroyed, of course, if the excessive spending indirectly and directly advocated in the majority Joint Economic Report of 1959 were implemented by an irresponsible Congress.

Mr. RHODES of Arizona. Mr. Speaker, will the gentleman yield?

Mr. CURTIS of Missouri. I yield to the gentleman from Arizona.

Mr. RHODES of Arizona. Mr. Speaker, I wish to compliment the gentleman from Missouri on his very fine statement. As the gentleman from Texas [Mr. PATMAN] was conducting his colloquy with the gentleman from Missouri [Mr. CURTIS] I could not help but hearken back to the days of World War II when there was a rather serious acci-

dent rate at one of the airfields at which I happened to be stationed, and the commanding officer put out an order which said:

There shall be no more ground loops in BT-13 aircraft.

I could not help but wonder if the gentleman from Texas was actually advocating that we should pass a law saying there shall be no more unemployment.

Mr. CURTIS of Missouri. Mr. Speaker, I might say to the gentleman that by ignoring this very basic economic factor that would be about what he would do.

Mr. RHODES of Arizona. I am actually serious in this remark, because I have noticed from the other side that there are people who decry unemployment, and we certainly are all of us against unemployment. That is just like being against sin; we do not like it. However, I found very little from the other side in the way of concrete examples, of concrete suggestions as to how we can best meet the unemployment situation that we have had. One idea is that we should spend more here and spend more there. As the gentleman from Missouri knows, this has been quite the vogue with the people on the other side. When a problem arises their only answer is to spend their way out of it.

Mr. CURTIS of Missouri. With Federal funds.

Mr. RHODES of Arizona. With Federal funds. I suggest the possibility that instead of talking about the trickle-down theory, as the gentleman from Texas did, perhaps we should say that some of our friends on the other side are dedicated to a "drown-out" theory; in other words, to prime the pump to such an extent that the ignition of the motor gets wet and it never does work. So rather than face the economic facts of life and realize that this Government, powerful though it may be, is not powerful enough to repeal the law of supply and demand, and no government under the sun has ever been powerful enough merely to pass a law and say, "This economic fact will not be, and we will set up something else in its place," it is a much more complicated thing to keep an economy going.

I congratulate the gentleman from Missouri on his very basic knowledge of the economic facts of this Nation. I think he has delivered on this floor today a masterpiece on the United States of America, which I hope every Member of the Congress will take to heart.

Mr. JENSEN. Mr. Speaker, will the gentleman yield?

Mr. CURTIS of Missouri. I yield to the gentleman from Iowa.

Mr. JENSEN. I am quite sure the country knows that early in 1933 there were a little over 12 million people unemployed. Then we went into a great spending spree, spending millions upon millions and billions upon billions. At the day of Pearl Harbor we still had over 11 million Americans not gainfully employed, but soon after that 12 million-plus Americans were given employment in uniform.

Mr. CURTIS of Missouri. I think the gentleman's remarks are sound. I do not know whether or not the 11 million figure is exact. I have forgotten the exact figure, but certainly it is true that after years of this kind of expenditure we had a very sizable unemployment picture that was no comparison with what we are talking about here today. It was 14 or 15 percent, at least. It was World War II that eliminated the unemployment problem at that time.

Mr. TEAGUE of California. Mr. Speaker, will the gentleman yield?

Mr. CURTIS of Missouri. I yield.

Mr. TEAGUE of California. The gentleman from Missouri has done a great service to the Congress and the Nation in his critique. I would add, however, one point to what he has said.

The strange economic proposals hinted at by the gentleman from Connecticut on February 25 are not new to the extreme liberals. Whether the gentleman from Connecticut is himself in that category I do not know, but I suspect that he probably is. Indeed, these theories are voiced frequently and boisterously by the financial angel of all leftwing political officeholders, Walter Reuther. In fact, he was so successful in peddling this propaganda in his native State that he has brought it close to bankruptcy.

If history means anything and if we can learn anything at all from the experiences Governor Williams has had, we will shy away from this character of proposal. In short, let us pray that the U.S. Government will be spared the fate of Michigan.

Mr. CURTIS of Missouri. I thank the gentleman for his observation.

In regard to Michigan, one of the advantages, as Justice Brandeis has phrased it, of having 48 States, now 49, was that we have 48 or 49 laboratories to test out economic and political ideas. This is a good example, because Michigan has tested out this Keyserling formula to some degree and is now facing a situation of bankruptcy. I think it is a fortunate thing that it has been tested out in one area, one of the 48, rather than throughout the Nation. We can well learn from that. And I may say also that we can well afford to keep the 48, 49, maybe 50 laboratories in existence so that we can continue to experiment in the field of the unknown, because actually we still are innocent children in our knowledge of the laws of economics.

Mr. O'HARA of Michigan. Mr. Speaker, will the gentleman yield?

Mr. CURTIS of Missouri. I yield.

Mr. O'HARA of Michigan. I was most interested to hear the State of Michigan called a laboratory for the economic theories of Walter Reuther. I am sure that the Republican Party of Michigan, which has controlled the State legislature during all the time that Mr. Williams has been Governor, will be surprised to learn that it has been cooperating with Mr. Reuther in a plan which we are told has brought Michigan near bankruptcy. The Republican-controlled legislature has passed all of the legislation, including the tax legislation during this period and was not too bashful to demand credit for much of it in the campaign.

Mr. CURTIS of Missouri. Then I take it you are in the same position that we Republicans are in on a national level. We have the President and you all have the Congress or the legislative branch. Now will you apply the same formula that you are now offering in your explanation of what is happening in Michigan because you are now, I assume, blaming the Republican legislature for the situation. Will you, too, join in blaming the Congress for our ills because the Democratic Party has been in control here for the past three Congresses.

Mr. O'HARA of Michigan. Will the gentleman yield for a moment?

Mr. CURTIS of Missouri. Certainly.

Mr. O'HARA of Michigan. I understood the gentleman who just spoke to say that the position of Michigan was much more perilous than that of other States or the Federal Government.

Mr. CURTIS of Missouri. I take his word for it. He says it is in bad shape.

Mr. O'HARA of Michigan. If so, it is because of the general recession that we have all felt and I am willing to accept the blame, along with the administration, for any part that the Congress has played. The important thing is that we act now to do something about it.

Mr. CEDERBERG. Mr. Speaker, will the gentleman yield?

Mr. CURTIS of Missouri. I yield.

Mr. CEDERBERG. It is true that the Republican legislature of my State has been controlled by the Republicans, but I suppose there have been few times in history when a legislature has been under such stress and strain by the Governor's office as this legislature in Michigan. As a matter of fact, the situation is that had they yielded to the Governor in all of his demands, our deficit would be not what it is, something like $115 million, but something like $240 million above the present deficit of $115 million.

Mr. CURTIS of Missouri. May I ask the gentleman then—the situation in Michigan has been quite the reverse. In Michigan the people in the legislature are trying to balance the budget while here we have the executive trying to balance the budget.

Mr. CEDERBERG. That is exactly correct. The public relations people from the Governor's office have spread the propaganda through the entire State of Michigan condemning the legislature for not having been more farsighted. Many of these programs would have cost additional millions of dollars. We are faced with this particular fact—that the State of Michigan is quite broke and we at the present time are trying to negotiate with the Governor's office, as I understand it, a sensible tax program to get us out of it. It seems to me what we are going to have to do not only on a Federal level but on a State level is to have a review of the spending in many of these areas. Certainly, we in Michigan are in very difficult straits financially at this time, but nothing compared to what we would have been if Soapy had had his way. In addition to that, he proposed a new budget for this year that

is several million dollars higher than the budget of last year. Then he has the fortitude, as long as this subject has been brought up, to come and testify before the committee of the other body, requesting additional billions of dollars to be spent on a given bill at the Federal level far and above that proposed by the President. I say to you if we listen to all of these ultraliberals, we will never get out of trouble. If we could spend ourselves into prosperity, then we would have the most prosperous State in the Union and certainly even the Federal Government ought to be in a pretty good condition, if that were the case.

Mr. CURTIS of Missouri. Maybe he ought to confine his activities to the State of Michigan.

Mr. CARTER. Mr. Speaker, will the gentleman yield?

Mr. CURTIS of Missouri. I yield.

Mr. CARTER. I have been very much entertained by your whole talk and by the discourses that have occurred here. But now I am wondering if you are suggesting anything new or anything different. To be objective—what are you specifically proposing to take care of the problems that confront the Federal Government at this time.

Mr. CURTIS of Missouri. Did the gentleman not listen to my speech?

Mr. CARTER. I have listened very carefully.

Mr. CURTIS of Missouri. I outlined that in effect what we are proposing is exactly what is contained in the President's economic report. The minority of the Joint Economic Committee have recommended to the Congress that the Congress follow the President's recommendation, No. one, in view of the prognosis of a very profitable year in 1959 that the budget should be balanced with the increased economic activity that is coming up. I might say that the economists who have testified before our Committee generally supported this prognosis.

In view of that, and if we will stimulate that growth and keep the economic climate healthy we will be providing the jobs that are necessary for maximum employment; in other words, it is the philosophy of this administration that, that the way you best get economic growth, sustainable economic growth, and maximum employment is through creating a good climate in the private sector of the economy. There are places where the Government can help, and I listed in my speech several areas, and pointed out that far from decreases in these areas of expenditure such as my Democratic friends—and I do not know which camp the gentleman falls into, those who want to spend more, completely ignore the fact that in these specific areas like public works we are spending more. In fact, there are some on our side of the House who contend we are spending too much. Now, the majority members of the Joint Economic Committee just ignore this question. Are they for a balanced budget in these times or are they not? Now, it is an easy question to answer and I think they owe it to the people to answer, but instead of that we have one segment of your people, the gentleman from Louisiana [Mr. PASSMAN] and the gentleman from Texas [Mr. WRIGHT], complaining that we are great spenders, and this other segment of your party raising the question of whether we are spending enough. But I am saying that you are not going to have a united party or a consistent party with this double talk.

Mr. CARTER. I appreciate that. Let me ask the gentleman two questions, then I will not bother him further. Do I understand that the magic you are presenting here——

Mr. CURTIS of Missouri. Not magic, sir.

Mr. CARTER. Well, the device to satisfy all the problems that confront us is a balanced budget; is that it?

Mr. CURTIS of Missouri. In these times, we are now in March of 1959, yes, and in view of President Eisenhower's policy a balanced budget is the device.

Mr. CARTER. The gentleman knows——

Mr. CURTIS of Missouri. Now, wait; that is not the sole thing; a budget is composed of expenditures and taxes; those are the ingredients that go to make up a budget. We need to have economic growth; we need to have maximum employment, but we feel that in these times price stability is one of the very basic things necessary in order to attain these ends. There is the way the picture shapes up.

Mr. CARTER. I do not believe any of your proposals are new at all.

Mr. CURTIS of Missouri. I did not hear the gentleman.

Mr. CARTER. I said I did not believe any of your proposals are new at all, even the gentleman's statement that prosperity is just around the corner is an old phrase.

Mr. CURTIS of Missouri. No one made any remark like that.

Mr. CARTER. It goes way back to 1929.

Mr. CURTIS of Missouri. I do not mind debating and arguing with the gentleman, but let us confine it to the issues here.

Mr. CARTER. I will. I will ask but one more question. The gentleman is advocating the trickle-down theory; that is what he is proposing. I do not believe there is anyone who can deny it.

Mr. CURTIS of Missouri. I have denied it.

Mr. CARTER. The gentleman is proposing exactly the same things that were proposed in 1929. The issue is not any different. It is simple.

Mr. CURTIS of Missouri. The gentleman obviously has not been following what I have said or he would not make those remarks.

Mr. HIESTAND. Mr. Speaker, will the gentleman yield?

Mr. CURTIS of Missouri. I yield to the gentleman from California.

Mr. HIESTAND. I am very much impressed with the careful analysis that the gentleman has made of the Economic Report, and also of the comments by the gentleman from Connecticut. But there were some additional inconsistencies to which I feel the attention of the House should be directed. I wish to give credit, for instance, where credit is due and I point to a statement made by the latter which was completely accurate and which is swept under the carpet by others in the Democrat Party whenever economy, employment, and our labor force are mentioned. The statement appears at pages 3055–3056 of the RECORD of February 26, 1959. It is:

> But, Mr. Speaker, let us face the fact that the New Deal failed in its second major objective, which was to restore full employment and prosperity to our country. In 1940, more than 8 million Americans were still unemployed; 14½ percent of the working force.

Although others who belong to the political party represented by the gentleman from Connecticut have dodged and otherwise evaded this cold and glaring fact as long as I can remember, I must say he has displayed courage, or maybe naivete in making such an admission.

I repeat: His statement in this respect was absolutely accurate according to the Department of Commerce, Bureau of the Census. I should add that this same authority reports that neither the unemployment figure mentioned or the percentage of work force idle has been equaled since.

Mr. CURTIS of Missouri. I thank the gentleman because that is probably as good an answer to be given to the remarks of the gentleman from Iowa, referring back to the great depression, as can be given. I would say, too, I recall during the recession last year there was great talk about a tax reduction which was supposed to benefit the people who were hurt by the recession. My colleagues of the Democratic Party were on the floor of the House here talking about giving tax reductions to the taxpayers. I made the point at that time, and I make it again, that the people who were really hurt by the recession were not taxpayers at all. They were people who were unemployed. The best thing we could have done was to have created conditions and circumstances where they could have become employed again.

That was the key of the thing, and I say here today, that is the key of my remarks. The way you get employment is through encouraging growth within the private sector of our economy. That should be the discussion and the issue.

Mr. PATMAN. Mr. Speaker, will the gentleman yield?

Mr. CURTIS of Missouri. I yield to the gentleman from Texas.

Mr. PATMAN. The gentleman remembers that the Democrats on the Joint Economic Committee were against the tax reduction. I think that committee was the first committee in Congress to come out, and the matter was forthright, against a tax reduction.

Mr. CURTIS of Missouri. I thank the gentleman, and I want to commend the committee for its attitude. I joined with the committee in this recommendation.

The SPEAKER pro tempore. The time of the gentleman from Missouri has expired.

Mr. CURTIS of Missouri. Mr. Speaker, I ask unanimous consent that all Members who have participated in this colloquy may have permission to revise and extend their remarks.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Missouri?

There was no objection.

THE ULTIMATE IN DISCLAIMER OATHS

The SPEAKER pro tempore (Mr. ALBERT). Under provious order of the House, the gentlewoman from Oregon [Mrs. GREEN] is recognized for 30 minutes.

Mrs. GREEN of Oregon. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include editorials.

The SPEAKER. Is there objection to the request of the gentlewoman from Oregon.

There was no objection.

Mrs. GREEN of Oregon. Mr. Speaker, on February 4 I introduced a bill, H.R. 4066, to repeal section 1001(f) of the National Defense Education Act of 1958. This provision was added to the act by the other body after the House had completed its own careful and painstaking deliberations on the legislation. Because of the lateness of the time and the approaching end of the 85th Congress, it was allowed to remain in the act without the opposition which I sincerely believe it merited.

As the Department began to administer the program, the oath requirement began to jar on the sensitivities of a great many patriotic and intensely loyal men and women. This section of the bill requires two oaths. First, it requires the oath of allegiance to the United States. This is an oath which most of us have taken for many years, in a voluntary way. I took it, or one like it, in the classrooms when I was there as a student, and I administered and took one like it with my students in the classrooms as a teacher. It is a stirring oath, and one which I take with pride. Most of the scholars and students who have written to me have accepted the imposition of this oath as legitimate and within the context of the American tradition. The indignation expressed by those who have written me in regard to the oath requirement has been directed against the other oath requirement, the so-called negative disclaimer.

This requirement demands that every person otherwise eligible for payments or loans under the act must first file an affidavit to the effect that he does not believe in, and is not a member of any organization and does not support any organization that believes in or teaches the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional means.

This oath or affidavit, call it what you will, is the focus of most of the objections that have been raised. The provision, when found in this particular legislation, seems to affirm the contention—that was raised so often in an earlier fit of national hysteria—that teachers are somehow especially sensitive to the blandishments of communism, and that special care needs to be taken to see that these socalled "untrust" people do not receive any assistance from the Federal Government. Such an assumption, Mr. Speaker, is of course completely false. But in addition, it is especially incongruous when attached to a bill which was made possible by the belated realization that our brainpower is the best defense we have against external enemies, and that the cultivation and furthering of scholarship is at least as necessary a contribution to our national security as is drafting young men to learn close-order drill.

This disclaimer is especially painful to the scholars and students who must take it because it discriminates against them. Other persons receiving Federal assistance are not required to take such an oath. Yes, people on the Federal payroll are required to take it. But certainly there is a difference between persons who seek jobs from the Government, whether elective or appointive and those who merely seek to participate in a program which is supposed to be available for any qualified citizen.

Mr. Speaker, I believe it would be valuable to introduce, as evidence of the real nature of the opposition to this section, some of the correspondence, editorials, and other materials in my files regarding the oath.

REED COLLEGE,
Portland, Oreg., February 28, 1959.

Hon. EDITH GREEN,
House Office Building,
Washington, D.C.

DEAR MRS. GREEN: Recently, at a regular meeting of the faculty of Reed College, the following resolutions were proposed, discussed, and passed:

"*Resolved,* That the faculty urges the president and board of trustees to adopt the position that Reed College should not participate in a program which requires it either to administer to anyone a disclaimer affidavit such as that in the National Defense Education Act, or to assume responsibility for seeing that anyone has executed such an oath or affidavit.

"*Resolved,* That the faculty protests against the inclusion of the requirement of a positive loyalty oath in the National Defense Education Act of 1958 and requests that appropriate action be taken toward the elimination of such a requirement from this act."

Since the adoption of these resolutions it has come to our attention that you have introduced a bill for the purpose of removing the oath provisions from the Defense Education Act and that Senator KENNEDY has introduced a similar bill. We are very pleased to know of your interest in this legislation.

Several points raised by faculty members in discussing the oath problem have been summarized briefly as follows:

First: The inclusion of a disclaimer oath is an attempt to make conformity in belief a necessary condition for doing business with a Federal agency. This attempt is made even more objectionable by the ambiguous wording of both the oath and disclaimer so that an individual may unknowingly perjure himself because these statements will be subject to interpretation at some future time and in a manner unknown at present. It is difficult to see how anyone in good conscience could agree to such a commitment.

Second: The imposition of the disclaimer and oath is obviously discriminatory, as evidenced by the fact that other groups of citizens such as farmers, businessmen, and even taxpayers, all conduct transactions with the Federal Government without a requirement that they subscribe to some sort of loyalty oath.

A third point which was raised concerns the very practical matter of obtaining foreign language experts from other countries for the language institutes. It seems unlikely that they would be in a position to or care to subscribe to an oath of loyalty to this country.

Finally, there has been a long history from Socrates to the present of similar relationships wherein a State has attempted the imposition of an oath contrary to the individual conscience. Knowledge of this history and its significance leaves no alternative for any citizen with a firm belief in democratic government but to oppose such oaths wherever and under whatever guise they appear.

Respectfully submitted on behalf of the faculty of Reed College.

M. W. CRONYN,
Faculty Clerk.

[From Mail Tribune, Medford Oreg., Feb. 8, 1959]

OBJECTIONABLE LOYALTY OATH

Most Americans are patriotic, and completely dedicated to the welfare of their Nation. They abhor this Nation's enemies. And many of them cannot understand why anyone would object to taking a so-called loyalty oath.

They, in their patriotic fervor, would be willing to raise their right hands and swear that they never have, do not now, and never will, advocate the forceful or illegal overthrow of the U.S. Government.

And they can't understand why anyone else would.

Let's look at it this way:

If they were applying for a job, and one of the conditions of employment was that they swear they have never beaten a small child to death, and will never do it, they'd probably be mad as hops.

"What kind of a stinking bum do you think I am?" would be their rejoinder, as they stalked off in search of a job where they could hold up their heads in pride and dignity.

It is for very similar reasons that the teaching profession feels discriminated against when asked to take such a negative "loyalty" oath.

They have no objection to a "positive" oath—one in which they declare they will uphold and support the Constitution and the laws and the ideals of the Nation.

One of the most lucid explanations of this situation we have seen was in a recent editorial in the Eugene Register-Guard, which said:

"The idea of the loyalty oath is a direct slap at the intellectual community. It is a hangover from the know-nothingism that swept America before the Civil War and that recurs periodically in hte form of Ku Kluxism or McCarthyism. The target, in all cases, is the educated man.

"We do not think it can be shown that a loyalty oath has ever, ever, been used to trap a spy. Any spy worth his rubles will sign anything if his signature will help him in his dirty business. Those who refuse to sign have been persons of principle who objected to being singled out as unduly suspect because of their professions. If refusal to sign is taken as an admission of guilt—a 'fifth amendment Communist' kind of thinking—are we to believe that any really subversive person would refuse?"

The president of Reed College, Richard H. Sullivan, recently announced the college would turn down a $3,349 grant from the Federal Government for scholarships, because of the fact that beneficiaries must take a form of the "negative" and discriminatory loyalty oath.

Dr. Sullivan objected because "singling out teachers and students as people not to be trusted gets under my skin."

The objections can be summed up in two points:

1. It is useless.

2. It is a gratuitous insult to an honorable profession.

That is why teachers object to it, and we think they're right.

[From the Eugene (Oreg.) Register-Guard, Feb. 4, 1959]

REED COLLEGE AND A HIGH PRINCIPLE

Reed College, through its president, Richard H. Sullivan, has turned down a $3,349 grant from the Federal Government. The scholarship money, made available through the National Defense Education Act, is forthcoming only if beneficiaries of this largess sign loyalty oaths. Reed's president says he turned down the money because singling out teachers and students as people not to be trusted gets under my skin.

Good for Reed. Perhaps this action will call attention to Senate bill 819, introduced by JOHN KENNEDY, of Massachusetts. This measure would remove the loyalty-oath requirement from the act. It has the support of numerous Senators, including RICHARD L. NEUBERGER, of Oregon.

The idea of the loyalty oath is a direct slap at the intellectual community. It is a hangover from the know-nothingism that swept America before the Civil War and that recurs periodically in the form of Ku Kluxism or McCarthyism. The target in all cases is the educated man.

We do not think it can be shown that a loyalty oath has ever, ever been used to trap a spy. Any spy worth his rubles will sign anything if his signature will help him in his dirty business. Those who refuse to sign have been persons of principle who objected to being singled out as unduly suspect because of their professions. If refusal to sign is taken as an admission of guilt—a fifth-amendment Communist kind of thinking—are we to believe that any really subversive person would refuse?

The scholarship program that Reed will not be a part of costs the Federal Government $250 million a year. It is small potatoes, indeed, compared with the farm-subsidy program, which costs nearly $5 billion a year. Yet those who receive money under the subsidy program, 18 times as costly as the scholarship program, are not asked to sign loyalty oaths. For all that subversion on the farm is not a common problem, it is just as true that it is no great problem in the colleges and universities.

Oregon, alone among the States on the coast, has never required a loyalty oath of its professors. This is due in part to the intensive lobbying in legislative halls in 1951 by W. M. Tugman, former editor of this newspaper; Charles A. Sprague, editor of the Oregon Statesman; and State Representative Earl Hill. All are Republicans. They were joined by Democrats like Maurine Neuberger and Robert Holmes. It was a tough battle, fought in a year when McCarthyism was riding high. They found support for loyalty oaths in surprising places, but they persevered and they won.

It is fitting that Reed, an Oregon college which is badly in need of all the money it can get, holds firm to the high principle.

[From the St. Louis Post-Dispatch, Feb. 5, 1959]

AN OATH THAT HURTS THE NATION

Reed College in Portland, Oreg., one of the better small colleges, has refused to accept money under the National Defense Education Act because a loyalty oath is demanded of those receiving grants or loans. This positive action follows appeals by the presidents of Harvard, Yale, and Princeton for repeal of the oath provision. The Association of American Colleges meanwhile is polling its 750 members on the question.

Such oaths, said President Griswold of Yale, "seem to represent a lack of confidence in young people and in their future, as well as in the educational process itself. They tend to alienate the good will of the loyal citizens without gaining a corresponding advantage in protecting the public against the actions or intentions of the disloyal."

More concretely, the oath requirement is preventing the use of a good part of the $900 million made available under the legislation, and thus it is delaying the training of the scientists, mathematicians and linguists needed in the defense of the Nation. After all, this law was not passed merely to aid education, but to make educated persons available for national service. Without repeal of the oath requirement, it is partly self-defeating.

EASTERN OREGON COLLEGE,
La Grande, Oreg., February 27, 1959.

The Honorable EDITH GREEN,
U.S. Representative,
House Office Building,
Washington, D.C.

DEAR MRS. GREEN: Recently we received the application forms required of student applicants for loans under the new Defense Education Act. We are very disturbed to find that this legislation has revived an "old sore" in the form of a negative oath requirement on top of an affirmative allegiance requirement. I am sure no one objects to the affirmative allegiance but the negative oath has been and remains objectionable. This is particularly true when it singles out one profession and one group of people as opposed to other citizens.

It is my personal hope, and I am sure I express the desire of our entire faculty, that the act itself be amended to remove this objectionable requirement. I do nope you can use your good influence to this end.

Sincerely yours,

FRANK B. BENNETT,
President.

AMERICAN ASSOCIATION OF UNIVERSITY PROFESSORS,
UNIVERSITY OF OREGON CHAPTER,
Eugene, Oreg., February 13, 1959.

The Honorable EDITH GREEN,
House of Representatives,
Washington, D.C.

DEAR MRS. GREEN: The University of Oregon Chapter of the American Association of University Professors unanimously passed the following resolutions concerning the disclaimer oath in the National Defense Education Act. A copy of our resolution is enclosed. We are particularly protesting the inclusion of the disclaimer oath and have no fault to find with the oath of allegiance similar to that taken by the President of the United States.

We urge that you use your influence to amend this act and until this is done, we are on record as favoring refusal of money under this act.

Respectfully,

EWART M. BALDWIN,
Secretary.

RESOLUTIONS PRESENTED TO THE GENERAL MEMBERSHIP OF THE UNIVERSITY OF OREGON CHAPTER A.A.U.P. BY THE TENURE, PROMOTION, AND SABBATICAL COMMITTEE, FEBRUARY 11, 1959

Whereas title X of section 1001(f)(1), of the National Defense Education Act of 1958 requires that a disclaimer affidavit be filed by any person receiving funds under the act; and

Whereas the Federal Government has disbursed millions upon millions of dollars to various business, financial, and agricultural enterprises without requiring such a disclaimer affidavit; and

Whereas the act seems thus to single out teachers and students as special objects of suspicion; and

Whereas the loyalty of students and teachers generally has been amply demonstrated: Therefore be it

Resolved, That the University of Oregon Chapter express approval of the actions taken by the national office of the American Association of University Professors (as reported in chapter letter No. VIII, of November 21, 1958) in protesting the disclaimer affidavit requirements; and be it further

Resolved, That the University of Oregon Chapter of the American Association of University Professors request the Congress so to modify the existing legislation as to remove the offending section; and be it further

Resolved, That the University of Oregon chapter respectfully request the administration of the university to refuse the acceptance and administration of any funds under the National Defense Education Act of 1958 unless and until the provision requiring a disclaimer oath in the form stated in title X, section 1001(f)(1) of the National Defense Education Act of 1958 has been deleted.

UNIVERSITY OF OREGON,
Eugene, Oreg., February 10, 1959.

Hon. EDITH GREEN,
U.S. House of Representatives,
Washington, D.C.

DEAR MRS. GREEN: The National Defense Act spells the beginning of what may turn out to be a long era of needed participation by the Federal Government in education. It is of great importance that Congress shall make a right beginning. The beginning made under the present act insults the good faith and intelligence of American educators and their students.

The act assumes that we do not realize that the ordinary oath of loyalty taken by all of us, from the inauguration oath of the President down, binds us to reject and oppose disloyalty of every kind. It suggests that we do not know the meaning of good faith, and that our wits are not of common brightness.

The act assumes that our want of understanding comes from a treason virus which infects people connected with higher education and leaves other people alone. If this assumption of our special liableness to treason is not true, why are we, as a class, required to sign the disclaimer affidavit? This insult to our profession is disgusting.

The act also assumes that signing the disclaimer will guarantee the signer's loyalty. This assumption does not show sound judgment of men. There are men who may refuse to sign because the requirement insults their good faith and intelligence, precisely the men most likely to have good faith, conscience, and dignity of spirit. Not only may individuals refuse to sign but entire institutions may refuse. In fact, the Reed College faculty has already refused. Thus the very aim of the National Defense Education Act would be defeated. The Congress is not wise to put such men and institutions under a cloud.

Would the act's disclaimer affidavit prevent a traitor from signing? To suppose that is to misunderstand the traitor mind, particularly the mind of a traitor in whose philosophy of life an oath in the name of God is meaningless because he believes there is no God.

Title X, section 1001(f)(1) reflects a certain hysteria with which our country has had experience in the past. Once upon a time it was called know-nothingism. In the present case it takes the form of suspicion against people in higher education. Our profession is getting a taste of this in other countries where, under dictatorships,

higher education has been among the first casualties.

Such are among the reasons I ask you to support efforts to eliminate the disclaimer affidavit from the National Education Defense Act.

Yours faithfully,

QUIRINUS BREEN,
Professor of History.

UNIVERSITY OF OREGON,
COLLEGE OF LIBERAL ARTS,
Eugene, Oreg., February 11, 1959.

Congresswoman EDITH GREEN,
U.S. Congress,
Washington, D.C.

DEAR CONGRESSMAN GREEN: The department heads of the College of Liberal Arts at their meeting last week requested that I write to you to ask your support of Senator KENNEDY'S amendment to repeal the negative oath requirement of the National Defense Education Act. As you know, the act contains two provisions respecting the oath:

1. An oath (or affirmation) of allegiance to the Constitution of the United States; and

2. A disclaimer oath that asks recipients of loans or fellowships to declare that they "do not believe in, and are not a member of and do not support any organization that believes in or teaches, the overthrow of the United States Government by force or violence or by any illegal or unconstitutional methods."

It is the second of these to which department heads object on the basis that the negative oath is wrong in principle, that it is unnecessary in view of the affirmative oath carried in the act, and that it sets apart and discriminates against a small segment of American people.

May I add that earlier in the week, Dean Charles T. Duncan and I jointly offered a resolution to the faculty in support of the Kennedy amendment. Under our faculty provisions, this resolution will not be acted upon until it has been reviewed by the senate and is presented to the faculty again at its March meeting.

I am confident that you will be sympathetic with our problem and shall, therefore, greatly appreciate your efforts on our behalf.

Sincerely yours,

ROBERT D. CLARK, *Dean.*

AMERICAN CIVIL LIBERTIES
UNION OF OREGON,
Portland, Oreg., February 6, 1959.

Hon. EDITH GREEN,
House Office Building,
Washington, D.C.

DEAR MRS. GREEN: On behalf of the Executive Board of the American Civil Liberties Union of Oregon, I am writing to urge you to use your influence to secure the deletion of section 1001(f), title 10, of the National Defense Education Act of 1958, which provides for a disclaimer oath for all the beneficiaries of the act. These include young people seeking loans, fellowships, and grants and many teachers and consulting experts involved in foreign language institutes and in other activities authorized by the act.

The American Civil Liberties Union has for a long time opposed such negative disclaimer oaths on the grounds of their vagueness and the presumption of unreliability which attaches to those individuals and groups selected for this kind of treatment. Since there is no definition of the organizations which are proscribed by the act nor of the term "support," it becomes most difficult for an individual to determine whether he is in a position to subscribe to such an oath. Furthermore, we believe it most undesirable to single out for this invidious treatment some of the ablest and potentially most valuable citizens of our country.

At a time when public opinion is coming increasingly to recognize the importance of higher education, it seems most unfortunate that this kind of an oath should be required. The history of such oaths indicates that they do not achieve their stated objective but may interfere with the attainment of valuable goals such as those which the National Defense Education Act seeks to implement. We trust that you will use your best efforts to secure the removal of this obnoxious provision.

Sincerely yours,

JUDAH BIERMAN,
Chairman.

OBERLIN COLLEGE,
Oberlin, Ohio, February 6, 1959.

Hon. EDITH GREEN,
House Education and Labor Committee,
House Office Building,
Washington, D.C.

DEAR MADAM: I am writing for the faculty of Oberlin College to express strong opposition to title X, section 1001(f)(1) of the National Defense Education Act of 1958, which reads:

"No * * * funds * * * shall be used to make payments or loans to any individual unless such individual (1) has executed and filed with the Commissioner an affidavit that he does not believe in, and is not a member of and does not support any organization that believes in or teaches the overthrow of the United States Government by force or violence or by any illegal or unconstitutional methods."

Our opposition is not directed against the oath of allegiance [title X, sec. 1001(f)(2)] which the act includes, but only to the foregoing quoted provision which is, in effect, a test oath. Such test oaths have aroused resistance many times before in the course of English and American history. An individual is compelled to make a statement disclaiming objectionable associations and beliefs in order to gain the benefits of the program. In our view this is unnecessary and unreasonable.

The provision of the oath concerning belief is particularly repugnant. We object to the notion that an individual should be penalized because of a mental state where no overt act has occurred. We fail to see how justice can be done in any proceeding to enforce this provision concerning the content of a human mind. We agree heartily with the late Justice Jackson, who said:

"Our forefathers found the evil of free thinking more to be endured than the evils of inquest or suppression. They gave the status of almost absolute individual rights to the outward means of expressing belief. I cannot believe they left open a way for legislation to embarrass or impede the mere mental processes by which those expressions of belief are examined and formulated. This is not only because individual thinking presents no danger to society, but because thoughtful, bold, and independent minds are essential to wise and considered self-government."

Suspicion directed at the students and teachers in our colleges and universities is completely unwarranted. Their understanding of and devotion to freedom and the cause of democracy is not surpassed by any other group in our society. We concur in the statement of Mr. Bentley Glass, president of the American Association of University Professors, who commented on the test oath as follows:

"If an individual refuses to sign, he raises a suspicion that he is unworthy of public trust or benefit. If he signs, he endorses the pertinency of the general suspicion about him and his kind which is embodied in the requirement."

The stand now taken by the Oberlin faculty against the test oath in the 1958 act is fully in accord with its proudest traditions. In 1952 the faculty unanimously adopted a resolution which included these statements relevant to the present issues:

"Times of crisis present sharp challenges to the professed values of a democratic society. At such times it is tempting to measure all things by the rough standards of unity, loyalty, and orthodoxy. The inevitable tendency is to restrict such fundamentals of democracy as discussion and debate, and even to make divergence of opinion appear dangerous.

"The Oberlin College faculty regards all forms of interference with intellectual freedom, discriminatory loyalty oaths, censorship, and other restrictions on free speech and thought as inimical to the democratic way of life."

In view of the objections and considerations stated above, we earnestly request that the test oath incorporated in title X, section 1001(f)(1) of the National Defense Education Act of 1958 be immediately repealed.

Sincerely yours,

DONALD M. LOVE,
Secretary of the Faculty.

PORTLAND STATE COLLEGE,
Portland, Oreg., January 30, 1959.

The Honorable EDITH GREEN,
House of Representatives,
Washington, D.C.

DEAR EDITH: I should like to call to your attention one aspect of the Defense Education Act passed last year. The oath which has been a requisite part is, I think, both contradictory and unnecessary. Under title VI, foreign language and area study programs, for example, teachers who might be asked to come from, say, Istanbul or Cairo, would be expected to take an oath which might easily affect their citizenship in their native lands, and such men and women might justifiably be as bitterly critical of our Government for making such a requirement as we would be were we required to take an oath before teaching in some foreign university. Indeed, we would lose our citizenship by taking such an oath. Secondly, I should like to point out that the oath required is negative. No public servant, I think, has any objection to making an affirmation; but I would suggest that a Communist would be perfectly willing to subscribe 10 times over and as many times in one day to such an oath if he could effect his objective. He would have no compunctions about swearing any oath, positive or negative. A true American is, I think, merely insulted by being asked to swear a negative oath.

I sincerely hope that you will take appropriate action regarding this one aspect of the Education Defense Act.

Sincerely yours,

HOYT C. FRANCHERE,
Chairman, Division of Humanities.

RESOLUTION CONCERNING THE NATIONAL DEFENSE ACT OF 1958, ADOPTED BY THE REED COLLEGE STUDENT COUNCIL ON FEBRUARY 2, 1959

Section 1001(f) of the National Defense Act of 1958, Public Law 864, passed by the 85th Congress, provides that each applicant for educational aid under the act must file an affidavit proclaiming that he "does not believe in, and is not a member of and does not support any organization that believes in, or teaches, the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods and has taken or subscribed to an oath or affirmation of the following form: I do solemnly swear (or affirm) that I will bear true faith and allegiance to the United States of America and will support and defend the Constitution and laws of the United States against all its enemies, foreign and domestic."

The provision of a loyalty oath requirement in this act, especially a negative oath such as the above, is contrary to American traditions of freedom and fair play.

The oath is vague. It requires the individual to make, upon pain of perjuring himself, sweeping statements about his beliefs and associations; and to disclaim affiliation with organizations which are not specified in the law.

The oath is insulting. Many groups in the United States receive Government economic aid without having to sign such oaths; the oath thus carries the implication that there is something about students which makes them particularly subject to disloyal influences, desipte the fact that some of America's great patriots were closely associated with the academic community.

Principally, however, the oath is a restriction on freedom of belief and association. It gives Government aid to students, not solely on the grounds of their need and qualifications for such aid, but also on the basis of the organizations to which they belong and the ideas to which they adhere. The Government has thus attempted to replace the longstanding academic tradition of free exchange in the marketplace of ideas with a program in which the Government dictates what ideas shall be presented, and by whom. Such a restriction has no place in a governmental system based on freedom of speech and thought.

Therefore, we, the Student Council of Reed College, resolve our opposition to the loyalty oath provision of this act, and urge that it be amended to remove this provision.

Mrs. GREEN of Oregon. Mr. Speaker, the Secretary of Health, Education, and Welfare, a distinguished member of the President's Cabinet, has addressed himself to, among other things, the question of expense in a press conference statement. Under unanimous consent, I include the statement by Secretary Flemming at this point in my remarks:

In response to an inquiry, Secretary Arthur S. Flemming made the following statement:

"The Office of Education is developing regulations and procedures for administering the loyalty oath provisions of the National Defense Education Act as enacted by the Congress. As soon as these regulations and procedures have been completed they will be made public.

"I would like to make three points regarding this provision.

"1. All persons involved in the administration of this act would have been able to deny funds to persons who themselves seek, or who belong to organizations that believe in or teach, the overthrow of the Government by force or violence, even though this provision had never been inserted. It is clear that such persons are not entitled to and should not receive funds from the United States Government.

"2. Requiring persons who receive funds under this act to sign an affidavit and an oath of allegiance will not uncover any persons who themselves seek or who belong to organizations that believe in or teach the overthrow of the Government by force or violence. Such persons have no scruples about signing such an affidavit and taking such an oath.

"3. The inclusion of this requirement in the National Defense Education Act will make it necessary for educators and students to go through a procedure that results in unnecessary expenditures on the part of the Government without making a contribution to national security."

Mr. Speaker, I find the loyalty oath provisions of the Defense Education Act, and for that matter, all of the negative disclaimer requirements with which we have filled our statute books in recent years, a basic denial of the American tradition. In the Constitution of the United States, as drafted by the Founding Fathers, to whom so much lip service is paid these days, at the end of the very last article, there occur these words:

The Senators and Representatives beforementioned, and the members of the several State legislatures, and all executive and judicial officers, both of the United States and of the several States, shall be bound by oath or affirmation, to support this Constitution; but no religious test shall ever be required as a qualification to any office or public trust under the United States.

To be sure, Mr. Speaker, these words do not expressly disallow such test oaths as are required by section 1001(f)(1). But they are clear evidence of the hostility to the principle of the test oath which was a vital part of the principles of the courageous and imaginative men who wrote this great Constitution of ours. They hated and despised the only test oaths with which they were familiar in the age of autocracy in which they lived. That age was an age of intolerance in the religious field, and the religious orthodoxies which European nations established were a part and parcel of the political structure of the nations involved. The test oaths were designed to eliminate from public life and from the benefits of citizenship in these countries, not only adherents of other religions than the locally approved one, but adherents of the tenets of toleration, the possessors of thin-skinned consciences, as well.

The Founding Fathers knew bitterly the lessons which they thought humanity had learned during the age of religious wars, and they were determined that no such nonsense would plague the country they had founded and which they loved.

It has remained for our time to revive the principle of the test oath, not attaching it to religion, but to patriotism, an equally sacred emotion, and one which, like religion, is too fine an expression of man's highest aspirations to be made a vehicle for the fears of the insecure.

Mr. Speaker, I love my country. But, Mr. Speaker, were I a private citizen, not seeking a public office, I would bitterly resent the insinuation by any legislator or bureaucrat that my loyalty was questioned and that I should purge myself or someone else's suspicion by signing an oath. An oath, Mr. Speaker? Not one, but two oaths.

We have heard a great many lectures on this floor, read much in the public prints, and heard much in private discussions in recent years about the nature of the Communist conspiracy. Its objectives, its contempt for what it terms "bourgeois morality," its ruthlessness, all these things have been exposed for every thinking person to see. And in all these exposures, we have been again and again reminded that the Communist has no scruples when it comes to attaining his distorted dreams of a proletarian millenium. He is bound in conscience by no oaths. He is a man who places his cause above his country, above his honor, above his family. How, then, Mr. Speaker, can we believe that such oaths as are contained in the Defense Education Act and in other acts on the statute books would be for one second a deterrent to any Communist? It is not the Communist who refuses such oaths, Mr. Speaker. It is the dedicated American, true to the grand oath which Jefferson swore, and by which we, his spiritual children, are still bound—the oath of eternal hostility to every form of tyranny over the mind of man. These loyalty oaths are meaningless, Mr. Speaker, as weapons against communism. But they are tragically potent as weapons against our own self-confidence, as attacks upon our devotion to freedom, as stresses and strains on the ancient belief of free men that men shall be held accountable to society for their actions, and to God alone for their thoughts.

Realizing this, scholars and students throughout this great Nation of ours have protested against the imposition of these futile and un-American oaths.

In my own district, a great college, Reed College, has refused pointblank to participate in the National Defense Education Act programs as long as these oath requirements are retained. At least six other distinguished American colleges have refused to participate, or have withdrawn their applications for participation under the act. These American colleges have not been afraid to risk criticism and have been willing to put principle ahead of monetary considerations. This honor roll is a list of some of the outstanding educational institutions of our time.

Listen to these names. They are the names of centers of courage and devotion to real Americanism, as well as centers of intellectual activity: Bryn Mawr College, Swarthmore College, Oberlin College, Reed College, Haverford College, Wilmington College in Ohio, and Goucher College. Other universities and colleges have expressed real concern, but have not yet actually refused.

Mr. Speaker, this country desperately needs the brainpower and the imaginative devotion to the search for truth that characterizes these colleges, their distinguished faculties and their alumni everywhere. It needs these things far more than it needs further accumulations of meaningless files of loyalty oaths.

Under unanimous consent, I include at this point in the RECORD a memorandum from the distinguished president of Reed, Mr. Richard H. Sullivan, concerning the intellectual contributions which Reed College has made to the Nation:

In the early years of this decade Robert H. Knapp and H. B. Goodrich undertook a very careful survey of American colleges and their records in producing scientists of distinction. Their findings were published by the University of Chicago Press in 1952 in the volume "Origins of American Scientists." They wrote in part as follows:

"The record of Reed College in the production of scientists is altogether remarkable. Its index for the year 1924–34 shows Reed's composite rate of production to have been 132 male scientists per 1,000 male graduates; its index for the period 1930–41 * * * was 98 scientists per 1,000 graduates. * * *

Reed undoubtedly ranks first in the production of scientists for both periods among all American institutions. Its closest rival for the earlier period had a rate of production only half that of Reed. A further examination of Reed's record reveals that this extraordinary effectiveness arises from the superior performance of all departments in the institution rather than from exceptional achievements by one or two. Of the five science departments maintained, three rank first in the Nation in their respective fields, and the remaining two rank among the first eight.

Of the 12 Rhodes scholars produced by this small institution between 1925 and 1940, 10 had concentrated in 1 of the social sciences, and only 1 in a natural science. We must recognize from this and other evidence that Reed's claim to distinction is generalized, not confined to the sciences alone."

In 1953 a further study was published by Robert H. Knapp and Joseph J. Greenbaum, "The Younger American Scholar: His Collegiate Origins." A more recent chronological period, the origins of younger scholars, and all fields of major study were scrutinized. A male index of collegiate productivity was developed, and on this Reed College was ranked second in the entire Nation.

Similar indexes were provided separately for the three broad areas of study: science, social science, humanities. Only two colleges were listed among the first 10 in all 3 areas, and Reed College was 1 of these.

Comparable findings and conclusions have been presented in other studies. Moreover, Reed graduates are continuing to be awarded national and international fellowships for graduate and professional study entirely out of proportion to the size of the institution. The graduating class of 1957, with 99 members, received 40 awards for continuation of their studies. These included:

One Rhodes scholarship.

One four-year fellowship of the Rockefeller Institute for Medical Research.

One Social Science Research Council fellowship.

Two National Science Foundation fellowships.

Two Fulbright fellowships.

Six Woodrow Wilson fellowships.

Thirteen members of that class planned to enter medical school in the fall of 1957, and 48 were planning to continue in graduate schools of arts and science (38 of them with national or institutional fellowships and assistantships). Ten more planned to take scientific positions immediately after college.

Now, Mr. Speaker, I am quite aware that my position on this issue is not one which is precisely unanimous in the House. I am sure, as one Member warned me when I sought to discuss this issue, that there will be quite a fight if this bill is reported and debated. A few of my constituents have written letters in opposition to my position on this bill.

Recently I did receive one letter which planted some seeds of doubt in my mind. The letter said, in effect, we have to show these college "perfessors" that they aren't anything special and that they are going to be treated just like everybody else. "Just like everybody else," Mr. Speaker. Well, there is more than one way to treat college professors "just like everybody else." We could repeal this discriminatory and nearly unique loyalty oath provision and assume that college professors, like bankers, dentists, hod carriers, and farmers, are loyal, until we at least have some evidence to the contrary. But that might be too direct an approach. There has occurred to me another method of treating teachers as we treat other people and, at the same time, utilizing the oath technique, if we continue to have confidence in it, as a weapon against other forms of antisocial behavior.

I have prepared a number of bills, Mr. Speaker, which I would like to discuss before introducing them. They are not yet in bill form, since my legal advisers are finding certain difficulties. Yet I would like the opportunity to discuss them and to hear from my colleagues such suggestions as they may have to further utilize the shining sword of the oath as a weapon against the ills that beset our society.

The first of these bills, and one which will go a long way toward treating teachers as we treat other people is a bill requiring every person who receives any payment or loan from the United States, or makes any payment to the United States, to file with whatever agency may be concerned, an affidavit to the effect that he does not believe in, or belong to or support any organization which believes in the right to advocate or teach the violent overthrow of the Government or alteration of the Constitution by illegal or unconstitutional means. Each such person should also swear that he does not belong to or support any organization based upon blood descent from any person who advocated or engaged in attempts to overthrow or alter any established Government within the present limits of the United States by force or violence.

Then we could have a special fire prevention oath to be sworn to by all U.S. Forest Service employees, denying membership in any organization which advocates arson.

The newest contributions of science also offer a field for expansion of the oath principle which we have never begun to exploit. Naturally, all the employees of the new National Astronautics and Space Agency will be required to take the usual plenitude of loyalty oaths and disloyalty disclaimers. But, Mr. Speaker, think of the special circumstances. Men will soon be sent into outer space and, in all probability, outside of the Earth's atmosphere. Would it not be the better part of valor to require an oath from each of these returning space voyagers that they have not become associated with unterrestrial organizations, and that they have not become infected with any Martian, Lunar, or other unearthly ideologies? While we are at it, it might be desirable to require such intrepid spacemen to sign oaths before going up, to the effect that they promise to come down.

Mr. Speaker, let us not rest content with oaths simply guaranteeing the law-abiding character of our citizenry. Let us fortify their sincerity as well, with a series of sincerity oaths, designed to cover as large a segment of the population as possible.

Our farmers have been berated from every direction for accepting the farm subsidies which the Congress has voted for them. In addition to the disclaimer and loyalty oaths, let us require them to sign an affadavit that they sincerely need the payments which they are receiving, and that their reception of such payments is sincerely in keeping, not only with the letter of the law, but with its spirit and intent as well.

To tidy up the whole business, let us enact three other bills. The first would be required of all executive officials appearing before any Appropriations Committee or Subcommittee hearings, and would be to the effect that the sums they sincerely say their agency needs are sincerely supported as adequate and as necessary, both by the agency and by the Budget Bureau, that new guardian against administrative heterodoxy.

Let us require veterans to sign loyalty oaths before receiving any VA payments. Some do-gooders might suggest that veterans, especially those who have been disabled in their country's service, have given ample proof of their loyalty. I personally think this is true beyond any doubt. Let us, above all, be sure.

My last bill is giving my legal counsel the greatest amount of trouble, but it is worth it. It is an oath to be taken by everyone who, under any statute must take any sort of oath, and this new oath would provide that the previous oath was taken in good faith. My legal advisers are having a bit of trouble devising the language which would make perfectly clear that a subsequent oath must be taken as to the accuracy of the preceding oath. Thus far, they have language which still leaves one final oath unsupported by a further oath. If my legal advisers are equal to the task, however, I hope eventually to introduce a bill which will require a literally endless cycle of oaths, each one guaranteeing to the public and the agency which has custody of these oaths that the previous one was true. It may require money to administer, to file, to investigate and to store these oaths, but Mr. Speaker, just think how safe we will be when everyone has begun to sign them.

And in this matter of expense, Mr. Speaker, I am preparing a bill to authorize the appropriation of $5 billion to pay for the costs of personnel, printing equipment, and storage of these new oaths. But I would hasten to assure my colleagues that this appropriation will not unbalance the budget. If this entire package of oath bills is accepted we can, after all, reduce the budget by far more than this program will cost. We can save vast amounts of money and services now rendered by the United States to farmers, publishers, veterans, forest rangers, spacemen, and other people who fail to complete the cleverly endless cycle of oaths which the proposed legislation requires. We can thus, Mr. Speaker, not only have a self-financing program, but also achieve the perfect safety that a paper curtain of oaths can best provide for the land of the free and the home of the affidavit.

Mr. BAILEY. Mr. Speaker, will the gentlewoman yield?

Mrs. GREEN of Oregon. I yield.

Mr. BAILEY. I sincerely hope the gentlewoman from Oregon will not find it necessary to rewrite all the Federal statutes in order to get some action. The Subcommittee on Education of which I happen to be chairman and the

second Subcommittee on Education of which the gentleman from Alabama is chairman have plans for an executive session of the two committees to consider the possibility of offering some amendment to the Defense Education Act which was passed by the 85th Congress, and I am sure that in that event we will give careful consideration to your proposal and your legislation and the possibilities are that the gentlewoman may be invited to come in and deliver this oration again.

Mrs. GREEN of Oregon. I thank my colleague from West Virginia, especially as chairman of that very important committee. He has shown wonderful leadership in the Congress over the years in regard to educational matters. No one has shown a greater grasp of the needs and the potential of the Nation's educational system.

Mr. BURDICK. Mr. Speaker, will the gentlewoman yield?

Mrs. GREEN of Oregon. I am glad to yield to the gentleman from North Dakota.

Mr. BURDICK. Mr. Speaker, I would like to commend the gentlewoman from Oregon for her very fine and able presentation. I want to associate myself with the position the gentlewoman has taken and I want to assure her that I will support H.R. 4066.

Mrs. GREEN of Oregon. I thank the gentleman from North Dakota.

Mr. DIXON. Mr. Speaker, will the gentlewoman yield?

Mrs. GREEN of Oregon. I am glad to yield to my colleague, the gentleman from Utah.

Mr. DIXON. Mr. Speaker, the gentlewoman has reduced this question of oaths to a ridiculous absurdity and she has done so very logically. If you support the provisions in this Defense Education Act to require the teachers to take an oath, you must then carry it to the extreme that the gentlewoman has suggested. And like the gentlewoman, I resent very much the inference in the clause that our school people need discipline and that they are less loyal to this country than other people. On the contrary, a lifetime experience with our school people convinces me that our universities and our colleges are nurseries of principle and honor. There is little, if any, graft there. They are wonderful Americans. Of course, there are a few exceptions, but that cannot be handled through shotgun oaths. I also appreciate the statement of the gentleman from West Virginia who is a fine champion of education and whom I admire when he says that his committee is going to give consideration, to the cause of the gentlewoman.

Mrs. GREEN of Oregon. I thank the gentleman from Utah. It has always been one of my regrets that the distinguished gentleman and scholar does not serve on the Committee on Education and Labor of the House.

Mr. AVERY. Mr. Speaker, will the gentlewoman yield?

Mrs. GREEN of Oregon. I am happy to yield to my colleague.

Mr. AVERY. Mr. Speaker, I find it extremely difficult to take the floor to disagree with some of my colleagues who have spoken this afternoon, especially my friend the gentleman from Utah and certainly the most charming Member of the House who now has the floor [Mrs. GREEN]. However, I am not just sure as to where the gentlewoman started to be facetious in her speech and where she was serious. Thinking over what I understood her to say, at first it all seemed very logical and clear to her that employees of the Federal Government should be required to take a loyalty oath, and yet she thought that we were being inconsistent or not being entirely fair and realistic in requiring a schoolteacher to take a loyalty oath. Now, what is the distinction? Certainly an employee in the gentlewoman's office, for instance, is indirectly an employee of the Federal Government. I do not think it is any more of an unfair requirement for that employee to take a loyalty oath than the employee of her local school board who is teaching the children of her own community. Can there ever be a more sensitive area in America than the question of what ideology or what philosophy might be advanced to the children in a classroom? What is the distinction? I want to pinpoint my question which is—What is the distinction?

Mrs. GREEN of Oregon. I regret first of all that the gentleman did not know where I ended the serious part of my speech and where I started the facetious part because, frankly, though I may have spoken in facetious terms, I am serious about it all. If you are going to require a loyalty oath of teachers then I think you should expand it to require loyalty oaths of other people.

You ask whether there is any difference between people on the Federal payroll taking an oath and a teacher. I think there is a difference. A person who is working for the Government has the employee-to-employer relation to the Government; the student, the veteran, the farmer—even when receiving money from the Government under an act of Congress—has the status of citizen boss in relation to the Government—not employee. I might also say to the gentleman that no oath will ever defend us against any Communist. A Communist would not hesitate to sign it for one moment.

I would submit that what we need is free men in this country; a reaffirmation of our faith in freedom. There can be no better way to defend this country than to rely on its own inherent superiority to communism. That is our greatest hope, not a meaningless paper oath.

Mr. MEYER. Mr. Speaker, will the gentlewoman yield?

Mrs. GREEN of Oregon. I yield to the gentleman from Vermont.

Mr. MEYER. I would like to answer the gentleman from Kansas and also compliment the gentlewoman from Oregon most highly on what she has had to say.

As a career employee of the United States Department of Agriculture many years back I was required to take an oath of this nature which at the time I resented very much. At the time I made a written protest, I was one of two in my region, the Northeastern Region. I still do not believe that it was sensible. I still do not believe that there was any reason to have it, and I can tell you the effect: Because I objected, and was only one of two to do so in writing; because I followed my own conscience in objecting to it, perhaps I displeased some of the administrators who were my superiors. Some of my superiors doubtless thought that I was kind of an "odd ball." I do not think I was an "odd ball." I do not think there was a need for that oath for Government service or for schoolteachers or for anything else.

If we in this country cannot depend on the people of this country and on our way of doing many things, then we cannot depend on anything. Are we now going to inject this aspect of a police state? Are we going to follow this path to the Gestapo? That is the way we are headed, and it is about time we realized it. We talk about these un-American theories we are fighting. It seems to me this loyalty oath is just about as un-American as anything we have, and as long as I am here in this Congress I am going to protest against such things because I am convinced that they are wrong, not only partly wrong, but completely wrong.

Mrs. GREEN of Oregon. I thank the gentleman from Vermont. I would ask the gentleman from Vermont if he knows of any individual or any organization which has ever made a study of communism which has ever come out with a report that an oath is a successful—an effective device against Communists or against communism in general?

Mr. MEYER. I do not see how it could be, for if they are as dishonest as they are said to be, what does an oath matter? It is only to a man who has a conscience or belief in himself that an oath means anything.

Mr. AVERY. Mr. Speaker, will the gentlewoman yield further?

Mrs. GREEN of Oregon. I yield.

Mr. AVERY. I believe we got off the subject just a little. I was not advocating that the taking of an oath be required in any or all of those situations; my question was what was the distinction? I would like to inquire of the gentleman from Vermont if he would follow his reasoning a little further, would he support the resolution that has been introduced in Congress to terminate the Un-American Activities Committee?

Mrs. GREEN of Oregon. I believe I have the floor. If the gentleman from Kansas would follow the logic of my remarks a little further, would he advocate an oath for teachers and professors, and then would he also require an oath for applicants for farm subsidy, for veterans or from anyone who receives other types of benefits?

Mr. AVERY. There is not anything wrong with it along the lines we are talking about if it would strengthen national security.

Mrs. GREEN of Oregon. Would a paper curtain of oaths really strengthen our national security? If so, shall we have several? First you have an oath of affirmation, an affirmative oath; then the oath we have just talked about is the negative disclaimer. Should that be re-

quired of teachers, professors, and scholars? Many of the universities of the country have objected to it very strongly.

Mr. AVERY. Not if it is the conventional disclaimer oath. If we are to be consistent about this, I would like to ask the gentlewoman from Oregon then would she suggest that we lift the loyalty oath requirement of our own employees? We should be consistent about it either way.

Mrs. GREEN of Oregon. I am trying, sir, to be consistent by saying that if we now require disclaimer oaths for teachers, for students, then we must be consistent and require that same oath from applicants for veterans' pensions, for farmers, for space jockeys, and so on.

That is the very thing I am pointing out.

Mr. TEAGUE of California. Mr. Speaker, will the gentlewoman yield?

Mrs. GREEN of Oregon. I yield to the gentleman from California.

Mr. TEAGUE of California. I would like to present a little different point of view for the record perhaps. I find the gentlewoman's speech most interesting and I know there is no more conscientious Member of the House. But I say, with due respect, that to my way of thinking this is a tempest in a teapot. I am inclined to agree with her that the oath accomplishes very little; on the other hand, it is beyond me to understood how any loyal American can object to swearing that he is a loyal American and does not advocate the forcible overthrow of our form of government.

Mrs. GREEN of Oregon. We are objecting to the series of oaths. We require them to sign one oath that they will uphold the Constitution, then we require them to sign a second oath. Then should we not require a third oath that they meant what they said in the preceding oath and the oath preceding that?

Mr. TEAGUE of California. That is carrying it to an extreme. Many examples the gentlewoman gave are interesting. I would be inclined to say that it would add an awful lot of cost to the Government, and I am endeavoring to avoid that. But I do not see how anyone could object to signing such an oath.

Mr. JOHNSON of Colorado. Mr. Speaker, will the gentlewoman yield?

Mrs. GREEN of Oregon. I yield to the gentleman from Colorado.

Mr. JOHNSON of Colorado. I first want to compliment the gentlewoman on a very beautifully constructed argument, and I hope she will present it before the various committees and that she will have the opportunity to present it before the full House at the time the bill comes on for consideration, because I believe it is worthy of the attention of this body.

I should like to offer one shred of evidence, and refer to an Illinois case where an oath was required. After some time they found one janitor who refused to sign the oath. He said very simply that when he became a citizen of the United States some 40 years earlier he had taken the oath of citizenship and he did not thereafter wish his loyalty to be brought into question. So he resigned from the school system. That is the kind of person who is proud of his own integrity, his own humanity, his own Americanism, and he resents the suggestion. This is not a matter to be taken lightly. About all it can do is have the most conscientious take the oath, but it will never catch a thief.

Mrs. GREEN of Oregon. I thank the gentleman for his usual very excellent contribution.

TRIBUTE TO HON. FRED SCHWENGEL

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Utah [Mr. DIXON] is recognized for 40 minutes.

Mr. DIXON. Mr. Speaker, the members of the 45th Club of Congress have asked me to request this time for two purposes. The first one is to show the appreciation of the group to the committee that conducted our most inspirational Lincoln Day program, and the second is to fortify the move that is now on foot to appoint a centennial commission commemorating the 100th anniversary of the establishment of the U.S. Department of Agriculture and the land grant colleges and universities.

If the gentleman from Iowa [Mr. SCHWENGEL] is here, I would like him to stand, as well as the gentleman from Illinois [Mr. MACK], the gentleman from Indiana [Mr. BRAY], and the gentleman from Indiana [Mr. DENTON]. We extend to this committee our congratulations and our sincerest thanks for a wonderful job well done.

It is indeed a pleasure for me to briefly present information on the splendid leadership of Congressman SCHWENGEL, of Iowa, current president of the Lincoln Group of the District of Columbia, who has for more than 2 years been a leader in developing the Lincoln Sesquicentennial.

The Lincoln Group has for more than 25 years been a continuing nonpolitical organization devoted to honoring Abraham Lincoln and to promoting the great American ideals exemplified by his life. It is composed of many of the Nation's most eminent Lincoln authors and scholars, as well as of people with a general interest in Lincoln's life and achievements. In addition to Congressman SCHWENGEL, a number of other patriotic Americans have become permanently identified with the group's Lincoln tradition and activities. Among these individuals is Bruce Caton, popular historian-author of "A Stillness at Appomattox" and editor of American Heritage magazine; Gen. U. S. Grant III, grandson of the famous Union general and who later became President; Dr. R. Gerald McMurtry, author of many publications dealing with the Lincoln history; Dr. William H. Townsend, Kentucky Lincoln authority and now chairman of the Kentucky Lincoln Sesquicentennial; Hon. George A. Dondero, for many years Congressman from Michigan and who is a Lincoln enthusiast; and Miss Josephine Cobb, Chief of the Still Picture Branch of the National Archives, an authority on Brady and Civil War photography.

It was in Congressman SCHWENGEL'S office on the evening of April 19, 1957, that the local Lincoln group decided to sponsor the creation by the Congress of a Federal Lincoln Sesquicentennial Commission. A committee was appointed at that time, and it became the nucleus organization which was instrumental in the passage of legislation which led to the establishment of the Lincoln Sesquicentennial Commission.

Among those who had joined in sponsoring the creation of the National Commission in the House of Representatives were, in addition to Congressman Schwengel, Representatives Peter F. Mack, Jr., Leo E. Allen, of Illinois; F. Jay Nimtz, of Indiana; Hugh Scott, of Pennsylvania; Winfield K. Denton, of Indiana; and William G. Bray, of Indiana. For the same purpose, a Senate legislation was introduced by Senator John Sherman Cooper, of Kentucky, joined by Senator Thruston B. Morton, of Kentucky, and Everett M. Dirksen and Paul H. Douglas, of Illinois, and Homer E. Capehart and William E. Jenner, of Indiana.

Congressman SCHWENGEL was also an important instrument in the creation of the Federal Civil War Centennial Commission. He was appointed a member of that Commission by House Speaker SAM RAYBURN. Throughout all of these legislative moves and accomplishments, he has steadfastly and continuously supported the development of Lincoln group and Lincoln sesquicentennial objectives. As a consequence of the establishment of the Lincoln Commission, which law—House Joint Resolution 351—was approved by the President on September 2, 1957, the President did issue on December 29, 1958, a proclamation which in part reads as follows:

> Now, therefore, I, Dwight D. Eisenhower, President of the United States of America, in accordance with the purposes of the Congress, do hereby call upon all agencies and officers of the Federal Government, upon the Governors of the States, and upon the American people to observe the year 1959 as the Abraham Lincoln Sesquicentennial Year, and throughout this period—and especially during the week February 5 to 12—to do honor to Lincoln's memory by appropriate activities and ceremonies, by a restudy of his life and his spoken and written words, and by personal rededication to the principles of citizenship and the philosophy of government for which he gave the last full measure of devotion.

As the fall of 1958 approached, Congrssman SCHWENGEL unselfishly gave of his time, devotion, and substance to the organization of a program to significantly recall the greatness of President Abraham Lincoln, 16th President of the United States. He organized, was master of ceremonies at, and otherwise led the Nation in the successful arrangement of the national Lincoln sesquicentennial dinner held in Hotel Statler, Washington, on the evening of February 11, 1959. The following day a historic joint session of Congress was held in this very Chamber, which had been arranged under the chairmanship of Congressman SCHWENGEL. The main address at the dinner was delivered by Rev. Richard S. Emrich, S.M., bishop of Michigan.

President Eisenhower favored the distinguished nonpartisan gathering by making a few remarks, and among the other dignitaries at the head table on the dias were Vice President Richard M. Nixon; Mr. Victor M. Birely; Hon. Frank Church, of Idaho; Hon. John Sherman Cooper, Chairman of the Lincoln Sesquicentennial Commission; Rev. Frederick B. Harris, Chaplain of the U.S. Senate; Rev. George M. Docherty, pastor of the New York Avenue Presbyterian Church, which Lincoln attended; Gen. U. S. Grant III; Mrs. J. Borden Harriman, former Ambassadress to Norway; and Mr. Melvin D. Hildreth, of Washington, D.C.

Many news reports were released which in some detail described the address of Bishop Emrich at the historical dinner. Among those releases was an article published in the Washington Post and Times Herald on Thursday, February 12, 1959, as follows:

IKE, PRELATE LAUD LINCOLN

(By Harry Gabbett)

Worldwide celebration of this 150th anniversary year of Abraham Lincoln's birth got underway ceremonially here last night with national and international leaders attending a Lincoln dinner in the Statler Hotel.

Guests were treated to a varied program which included President Eisenhower's brief résumé of the homage statesman the world over have paid the Civil War President, and an address by the Right Reverend Richard S. M. Emrich, Episcopal bishop of the diocese of Michigan.

The President cited among the international marks of respect for Lincoln a New Delhi museum in his honor; Tolstoy's description of Lincoln as the only giant among world statesmen; Sun Yat-sen's recourse to the Gettysburg Address for his three basic principles of government, and Prime Minister Nehru's personal attachment to Lincoln's memory.

He cited among Lincoln's words having applicability today:

"The tendency to undue expansion is unquestionably the chief difficulty. How to do something and still not do too much, is the question. * * * I would not borrow money. I am against an overwhelming, crushing system. Suppose that at each session Congress shall first determine how much money can, for that year, be spared for improvements; then apportion that sum to the most important objects."

The words were taken from a Lincoln speech in the House June 20, 1848, on internal improvements.

Bishop Emrich chose for his theme "Lincoln and the Judgments of the Almighty."

He opened with a plea to sesquicentennial year Lincoln orators to speak not on Lincoln generally, but on some aspect of his great and mysterious person. Let them drill * * * into a small surface, and bring up the riches beneath.

The small surface into which the cleric drilled appears toward the close of Lincoln's Second Inaugural Address, in which the Great Emancipator proclaimed:

"If we shall suppose that American slavery is one of those offenses which, in the providence of God, must needs come, but which, having continued through His appointed time, He now wills to remove, and that He gives to both North and South this terrible war, as the woe due to those by whom the offense came, shall we discern therein any departure from those divine attributes which the believers in a living God always ascribe to Him.

"Fondly do we hope—fervently do we pray—that this mighty scourge of war may speedily pass away. Yet, if God wills that it continue until all the wealth piled by the bondsman's 250 years of unrequited toil shall be sunk, and until every drop of blood drawn by the lash shall be paid by another drawn by the sword, as was said 3,000 years ago, so still must it be said, the judgments of the Lord are true and righteous altogether."

In that passage, Bishop Emrich continued, Lincoln saw the war as God's judgment on America for slavery, that America must pay. What he said about judgment was the teaching of the Scriptures; it was old-time religion; it was a far remove from some of the effeminate and sentimental religion of a comfortable suburb. It was fearful and awful. He saw God's hand in the darkness. He does not say that perhaps this is true; but that it is true; and the first question to which we address ourselves is, Did Lincoln really believe this, or was he saying something that he felt ought to be said? Was it profound conviction or was it rhetoric?

Bishop Emrich went on to cite subsequent Lincoln writings in support of his contention that it was profound conviction. Moreover, that it was not a popular thing to say—and he knew it.

The dinner, sponsored by the District of Columbia Lincoln group in cooperation with the Lincoln Sesquicentennial Commission, also featured a film presentation of "Meet Mr. Lincoln."

President Eisenhower's brief remarks show his reverence for the memory of a distinguished predecessor. His remarks were as follows:

Mr. Chairman, Mr. Vice President, and distinguished guests, it is natural, I think, that speaking last in such a program as this, that we should expect some duplication and repetition. But I should reassure you as I begin, by saying that my talk is only 5 or 6 minutes, so if there are these inevitable duplications, I may hope and pray that you do not find them lengthy or too boring.

Ninety-eight years ago the President-elect of the United States boarded a train in Springfield, Ill., to start the long journey to his Nation's Capital. That same day a Washington newspaper reported the election in Montgomery, Ala., of another President, Jefferson Davis, and from Fort Sumter came a report of preparations for attack.

In bidding farewell to Springfield, Lincoln shared his innermost thoughts with old friends. In part, he said, "I now leave, not knowing when or whether ever, I may return, with a task before me greater than that which rested upon Washington. Without the assistance of that Divine Being who ever attended him, I cannot succeed. With that assistance I cannot fail."

Four years and two months later Abraham Lincoln was dead—but the Union again united. Now, said Secretary of War Stanton, "he belongs to the ages."

But Abraham Lincoln belongs not only to the ages, but to all humanity. Immortality is his in the hearts of all who love freedom everywhere in the world.

Each year 2 million people visit the Lincoln Memorial in Washington.

In New Delhi, a Lincoln society is establishing a museum in his honor. High school students in Tokyo last summer ranked him as the most respected of all world figures.

"Of all the great national statesmen of history," Russia's Tolstoy thought, "Lincoln is the only giant."

In the Caucasian Mountains, a wild chieftain asked of a visitor, "Tell us about the greatest ruler in the world. We want to know something about this man who was so great that he even forgave the crimes of his greatest enemies and shook brotherly hands with those who had plotted against his life."

The first President of modern China, Sun Yat-sen, found his three basic principles of government in Lincoln's Gettysburg Address.

For many years India's Prime Minister Nehru has kept, on the study table, a brass mold of Lincoln's right hand. "I look at it every day," Nehru tells us; "it is strong, firm and yet gentle * * * it gives me great strength."

The birth, 150 years ago, which we here honor, gave the Nation a son who a half-century later was summoned to lead our Republic through the tragedy of civil war. And as Lincoln fought for union and liberty he insisted always that "The struggle of today is not altogether for today—it is for a vast future also."

As we turn our eyes to that future, other words of his seem applicable. He said: "The tendency to undue expansion is unquestionably the chief difficulty. How to do something, and still not do too much, is the question. * * * I would not borrow money. I am against an overwhelming, crushing system. Suppose, that at each session, Congress shall first determine how much money can, for that year, be spared for improvements; then apportion that sum to the most important objects."

That the spirit of Lincoln be close at hand as we meet each successive challenge to freedom is the earnest hope of all Americans—indeed it is the hope of freedom's sentinels wherever they stand.

Pushing always ahead in our quest for a just peace and freedom for all men we can do no better than live by his prescription: "by the best cultivation of the physical world, beneath and around us; and the intellectual and moral word within us, we shall secure an individual, social, and political prosperity and happiness, whose course shall be onward and upward, and which, while the earth endures, shall not pass away."

Thank you very much.

Americans from all stations of life have reason to be grateful to Congressman SCHWENGEL, to whom special tribute is today being paid. Certainly the National Lincoln Sesquicentennial Dinner and the joint session of Congress will ever remain in the record attesting to energy, ability, and his resourcefulness. He first became interested in Lincoln during his college days and these recent Lincoln events have served to in a sense cap his efforts here in Washington in behalf of Lincoln. He has in his library about 400 books on the Lincoln theme and there is perhaps no one more devoted to the ideals and achievements of the Great Emancipator than is FRED SCHWENGEL. In a sense, his Lincoln headquarters has been an old roll-top desk which stands in the corner of his office and which is believed to be more than a hundred years old. Congressman SCHWENGEL found that desk, used by a Congressman of that period, on a tour through little-used rooms in the Capitol Building. He was looking for a scroll broken from the hand of a Lincoln statue on which was written the Emancipation Proclamation.

Among the brief summaries which have been made by distinguished Americans in describing their views of Lincoln is one by former President Woodrow Wilson. It appealed to Congressman SCHWENGEL, and deals with what President Wilson said on the question of the possibility of other Lincolns arising. President Wilson said:

We cannot do without them. * * * We must have the leadership of sane, genial men

of universal use like Lincoln to save us from mistakes and give us the necessary leadership.

I thank John E. Allen, assistant executive director of the Lincoln Commission, for his help in the preparation of this speech.

Mr. DIXON. Mr. Speaker, I ask unanimous consent to extend my remarks and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Utah?

There was no objection.

Mr. DIXON. Mr. Speaker, I ask unanimous consent that all Members may extend their remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Utah?

There was no objection.

Mr. BRAY. Mr. Speaker, it was my privilege to serve under the chairmanship of my colleague from Iowa [Mr. SCHWENGEL] on the Committee on Arrangements for the Joint Session of Congress honoring the 150th Anniversary of the birth of Abraham Lincoln. Mr. SCHWENGEL, a long-time student of Lincoln, has shown great and unique knowledge and experience in the subject of our 16th President and, having served on this committee, I am aware of the unusually and energetic leadership Congressman SCHWENGEL provided.

I came to this work rather late, inasmuch as I was appointed to the Committee on Arrangements just a few weeks before the joint session. It was apparent that much ground work had already been undertaken by Congressman SCHWENGEL. He and the Honorable J. Nimtz, a Member of this body in the 85th Congress, has done much of the work in planning and preparing the joint session. They had secured the legislative authorization for the session. It was already formed in their minds to such an extent that the Committee on Arrangements had merely to put into final form the plans for this observance.

Prior commitment took me home to Indiana on the day of the 12th. I regreted being unable to attend the joint session, for it was obvious beforehand that it would be an occasion of great historical significance. From every account that I have heard, the joint session was a success and honorably served to mark this important anniversary of one of our greatest Americans. There has been great interest in accounts of the proceedings of that day. As time goes on, I am sure it will be a significant event in the story of Abraham Lincoln.

For the taste and simplicity with which the program was planned, and for the effective forethought which made its realization simple and harmonious, this body owes greatful thanks for the direction and leadership and forceful energy of Congressman SCHWENGEL.

Mr. BALDWIN. Mr. Speaker, will the gentleman yield?

Mr. DIXON. I yield to the gentleman from California.

Mr. BALDWIN. Mr. Speaker, I would like to join with the gentleman from Utah in commending the gentleman from Iowa [Mr. SCHWENGEL] for the splendid job that he did in acting as chairman of the committee which planned the program here in the Congress on the anniversary of the birth of Abraham Lincoln. It has been my privilege to serve on the Committee on Public Works during the past 4 years with the gentleman from Iowa [Mr. SCHWENGEL]. The citizens of his district are fortunate in having such a dedicated and devoted representative here in the Congress. I have come to respect him deeply during this period of time; come to respect him for the attitude that he has toward the work of the Congress, the deep faith he has in America, and the tremendous respect that he has for Abraham Lincoln. It was an inspiration to all of us here in the House to see the outstanding job he did in planning this 150th anniversary of the birth of President Lincoln. I think it was an inspiration to the people of this country, and I would like to commend the gentleman from Iowa on his leadership.

Mr. BALDWIN. Mr. Speaker, I ask unanimous consent that the gentleman from Texas [Mr. WRIGHT] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. WRIGHT. Mr. Speaker, I should like to join in this expression of appreciation for the monumental work performed by our colleague, the gentleman from Iowa [Mr. SCHWENGEL] and his committee which planned and carried out the memorable and fitting observances on the 150th anniversary of the birth of President Lincoln.

Having served for the past 4 years with the gentleman from Iowa [Mr. SCHWENGEL] on the House Public Works Committee, I know of his continuous dedication to duty and his reputation for giving of his whole efforts to those causes in which he deeply believes.

His dedication and ability have never been more evident, however, than in the altogether appropriate commemorative services which he and his committee have directed during the course of this sesquicentennial.

The 150th anniversary of the birth of Abraham Lincoln was an event which richly deserved to be commemorated by tasteful and impressive ceremonies. Thanks to the many hours of well directed work on the part of FRED SCHWENGEL and others, it was.

Mr. TEAGUE of California. Mr. Speaker, will the gentleman yield?

Mr. DIXON. I yield to the gentleman from California.

Mr. TEAGUE of California. Mr. Speaker, I, too, would like to join in these well-deserved words of praise for the splendid job that the gentleman from Iowa [Mr. SCHWENGEL] and others performed in connection with that very fine joint session of the Congress held on Lincoln Day this year.

Mr. JENSEN. Mr. Speaker, will the gentleman yield?

Mr. DIXON. I yield to the gentleman from Iowa [Mr. JENSEN].

Mr. JENSEN. Mr. Speaker, the spirit of Abraham Lincoln is still a great force throughout the land. Each year when his birthday is celebrated, there is renewed interest in this great patriot not only in the land of his birth, but throughout the world where he has become the best known American.

Lincoln's spirit reigns because men from all walks of life have been attracted to the ideals of this man. As they read and discuss his statements, his policies, and his warm interest in his fellowman, they become imbued with the desire to see that more people know and appreciate Lincoln's greatness.

The fact that some men catch Lincoln's spirit and perpetuate it more than others is understandable. It has been ever thus whenever great men walk the land and leave an imprint upon all humanity.

Such a follower of Lincoln is our colleague, FRED SCHWENGEL, and that fact that the sesquicentennial observance of Lincoln's birthday on February 12 of this year was perhaps the most notable of all Lincoln birthday celebrations can be attributed to the esteemed gentlemen from the First District of Iowa, Representative FRED SCHWENGEL.

All who attended the sesquicentennial banquet on February 11 at Washington's Hotel Statler where Representative SCHWENGEL was the master of ceremonies for a colorful and historic tribute to Lincoln can attest to SCHWENGEL's leadership.

Any Member who sat in this Chamber on February 12 when a joint session was convened to mark this anniversary was treated to what may go down as one of the most moving of all Lincoln tributes. As they heard Fredric March read the Gettysburg address, those words took on new meaning. Then in measured cadence with the delicate vocal nuances of the poet he is, Carl Sandburg, Lincoln's biographer, and best known of all the Lincoln scholars, delivered an address which is destined to take its place among the classics of our time.

Anyone who sat in the Chamber, or listened on the radio, or watched on television, could not help but feel the significance of this historic occasion. It will be imprinted on our memories for years to come.

These two events—the banquet and the joint session—were just two of the many observances throughout the land which marked Lincoln's birthday this year. In each instance the actual program time for the ceremonies was relatively short, just a fraction of the days, weeks and months of planning which went into each event.

Always active in this planning, and assuming a place of leadership because his coworkers wanted it that way, was our colleague, FRED SCHWENGEL. It was his joint resolution, adopted by the 85th Congress, and signed by the President, which authorized the joint session. He was selected by our beloved Speaker to serve on the Committee on Arrangements and was chosen by the other members of this committee to serve as its chairman.

Representative SCHWENGEL serves as president of the Lincoln Group of the District of Columbia which sponsored the banquet on February 11, at which

President Eisenhower and Vice President NIXON was honored guests. This impressive ceremony served as the kickoff for the Lincoln birthday celebrations across the land.

Congressman SCHWENGEL's leadership in these historic events is natural when you consider his dedication to the life of Lincoln. It goes back to his school days when he first studied history and learned that a young man from the Midwest with the barest of resources but a man of the people could, through a dedication to what is right and decent, elevate himself to the highest office in the country. Later when SCHWENGEL went into politics, he had the pattern of a great man to emulate. Lincoln's thoughts and teachings have guided SCHWENGEL'S action in the Iowa Legislature where he served with distinction for 10 years. When he came to Washington as a Member of the 84th Congress, he moved into an atmosphere where he could be closer to the spirit of Lincoln than ever before. His interest and devotion have found many avenues for expression in the Capital where Lincoln rose to his eminence.

Our colleague does not wear this attachment lightly and exhibit it as a sometime thing. Lincoln doesn't dominate him—but the spirit of Lincoln is always with him. His extensive library has some 400 careworn volumes on the life of Lincoln. They are a ready reference for guidance and for further whetting the appetite to know and understand more of the philosophy of our 16th President whose approach to the affairs of state has many present-day applications.

In addition to the volumes on Lincoln, Congressman SCHWENGEL has what is probably the most extensive library in the country on women of the Civil War period. This interest started with a desire to know more about Annie Wittenmyer, one of the leading feminine figures of the Civil War period. She had many ties in the district Congressman SCHWENGEL serves and an orphanage in SCHWENGEL'S home city of Davenport, Iowa, bears her name.

SCHWENGEL'S office and home are decorated with pictures of Lincoln and other memorabilia which gravitate to a devout follower of this man. In his office in the House Office Building, he has one of the desks which were used by Members of Congress at the time that Lincoln served in the House. It serves as a focal point for material on Lincoln which grows with each passing day.

Our distinguished colleague from Iowa accepts every opportunity to speak on the life and deeds of Abraham Lincoln. Since he has been in Congress he has been called back to the Iowa Legislature twice to deliver a Lincoln Day address to the biennial joint session which the Iowa bodies hold in honor of Lincoln. SCHWENGEL is the only person to be honored with this privilege.

Each year he joins his Republican colleagues in speaking in various sections of the country to honor Lincoln's memory. This year, following the joint session, he spoke at the Loyal Legion observance in Washington. In typical fashion, he rushed to Springfield, Ill., to take part in the international observance in that city and then proceeded to Harrogate, Tenn., for an address at Lincoln Memorial University.

As SCHWENGEL'S interest in Lincoln continues to manifest itself in ever widening circles, he has a constant reminder of that February 12th anniversary within his own family circle. His daughter, Dorothy, shares the birthdate with the man her father reveres so much. She was born on February 12, a little over one score years ago.

As we pay tribute to the good works of our colleague today, we must keep in mind that he will continue taking leadership in Lincoln observances for years to come. He has been named as a member of the Civil War Centennial Commission and as the centennials of the events of that era are brought back into focus, we can expect to see Representative FRED SCHWENGEL take active leadership in formulating the plans and celebrations which will recognize Lincoln's part in this historic period.

Mr. HOEVEN. Mr. Speaker, will the gentleman yield?

Mr. DIXON. I yield to the gentleman from Iowa [Mr. HOEVEN].

Mr. HOEVEN. Mr. Speaker, I want to join in the splendid tributes that are being paid my distinguished colleague, the gentleman from Iowa [Mr. SCHWENGEL],

It is said that when Members of Congress come to Washington it is expected of them that they shall be statesmen and scholars. I am very happy to report that our distinguished colleague from Iowa has demonstrated that he is a statesman and furthermore that he is a scholar. He has been a profund scholar of Lincoln lore, of the Civil War period. It is no longer a hobby with him but has become in reality a public service.

The gentleman from Iowa [Mr. SCHWENGEL] has contributed much to bringing to our attention some of those matters that should be brought to the attention of Congress as they related to the Lincoln era. I am very happy, in behalf of the Iowa delegation, I know, and all of the people of Iowa, to express our deep appreciation for the splendid service our colleague, Mr. SCHWENGEL, is rendering not only to his district but to his State and the Nation as well.

Mr. HENDERSON. Mr. Speaker, will the gentleman yield?

Mr. DIXON. I yield to the gentleman from Ohio.

Mr. HENDERSON. Mr. Speaker, I should like to join with our colleagues this afternoon in complimenting the gentleman from Ohio [Mr. SCHWENGEL] on the fine service he rendered in his work in connection with the 150th anniversary of the birth of Abraham Lincoln, and I also want to compliment the other members of his committee, who joined with him. The result was an observance of which we are all justly proud. The work he performed as chairman of that committee is characteristic of the remarkable service he has rendered here in this House to his colleagues in providing them with information, and also to the people of his district, his State, and the Nation.

Mr. WEAVER. Mr. Speaker will the gentleman yield?

Mr. DIXON. I yield to the gentleman from Nebraska.

Mr. WEAVER. Mr. Speaker, the joint session of Congress on Thursday morning, February 12, in honor of the 150th anniversary of the birth of Abraham Lincoln was not only a memorable incident in legislative history, but a moving experience for everyone permitted to participate in it. The scene itself, the music, the words repeated, the dramatic climax of the eloquent tribute, all combined to lift it above the commonplace and invest it with a special meaning.

This is generally recognized and generally agreed. But it is not so well known that it stemmed from the ideas, energies, and dedicated imagination of one man to whom full credit for that solemn celebration is almost singly due.

One evening, last summer, our colleague, the Honorable FRED SCHWENGEL, of Iowa, in his studies of his foremost hero, chanced to read how 92 years ago, on that same birthday, the two Houses of Congress came together to honor their lamented leader. Mr. SCHWENGEL determined that the sesquicentennial should be comparably commemorated. Accordingly, on July 8, he introduced in the House of Representatives, House Joint Resolution 648 calling for a joint session. He persuaded others to adopt it. He arranged for its introduction in the Senate. He had it reported out of committees. With bipartisan support as completely generous as it perhaps was unusual, he directed its passage. The President approved it on August 27.

His appointment as chairman of the joint committee on arrangements was as fortunate as it was natural. Under his hand, the program was steadily developed and perfected. His associates on the committee were cordial and unanimous. But more than this, musicians gladly consented to perform. A distinguished actor accepted an invitation to read the Gettysburg Address. Carl Sandburg, the best known Lincolnist of our own or any time, promised his presence and the preparation of the public acknowledgment of Mr. Lincoln's place in the hearts of a later generation. Said Mr. Sandburg: "For this I have been in training for 81 years."

There were no flaws to be found in the proceedings. They ran smoothly, succintly, gracefully. But this was because—almost entirely because—of the firm grasp and applied wisdom of FRED SCHWENGEL. When problems arose in the days before the session, they were confronted bravely and seriously until they had been finally and permanently resolved. When time called for prompt decisions, they were promptly forthcoming. When choices had to be made, they were made with honesty and taste and always in the public interest. These were and will remain invisible and unrecorded. But it is well to know that Mr. SCHWENGEL'S sagacity and high purpose alone have kept them so.

If Mr. Lincoln's anniversary has been observed with fine feelings and high hearts in the Congress, which once he served, he must look down from his Elysium and give thanks, as we give

thanks, for the splendid response of FRED SCHWENGEL, to a splendid opportunity.

Mrs. ROGERS of Massachusetts. Mr. Speaker, will the gentleman yield?

Mr. DIXON. I yield.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I too would like to express my very deep appreciation for the very great service the gentleman from Iowa [Mr. SCHWENGEL], has rendered not only to the House of Representatives but to the country in connection with the very fine exercises commemorating the birth of Abraham Lincoln. It was a very wonderful thing. I am glad that through television the entire country could see and hear it.

Mr. AVERY. Mr. Speaker, will the gentleman yield?

Mr. DIXON. I yield to the gentleman from Kansas.

Mr. AVERY. I thank my friend from Utah for yielding to me. Naturally I want to associate myself with other colleagues in paying tribute to our most esteemed colleague from Iowa [Mr. SCHWENGEL], on his fine performance as chairman of the Lincoln Commission last month.

Further I should like to associate myself with the gentleman now in the well in his remarks concerning the 100th anniversary of the Department of Agriculture and the land-grant colleges. Since the undisputed leader in the field of land-grant colleges is located in my own congressional district, naturally I have more than just a casual interest in this resolution. I certainly hope the House will see fit to expedite its passage.

It is most appropriate that the Department of Agriculture and the land grant colleges of America should officially observe their 100th anniversary. The chairman of the Judiciary Committee is to be commended on his prompt attention to the resolution authorizing the creation of a Commission to make the necessary arrangements for this anniversary which will occur in 1962. Since the occasion is but 2 years hence, preliminary arrangements for its proper recognition should commence immediately.

I do not think it necessary to dwell at length on the vast contribution that the Department of Agriculture has made to the development of this country. As the country grew, agriculture became the basis for the economy in the Middle West. Even though we are presently plagued with surpluses of some commodities, certainly an abundance of agricultural production, even if it is a surplus, is to be desired over the lack of an adequate food supply. It is only by an assured supply of food that we can maintain and raise our present standard of living.

The Department of Agriculture and the land grant colleges have a natural relationship in their growth and development over the years. It has been the responsibility of the Department of Agriculture to research crop improvement and marketing, but it has been the agricultural or land grant college that has made practical application of this knowledge. The college provides a medium whereby the average farmer can avail himself of the improvement in methods of agricultural production and marketing made by the Department.

It is an honor to represent the First District of Kansas which contains the outstanding land-grant college of the Nation. There are several reasons why Kansas State remains the undisputed leader in the field of land-grant colleges, but probably the main reason is that of experience. A college dedicated to agriculture had been established at Manhattan, Kans., 2 years before the Morrill Act was passed in 1862. This original college was known as Old Bluemont College, and founded in 1860 by the Methodist Church. From a meager beginning of 53 students and 2 faculty members, this institution, officially designated as Kansas State Agriculture College by the Kansas Legislature on February 13, 1863, has expanded to its present enrollment of approximately 8,000 students and 1,200 faculty members, including representatives of the off-campus extension department.

Although these colleges throughout the land are still designated as agricultural colleges, their contribution in the field of education has not been confined strictly to agriculture. In assessing the contribution these schools have made, it is of course necessary to recognize the instruction they have provided in fields other than agriculture. In addition to agriculture, instruction is available in the arts and sciences, engineering and architecture, and in many cases professional courses such as veterinary medicine.

These institutions conceivably might have developed to their present size and stature without the benefits that have accrued as a result of the Morrill Act. The security and supplemental financing that became available with the passage of this act accounted for an early growth and development which otherwise might not have occurred until 50 years later.

The public benefit from these institutions, particularly Kansas State College, has not been confined to the student body alone. Through the extension department, technological advances and production knowledge has been made available to the farmer at the county level. Besides the dissemination of information through the extension department, for many years the college has been host to innumerable conferences and meetings of special interest groups for training courses and seminars. These groups include 4–H clubs, livestock organizations and extension council members.

Another segment of college activity that should not be overlooked is the contribution that land-grant colleges have made to our national security. As a requirement for qualifying to the benefits granted under the Morrill Act, these colleges were required to include military training as a part of their regular curriculum for all male students. This is not an uncommon program in modern education, but previous to World War I and between World War I and World War II, land-grant colleges were among the few institutions of higher learning that required military training. It would be interesting to know how many officers in World War II received their commission as a result of military training received by them at one of the land-grant colleges we are going to honor in 1962. Kansas State College at Manhattan has trained thousands of reservists for the Army and the Air Force, over the years.

It is not possible of course on an occasion such as this to enumerate the many advantages and achievements of our land-grant colleges. I do want to associate myself with the gentleman from Utah [Mr. DIXON] in urging the early appointment of this Commission.

Mr. JENSEN. Mr. Speaker, will the gentleman yield?

Mr. DIXON. I yield to the gentleman from Iowa.

Mr. JENSEN. Mr. Speaker, I too want to join with those who are commending our great land-grant colleges for the fine service they have rendered to America. As you know, we have in the State of Iowa a great agricultural college at Ames. Of course, in the opinion of us from Iowa, it is the best in the Nation. Great things are done at that college and for the many services that that college has rendered not only the farmers of Iowa but the farmers of all of America and all of the people of this great Nation have greatly benefited.

LINCOLN LIGHTED A CANDLE DURING THE DARKEST DAYS OF THE CIVIL WAR—WE COMMEMORATE THE CENTENNIAL IN 1962

Mr. DIXON. Mr. Speaker, May 15, 1962, marks the 100th anniversary of the Department of Agriculture and July 2, 1962, marks the 100th anniversary of legislation providing for the establishment of land-grant colleges and State universities.

On July 1, 1862, the day before Lincoln signed the Morrill Act, which established our system of land-grant colleges, General Lee cut McClellan's communication lines from his base of supplies and McClellan retreated to Malvern Hill. On that 1st day of July 1862, 5,000 men were lost to the South and approximately 1,600 to the North. On that same July 1, 1862, the Treasury in desperation sent out an order saying, "Wherever you find an article, a product, a trade, a profession, or a source of income, tax it."

Yes, those were among the darkest days of the Civil War. Yet President Lincoln, our inspired emancipator, lighted a candle in the darkness. Little wonder that is known as a magnificent act of faith. Would that he were alive today to enjoy the blessings of his vision and to help us plan the commemoration of the 100th anniversary of the founding of the USDA, the land-grant colleges, and the State universities.

The Judiciary Committee of the House of Representatives has fittingly introduced and last week approved H.R. 4012, which if enacted into law will authorize a commission to be known as the Commission for the Commemoration of the 100th Anniversary of the Enactment of Legislation for the Establishment of the

Land-Grant Colleges and State Universities and for the Founding of the United States Department of Agriculture.

It will be the function of the Commission to coordinate and approve suitable plans for celebrating the 100th anniversary of these institutions and to do all things fitting and proper to give support and coordination to the commemoration activities anticipated by the act, including cooperation with States, local and civic bodies, and interested organizations in appropriate local celebrations and participation in regional and national celebrations.

The story is told about Lincoln stopping on a crowded street to pick up a beetle that was on its back and struggling to get on its feet. When he was chided by his companion for causing such a stir he said:

> I wanted to give that beetle the same opportunity as all other beetles.

This great emancipator not only detested African slavery, but the far commoner bondage—that of ignorance. That same Abe Lincoln during the Civil War in 1862 when the Union defeats were pressing the North signed the Morrill Act—which Buchanan had vetoed because the Nation could not afford more colleges and because the land-grant colleges would compete with the liberal arts colleges—and founded the land-grant college for the "liberal and practical education of the industrial—as distinguished from the professional—classes."

Dr. John A. Widstoe, former president of Utah State University and the University of Utah, said:

> For the first time in the history of the world the common man, to which class we all belong, was given access to the great heritage of learning of the ages, and for the first time an attempt was made to lift the common necessary pursuits of life to a professional dignity.

The American tradition of higher education is distinctly different. It had its legal beginning in the signing of the Morrill Act by Abraham Lincoln, the hundredth anniversary of which we are now making plans to celebrate in 1962.

The second tremendous step toward "giving the common man," to which class we all belong, "access to the heritage of the learning of the ages," was and is being made by the 667 comparatively new junior and community colleges which now enroll one out of every four students on the college level and which may soon absorb the bulk of the increase in higher education during the coming decade.

Fortunately for America, our concept of equality of educational opportunity is a far cry from the program of European universities, which are essentially concerned with preparing youth for the learned professions, and whose student bodies are a highly select group. The selection begins toward the close of the elementary school at which time not more than 20 percent of any age group is privileged to attend the preuniversity schools and thence to college, and the selection is often influenced by the class system. The remaining 80 percent, except of a comparatively few, go to work and complete their full-time education at age 14.

As a result, only about one out of every five or six European boys and girls attend college, whereas one out of approximately every three American boys and girls attend college. At the same time, Europe is turning out about the same percent of doctors, lawyers, engineers, scientists, teachers, and scholars as we are, namely, around 6 percent—a surprisingly small percent.

Dr. Conant, in his splendid book, "The American High School Today," points out the tremendous waste in undeveloped talent in Germany, France, Italy, and Switzerland as a result of the selective character of their higher institutions of learning. This is a waste which America cannot afford. In fact, we cannot afford the waste of our own present system, in which fully one-half of the top 25 percent of our high-school graduates never even reach college.

Equality came to mean not only political equality, but equality of educational opportunities, as far as the individual could profit from such opportunity. Unless we build institutions of higher learning and prepare college teachers more rapidly than we are doing today, one out of every three students applying for higher education in 1970 will be turned away, and our American dream of equal educational opportunity will be reduced from a bright light to a mere glimmer.

The land-grant system enrolls one in every five of America's college population. One hundred percent of U.S. doctorate degrees earned in agricultural subjects are conferred by these institutions which on occasion have been described as "cow colleges."

This description is far from displeasing to me, although it is woefully incomplete.

The relationship of these institutions to the Nation's agricultural life is unique. Through their research experiment stations, adult education programs, and their down-to-earth working relationships with State extension services and the Federal Government, the land-grant universities and colleges benefit every U.S. farm family directly.

The fact that the productivity of our agriculture is unparalleled in world history, the fact that our problem in America is how best to use our abundance rather than how to prevent starvation, the fact that we are sharing our plenty with the hungry of this earth—all of these blessings are due in immeasurable degree to our land-grant colleges. The direct influence of these institutions, however, extends far beyond the farm into the homes and working lives of all Americans, and of many peoples around the world. The land-grant colleges—their faculties and graduates—are the principal recruiting ground for men and women of ability and high character who develop and manage our technical assistance programs abroad.

The discovery of streptomycin at a land grant university brought the first sharp breakthrough in control and treatment of tuberculosis. Stilbestrol came to us from another of these universities, and also the first cyclotron. Pioneering research in television and the transistor was done at still another land-grant institution. Soybean procession, the woodpulp and ceramics industries were developed at these colleges—to mention only a few of the many ways they serve us all.

While these institutions enroll 20 percent of U.S. college students, they confer twice that proportion of doctorate degrees or 40 percent of the total in all subjects. In the areas of study considered so vital to our defense, the sciences and engineering, the land-grant colleges award more than half of all U.S. doctorate degrees. They also confer more than half of those in the health professions, and approximately one-fourth of those in the arts and languages, in business and commerce, and in education itself. Through the ROTC programs these colleges provide almost one-half of all the Regular and Reserve officers in our Armed Forces.

Today there are 68 land-grant colleges and universities; at least one of them in every State, Hawaii, and Puerto Rico.

Mr. Speaker, our system of land-grant colleges could hardly have come into being under more forbidding circumstances. The date was July 2, 1862. We were driven asunder from east to west, North against South and brother in arms against brother.

The Confederates attacked on the morning of that 1st of July in 1862. It was a day of fierce and bloody fighting.

On the next day, the 2d of July in 1862, Lincoln affixed his signature to the Morrill Act establishing the land-grant system of colleges.

Little wonder that Lincoln's action has been described as a magnificent act of faith.

That faith, Mr. Speaker, was the faith that higher education for the many—and not only for the few—was the means of making democracy work. The Morrill Act opened the way to equality of opportunity in education, the right of every American to learn what he can. The act, in effect, abolished the caste system in higher education; it has made college possible for people who work for a living.

This was not a new idea in Lincoln's day. It had been much on the minds of the Founding Fathers, although almost a century was to pass before we parted sharply from the traditional European concept of higher learning as the prerogative of an aristocratic few.

In a letter to George Wythe, dated August 13, 1786, Thomas Jefferson wrote:

> I think by far the most important bill in our whole code is that for the diffusion of knowledge among the people. No other sure foundation can be devised for the preservation of freedom and happiness. * * * Preach, my dear sir, a crusade against ignorance; establish and improve the law for educating the common people. Let our countrymen know that the people alone can protect us against these evils, and that the tax which will be paid for this purpose is not more than the thousandth part of what will be paid * * * if we leave the people in ignorance.

That is what Jefferson said, but he did not then see the extent of popular education as we know it today.

The Morrill Act—

Writes Earle Dudley Ross, professor of history at Iowa State—

was the culmination of the evolving idea to that stage and point of departure for the new education of the new industrialized nation. In this body of principles, written and unwritten we have then the Magna Carta of this type of higher education. * * *

First and foremost—

Professor Ross goes on—

the act committed the expanding and consolidating Nation to mass higher education. Historically the provision marked the extension of the public elementary and secondary school systems to the collegiate realm. It thus brought the nearest approach to Jefferson's educational pyramid in the State realm, but with much broader apex than he had envisioned. The conforming State universities, dominated largely by the old traditions in aim and subject matter, had never made such an appeal. Here indeed was "democracy's college"—in design and aspiration. The opportunity was clearly open to all aspiring young people who found existing institutions and courses of study unavailable or unacceptable.

That is how Professor Ross described the basic idea in his excellent book published last year, "The Land Grant Idea at Iowa State College."

The land-grant colleges and universities are so called because the Federal Government under the Morrill Act gave grants of land to the States. Proceeds from sale of the land were to provide endowments to be used for instruction in colleges which would stress agriculture and the mechanic arts as then neglected fields, but also providing liberal and practical education for the industrial classes in the several pursuits and professions of life.

The industrial classes as the term was used 100 years ago included practically everybody who worked for a living, in whatever capacity—and the words did not have the more limited connotation that surround them today.

The principles of the Morrill Act have been extended in two additional laws—the Hatch Act of 1887 providing for joint Federal-State research in agriculture at land-grant institutions, and the Smith-Lever Act of 1914 establishing our present system of extension services, a venture in adult education that has been studied and adapted in varying forms by other countries.

From time to time, Mr. Speaker, unthinking critics have charged the land-grant institutions with being "degree factories." Unfortunately, I believe, this has given some people the picture of a sort of educational beltline on which material of indifferent sort is placed, emerging in due time at the end of the line bearing some polish but otherwise little changed for the better.

The evidence argues to the contrary, and in fact indicates that the quality of education at our public institutions of higher learning is of the highest order. Of the 35 living American Nobel Prize winners who attended college in the United States, 21 have earned degrees from land-grant colleges. That amounts to 60 percent of Nobel winners from institutions which enroll 20 percent of our total college population.

Mr. Speaker, there is a side to this sort of criticism that troubles me deeply. To argue against higher public education for the many and hold that it should be for the few is to say in effect that democracy cannot work and will not last.

If people are to manage their own affairs for themselves they must be informed—and the more of them that are informed, and the better they are informed, the longer self-government will last. Or so it seems to me and, I am happy to say, so it has seemed to many who have gone before us.

Senator Justin Smith Morrill, that great citizen of Vermont, and author of the Morrill Act, was a largely self-educated man. His schooling stopped at the age of 14 years. His many years of work to develop and pass the land-grant legislation is a testimony to his vision, a vision that was unembittered by the meager character of his own formal education.

Many men in all the States, Mr. Speaker, share the credit for the land-grant concept and its practical development in this country. One of the most important of a century ago was Thomas Green Clemson, a man of very different background from that of Mr. Morrill, but who believed with him that education in a democracy must be both broad and deep.

Clemson was trained in the best schools of Europe. A recognized authority in science and economics, he was also expert in the arts, music, and literature.

This benefactor of Clemson College in South Carolina, and son-in-law of John Calhoun, was a leading advocate of the land-grant idea.

Mr. Speaker, it also has been said from time to time that our land-grant colleges are "trade schools" which at their best may turn out competent scientists and technicians, but seldom leaders, or deep thinkers, or philosophers and serious writers.

This banal assertion is readily belied by the long list of Americans who have studied at land-grant colleges and yet somehow survived to be outstanding leaders and thoughtful citizens. Yet, again, there is something deeply disturbing to me about such loose talk.

It is true that technical skills and scientific competence are nothing if we fail in providing avenues to knowledge that makes for vigorous leadership, for the best use of strong minds, and which helps to give us the creators of the art, literature, music that give life its inner meaning.

The central purpose of the land-grant colleges and universities, Mr. Speaker, as I trust it is of our other institutions of higher learning, is to build whole men. Since when, I would like to know, has it been inconsistent with high intelligence to possess skills and acquire training in technical subjects, and in matters of practical consequence? The two things go together in my experience as the president of Utah State University at Logan, a land-grant institution.

What good, you may ask, will a centennial observance do the cause of higher education. Mr. Speaker, we are again today at a time of decision as to essential character of our future educational system. Our existing facilities and staffs for higher education are woefully short of future needs.

College enrollments must double in the next decade, providing we want to give the same relative number of our young people the chance for higher education that we have had. Today, as there were in the day of Lincoln and Morrill, there are citizens among us who insist we should reduce the proportion of our young people who go to college.

Their argument, Mr. Speaker, is based on the premise that fewer opportunities for education will somehow give it higher quality. This is a demonstrably false premise, in my opinion, but one that I fear is being given considerable credence despite its essentially antidemocratic character.

If we hold that all men are created equal—but fail to provide equal opportunity for every man to be educated to the limit of his capacity—we simply do not mean what we say. I believe that we do agree the one logically follows the other in a democratic society, but I also believe that the fundamental importance of it, the daily meaning of it in our lives, has been obscured by time, the mounting complexities of life in this new and eventful age, and by the shallow preoccupations associated with prosperity.

Mr. Speaker, I would like to quote from a speech by John Cowles, president of the Minneapolis Star and Tribune, before an audience at the centennial convocation of Pennsylvania State University on October 21 in 1955. Mr. Cowles, a Harvard man himself, said at that time:

If the quality and the quantity of our mass education in the past half century had not been approximately as good and as widespread as it was, if we had not given each succeeding generation a better education than its parents received, I seriously doubt that our Nation would have been able to preserve its free institutions through the stresses of the past quarter century. * * *

Great as the contribution of the land-grant institutions has been in the past three generations, I venture two predictions—

Mr. Cowles went on in that Pennsylvania speech—

First, it is inevitable that in the immediate and continuing future the responsibilities and the scope of the land-grant institutions are going to be immeasurably larger than they ever have been, not only actually but also in relation to the other segments of our overall educational system. Second, if the land-grant institutions should fail, quantitatively or qualitatively, to play to the full the role which destiny is assigning them, I doubt that we will have a free society and a democratic form of government in the United States a century hence.

Those are strong words from one of our Nation's leading publishers, and I believe they do not overstate the case.

Mr. Speaker, the land-grant colleges are not planning to observe their centennial in 1962 in order to build bonfires and stamp out some self-congratulatory buttons. The purpose of the commemoration is to dramatize the vital connection between democracy itself and our democratic system of higher education.

Another and related purpose of this centennial observance is to review the past in order to secure and improve the

future. Now is the time, if ever there was one, for the colleges and universities of this country to reappraise their way of doing things—and devise and propose better ways of doing them.

It is for the rest of us to assist them in this task, not only by words of advice but with the means to accomplish it.

Unless we expand our support for the colleges consistent with the Nation's population growth, our democratic system of higher education for the many—instead of only a chosen few—just will not last.

Mr. KING of Utah. Mr. Speaker, I should like to join my distinguished colleague and fellow Representative from Utah in commenting upon the great benefits derived by my State, and my district, from the services of the experiment station and extension service of the Utah State University of Agriculture and Applied Sciences, and of the Department of Agriculture.

I have been reliably informed that the experiment station and extension service alone have saved the State of Utah more money every year than their total cost of operation incurred since their establishment many years ago. There was a time when smut was taking some 95 percent of our wheat and barley crop, in some areas. The university has developed smut-resistant varieties which have virtually overcome our problem.

I might also mention turkeys. There was a time when the diseases which attacked our turkeys, and the ensuing mortality, made turkey growing unprofitable. This problem was solved by the experiment station, and today turkey raising is a very important factor in our agricultural economy. Moreover, it used to take 5 pounds of feed to produce 1 pound of broiler chicken meat. This has now been reduced to 2½ pounds.

The members of the Utah Second Congressional District join in expressing thanks for the splendid services of this great university and the Department of Agriculture.

THE CENTENNIAL YEAR OF THE U.S. DEPARTMENT OF AGRICULTURE—1962

Mr. DIXON. Mr. Speaker, on March 4 the Committee on the Judiciary reported favorably on H.R. 4012. This legislation would provide for the centennial celebration in 1962 of the establishment of the land-grant colleges and State universities, and the establishment of the Department of Agriculture. In giving my wholehearted endorsement to this bill, I would like to call attention to some outstanding accomplishments made by these institutions in the growth and development of our country.

The Founding Act of the Department of Agriculture was signed by President Abraham Lincoln on May 15, 1862; and the first Morrill Act, approved on July 2, 1862, authorized the granting of public lands in the States and Territories in support of colleges. Out of these beginnings has grown a totally new concept of education, of publicly supported research, and of Federal-State cooperation.

Working together, the Department of Agriculture and the land-grant colleges and State universities have given to the farmers of this country the knowledge that has made them the most efficient agriculture institution the world has ever known. When we see today that 1 farmer produces enough for himself and 23 others, we see the results of applied technical knowledge. For back in 1862 one farmer produced enough for himself and only four others.

In the total perspective, agricultural progress was slow but steady as the research knowledge accumulated, and more and more of our farmers could take advantage of educational opportunities offered through adult extension work, or by taking the full course of academic work offered at the colleges and universities.

This accumulative knowledge reached fruition at a time when it was critically needed, at the beginning of World War II. Farmers were called upon to meet production goals that seemed practically impossible. But they met them. Our greatest progress has come since 1940, and we are far from reaching our potential. Again in terms of production, the farmer in the first 80 years of the past 100, had increased his efficiency so that he could produce enough for himself and 11 others. This was a little more than double the figure for 1862. In the last 20 years, he again has doubled his production output so that he produces enough for himself and 23 others.

The farmer and his acquired knowledge has considerable significance in this agricultural revolution. But education alone is not enough. Even with the best knowledge of techniques, the farmer must have crops scientifically bred to reach a full environmental potential. He must have livestock that produces efficiently the meat, the wool, the milk the consumer wants. He must have the agricultural chemicals to control pests and diseases of both crops and animals. Finally, he must have technical assistance in husbanding his soil and water resources. No one man can master the knowledge necessary to pursue and carry out all of these tasks.

The individual research accomplishments of the Department of Agriculture, and the State experiment stations would make far too long a list to publish here. But the development of hybrid crops and animals alone has more than paid for all the money invested in agricultural research.

Results are not always determined in dollars, nor should they be. Discovery of the cattle tick as the carrier of the so-called Texas fever was the first time that man knew that a disease could be carried by an insect. This led to the discovery that yellow fever was carried by the mosquito, and set a new milestone in the control of human diseases.

Perhaps the greatest tribute to our system of agricultural education and research comes from our many friends in other countries. Not only in the underdeveloped countries, but in Europe as well, they seek to establish systems such as ours.

Mr. SCHWENGEL. Mr. Speaker, will the gentleman yield?

Mr. DIXON. I yield.

Mr. SCHWENGEL. Mr. Speaker, to say that I am grateful for all the remarks that have been made here today would be putting it very, very mildly. I want to take this opportunity to say that I am pleased that the celebration on Lincoln has gotten off to such an impressive start. I did have a part in it, but I want to assure you that these things like any other significant move or happening did not just happen without the help of other people. It was my pleasure to enjoy the help of many, many people to make this event on the 11th and 12th of February the success that it was. With reference to the 12th of February, I want to particularly mention the Members of Congress—those of you who were Members on both sides last year who had a part in this because you voted for it and the resolution providing for the joint session carried unanimously. Then, I would be remiss if I did not mention some other people who were very prominent in this. Particularly do I want to mention David Burns, of the Library of Congress, whose invaluable help was very much appreciated in preparing the proper resolution and doing additional research work. And in regard to the members of the committee, one of the members who is not with us at this moment, Congressman Nimtz, did splendid work. The meetings we had were attended almost 100 percent. I think there was only one meeting that we had one absentee. So this was the result of the work of a lot of people who cooperated wonderfully. Within this organization or as a part of this group, there was another man I should mention whose work went far beyond the call of duty. He is one of the important people in the Office of the Clerk of the House, Mr. Harry McGill, who had much to do in helping us with the details and in developing the program.

Mr. Speaker, I ask unanimous consent that all Members may extend their remarks at this point.

The SPEAKER pro tempore. Without objection, it is so ordered.

There was no objection.

Mr. DIXON. I thank you, Mr. Speaker, and I thank the Members who participated in the discussion.

Mr. Speaker, I yield back the balance of my time.

THE FEDERAL RESERVE AUTOCRACY: MAKES ECONOMIC POLICY TO SUIT ITSELF; GOES UNAUDITED FOR 46 YEARS; INVESTIGATES ITS OWN SCANDALS IN THE GOVERNMENT SECURITIES MARKET; NEEDS ATTENTION OF CONGRESS

The SPEAKER pro tempore (Mr. THORNBERRY). Under the previous order of the House the gentleman from Texas [Mr. PATMAN] is recognized for 30 minutes.

Mr. PATMAN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. PATMAN. Mr. Speaker, the Federal Reserve Board's action last Thursday has come as a shock to many of us. By raising the discount rate from 2½ to 3 percent, the Federal Reserve drove home the point that it has embarked on another tight-money squeeze.

Actually, this sudden and large jump in the discount rate does not do a great deal more than confirm what the Federal Reserve System had already accomplished, but with little notice, during the preceding several weeks. It had already been putting the country back into a period of tight money and high interest.

A discount rate of 3 percent now is exactly the same as the discount rate of 3 percent which was maintained in the first 7 months of 1957. This was the period when money was made tightest and finally brought on the recession which began in August of 1957. We may not expect that credit will be of about the same stringency as then, but long-term interest rates on Government bonds will undoubtedly go even higher than in 1957. The Treasury has recently had great difficulty in marketing its securities. And the President has warned that he expects to ask Congress to raise the legal ceiling on the rates at which the Treasury can issue long-term bonds. This ceiling is now 4¼ percent and has been in effect since shortly after the end of the First World War.

I have no doubt that many Members of the Congress will be demanding an investigation of the Federal Reserve's latest action. To tighten money and choke off the business recovery now, when almost 7 percent of our labor force is unemployed, seems to many of us almost an irrational action. Furthermore, this action, which promises to bring on a new "space age" of high-interest rates on Government securities, is one which will not go unchallenged.

I wish now to point out to the Members as they consider the need for an investigation into these matters that there are some other conditions and practices, both in the Federal Reserve System and in the Treasury Department, which are crying for investigation. These are all part of the same cloth.

For example, the Members may have noted the news story carried by the Washington Post and Times Herald this morning entitled "U.S. Bond Market Speculation Probed." In this article, which is by Joseph R. Slevin, of the Herald Tribune News Service, it is reported that the Treasury Department and the Federal Reserve System said yesterday they have begun a joint investigation of the Government bond market. The two agencies are reported as saying they want to prevent excessive speculation.

It is further stated that this investigation is a direct outgrowth of a speculative buying spree and subsequent market collapse in 1958, which, according to this article, was the worst debacle in the history of the United States public finance.

Now, I would call your attention to the fact that this debacle occurred early in June of last year. The investigation should have been made long ago. The investigation should not have been delayed until such time as it is apparent that the Federal Reserve's new tight-money policy is going to drive U.S. Government bond prices down, and the yields on these bonds up.

This investigation is still needed, yes. It is needed very badly. But how in the name of heaven can we expect the Federal Reserve and the Treasury to come out with findings which will condemn themselves, their own practices, and their own contribution to these wild speculations in Government bonds that have been taking place in recent years. An investigation is needed, yes, but not an investigation made by the people who have had a major part in the crime. The investigation should be made by Congress.

These runaway speculations in the Government securities market are the faults of the Treasury and the Federal Reserve System. They have been caused specifically by a combination of three factors: First, an unregulated market in Government securities with gambling on very low margins, and recently with no money down at all. Both the Federal Reserve and the Treasury have resisted any regulation of this market although such regulation has been proposed—by me for one—for many years.

Second, a long history of Treasury giveaways has caused speculation. It has been the practice almost throughout this administration for the Treasury to issue fixed-interest securities at artificially high interest rates. The result has usually been that the securities were reselling in the open market at premium prices immediately after the Treasury issued them. And the result has been that a great many speculators have made killings.

Third, each change in direction of the Federal Reserve's monetary policy drives the Government bond market up or down, and there have been quite a few instances where all the evidence has pointed to leaks before new policies were announced. And the fact is that the professional bond dealers and other big-time money speculators are close enough to observe the Federal Reserve's course of zigzagging to make shrewd guesses about which way it is going, even without having the benefit of an inside tip.

I do not want to prejudge an investigation by the Treasury and the Federal Reserve, but I think those of us who have tried to do something over the years with this situation will be very much surprised if it is not a whitewash.

TEAPOT DOME SCANDAL IS PEANUTS COMPARED TO SCANDAL IN GOVERNMENT BOND MARKET

The first thing that should be done with the Government securities market is take the loaded dice away from the pet dealers in securities and the favorites of the administration. The Teapot Dome scandal was peanuts compared to the scandals involved in the Government bond market.

Over the years, I have supported resolutions calling for an investigation and audit of the Federal Reserve System. On May 5, 1953, during the 83d Congress, when a hearing was being conducted before the Committee on Banking and Currency of the House of Representatives on H.R. 4605, I interrogated the Chairman of the Board of Governors of the Federal Reserve System, Mr. William McChesney Martin; commencing on page 18 of the printed hearings of that date, there is the following:

Mr. PATMAN. Is it not a fact, Mr. Martin, that the Federal Reserve Act is 40 years old this year, 1953, and that during that time the United States Government has never made any audit of the Federal Reserve System, or any Federal Reserve bank?

Mr. MARTIN. Well, the Board of Governors is part of the Government of the United States.

Mr. PATMAN. I know, but it is part of the Federal Reserve System, too.

Mr. MARTIN. It is part of the Federal Reserve System.

Mr. PATMAN. But I am talking about any independent audit. No independent audit has ever been made by any agency of the Federal Government—that is, independent audit. Of course you are a part of the Federal Reserve System. I am speaking about Lindsay Warren's group, or anybody like that?

Mr. MARTIN. If you are talking about the Board, that is correct, sir.

Mr. PATMAN. Or the Federal Reserve banks, either, I mean the regional banks.

Mr. MARTIN. That is correct.

Mr. PATMAN. Never in 40 years.

Now, although we know that the gold is over there in Fort Knox, and we have no reason to believe that the gold certificates and the money is not just exactly as it should be, just like the gold, yet we have had no audit of them, have we?

Mr. MARTIN. There has been no audit.

Mr. PATMAN. In 40 years.

Mr. MARTIN. No audit of the Federal Reserve banks.

In addition, the following questions and answers between Mr. Martin and me appear commencing at page 19 of the hearings:

Mr. PATMAN. You have had audits annually, haven't you?

Mr. MARTIN. We are required by law to have annual audits.

Mr. PATMAN. That is right, but the reports are made to you. Do you not think it would be within our discretion as Members of this committee to have access over those audits over the past few years, and let us see what the situation is? We think everything is all right, and you think it is, too, but you know, as an agency of this body, do you not think those audits should be made available to the members of this committee?

Mr. MARTIN. Would you care to come down and look at them?

Mr. PATMAN. No; why not bring them up here?

Mr. MARTIN. Because there are so many confidential items in there, and I question very much whether they should be made a matter of public record.

Mr. PATMAN. But the members of this committee are responsible persons, and the chairman is certainly a very responsible person, and they would be in the charge of the chairman and the clerk, who is also a very responsible person.

Mr. MARTIN. We went all through this with your committee. I would be very glad to have you or the whole committee come down and look at the audits.

Mr. PATMAN. What about bringing them up here, Mr. Chairman; do you not think that would be a reasonable request.

The CHAIRMAN (Mr. WOLCOTT of Michigan). I doubt very much whether it is germane to this bill.

Imagine, in a country like ours, the Congress permitting a situation like this to go on for 46 years. The conspicuous thing about the answers of Mr. Martin, stated above, is the fact that he acts like an autocrat. He speaks like an autocrat would speak. His agency is a servant of the Congress; not the master. Imagine the servant of the Congress telling a committee of the Congress that if the members want to see the audits by their own private auditors and never made public to come down to the offices of this sacred cow and they will be permitted to see parts of the audits. He politely gave us notice that certain parts were confidential and we would not be able to see those parts. We almost have to pinch ourselves to see if we are living here in a democracy in a civilized country when things like this are disclosed.

Now, back to these audit reports. Last year I did finally succeed in obtaining them—or rather in obtaining portions of them. I have succeeded in obtaining selected parts of all the reports going back for several years. Mr. Martin gave in to a certain degree and sent up to the House Committee on Banking and Currency a portion of each report for each Federal Reserve bank for a period of 6 years. He still insisted, however, that those portions of these reports which deal with the conduct of the officers of the banks and investments and possible market speculations are confidential. He would not permit these portions of the reports to be seen.

Even so, those parts of the report which he did send up contained many shocking things. Yes, shocking.

Yet all I have seen are audit reports made by the Federal Reserve itself—by its own personnel—and only the uncensored portions of the reports at that.

Early last year I pointed out to the House Committee on Banking and Currency some of the shocking misuses of money and shocking mismanagements of the Government's business which turned up in these reports for the earlier years. I have now gone through the reports made just last year. I believe the Members would be most disturbed to know of some of the things these reports reveal.

SUPPOSE POSTMASTERS SPENT GOVERNMENT MONEY LIKE THE FEDERAL RESERVE

The Federal Reserve banks are as much a part of the Government as the post offices and postmasters. Suppose it should be discovered that a postmaster used the money that he takes in from stamp sales and for other purposes to buy himself a membership in a golf club; or to entertain groups of friends at the expense of the post office funds; or to subsidize the meals of his employees up to 50 percent; or to make contributions to different associations at the expense of the funds, and expend money in many other ways as a private business in the locality might spend money. Do you think that Congress would put up with it? Of course not.

In the case of the postmaster or the Post Office Department, Congress has a remedy. The Congress can place limitations on the appropriation bills and place limitations and restrictions on the expenditures of the funds handled by the postmaster and the Post Office Department.

In the case of the Federal Reserve, however, this is different. Congress permits the Federal Reserve banks to take money, free of charge, from the Bureau of Engraving and Printing and trade this money, which is a noninterest-bearing Government obligation, and exchange it for U.S. Government securities that are interest bearing. The 12 Federal Reserve banks keep these securities—at least, the New York Bank keeps them—and they collect the interest on them. In this way the System collects enough money to spend for all desired purposes without coming to Congress for money. In this way, the Federal Reserve receives about $600 million a year paid by the taxpayers. And after the Federal Reserve officials spend all of this income they desire to spend, including spending for purposes wholly unrelated to the public business, they hand back 90 percent of the remainder to the U.S. Treasury.

I wonder how much longer Congress will permit this situation to continue without investigating to find out what is being done and by whom?

[From the Washington Post and Times Herald, Mar. 9, 1959]

U.S. BOND MARKET SPECULATION PROBED

(By Joseph R. Slevin)

The Treasury Department and the Federal Reserve System said yesterday they have begun a joint investigation of the multi-billion-dollar Government bond market.

The two agencies declared they want to prevent excessive speculation and to improve the functioning of the market. They said that the inquiry will be factual.

The investigation is a direct outgrowth of a speculative buying spree and subsequent market collapse in 1958. The agencies said their study will focus on those developments.

The 1958 fiasco was the worst debacle in the history of U.S. public finance. Thousands of investors lost money. The Government bond market became demoralized and has not yet regained public confidence.

The Treasury and the Federal Reserve said they expect to complete their joint study in time to make it public about midyear. The findings presumably will be laid before congressional committees.

A Herald Tribune News Service investigation last summer disclosed that loose corporate, bank, and Government bond dealer lending practices made it possible for speculators to obtain huge quantities of Government bonds without making a down payment and without paying interest. Some of the Nation's biggest corporations and banks financed the speculators and simultaneously speculated heavily on their own.

The Treasury and Federal Reserve made it plain that the plungers' credit deals will be a prime target of their probe.

They said they will ask for data from major lenders and participants in the Government bond market including banks, corporations, dealers and brokers.

The news service investigation revealed that banks and corporations financed hundreds of millions of dollars of speculative activity by buying securities that they then agreed to resell at a future date to a speculator or to a money broker who acted as the speculator's middleman. These arrangements were called repurchase agreements and buybacks.

A number of banks violated the precepts of sound banking by lending money to speculators they didn't know. Direct loans were often granted without margin.

The bubble burst in mid-June after the plungers had joined with legitimate investors in buying more than $7 billion of new 2⅝ percent 7-year Government bonds. The bond market faltered with signs that the recession was ending. It broke sharply when speculators began to dump huge holdings of Government obligations.

SPECULATION IN U.S. BONDS

(By Joseph R. Slevin, national economics editor, New York Herald Tribune)

FOUR HUNDRED MILLION DOLLARS LOST BY U.S. SPECULATORS SINCE JUNE—EFFECTS TO BE FELT FOR MONTHS YET

WASHINGTON, September 1.—The Treasury Department sold $7,388,000,000 of new bonds last June and the dust hasn't settled yet. It was the worst debacle in the history of U.S. Government borrowing. The bonds have been declining in value since the day the subscription books closed and they still were edging lower last week.

Individuals bought the bonds. So did banks, corporations, brokers, dealers, and insurance companies. Some bought the bonds as permanent investments. But an astonishingly large number bought the bonds for speculation. The real and paper losses of the buyers totaled almost $400 million when the Labor Day weekend began.

The loss is the largest that ever has been suffered by the buyers of a new issue of securities in so short a time. Every fresh decline in the bond market adds to its size.

Some lose millions

The real dollars-and-cents losses are being borne by the speculators who bought the bonds to make a quick profit and instead have been selling them out at strapping losses. There are some individuals and syndicates who now count their losses in the millions.

The paper losses are on the books of the investors who bought the bonds for the 2⅝ percent interest that they pay, still have them, and plan to redeem them for 100 cents on the dollar when they mature on February 15, 1965. They will be hurt only if they are forced to sell at depressed prices before the bonds come due.

No one is wise enough to say how much of the drop was caused by the speculators overbuying the 2⅝s and then hastily dumping

them when the market broke. The bond market was ready to turn down, and the skid in the new bonds has been accompanied by a steep slide in the prices of other Government securities. But there is general agreement among financial experts that the entire U.S. Government securities market has plummeted far more swiftly than it would have if the speculators had not moved in.

The magnitude of the speculative activity was staggering. The best guess now is that speculators bought more than $3 billion of Government bonds during the June refunding. That represents the difference between the $7,388 million total issue and an advance Treasury estimate that the true investor demand for the new 2⅝s would total between $3 billion and $4 billion.

"These guys must have thought they were playing with marbles," a leading investment banker said recently. Guys who had never owned more than a few stocks and bonds found that they had signed up to take millions of dollars of Government bonds."

Will be felt for months

The impact of the June fiasco will be felt for many months to come. It is a matter of profound national concern.

The market for United States Government securities has been disrupted and it has become measurably more difficult for the Treasury to finance the Government debt in a sound and orderly fashion.

The Federal Reserve System, which is charged with regulating the national money and credit supply, found its activities limited this summer by a need to be solicitous of the weakened Government securities market.

The persistent decline in bond prices has scared off the big Government bond houses that are supposed to make a market by buying, selling, and owning Government securities. They are reluctant buyers for they fear that further price declines—and further losses—are ahead. The new bonds plunged from a peak price of just over 100 13/32 on June 5 to a low of 93 28/32 last Friday—a drop of $6.54 in the value of every $100 bond.

Separate investigations of the June break are being made by the Federal Reserve and the New York Stock Exchange. Whether they can or will find solutions that will make it more difficult for the speculators to come into the Government bond market in the future remains to be seen.

There is a widespread conviction that it must not be allowed to happen again.

The damage to the market, to credit policy, to investors, and to the financial integrity of the country has been too great.

The full story of what happened has not been told and perhaps it never will be. But the major pieces now can be fitted together.

It is easier to single out those who played a part in the events leading to the collapse than it is to parcel out responsibility. Many people were involved. Many forces were at work. Some of the biggest corporations and banks in the country did things they intend never to do again.

But there is no one scapegoat.

The responsibility must be shared among:

Individual, corporate, bank, and broker-dealer speculators who unsuccessfully tried to make a killing in the Government bond market;

More than 100 leading corporations that supplied hundreds of millions of dollars to the speculators to finance their bond purchases;

Dozens of substantial banks that financed security purchases at little or no cost to the speculators;

A money broker who financed more than $500 million of the bond purchases by acting as go-between for the corporations and the banks on the one side, and brokerage houses and individual speculators on the other;

Brokerage houses, including stock exchange firms, that speculated in Government bonds for their own account and encouraged their customers to do the same.

Government bonds houses and banks that sold securities to stock exchange firms on terms that permitted the buyer to delay payment until a date in the future;

The Federal Reserve System, which made money so cheap in pursuit of its anti-recession policy that the speculative deals became tempting to corporations and banks that were in search of income;

The Treasury Department, which shared the general blindness about the events that were taking place and thus arranged the refunding on terms that tempted the speculators to make their play.

A minority caused the trouble—a minority of the corporations, a minority of the stock exchange houses, a minority of the investors.

The speculative fever burned its hottest in Wall Street, but it fanned out across the country and blinded the speculators and the lenders to the risks that they were taking.

It was a classic speculative surge. Hardened professionals and naive clerks all reached the same happy conclusion: the Government bond market could go only one way—"up"—and there was money to be made for the asking.

But they were wrong.

BIG PROFITS MADE IN FEBRUARY PURCHASES LURED PLUNGERS INTO JUNE DEBACLE

WASHINGTON, September 2.—Wall Street now holds the "gay '90's" party responsible for last June's big speculative purchases of the Government's new 2⅝ percent bonds.

The financial center is not talking about the colorful decade that ended the 19th century. Instead, it is pointing directly at a $1,727 million issue of 3½ percent bonds—due in 1990—that the Treasury sold in mid-February.

These were the "gay '90's." They soared to a peak price of 107 10/32s during the weeks after they were issued. Speculators had been heavy buyers at the offering price of 100 and the big paper profits whetted their appetities for more when they looked ahead to the $9,550 million refunding that the Treasury would have to carry out in June.

But one episode

The "gay '90's" were but one glittering episode in a story of huge speculative profits that began when the Federal Reserve System abandoned its tight money policy in mid-November of last year. The shift to an antirecession, easy-money policy and the impact of the business downturn on market expectations led to the sharpest drop in interest rates—and the steepest rise in bond prices—in history.

That was when the professionals began to make big money.

They reaped enormous profits by buying outstanding Government bonds and holding them while prices rose. They made millions more by buying 3⅞ percent, 17-year bonds that the Treasury sold in December and 3 percent, 6-year bonds that it sold with the 32-year "gay '90's" in February.

It was against this background of a pell-mell price rise and confident expectations of further increases to come that the speculators began to build their positions for the June refunding. It seemed certain that the recession would continue for many more months and that bond prices would continue to climb as interest rates fell. It didn't look like a gamble. The word went out: There's no risk. It's a sure thing. It's a free ride. Get on board.

Bonds prices customarily are pushed to higher levels when business activity declines. The supply of money grows while the demand for funds weakens. People bid against one another to buy the available supply of bonds.

The biggest plungers—and the heaviest losers—are believed to have been a Miami, Fla., family group. They are known to have had close to $90 million of new bonds and there are some indications that their purchases were substantially larger. They held on to their bonds after the market broke in June, kept hoping that a fresh rise would get under way, and didn't begin unloading in earnest until August.

They sold many millions out at 96 cents on the dollar and sold millions more at 95. Their losses have been estimated at almost $5 million—and just last Thursday a dealer found evidence that they still were selling.

The "Miami crowd," as they now are known in Wall Street and other giant speculators could operate on a magnificent scale because a money broker arranged to give the speculators access to the idle cash of some of the country's biggest corporations. The speculators paid no interest, usually did not put up any money of their own, and gave the corporations temporary title to the bonds to protect the loan.

They called the deals repurchase agreements. Sometimes they did them with banks and called them buybacks.

A Boston broker arranged $73 million of loans for his customers through the money broker. A prominent oil industry official came to the money broker. So did the head of a Midwest brewery, the lawyer for a big mutual fund, a top officer of a big defense company, and many, many others.

Bank officials got caught up in the rush and in at least two instances they approached Government bond dealers for special credit arrangements. The big foreign agency banks in Wall Street helped to finance the speculators, and substantial foreign interests, including Greek shipowner money, joined the profit-hungry throng.

The speculative excitement spread during May from the big Government bond operators to brokerage houses and through them to thousands of little people who had never bought a marketable Government bond in their lives. The stock market showed signs of weakening and brokers talked up the rising Government bond market as a smart hedge against the threat of a stock market break.

Where $100,000 deals always have been looked on as small potatoes in the Government bond market, some brokerage houses pushed the bonds in $5,000 and $10,000 blocks.

Some asked margin. Others didn't. One novice speculator bought $1 million of the new bonds by putting up only $1,500—a margin payment of exactly three-twentieths of 1 percent. He sold out at a profit of $180 before the market broke. If he had waited just a little longer, he would have lost $7,000.

The public had missed out on the "gay '90s" and the big profits of the winter and early spring. The public came in during the last days of May and the first days of June—in time for the crash landing.

Toward the end of June, about 10 days after the market broke, a preoccupied trader for one of the leading Government bond houses stopped at a cigar stand and absent-mindedly asked for "a pack of 2⅝s."

"How are they doing?" the clerk asked. "I've got a hundred of them myself."

Another major dealer received a call at about the same time from a man who asked the price of the 2⅝s. When the dealer said they were selling at 99½, the caller said he would like to sell some.

The big bond houses trade with other dealers, banks and brokerage houses but don't usually trade with individuals.

"What's your name and how many do you have?" the dealer asked. "Five million," replied the caller and gave a name that the dealer didn't recognize.

"Who are you?" the puzzled dealer inquired.

"A used car dealer in Jersey City," the man replied.

PLUNGERS WAITED IN VAIN FOR RALLY

WASHINGTON, September 3.—Professional speculators, commercial banks, big corporations, bond dealers and stockbrokers got caught with the dress manufacturers, real estate salesmen, storekeepers, stenographers and ribbon clerks when the Government's new 2⅝-percent bonds broke par June 19.

Some people got out in time, but most didn't. A few Government bond dealers had sensed that a change was coming and had been quietly reducing their inventories for some days before the market broke. But many speculators wouldn't believe that the turn had come and hung on to their bonds—hoping that the slump would be brief, hoping that a rally would carry the bonds back above par and at least let them get even.

The rally never appeared.

The 2⅝s were in weak hands. Too many 6-year 8-month bonds were owned by individuals and corporations who didn't want to own marketable governmental bonds, had no business owning them—and couldn't wait to get rid of them.

They were speculators. They were not investors. They had bought the bonds in the hope of a quick profit. Now that the bonds were going down instead of up, they wanted out.

Price changes in the Government bond market customarily are small and the speculators signed up for huge quantities of the 2⅝s in their attempt to make a profit. They had to buy in on little or no margin to get the leverage they needed.

A composite case in point would be a speculator of modest means who bought $1 million of bonds on credit, made no down payment, and was startled to realize that he had, in effect, signed a pay-on-demand note for $1 million.

A speculator who dealt with one of the New York Stock Exchange firms that lived up to the N.Y.S.E. rules by charging the full 5-percent margin that the exchange requires would have had to put up $5,000 on a $100,000 deal.

He still had powerful leverage. A one point rise would have returned a $1,000 profit. That figures out to a 20 percent return on a $5,000 investment within a few short weeks.

It was a different story when the market broke. Every point decline meant a $1,000 loss to the small speculator who had $100,000 of bonds. It meant a $10,000 loss to the speculator who had $1 million of bonds.

Speculators sell

The speculators had no stomach for that kind of pounding. They didn't plan to keep the bonds for 6 years 8 months and couldn't have paid for them if they had wanted to. One after another, the speculators began to sell out.

Some of the largest corporations of the country contributed to the debacle by speculating heavily in the 2⅝s. Corporations normally invest their funds in short-term securities that mature in a year or less. They know they will need the money within a short time for taxes, dividend payments or equipment purchases and choose temporary investments that can be liquidated quickly.

But the 6-year 8-month bonds were too tempting. The corporate treasurers knew about the big profits that had been made in the Government's February issue of "gay '90's" and they thought that bond prices still were rising.

Treasurer after treasurer threw caution to the winds and decided that he would buy the 2⅝s, hold them until they rose to a premium of 101, 102, or perhaps even 103, then kick them out at a profit and switch to the 1-year and under securities that he should have bought in the first place.

The 2⅝s didn't go up. Some corporations sold out at a loss and added to the pressures that depressed the bond market. Others still are carrying the 2⅝s on their books in red ink. It's a safe guess that many red-faced corporate treasurers have spent uncomfortable hours explaining their June gambling enthusiasm to company presidents and boards of directors.

The startling fact is that corporations directly and indirectly financed more than $1 billion of the speculative purchases of the 2⅝s. A Treasury survey shows that corporations—which had been expected to buy only a handful of the bonds—actually took $1,045 million worth.

The corporations didn't buy the entire $1,045 million of bonds for their own speculative operations. A sizable share—certainly many hundreds of millions—represents bonds that the corporations took for the individual speculators that they were financing through the "repurchase agreements."

Corporations were tempted to speculate in the 2⅝s partly because they were unenthusiastic about a 1¼ percent interest rate that the Treasury attaches to a 1-year certificate that it issued at the same time as the 2⅝s. The corporations normally would have gravitated toward the 1-year security to meet their short-term investment needs, but the Treasury survey reveals that they bought a relatively meager $570 million of the certificates while taking the incredible $1,045 million of intermediate bonds.

Commercial banks speculated heavily, too. They were expected to be substantial buyers of the 2⅝s since a 6-year 8-month bond is an attractive investment for many commercial banks. But the banks bought many more than they needed for their own portfolios.

The Treasury breakdown shows that commercial banks took $4,031 million of the 2⅝s. The bank takings alone thus exceeded an advance Treasury estimate that total subscriptions to the 2⅝s by all comers would total somewhere between $3 billion and $4 billion and played a significant role in boosting the total bond issue to $7,388 million. Where the Treasury had expected to sell $5 to $6 billion of the 1-year certificates, it received orders for only $1,817 million.

The bank figures undoubtedly exaggerated the volume of direct bank speculation just as the corporate figures exaggerate the amount of direct corporate speculation. The bank total includes the 2⅝s that the banks bought for speculators who had arranged direct loans and for speculators who had arranged "buy-backs."

Ironically, commercial banks from one end of the country to the other were steadily—and injudiciously—buying the 2⅝s during the delicately balanced mid-June weeks when the Government bond dealers were cautiously liquidating their own holdings.

The bank purchases helped give the Government bond market a deceptive appearance of stability in mid-June just as heavy specualtive buying in May had made the market look stronger than it really was.

The commercial bank speculation didn't add directly to the downward pressures after the market broke because the banks kept their 2⅝s in preference to selling them out at a loss. Normally, though, the banks would have bought up some of the 2⅝s as they were released by the speculators. But the banks were overstuffed and wanted none of them. An important cushion was missing when the speculators began to unload.

MONEY BROKERS TAP IDLE RESERVES OF FIRMS, BANKS TO PLAY MARKET

WASHINGTON, September 4—One day in late February a New York investment banking house called a prominent money broker and asked him to arrange a $30,000,000 "loan" for an unidentified individual. The money broker quickly complied. It was the first of many such "loans" that ultimately led the money broker to set up the financing for more than $500,000,000 of speculation in the Treasury's June issue of 2⅝ percent bonds.

The initial deal was arranged for tax rather than for speculative purposes. So were a number of the other transactions that the money broker negotiated during the following months. But the method that he used was peculiarly well adapted to financing speculation in Government bonds.

The word spread rapidly and the demand for the "loans" mounted. The money broker arranged some deals for big individual speculators including the Miami crowd that bought about $90,000,000 of bonds. Most of his deals were negotiated for members of the New York Stock Exchange and for other brokers who wanted financing for themselves or for their customers.

He wasn't the only money broker who participated in financing the June speculation but he was the most active. He showed speculators how they could tap the huge reserves of idle corporate and bank money to play the Government securities market.

The money broker called his deals "repurchase agreements" when he made them with corporation and "buy-backs" when he made them with banks.

Speculators liked the deals because they obtained millions of dollars of Government bonds without paying any interest and without putting up any money of their own.

Corporations and banks liked the deals because they held Government obligations as security and collected more interest than they could have obtained through conventional financing techniques.

The first $30,000,000 deal set the broad pattern that the others followed. Here is how a typical repurchase agreement worked:

Acting on the instructions of the money broker, a big corporation with idle cash bought $30 million of 2⅜ percent Government bonds that were scheduled to mature June 15. The money broker agreed to buy the bonds from the corporation by the maturity date and contracted in turn to sell them to an individual or a brokerage house that had placed the original order.

Pockets interest

The corporation pocketed all or most of the 2⅜ percent interest that the bonds paid. Frequently it agreed in advance to accept only 2 or 2⅛ or 2¼ percent and the money broker kept the rest.

It was an attractive deal because the corporation received about twice the income it would have obtained by the traditional device of investing its funds in short-term Treasury bills. The bills yielded about 1 percent during most of the spring.

The money broker collected 1/32 of 1 percent commission on the bond transaction.

The speculator was assured delivery of the bonds on the date that he wanted, at the price the corporation had paid, and at a cost of only the 1/32 commission that he would in any event have had to pay a broker for buying the bonds.

Banks found the buy-backs even more lucrative than the corporations did. The interest they received from the 2⅜s contrasted sharply with the ⅛ to ¼ of 1 percent that they could have obtained by lending their surplus "Federal funds" to other banks during the period in late May when the speculative fever was at its peak.

The wide spread in the interest rate structure was responsible for the strong appeal that the speculative loans had for both the corporations and the banks. The spread had developed in large part because of the aggressive manner in which the Federal Reserve System had been pursuing its antirecession easy-money policy.

Biggest is $84 million

The biggest repurchase agreement that the money broker arranged totaled $84 million. It was negotiated with a mutual fund.

One corporation made $70 million available. Another provided $60 million. More than 100 other corporations and some two dozen banks provided substantial but lesser amounts.

The speculators used the money to have the corporations and banks buy "rights" to the new securities that the Treasury would issue in its $9,550 million June refunding. "Rights" are maturing obligations that the Treasury encourages investors to exchange for new Government securities. Some speculators chose the 2⅜ percent bonds that matured June 15 while others bought the 2⅞ percent notes that came due the same day.

Most of the wealthy individuals who originally came to the money broker for tax reasons stayed to gamble. They got caught up in the speculative excitement of late spring and failed to sell out in time to achieve their tax objectives.

One affluent citizen brought $22,825,000 worth of rights for tax purposes through a repurchase agreement. He acted on the advice of a prominent New York accountant who told him that $22,825,000 was the exact amount that he needed. He bought the rights at a premium and gave orders that they were to be exchanged for the 2⅝s, which then were to be sold out immediately.

But he heard that the 2⅝s were going up canceled the sell order, and finally sold at a heavy loss after the 2⅝s broke par.

Didn't sell in time

Another individual bought $25 million of the rights, then became more interested in speculation than in taxes and bought an additional $36 million—a total repurchase deal of $61 million. He didn't sell in time, suffered a substantial loss, and is mad as a wet hen at the money broker that he dealt with.

The tax plan was only for people in the upper brackets and only for people who had substantial losses on other investments.

Take the hypothetical case of a man in the 70 percent income-tax bracket who bought about $30 million of rights and paid 100$\frac{1}{32}$s for each bond. The premium payments of eight thirty-seconds totaled $75,000. A taxpayer is permitted to deduct premium payments from ordinary income. This means the taxpayer could subtract the $75,000 from his taxable income. The saving for a man in the 70 percent bracket amounted to $52,000.

He still had to take two more steps. He had to convert the rights into the new Treasury securities and had to sell out the new securities immediately to get his money back.

The market was rising. The taxpayer assumed that he would be able to get back his $75,000 of premium money by collecting at least as big a premium on the new June security as he had paid on the rights.

But he would lose his tax saving if he had to pay a 70 percent tax on the premium that he collected. The scheme therefore provided for writing off the premium income against carryover losses that the taxpayer had suffered from unfavorable investments in previous years.

The market remained strong for a brief period after the tax operators converted their rights into the 2⅝s. But most waited too long to sell.

MONEY BROKER TRADED ON NAME TO BACK HALF-BILLION IN DEALS

WASHINGTON, September 6.—The Wall Street money broker who arranged the financing for more than $500 million of speculation in the Treasury's June refunding didn't invent the techniques that he used but he polished them up and put them to work on a scale that had never been seen before.

Individual speculators and brokerage houses, who could not have swung the deals on their own, obtained interest-free, no-downpayment access to huge quantities of corporate and bank credit for speculating in the U.S. Government securities market.

Broker's good name

The money broker got them the money by putting his own name instead of theirs on the repurchase agreements and buybacks that he negotiated with corporations and banks. He traded on his high reputation and solid credit-standing to make deals that corporate treasurers and bank lending officers would not have made with his clients.

At the peak of his operations, he had commitments to buy more than $500 million of Government bonds from corporations and banks. Individuals and brokerage houses in turn had promised to buy the bonds from the money broker.

But people up and down Wall Street shudder today to think of what might have happened if the Government bond market break had been sharper than it was—and if a number of the speculators had reneged on their contracts with the money broker.

He lost a large sum of money but he met all of his commitments and disappointed some Wall Street bankers who had been confidently predicting that he would go under.

The New York Stock Exchange has been auditing the money broker's books and is conducting a wide-ranging investigation of his operations in an attempt to find out whether any of its rules have been violated. It began looking into the situation after the 2⅝s came on the markets June 15. In early July it ordered him to liquidate $376 million of "repurchase agreements" and "buy backs" that he still had in force.

Wall Street plan

The methods that the money broker used had been developed in the last few years by the big Government bond houses to finance their portfolios of Government securities at lower interest rates than they would have had to pay the Wall Street banks.

The bond dealers tapped corporations and banks all around the country and one result was that corporate treasurers and bank lending officers felt at home in negotiating repurchase agreements with the money broker. They were working with a type of transaction they had come to know well.

The money broker for his part had been using the same devices on a smaller scale to finance tax savings deals and elaborate arbitrage transactions for his clients. He had established a special place for himself as a clearinghouse for banks that wanted to buy and sell Federal funds. On his biggest day, his transactions fell just $30 million short of an even $1 billion.

Bank lending officers in large- and medium-sized communities all around the country knew him. Borrowers came to him for he could obtain money much more cheaply than they could get it for themselves. Because of his dealings in Federal funds, he always knew which banks had extra money they were anxious to lend.

It only gradually dawned upon the banks and the corporations that the deals they had made with the money broker were riskier than their customary transactions with the Government bond houses. Some lenders were less knowledgeable than they might have been. Others had bee lulled by eager talk of a rising bond market and riskless transactions.

Those who came in at the beginning started out with one type of commitment and ended with another. But even so they probably would not have become nervous if the bond market had not weakened.

June redemptions

The original repurchase agreements and buybacks covered the 2⅜-percent rights that matured June 15. Banks didn't fret about entering into deals secured by a Government bond that could be redeemed at par in mid-June. Neither did the corporations.

But, when the speculators told the lenders to exchange the rights for the new 2⅝s, the character of the deal changed profoundly. Instead of holding riskless securities, the banks and corporations now had title to Government bonds that would not mature until February 15, 1956, and that would fluctuate in price.

The lenders had not thought to obtain a promise of collateral from the money broker to protect them against a decline in price. He in turn had not obtained margin from his clients for he did not consider them brokerage customers who would be subject to the Stock Exchange requirement of a 5-point margin payment.

Bank examination officials maintain they are not disturbed by the buybacks since they know of no bank that suffered a substantial loss. Many bankers vigorously disagree. They consider it unsound banking to lend money on a 6-year, 8-month bond without at least 5 percent margin.

As the 2⅝'s rapidly lost their premium value before breaking par on June 19, the lending officers of the big New York banks received call after call from the worried treasurers of big corporate depositors. Some had loans they could call on short notice. Others were committed for fixed periods such as 30 days. One corporation had agreed to hold $5 million of bonds until August 15 and $5 million more until September 15.

Needed collateral

The bank lending officers shook their heads and advised the corporations to demand collateral to cover the decline in the price of the bonds. The margin calls mounted. The money broker had to get collateral to cover his contracts. Banks and brokerage houses demanded more margin from their customers. Each day brought additional liquidation of the 2⅝s. Each day saw more speculators shaken out.

The heavy volume of corporate financing and the insistent margin calls were ominously reminiscent of the 1929 stock market crash. Billions of dollars of speculation had been financed by corporate call loans in 1929. When the market broke, the corporations demanded their money and touched off a torrent of distressed liquidation.

The dimensions of this summer's break were not comparable to the 1929 crash.

But the country has had a blunt reminder that it is dangerous to finance speculation through bank and corporate call loans that are protected by little or no margin.

"NO DOWNPAYMENT" SAID WALL STREET IN FINANCING OF TREASURY OFFERING

WASHINGTON, September 7.—Some of the big Wall Street banks and large Government bond dealers helped finance speculation in the Treasury's $9,550 million June refunding by carrying securities for their customers without a downpayment and without an interest charge. The chief beneficiaries were leading New York Stock Exchange firms. But other brokerage houses and some individuals obtained the 100 percent "loans" too.

The "free carries" were a departure from the normal operating practices of the few dealers and banks who made the generous credits available. They acted under pressure from good customers and because they had a chance to earn a comfortable return on a riskless transaction.

"It wasn't something we went after," a bank official said recently. "We only did it for the substantial houses. We were careful which stock exchange firms we did it with. They came to us."

What the banks and the dealers did was to grant their customers delayed delivery in selling them the 2⅜ percent and 2⅞ percent rights that matured June 15. A stock exchange house that bought, say, $5

million of the 2⅜s on May 15, didn't have to put any money up until it took delivery of its securities in June. Normal Government bond market practice would have called for payment either the next day or on the second day following the sale.

Most of the delayed delivery contracts were made as the speculative excitement mounted from mid-May on. They called for delivery in early June for that was when the Treasury was expected to open its refunding books. A speculator who planned to exchange his rights for new Government obligations would have to act at that time.

Two to five million dollar blocks

A substantial number of the delayed delivery sales of rights to the stock exchange firms were in blocks of $2 to $5 million. A few were larger. One well-known member firm took more than $50 million of the rights from a bank under a delayed delivery contract.

The stock exchange houses eagerly sought the delayed delivery contracts for the same reason that they embraced the repurchase agreements and buy-backs that they arranged for themselves or through a money broker. Delayed delivery was one more way in which they could obtain rights without an interest charge and without a down-payment.

The banks and the dealers found the delayed deliveries tempting because they were able to sell the 2⅜s at the premium prices of mid-May while they continued to collect the 2⅜ percent interest until their customers took delivery in June. It was a shade less profitable for the dealers than for the banks, since the dealers had to borrow money at about 1 percent to carry the "rights."

Many dealers refused to make delayed deliveries. The refusal often meant a lost sale, because the stock exchange firm then shopped around until it found a dealer or a bank that would give it the free credit it wanted.

"We said, 'No thanks,'" a prominent Government bond dealer recalled. "We're not in the money lending business."

The loan officer of one of the big financial district commercial banks said flatly: "We're clean. We didn't finance any of the rights. We had the answer from the beginning: 'No.'"

The delayed deliveries, like the "buy-backs," seemed sound from a banking standpoint. The collateral was the best. The 2⅜s came due on June 15. If the buyer reneged, the bank could exercise the rights itself or turn in the maturing securities for cash. It could lose no more than the premium it would have collected if the deal had not fallen through.

Not good for United States

But the easy credit deals contributed to the excessive speculation in the Government bond market. What may have been good for the banks was not good for the country.

The Treasury closed its subscription books on June 6, and the people who had bought the 2⅜s on delayed delivery contracts elected overwhelmingly to exchange their securities for the new 2⅝-percent 6-year 8-month bonds. The dealers demanded payment, but the banks extended the "free carries" for 10 days until June 16—the day when the rights were to be replaced by the new bonds. June 16 was the exchange date because June 15 fell on a Sunday.

The additional 10-day delay pushed further into the future the moment when the speculators would have to arrange loans and put up margin to finance their bonds. At least one bank carried the new bonds for insistent customers to July 1—without interest and without a margin payment.

Brokers pressed banks for liberal credit terms and many banks and brokers carried the speculators with little or no margin partly because they were convinced that the market was rising and there was no risk—and partly because they were in competition with one another.

A broker who meticulously observed the stock exchange's 5 percent margin requirement was aware that he might lose a customer to another broker or to a bank that charged no margin. Money was easy. The borrowers held the whip hand.

Many banks financed the speculators through standard security loans but granted more liberal terms than they normally would have provided. Where one Wall Street bank, for example, held fast to its regular 3½ percent interest charge for "street accounts," another planned to ask 2¾ percent but trimmed its fee to 2⅝ percent because that was the rate a big competitor charged.

Zero to 5 percent margins

Margin requirements in New York ranged from 0 to 3 percent on the rights and from 2½ percent to 5 percent on the 2⅜s.

The Wall Street division of one major bank had a larger volume of loans on its books after the 2⅜s were issued than at any other time in its history. Significantly, the bulk of the loans were to stock exchange firms that had never been active in the Government securities market before. Like many others, the stock houses found themselves doing something new—and took a licking.

A large number of banks outside of New York financed speculators on as little as 1 or 2 percent margin. They usually made the loans through money brokers directly to individual spectators.

They loaned hundreds of millions of dollars to people they didn't know and they had some frantic moments trying to get hold of speculators in New York and other cities to raise additional margin as the market went down.

One worried out-of-town banker came to New York in late June carrying a three-page, single-spaced list of unknown New Yorkers to whom he had casually loaned an average of about $200,000 each on the new 2⅝s. Along with other bankers throughout the country he had thought the bond market would remain strong and his loans would rest quietly until they were paid off. To their dismay, the bankers discovered that they had acquired thinly protected, highly active Wall Street accounts.

TREASURY AND WALL STREET DIDN'T KNOW THAT BREAK IN MARKET WAS AT HAND

WASHINGTON, September 8.—The mid-June break in the Government bond market and the steepness of the decline took Wall Street and Washington by surprise. They had known that trouble was brewing, but they hadn't suspected that the situation was as grave as it proved to be. Top Government financial officials and some of the keenest bond dealers in New York only gradually abandoned hope that the drop could be held within narrow limits.

The ironical fact is that Government bond prices had hit their peak in April, but the speculators didn't know it. They streamed into the market during May and early June to bet on a further rise in a market that had already started to drift lower.

The Treasury Department didn't know the turn was at hand. Neither did its expert advisory committees of top commercial and investment bankers. They came to Washington in the last week of May to advise the Treasury on the terms of its $9,550,000,000 June refunding and all of the discussions began and ended with an assumption that the market would remain strong.

Knew of speculation

The bankers and bond dealers knew that people were speculating in the rights that matured June 15. But they had no notion that the speculation was as widespread as it was. Neither did the Treasury or the Federal Reserve System.

The advisory committees warned the Treasury that speculative demands would make it dangerous to include a long-term bond with the securities that it would offer in exchange for the rights. But they stopped there. The Treasury accepted the committees' general recommendations and announced on May 29 that it would sell about $1 billion of 3¼ percent, 27-year bonds for cash and would give the holders of the rights a choice between 2⅝-percent, 6-year, 8-month bonds and 1¼-percent, 11-month certificates.

Speculators never had gambled by buying 6-year, 8-month bonds before. No one thought that they would now.

But the danger signs multiplied in the days that followed. The premium on the "rights" went up after the Treasury announcement. It had been expected to decline for it had been thought that the speculators would dump their "rights" once they found that the refunding package would not include a potentially lucrative long-term bond. Instead, they held tight. The rise in the price of the "rights" was a tip-off that the ranks of the plungers were growing.

The alarm rings

The subscription books closed on June 6, and on Tuesday, June 10, an alarm bell clanged loudly. The Treasury made public a preliminary finding that investors had taken about $7,250 million of the new 2⅝s—instead of the $3 billion to $4 billion it had anticipated.

But commercial banks were buying in the market and the price of the 2⅝s edged up 1/32 the next day. The dealers and the Treasury agreed that it would take several months but the market could absorb the extra $3 billion to $4 billion of bonds. The consensus was that the job was manageable.

Disquieting rumors circulated during the rest of that week. The speculators had to take delivery of the 2⅜s on Monday, June 16, and the market heard that a money broker had some commitments that he was finding it difficult to finance. On Friday, June 13, there were reports that he had asked that some deliveries be postponed beyond the Monday deadline.

The market became jittery. The 2⅝s slipped from a peak of 100 13/32s on June 5 to 100 9/32s on Friday, June 13. They dipped to 100 7/32s on Monday.

People who had had "free carries" had to obtain bank loans and had to put up margin when they took delivery of the 2⅜s. Some sold out instead.

The money broker delivered $126 million of the new bonds to his clients. Many corporations had taken repurchase agreements on the understanding that they would get their money on June 16 in time to pay their quarterly tax installments. A number of speculators had mistakenly believed their interest-free, no-down-payment corporate credit arrangements would continue. Some reluctantly placed their bonds in bank loans. Others wouldn't or couldn't put up the margin that the banks were asking and they, too, sold out.

The 2⅝s slipped to 100 2/32s on Tuesday and to par on Wednesday. The next morning the New York Herald Tribune reported from Washington that the "Federal Reserve System had reached a major turning point in its antirecession drive and is slowing the pace at which it has been pressing toward easy money." The speculators leaped to the twin conclusions that the central bank soon would be shifting toward tight money and that a decline in bond prices was imminent.

The 2⅝s broke par. The general decline in the Government bond market was under way.

The Herald Tribune story triggered the decline. It had the impact that it did because it hit a nervous, speculative market at a time when business activity was be-

ginning to improve and market expectations were shifting.

The recession was ending sooner than the plungers had anticipated. Speculative buying had helped bring about a recordbreaking rise in bond prices after the Federal Reserve shifted to easy money last fall. Now the speculators started to dump their holdings and bond prices plummeted during the following weeks.

The market broke because business activity unexpectedly began to rise. It broke as dramatically as it did because it was shot through with speculation.

Each fresh report of an improvement in business activity made it seem more certain that higher interest rates and lower bond prices were ahead. Each new sell order from an individual or a corporate plunger aggravated the downward pressures.

When the New York Stock Exchange in early July ordered the money broker to liquidate $376 million of repurchase agreements and buy-backs that still were in force, it added to depressing influences that led the Treasury to buy up $589,500,000 of the 2⅝s from June 18 to July 9 in a vain attempt to stem the decline in bond prices.

Hindsight makes it plain that the Treasury should not have made an unlimited offering of 6-year, 8-month bonds to holders of $9,550 million of maturing Government securities. It feared speculation in the 27-year bonds that it simultaneously sold for cash and it imposed stiff downpayment and allotment limits that kept most of the speculators out of the long bonds.

The $9,550 million refunding would have been far harder to control since every holder of a maturing security had a right to one of the new Government obligations. But there were steps that the Treasury could have taken if it had known that the speculators were lying in wait. It could have offered only short-term securities, for example, or it could have restricted the offering of 2⅝s to an amount that it was sure the market could digest.

But its suspicions were not aroused and it walked in with its guard down and its chin out. Even so, there is widespread agreement among market experts that the Treasury still would have come through unscathed if the speculators had not chosen to make their big play just at the time when people were becoming aware that the recession had ended.

PLUNGERS CAN BE A PROBLEM AGAIN IF ACCESS TO EASY CREDIT IS LEFT OPEN

WASHINGTON, September 9.—Speculators raised hob with the bond market this year and they can do it again unless corrective steps are taken.

The plungers turned the Treasury's $9,550 million June refunding into the worst fiasco in Government financial history. The bond market is wide open for another foray any time they care to get it started.

Speculative activity has become a major problem because the character of the Government bond market has changed profoundly in the past 10 months. It has become a market where prices swing widely and dramatically enough to attract mass speculation. It no longer is a market where all price changes are small.

Government bond prices rose at a record pace after the Federal Reserve System abandoned its tight money policy in mid-November of last year. They dropped almost as violently this summer when it became apparent that the recession was coming to an end. Professional operators aggravated the upswing by buying bonds and professionals and amateurs alike aggravated the downturn by dumping them.

Psychology changed

Market psychology has changed. Investors now expect drastic price movements. When the market broke in June, investors stopped buying and withdrew to the sidelines to wait for prices to stabilize at new and sharply lower levels.

The odds are against another speculative binge in the near future. The speculators were badly burned when the market broke and all except the toughest professionals will be nursing their wounds for a long time to come.

Market conditions at the moment are unfavorable for mass speculation. Business activity is rising and the dominant pressures on bond prices during the coming months are expected to be in a downward direction—not in the upward direction that attracts the speculators.

A shakeout as violent as the one that took place this summer temporarily provides its own correctives. Corporate treasurers who have large amounts of cash locked up in 2½-percent bonds that are below par won't soon again gamble with short-term money by using it to buy bonds. Corporations and banks that financed the speculators through repurchase agreements and buybacks will be more careful about the people they do business with—for a while, anyway.

But even the most painful memories eventually fade. The plungers will become a problem again the next time a recession develops and a sharp rise in bond prices seems to be a prospect. Now that the speculators have found the way, they will come back.

Easy credit made their operations possible. If they are to be stopped, it will have to be made more difficult for them to obtain funds to finance their purchases of Government bonds.

Same pressure likely

The opportunity for big profits would not have arisen if the Federal Reserve System had not made money so easy that corporations and banks were hungrily looking for loans. And the opportunity would not have arisen if easy money had not driven short-term interest rates down so far that the lenders were searching for a more attractive return than they could obtain from normal short-term investments such as 91-day Treasury bills.

The Federal Reserve made money cheap in aggressively pursuing an antirecession, easy-money policy. It was trying to restore liquidity to the country's financial structure and thus to prepare the way for a business recovery. It will be under pressure to follow the same course in another recession. Even if it decides to move more cautiously, money may still become cheap enough to support a heavy volume of speculation.

A more direct approach to the problem of controlling speculation would seem to be in order.

The most commonly heard proposal is that Federal margin requirements be imposed on purchases of Government bonds. Along with State and local government obligations, Government bonds now are exempt by statute from the downpayment and other credit regulations that the Federal Reserve Board maintains on stocks.

Margin requirements would not have deterred the corporate and bank speculators who used their own money last spring and paid for their bonds in full. But the need to post a downpayment doubtless would have deterred many of the individual speculators and brokerage houses that put up little or no margin to carry huge quantities of the rights that matured on June 15 and of the 2⅝-percent bonds that were issued in exchange.

Less eager to gamble

An individual who had a "free carry" on $1 million of "rights" might have been less eager to gamble if he had been faced with a 10-percent margin requirement and had had to put up $100,000—or with a 25-percent margin requirement and had had to put up $250,000.

The downpayment requirements on stock were set at 50 percent in June and now are pegged at 70 percent.

Banks could not have made "buy-backs" without margin if Government bonds had been subject to the existing regulations. Corporate money perhaps could have flooded in through "repurchase agreements" under the present rules but the margin laws would give the Board power to control the "repurchase agreements" if the exemption were repealed.

An across-the-board imposition of margin regulations on Government bond transactions would create difficult problems for the big Government bond houses. They have to carry large inventories of securities and would be severely hampered by a regulation that required brokers and dealers to put up margin when they borrow against Government bonds.

New York Stock Exchange specialists and odd-lot dealers are exempt from the present stock margin requirements. It has been suggested that the Government dealers could be treated similarly.

An exemption could be granted only if standards were adopted to distinguish the 10 to 16 houses that make a market in Government bonds from the dozens of other brokers who call themselves Government dealers but actually do no more than execute, buy, and sell orders for customers.

It has been proposed that the Federal Reserve Board be authorized to establish the criteria. Alternately, it has been suggested that the dealers be given authority to set up a self-regulating association that would lay down rules as the stock exchange defines and supervises its specialists and odd-lot dealers.

Other margin recommendations have been made that stop short of new legislation. One is that the stock exchange increase its present 5 percent rule to a higher figure—and see to it that it is enforced. One objection that brokers voice to this, as to many proposals for stiffening the exchange rules, is that it might drive customers into the arms of more lenient banks and nonmember brokers.

It has been urged, too, that the exchange make Government bonds subject to its net capital requirements and there are some indications that it may take this step. Two Government bond houses are members of the exchange and presumably would insist upon special treatment that would enable them to continue to finance their inventories of Government securities.

The exchange has steadily broadened its net capital rules as abuses have developed. It made commodity futures subject to net capital requirements in 1946 and it brought in tax-exempt State and local government obligations in 1953.

Brokers could not have made some of the deals that they made in June if Governments had been subject to the net capital rules.

The exchange says that a firm must have a net capital equal to 20 percent of its aggregate indebtedness and must have a minimum of $50,000. A broker who buys stock must deduct 30 percent of its value from his net capital. If he buys a municipal bond, he must deduct 2½ to 10 percent depending upon the bond's rating.

Enforcement of a comparable deduction for Government bonds would have limited the capacity of the brokers to take on bond commitments last spring.

No complete answer

The Securities and Exchange Commission has a similar rule that covers all brokers and dealers but the regulation does not apply either to Government bonds or to municipal securities. Both sets of obligations enjoy a statutory exemption from SEC rules. Repeal of the exemption would enable the

SEC to subject Government bonds to its net capital requirements.

There is no complete answer to the problem of preventing excessive speculation in the U.S. Government securities market. But measures can be taken that will help to keep the speculators within bounds.

Last spring's speculative activity disrupted the market so badly that the Federal Reserve had to buy $1,090 million of Government securities to support an essential Treasury cash borrowing during the Mideast crisis in late July. The Government can't afford to give the speculators another field day. The risks are too great.

Mr. PATMAN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

THE MISSOURI RIVER—NO. 1

Mr. BAILEY. Mr. Speaker, I ask unanimous consent that the gentleman from Michigan [Mr. DINGELL] may extend his remarks at this point in the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

Mr. DINGELL. Mr. Speaker, I have been saddened and shocked by the foul, unsanitary, and downright dangerous condition of our polluted and dirty rivers. One of America's great rivers is the Missouri, known as Big Muddy, rising in Montana and flowing through the Dakotas, Iowa, Nebraska, Missouri, Kansas, and into the Mississippi, at St. Louis.

Conferences preliminary to enforcement procedures under Public Law 660 of the 84th have been held on the Missouri River. It would be fair to say that these conferences are not held until the situation becomes desperate or worse.

From some of these conferences recently held I take extracts to insert into the CONGRESSIONAL RECORD.

I hope our people, as yet unaware of the danger and the need, will read these remarks and will come to understand the horrible conditions in this river, not just from the standpoint of fish and wildlife but from the aspect that citizens living along and around this river are actually in danger from the filth and disease therein.

I am sure anyone who finds his home or business flooded with this kind of water when this mighty river hits the flood stage will have reason to understand more fully the danger and the disgusting nature of the water.

These are the first remarks I intend to make on the Missouri and deal with the Sioux City-Omaha segment of the Missouri River. The remarks here chronicling the nauseating conditions of the river will be equaled if not exceeded by a description of the water to appear in my second set of remarks on this once delightful river dealing with other stretches downstream.

THE MISSOURI RIVER—I

The Missouri is a big, impressive, turbulent river. "Big Muddy," as some call it, carries tons of water in a swift torrent from its headwaters in Montana, down through the Dakotas, continuing on to form the State borders between Iowa-Nebraska, Missouri-Nebraska, Missouri-Kansas, thence through the State of Missouri and into the Mississippi River at St. Louis.

The river was wild and hard to use until fairly recent times when the Corps of Engineers, U.S. Army, began a program to tame it and stabilize its banks. Impoundments, concrete bank supports, and other devices have been erected at great cost to make the river navigable and otherwise useful along its great length.

These devices proved fairly effective in the stretch between Sioux City and Omaha, and water-hungry midwesterners rushed to use it for recreational purposes. What they saw when their boats hit the water at Sioux City was shocking:

"At the mouth of the Perry Creek sewer, just below Combination Bridge, the water appeared gray; floating feces and other sewage solids were obvious, and gas bubbles from sludge deposits rose to the surface. An odor typical of stale sewage could be detected for some distance from the mouth of the sewer.

"The mouth of Floyd River (at its juncture with the Missouri) appeared almost clogged with the untreated packing plant wastes. Floating masses of grease and solids, apparently from paunch manure, lined the banks, extended well into the stream, and clung to every solid object on the surface of the water. Where the water was not red with bloody wastes it was gray with decomposing organic wastes. Gas bubbles rose from sludge deposited on the bottom. Offensive odor filled the atmosphere."

These water conditions, caused by the raw discharge of some 10 tons of human feces per day, plus wastes from the stockyards and cattle slaughtering industries in Sioux City, do not create the most attractive environment for the fishermen, hunters, and boaters in the areas downstream. They, however, are not compelled to be on the river. Employees of the Corps of Engineers who are continuing their efforts to stabilize the stream for flood control and other purposes, must live and work in these surroundings. This is likewise true of persons engaged in commercial navigation on the river. The polluted water daily threatens the health of these workers. We can only hope that they have somehow adjusted their sensibilities to the disgusting sights and odors that constitute their environment.

Let us now move about 135 miles downstream to Omaha, Nebr. Between Sioux City and Omaha there are mainly farms and open country. One would think that the river, having traversed this distance, would have purified itself. This process does take place to a certain extent. But operators of the Omaha water purification plant, which draws its water supply from the Missouri, observe that considerable artificial means must be employed to render the water acceptable for public use.

According to the testimony of a Public Health Service engineer, "Some of the solid materials (from Sioux City) carry downstream as far as the Omaha waterplant intake. Here, at times, the metal screens that protect the raw water pumps against large floating objects become covered with grease containing animal hairs. Some of the grease passes into the water-treatment plant to float on the water surface and to coat the walls of concrete basins used in treating the water.

"At times large numbers of condoms accumulate on the Omaha water intake screens. Some of these also pass through the screens to enter the water-treatment basins. Sometimes it is necessary to assign one of the plant operators responsibility for dipping the condoms from the basins."

In addition, "There are soluble, unseen materials in the river that also reach Omaha. It is estimated that a little more than one-half of the 10 tons of human feces discharged into the river daily in the Sioux City area reaches Omaha in solution in the river under normal summer conditions."

Sioux City's reaction to the disclosure of these shocking facts was to defy the Public Health Service and a group of officials representing the States of South Dakota, Nebraska, Iowa, Kansas, and Missouri who recommended that it take remedial action to abate its polluting discharges. And so, until the slow wheels of governmental administrative and legal actions grind out their findings and press the city to take the necessary steps, Omaha waterplant operators will have to maintain their alert to avoid any water-processing deviations in order to protect the health of consumers. And the hardy water sports "aficionados" will just have to cope as best they can with the pollution hazards surrounding their "enjoyment" of these activities.

Below Omaha, the river is in just as bad condition as it is below Sioux City because of Omaha's discharge of sewage and packinghouse wastes. An official of the Iowa State Conservation Commission described it in these words:

"I have been on the bottoms when the stench from the stream could be smelled long distances. I have seen patches of floating grease solid enough for crows to ride on it in the current. I have tasted catfish taken from the stream below Omaha that were inedible because of a kerosene-like taste."

He tells of reports made to him by another Iowa conservation officer:

"Many hunting, boating, and fishing enthusiasts are pinning more and more hope on the river as a place for recreation, now that the river work has cleared up much of the silt, but that industrial and domestic pollution has become more and more apparent, with raw domestic sewage and industrial wastes, including oil, grease, chemical residue, and stockyard wastes making the stream practically unuseable.

"He advises that the river actually smells, that the pollution is visible, that the commercial fishermen's nets are filthy when they are raised and festooned with toilet paper and covered with slime and that the fish have a disagreeable oily taste."

Unlike Sioux City, the voters of Omaha have approved a bond issue to finance the first part of the construction of sewage treatment facilities. If they are not discouraged by the obstruction of Sioux City, they plan to continue this program for the abolition of the water conditions which presently exist below Omaha.

THE MISSOURI RIVER—NO. 2

Mr. BAILEY. Mr. Speaker, I ask unanimous consent that the gentleman from Michigan [Mr. DINGELL] may extend his remarks at this point in the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

Mr. DINGELL. Mr. Speaker, my earlier remarks on the Missouri River treating the Sioux City-Omaha segment were quite shocking to anyone who has not been around the "Big Muddy." I now intend to treat the lower Missouri from Omaha on down.

It is no news that the filth and dirt in this river renders it unfit and unsafe in most of its stretches for sporting and recreational use. What is news is the really disgusting nature of the filth defiling the water.

It has gotten so bad that industry will shortly look for other sites on which to locate.

THE MISSOURI RIVER—II

In section I of this Missouri River discussion, relating to the Sioux City-Omaha segment, a fundamental cause of continuing, growing water pollution was touched upon. There we saw how pollution from Sioux City interferes with Omaha's use of the river water while, at the same time, Omaha itself pollutes the river. This two-sided victim-offender role is characteristic of most communities on the Missouri stretching in a long chain from Sioux City to the river's mouth at St. Louis, as indeed it is on a number of other large streams in other parts of the Nation. Thus, although each city would like to see upstream pollution abated, it is reluctant to take the initiative in treating its own. And the result is—a polluted river, growing more polluted as time goes by and as each polluter eyes the offender upstream hoping he will do something first.

St. Joseph, Mo., is in the middle of the middle of the Missouri River chain. Like other major communities, it is contributing sizable quantities of waste to the stream. It, too, has a packinghouse industry which is, however, located outside the city limits. The combined effect of city sewage and industrial wastes from the stockyards creates a deplorable water condition.

A State of Missouri engineer, discussing water quality in the St. Joseph area, stated: "Pollution is so obvious that one does not need to do more than view the stream to arrive at the correct conclusion that the river is a combination of city dump and open sewer."

Downstream from St. Joseph the communities of Atchison, Leavenworth and Kansas City, Kans., use the river's water as a source of public water supply. Atchison city officials, on numerous occasions, have requested the assistance of the Kansas State Board of Health in solving their water treatment problems. Grease and wax have entered the filters; eggshells and other materials have complicated the water treatment plant operation. In addition, sportsmen have complained about the effects of the pollution on fish and wildlife. Grease has been stranded on sandbars for many miles downstream from St. Joseph and livestock watering has been impaired.

Kansas City, Kans., and Kansas City, Mo., use the waters of the Missouri for their drinking supplies. Although their job of purifying this water has been complicated and the risks of error multiplied by upstream pollution, here again are communities discharging such massive quantities of human and industrial wastes as to affect the quality of the stream 367 miles away at St. Louis. All along the river between these two metropolitan centers, smaller Missouri communities such as Lexington, Glasgow, Boonville, and Jefferson City, must use the filth-laden waters of the Missouri for their water supplies. In all, some 1,500,000 people are dependent upon this doubtful source of supply.

The water plants of the downstream communities have had serious problems in attempting to cope with the taste and odor problems in the raw water. At times pollution in the river has been so severe that these plants have simply closed their intakes and stopped pumping until the heavy slugs of waste material passed by. Scientists employed by the St. Louis County Water Co. which supplies drinking water to people in St. Louis County, Mo., separated a quantity of organic material from the water supply after it had been purified. This is what the plant manager had to say about it:

"I have here a sample of organic material removed from the finished drinking water supply in St. Louis County and from the finished drinking water in Lexington, Mo., by this carbon filter procedure. This material was extracted, in each case, from about 2,000 to 3,000 gallons of water. Water treatment processing as now practiced at these plants, or for that matter at any other Missouri River water treatment plant with which I have familiarity, will not remove such pollution. To those of you who are interested, I invite a cautious smelling. I strongly advise that you do not taste the material, because one member of our laboratory staff became ill when he experimented by tasting. If this type of pollution increases in quantity in the Missouri River, the use of the Missouri River for public water supply will become dangerously impaired."

Pressure continues to mount for a clean-up on the Missouri. Sportsmen, citizens who can see a few years into the future, and public officials are urging action. But still, one community eyes the other tentatively, for each fears it may spend the large sums necessary for sewage treatment facilities while the others procrastinate. Until a movement is made away from this dead center, life on the Missouri will continue to be hazardous.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows:

To Mr. FRELINGHUYSEN (at the request of Mr. WAINWRIGHT), for the week of March 9, 1959, on account of illness in family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mrs. GREEN of Oregon, for 30 minutes, today.

Mr. PATMAN, for 30 minutes, today, and to revise and extend his remarks and include certain extraneous matter.

Mr. DIXON (at the request of Mr. WEAVER), for 40 minutes, today.

Mr. WILLIAMS of Mississippi (at the request of Mr. MCCORMACK), to cancel the special order he had for today.

Mrs. ROGERS of Massachusetts, for 30 minutes, on tomorrow.

Mr. PATMAN, for 30 minutes, on Thursday next.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mrs. KEE in four instances and to include extraneous matter.

Mr. SMITH of Virginia and to include an address by Mr. DAVIS of Georgia in Richmond on March 7.

Mr. PILLION.

Mr. ALGER in four instances and to include extraneous matter.

Mr. CUNNINGHAM.

Mr. SHORT.

Mr. BERRY in three instances and to include extraneous matter.

Mr. WALLHAUSER (at the request of Mr. ARENDS).

Mr. MCGOVERN.

Mr. MCCORMACK in two instances.

(At the request of Mr. MCCORMACK and to include extraneous matter, the following:)

Mr. CELLER in two instances.

Mr. MULTER in two instances.

Mr. KING of California.

Mr. GALLAGHER (at the request of Mr. BOLLING) and to include extraneous matter.

Mr. COOLEY (at the request of Mr. BOLLING) and to include extraneous matter.

Mr. BOLAND (at the request of Mr. BAILEY) and to include extraneous matter.

Mr. FLOOD (at the request of Mr. BAILEY (in two instances and to include extraneous matter.

Mr. BRAY (at the request of Mr. MOORE) and to include extraneous matter.

ADJOURNMENT

Mr. BAILEY. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 36 minutes p.m.), the House adjourned until tomorrow, Tuesday, March 10, 1959, at 12 o'clock noon.

OATH OF OFFICE, MEMBERS AND DELEGATES

The oath of office required by the sixth article of the Constitution of the United States, and as provided by section 2 of the act of May 13, 1884 (23 Stat. 22), to be administered to Members and Delegates of the House of Representatives, the text of which is carried in section 1757 of title XIX of the Revised Statutes of the United States and being as follows:

> "I, A. B, do solemnly swear (or affirm) that I will support and defend the Constitution of the United States against all enemies, foreign and domestic; that I will bear true faith and allegiance to the same; that I take this obligation freely, without any mental reservation or purpose of evasion; and that I will well and faithfully discharge the duties of the office on which I am about to enter. So help me God."

has been subscribed to in person and filed in duplication with the Clerk of the House of Representatives by the following Member of the 86th Congress, pursuant to Public Law 412 of the 80th Congress entitled "An act to amend section 30 of the Revised Statutes of the United States" (U.S.C., title 2, sec. 25), approved February 18, 1948:

MISSOURI

Wm. J. Randall.

REPORTS OF COMMITTEES ON COUNTERPART FUNDS

Mr. BURLESON. Mr. Speaker, the Mutual Security Act of 1958, chapter IV, section 401(a), requires the Committee on House Administration to publish in the CONGRESSIONAL RECORD, within 10 legislative days after receipt, the consolidated report of each committee of the House using foreign currencies—counterpart funds—during the preceding year. Accordingly, there is shown herein, within the prescribed time limit, the consolidated reports of the Committee on Armed Services, the Committee on Education and Labor, the Committee on Foreign Affairs, the Committee on the Judiciary, the Committee on Post Office and Civil Service, and the Committee on Ways and Means.

MARCH 7, 1959.

Counterpart funds

REPORT OF COMMITTEE ON ARMED SERVICES

WILBUR D. MILLS,
Chairman, Committee on Ways and Means.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

673. A letter from the Secretary of Agriculture, transmitting a draft of proposed legislation entitled "A bill to amend section 377 of the Agricultural Adjustment Act of 1938, as amended, concerning the preservation of unused acreage allotments"; to the Committee on Agriculture.

674. A letter from the Secretary of Agriculture, transmitting a draft of proposed legislation entitled "A bill to amend section 335(f) of the Agricultural Adjustment Act of 1938, as amended, to eliminate the 30-acre limitation on the amount of wheat exempt from wheat marketing quotas where all the wheat produced on the farm is used on the farm for feed, food, and seed"; to the Committee on Agriculture.

675. A letter from the President of the Board of Commissioners of the District of Columbia, transmitting a draft of proposed legislation entitled "A bill to amend section 13 of the District of Columbia Redevelopment Act of 1945, as amended"; to the Committee on the District of Columbia.

676. A letter from the President of the Board of Commissioners of the District of Columbia, transmitting a draft of proposed legislation entitled "A bill to repeal the act approved March 3, 1897, and to amend the act approved December 20, 1944, relating to fees for transcripts of birth and death certificates in the District of Columbia"; to the Committee on the District of Columbia.

677. A letter from the Assistant Secretary of the Interior, transmitting the annual report of the activities of the Division of Coal Mine Inspection, Bureau of Mines, for the calendar year January 1 through December 31, 1958, pursuant to the Federal Coal Mine Safety Act; to the Committee on Education and Labor.

678. A letter from the Under Secretary of Commerce, transmitting the quarterly report of the Maritime Administration on the activities and transactions of the Administration under the Merchant Ship Sales Act of 1946, from October 1, 1958, through December 31, 1958, pursuant to section 13 of that act; to the Committee on Merchant Marine and Fisheries.

679. A letter from the Acting Secretary of the Treasury, transmitting a draft of proposed legislation entitled "A bill to repeal and amend certain statutes fixing or prohibiting the collection of fees for certain services under the navigation and vessel inspection law"; to the Committee on Merchant Marine and Fisheries.

680. A letter from the Assistant Secretary of the Interior, transmitting a draft of proposed legislation entitled "A bill to clarify a provision in the Black Bass Act relating to the interstate transportation of fish, and for other purposes"; to the Committee on Merchant Marine and Fisheries.

681. A letter from the Director, Bureau of the Budget, Executive Office of the President, transmitting a draft of proposed legislation entitled "A bill to amend the Federal Employees Pay Act of 1945, as amended, and for other purposes"; to the Committee on Post Office and Civil Service.

682. A letter from the Acting Secretary of the Treasury, transmitting a draft of proposed legislation entitled "A bill to amend the Tariff Act of 1930, as amended, to provide for reimbursement of services performed at foreign stations, and for other purposes"; to the Committee on Ways and Means.

683. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders entered in the cases of certain aliens who have been found admissible into the United States, pursuant to the Immigration and Nationality Act; to the Committee on the Judiciary.

684. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, transmitting copies of orders entered under the authority contained in section 13(b) of the act as well as a list of the persons involved, pursuant to the act of September 11, 1957; to the Committee on the Judiciary.

685. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, relative to the case of Pasquale Auricchio, A-1310516, involving suspension of deportation, pursuant to the Immigration and Nationality Act of 1952; to the Committee on the Judiciary.

686. A letter from the Commissioner, Immigration and Naturalization Service, U.S. Department of Justice, relative to the case of Wah Sing Hou, A-10493013, involving the provisions of section 6 of the Refugee Relief Act of 1953; to the Committee on the Judiciary.

687. A letter from the Secretary of Defense, transmitting a report relative to the Career Compensation Act of 1949, as amended, for the calendar year 1958; to the Committee on Armed Services.

688. A letter from the Secretary of the Army, transmitting a draft of proposed legislation entitled "A bill to set aside and reserve Memaloose Island, Columbia River, Oreg., for the use of the Dalles Dam project and transfer certain property to the Yakima Tribe of Indians in exchange therefor"; to the Committee on Interior and Insular Affairs.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. THOMPSON of New Jersey: Joint Committee on the Disposition of Executive Papers. House Report No. 185. Report on the disposition of certain papers of sundry executive departments. Ordered to be printed.

Mr. THOMPSON of New Jersey: Joint Committee on the Disposition of Executive Papers. House Report No. 186. Report on the disposition of certain papers of sundry executive departments. Ordered to be printed.

Mr. WALTER: Committee on Un-American Activities. Annual report for the year 1958. (Rept. No. 187). Referred to the Committee of the Whole House on the State of the Union.

Mrs. PFOST: Committee on Interior and Insular Affairs. H.R. 2154. A bill to authorize the Secretary of the Interior to acquire certain additional property to be included within the Independence National Historical Park; without amendment (Rept. No. 188). Referred to the Committee of the Whole House on the State of the Union.

Mr. BROOKS of Louisiana: Committee on Science and Astronautics. H.R. 4913. A bill to amend the National Aeronautics and Space Act of 1958 to authorize the National Aeronautics and Space Administration to lease buildings in the District of Columbia for its use; with amendment (Rept. No. 189). Referred to the Committee of the Whole House on the State of the Union.

Mrs. PFOST: Committee on Interior and Insular Affairs. H.R. 318. A bill to authorize a revision of the boundaries of the Edison Laboratory National Monument, N.J., and for other purposes; with amendment (Rept. No. 190). Referred to the Committee of the Whole House on the State of the Union.

Mr. BLATNIK: Committee on Public Works. H.R. 1. A bill to require a study to be conducted of the effect of increasing the diversion of water from Lake Michigan into the Illinois Waterway for navigation, and for other purposes; with amendment (Rept. No. 191). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANDERSON of Montana:

H.R. 5373. A bill to amend section 105(b) of the Agricultural Act of 1949, as amended, relating to price support for oats, rye, barley, and grain sorghums; to the Committee on Agriculture.

By Mr. BASS of Tennessee:

H.R. 5374. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

H.R. 5375. A bill to amend title II of the Social Security Act to provide a more liberal definition of the term "disability" for purposes of entitlement to disability insurance benefits and the disability freeze; to the Committee on Ways and Means.

By Mr. BENTLEY:

H.R. 5376. A bill for the establishment of a temporary National Advisory Committee for the Blind; to the Committee on Education and Labor.

By Mr. BERRY:

H.R. 5377. A bill to provide for special roll of correction classifying and grouping as follows: Landless and retaining trust property; certain bands of the Sioux Tribe of Indians to determine who is Indian and who is not; to the Committee on Interior and Insular Affairs.

H.R. 5378. A bill relating to acreage allotments for durum wheat; to the Committee on Agriculture.

By Mr. BLATNIK:

H.R. 5379. A bill to amend the Social Security Act and the Internal Revenue Code so as to provide insurance against the costs of hospital, nursing home, and surgical service for persons eligible for old-age and survivors insurance benefits, and for other purposes; to the Committee on Ways and Means.

H.R. 5380. A bill to extend by 6 months the period for which additional benefits may be paid under the Temporary Unemployment Compensation Act of 1958; to the Committee on Ways and Means.

H.R. 5381. A bill to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas; to the Committee on Banking and Currency.

H.R. 5382. A bill to expand the public facility loan program of the Community Facilities Administration of the Housing and Home Finance Agency, and for other purposes; to the Committee on Banking and Currency.

By Mr. BONNER (by request):

MEMORIALS

Under clause 3 of rule XXII, memorials were presented and referred as follows:

By the SPEAKER: Memorial of the Legislature of the State of California, memorializing the President and the Congress of the United States concerning the establishment in California of a soil and water conservation laboratory; to the Committee on Agriculture.

Also, memorial of the Legislature of the State of Idaho, memorializing the President and the Congress of the United States that the necessary action be immediately taken to compensate certain livestock operators for the loss in grazing privileges, and for the damage sustained in the withdrawal of certain lands in the Atomic Energy Commission area of the Idaho Falls site; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Idaho, memorializing the President and the Congress of the United States relative to requesting statehood for Hawaii; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Kansas, memorializing the President and the Congress of the United States to take appropriate action to assure the continuance of surveys and planning and cooperation in the construction of projects in the State of Kansas that are vital and necessary to the control of floods; to the Committee on Public Works.

Also, memorial of the Legislature of the State of Massachusetts, memorializing the President and the Congress of the United States to establish a Federal domiciliary hospital in New England; to the Committee on Veterans' Affairs.

Also, memorial of the Legislature of the State of Montana, memorializing the President and the Congress of the United States relative to requesting the establishment of a Federal Indian policy which recognizes the duty of the Federal Government to the American Indian; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of New Mexico, memorializing the President and the Congress of the United States against discrimination in price supports in similar farm commodities by the Secretary of Agriculture of the United States; to the Committee on Agriculture.

Also, memorial of the Legislature of the State of New Mexico, memorializing the President and the Congress of the United States to decline passage of a bill establishing a national wilderness preservation system and designating certain areas to be maintained as a wilderness; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of South Dakota, memorializing the President and the Congress of the United States to refuse to enact any increase in the Federal gasoline tax; to the Committee on Ways and Means.

Also, memorial of the Legislature of the Territory of Hawaii, memorializing the President and the Congress of the United States relative to the rapid progress now being made toward the granting of statehood to Hawaii, and petitioning them to continue in their efforts; to the Committee on Interior and Insular Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BERRY:

H.R. 5468. A bill to provide for the issuance of patents in fee simple covering certain property now held in trust for Indians or Indian tribes; to the Committee on Interior and Insular Affairs.

By Mr. BOYLE:

H.R. 5469. A bill for the relief of Joe Ho Kwong and Alverne Joe (Goon) Kwong; to the Committee on the Judiciary.

By Mr. HOFFMAN of Michigan:

H.R. 5470. A bill for the relief of Capt. Oren E. De Haven; to the Committee on the Judiciary.

By Mr. KEOGH:

H.R. 5471. A bill for the relief of Dr. Jose Jimenez; to the Committee on the Judiciary.

By Mr. LANKFORD:

H.R. 5472. A bill for the relief of Anthony Cono; to the Committee on the Judiciary.

By Mr. METCALF:

H.R. 5473. A bill for the relief of Albert Dance; to the Committee on the Judiciary.

H.R. 5474. A bill for the relief of W. R. Wade; to the Committee on the Judiciary.

By Mr. MULTER:

H.R. 5475. A bill for the relief of Giuseppe Aniello; to the Committee on the Judiciary.

By Mr. REECE of Tennessee:

H.R. 5476. A bill for the relief of Magdaleno Duenas; to the Committee on the Judiciary.

By Mr. STRATTON:

H.R. 5477. A bill to authorize Maj. Gen. Bernard W. Kearney, U.S. Army (retired), a former Member of Congress, to accept and wear the Philippine Legion of Honor in the degree of commander, conferred upon him by the Government of the Philippines; to the Committee on Foreign Affairs.

By Mr. TAYLOR:

H.R. 5478. A bill for the relief of Gee Lai Ting; to the Committee on the Judiciary.

By Mr. TEAGUE of California:

H.R. 5479. A bill for the relief of Jose F. Macabantad; to the Committee on the Judiciary.

By Mr. TEAGUE of Texas:

H.R. 5480. A bill for the relief of Maria Papaconstantinou; to the Committee on the Judiciary.

By Mr. WAINWRIGHT:

H.R. 5481. A bill for the relief of Julia S. Lee; to the Committee on the Judiciary.

H.R. 5482. A bill for the relief of Gennaro Prudente; to the Committee on the Judiciary.

By Mr. WHARTON:

H.R. 5483. A bill for the relief of Francesco Aiello; to the Committee on the Judiciary.

By Mr. YATES:

H.R. 5484. A bill for the relief of Carmen Alicna Campos; to the Committee on the Judiciary.

By Mr. BATES:

H.R. 5485. A bill for the relief of Maria Sebbio; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

98. By Mr. HORAN: Petition of 2,142 citizens of Stevens County, Wash., urging the Congress to confine their expenditures to existing sources and limits of revenue and not to increase taxes; to the Committee on Ways and Means.

99. Also, petition of 44 citizens of Spokane, Lincoln, and Stevens Counties, Wash., urging the Congress to enact legislation clearly and concisely establishing single tax liability upon patronage refunds of farmer cooperatives by taxing them at face value in the hands of the member in the year of issuance or notification, disregarding the actual or market value thereof for tax purposes, and, urging Congress to reject any attempts to fix the interest paid or payable on such patronage refunds or the period of redemption thereof by such farmer cooperatives; to the Committee on Ways and Means.

100. Also, petition of 307 citizens of Lincoln County, Wash., urging the Congress to confine their expenditures to existing sources and limits of revenue and not to increase taxes; to the Committee on Ways and Means.

101. By Mr. KASEM: Petition of 38 members of the Veterans' Club, Citrus Junior College, Glendora, Calif., petitioning favorable consideration of H.R. 712, relating to a 10-percent increase in the education and training allowances paid to individuals pursuing educational programs under laws administered by the Veterans' Administration; to the Committee on Veterans' Affairs.

102. By the SPEAKER: Petition of the resolutions committee chairman, Red Oak Ruritan Club, Alberta, Va., petitioning consideration of their resolution with reference to the rights of States in the field of education, and other enumerated grievances; to the Committee on the Judiciary.

103. Also, petition of Ophelia Beard, Chicago, Ill., relative to redress of grievances and restoration of full citizenship; to the Committee on the Judiciary.

104. Also, petition of the clerk of the Board of Supervisors, County of Erie, Buffalo, N.Y., relative to proposing an amendment to the Old-Age and Survivors' Insurance Benefit Act by reducing from 62 years to 55 years the age at which women may qualify for the benefits thereunder; to the Committee on Ways and Means.

105. Also, petition of Fil-American Guerrilla Brigade, ECLGA, Manila, Philippines, petitioning consideration of their resolution with reference to the request for granting compensation to Philippine claimants who rendered services in World War II, and enclosing some of the members' individual records; to the Committee on Foreign Affairs.

106. Also, petition of Lester Higa and other students of Roosevelt High School, Honolulu, T.H., relative to requesting prompt and favorable legislation admitting Hawaii into the Union and granting full statehood; to the Committee on Interior and Insular Affairs.

EXTENSIONS OF REMARKS

National Security

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a very fine letter which I have received from John W. Mahan, commander in chief of the Veterans of Foreign Wars together with a copy of my reply to Commander in Chief Mahan:

VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Kansas City, Mo., March 3, 1959.

The Honorable JOHN W. McCORMACK,
U.S. House of Representatives, Washington, D.C.

MY DEAR CONGRESSMAN: As commander in chief of the Veterans of Foreign Wars, I recently had an opportunity to meet with leaders from your State during our annual legislative conference in Washington, D.C. Since talking with your constituents, I thought it advisable to write you on a matter that concerns all of us—national security.

The VFW, by resolution and by unanimity of opinion, feels that our country is losing basic military strength through proposed plans to reduce our Defense Establishment. We believe, and we are on record, that our country should have a balanced defense which is ready to move at a moment's notice whether on the ground, on the seas, or in the air. We further believe that a reduction in our ground forces in the face of the Khrushchev challenge over Berlin is unthinkable. Even though the Berlin situation might be settled peaceably, there are still many trouble spots in the world where American support has already been committed.

It is our understanding that unless plans to reduce forces are halted, the Army will lose one division and the Marine Corps will suffer drastic cuts in its combat strength. Our military strength must be great enough to insure peace.

We are told that Russia has 25 divisions on the borders of Western Europe alone. Instead of a reduction of forces, the VFW knows that the American people are willing to pay more for defense, if necessary, and we should keep our ground forces at least at the level recommended by the Congress which was 900,000 in the Army and 200,000 in the Marine Corps.

We would appreciate hearing from you on this matter and if you agree with us, I sincerely hope that you will lend your influence and support toward maintaining our military and naval forces at the above strength.

Sincerely yours,
JOHN W. MAHAN,
Commander in Chief.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 6, 1959.

JOHN W. MAHAN,
Commander in Chief, Veterans of Foreign Wars of the United States, VFW Building, Kansas City, Mo.

DEAR COMMANDER IN CHIEF MAHAN: I am in receipt of your letter of March 3 which I have read with special interest and pleasure. Your views, as expressed in your letter, are completely consistent with my views on the question of national security. I am sure that you have read in the papers recently my statement that I would be happier if the President would recommend more taxes for greater national defense. It would be good leadership for our people to make that sacrifice rather than holding up a reduction in taxes, which is leadership along the lines of complacency. I think that if you will examine my record in Congress, you will find that while there are other Members who are just as strong as I am for a powerful military force, there is no Member who has a stronger feeling on this question than I do. I have repeatedly said, "the only thing that those in the Kremlin respect is what they fear" and that is military strength and power greater than they possess themselves.

I know that you are aware of the fact that Congress last year appropriated money to maintain an Army of 900,000 officers and men; and the Marine Corps, 200,000 officers and men but the President did not maintain this force. The Army has been reduced, as you know, to about 870,000 or it is in the process of being reduced. The Marine Corps is now down to about 184,000 with the objective to reduce it to 175,000. The money has been appropriated but the President has frozen same. We also appropriated money for greater defense in other directions and most of the money that Congress appropriated last year under the President's budget estimates has been put in a deep freeze.

With kind regards, I am,
Sincerely yours,
JOHN W. McCORMACK,
Member of Congress.

P.S.—The only one who can stop the reduction of the Army and Marine Corps is President Eisenhower. In fact he could increase the Army and Marine Corps to 900,000 and 200,000 respectively. The money has been appropriated and is available until June 30 of this year.

Thomas G. Masaryk: Democracy's Advocate

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. FLOOD. Mr. Speaker, on Saturday, March 7, we honored Thomas G. Masaryk, the founder of the Czechoslovak Republic, and its first President. It was 109 years ago that this great Democrat and friend of the United States was born. Yet today the people Thomas Masaryk inspired just over four decades ago are banned from joining us in paying tribute to this great man.

The reason for this is quite simple. Those who rule Czechoslovakia today represent the negation of everything Thomas G. Masaryk stood for. He stood for truth; they stand for falsehood. He stood for liberty; they stand for oppression. He stood for a religious, moral way of life; they stand for atheistic materialism. Masaryk was a man of principles. The dignity of the individual, protection of minority rights, and sincerity in politics were among his basic convictions. The acceptance of even one of these beliefs would undermine the foundation upon which the Soviet empire, under whose domination Czechoslovakia has been chained, is based.

Thomas Masaryk was a friend of America. In America, he saw much to be copied in the field of technology. More important, however, he saw deeper into the workings of the American civilization than just technological innovations. Thomas Masaryk realized that at the heart of America lie the seeds of democracy that bud into the flowers of independence, justice, and freedom.

In America—He said—

We can and should learn * * * love of freedom and individual independence.

On this 109th anniversary of the birth of Thomas G. Masaryk it is, therefore, fitting that all America should join with the friends of this great Czechoslovak patriot in commemorating this historic occasion. Let us rededicate ourselves to those higher democratic ideals which are exemplified so much by the spirit of Thomas G. Masaryk.

Establishment of a U.S. Foreign Service Academy

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. CELLER. Mr. Speaker, on March 2, 1959, I introduced a bill in the House of Representatives, for the establishment of a U.S. Foreign Service Academy. This school will provide the corps of well-trained, devoted foreign service officers required by America's position in world affairs.

For 10 years, the United States has been engaged in an uneasy peace—really a war with different weapons. This means, simply and fortunately, that the shots are not yet being called by the generals, but rather by our diplomats and policymakers. Important and far-reaching policy decisions are being made, based upon the assessment of local situations by our official representatives abroad. Their conduct, attitudes, and knowledge strongly influence the opinion which foreign nations hold of us. Frequently, the difference between a stunning diplomatic success and abject failure turns upon the effectiveness of our diplomatic representation. Yet, in this day and age, the Government of the United States still does not maintain any school, adequate for training our career Foreign Service officers.

Let us look at only one aspect of the need for such training. Fifty percent of the entire Foreign Service officers

do not have even a speaking knowledge of any foreign language. Seventy percent of the new recruits coming into the service suffer the same deficit. Many of our Ambassadors cannot speak the language of the country to which they are at present accredited. In nine Arab Nations only two of our Ministers speak Arabic. In Japan, Korea, Burma, Thailand, Vietnam, and Indonesia, our Ambassadors must speak through interpreters.

Effective representation abroad requires proficiency not only in foreign languages, but a thorough knowledge of the history and culture of foreign lands, an understanding of international and local economics, a thorough familiarity with diplomatic practices and procedures, and a working knowledge of the political systems of other nations. Yet, many of these essential subjects are giving way to sciences and mathematics in our universities. In the interest of world peace, we must have a balance between emphasis on general education and emphasis on science. Scientists do not make policy and policy is what we sadly lack today. Good policy is born out of knowledge and training.

Training for our Foreign Service should be maintained by a Foreign Service Academy administered with the discipline present in our military service academies. Such an Academy would attract capable young people into the diplomatic service, who might otherwise go into other professions. Thus, the education of our future ambassadors would be begun at the receptive age of college freshmen and this would provide sufficient time for broad background studies and special training. Academy training would also generate the esprit de corps which every first-rate organization must have.

Under the provisions of my bill, students would be selected for the Academy upon competitive entrance examinations as prescribed by the Secretary of State. Each diplomatic cadet will be expected to sign an agreement signifying his willingness to accept an appointment and serve as an officer in the Foreign Service for at least 3 years following his graduation.

The establishment of a Foreign Service Academy will be a significant step forward in vitalizing the diplomatic service of the United States. This should not be the end, but rather the beginning. Congress must also consider granting realistic and adequate funds for the maintenance of our Foreign Service, so that capable Foreign Service officers will not be impoverished in the performance of their duties.

The text of the bill follows:

A bill to provide for the establishment of a United States Foreign Service Academy

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "United States Foreign Service Academy Act".

SEC. 2. The Secretary of State is authorized and directed to establish and maintain, in or near the District of Columbia, a United States Foreign Service Academy (hereinafter referred to as the "Academy") for the instruction and training of diplomatic cadets in preparation for service as officers in the Foreign Service of the United States.

SEC. 3. (a) The Academy shall be under the general supervision of the Director General of the Foreign Service Institute and under such regulations as the Secretary of State may prescribe.

(b) The course of instruction and training for diplomatic cadets at the Academy shall be prescribed by the Secretary of State and shall be the equivalent of the curriculum prescribed by accredited colleges and universities as a prerequisite to the granting of a master's degree. Upon satisfactory completion of the prescribed course of instruction and training, diplomatic cadets shall be granted a master's degree.

(c) The Secretary of State may appoint or assign such officers and civilian instructors as the needs of the Academy require.

SEC. 4 (a) The corps of diplomatic cadets shall consist of such individuals as may be selected and admitted to the Academy upon competitive entrance examinations as prescribed by the Secretary of State.

(b) Diplomatic cadets while in attendance at the Academy shall be entitled to quarters and subsistence.

SEC. 5. There shall be appointed each year a Board of Visitors to the Academy which shall consist of five members from the Committee on Foreign Relations of the Senate and five members from the Committee on Foreign Affairs of the House of Representatives, to be appointed by the respective chairmen of such committees. The Board of Visitors shall exercise the same functions and be entitled to the same expense allowance as is provided in the case of the Board of Visitors to the United States Military Academy.

SEC. 6. Each diplomatic cadet selected for admission to the Academy shall sign an agreement that, unless sooner separated, he will—

(1) complete the course of instruction at the Academy; and

(2) accept an appointment and service, as an officer in the Foreign Service for at least the three years immediately following the granting of his degree from the Academy.

SEC. 7. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

Layman's View of the Life Insurance Company Income Tax Act of 1959

EXTENSION OF REMARKS
OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 9, 1959

Mr. ALGER. Mr. Speaker, this is in response to numerous constituent requests for a plainly worded, nontechnical explanation of the Life Insurance Company Income Tax Act of 1959 (H.R. 4245) which recently passed the House. It was the year's first tax bill considered by the House of Representatives and was the first major legislation prepared by and reported from the Ways and Means Committee in which I participated as a committee member.

Background information includes the following considerations: There are approximately 1,300 insurance companies consisting of 300 mutual and 1,000 stock companies. There are big and small companies of each kind. Mutuals have 63 percent of insurance in force, hold 75 percent of the assets, pay 75 percent of the income tax, and had an estimated gain of 58 percent of all insurance business in 1958. Stock companies, therefore, are 37 percent, 25 percent, and 42 percent, respectively.

The kinds of taxation possible are based on insurance company income of two kinds: First, investment income—yield from investment of policyholders' money in 1958 was $3.25 billion—and, second, underwriting income—chiefly gain from margin in premiums charged, fewer death benefits paid than expected. Correct profit determination is complicated by the need for accumulation of various reserves to provide available assets or money to make good the promised payout later in death or retirement. Tax formulas, therefore, must include these factors and recognize analyses involving industrywide averages and/or company-by-company experience. All these considerations spell out the uniqueness of the insurance industry compared to other corporations in the context of a proper determination of taxable income.

The peculiar difficulties of taxation of insurance companies, therefore, are threefold:

First. Contracts are made with policyholders wherein profit may not be known for periods up to as much as 100 years.

Second. In investing policyholders' premiums insurance companies have a bank-like function, so intertwined with pure insurance operation, that it is difficult to determine what investment income does go to the policyholders and what part to the company.

Third. The greatest volume, approximately 75 percent, of life insurance is done by mutuals, that is, cooperative organizations and it is difficult to measure their income. It is maintained that mutuals refund profits or overcharges to policyholders while stock companies competitively at time of policy sale offer lowest possible premium charges without any overcharge refundable cushion on nonparticipating business.

A complicated three-step formula attempts to fairly spread the insurance company tax burden and in many ways is an improvement over earlier formulas.

THE PROPOSED TAX FORMULA

The regular 52-percent corporate rate—30-percent normal tax, 22-percent surtax on incomes in excess of $25,000—applies to the insurance company income tax base. The 25-percent alternative capital gains tax is applicable to capital gains.

The tax base consists of computations under a three-phase formula.

The first phase is concerned with investment income. Gross investment income consisting of interest, dividends, rents, royalties, and so forth, is aggregated and deductions are taken for such things as investment expenses, tax-free interest, a percentage of dividends received, and a special deduction to benefit small insurance companies. The net investment income is determined and further deductions are allowed with respect to reserve requirements, investment income on qualified pension plan reserves, and certain interest paid items.

The deduction for net investment income required to be set aside in life insurance reserves to meet future policy obligations is determined pursuant to what is called the modified-Menge formula. This basic deduction is computed by adjusting the reserves in terms of earned interest predicated on an average industry assumed rate or an individual company's assumed rate, whichever is higher.

The second phase in the computation of the tax base is a determination of the net gain or loss from operations. Gross receipts takes into account investment income, income premium income, and other receipts. Deductions are allowed for benefit payments and expenses pertaining to investment and insurance company operations. Deductions are also allowed for additions to reserves, certain dividends and credits to policyholders, certain group insurance premium income, and a special deduction for nonparticipating insurance equal to 10 percent of the increase in such life insurance reserves.

By deducting taxable investment income which has already been subject to tax in phase one from the aggregate determined under phase two, the underwriting gain or loss is determined. If there is an underwriting gain, one-half of that amount is added to the taxable investment income to establish a combined tax base under phases one and two. In the case of underwriting loss, such loss is offset in full against the phase one tax base.

The phase three tax base computation relates to stock companies and provides that for calendar year 1959 and subsequent years, income distributed to stockholders in excess of amounts already taxed on a current basis is to be included in the regular tax base of the company at the time of such distribution or at the time the company elects to be taxed on part or all of such previously untaxed amount.

ARGUMENTS FOR THE PROPOSED FORMULA

First. Loss would be fully deductible and could be carried forward or back.

Second. One hundred and ten percent deduction would be allowed for profit payment into reserves.

Third. Pension trust reserves investment yield would be deductible.

Fourth. Interest on tax-exempt securities would be deductible.

Fifth. The discriminatory 1942 formula would become effective if H.R. 4245 is not passed.

ARGUMENTS AGAINST THE PROPOSED FORMULA

First. Economic impact on the industry of 90 percent tax increase for 1958 over 1957 has not been sufficiently studied by the Committee or Treasury Department.

Second. State taxes of $300 million plus estimated $545 million of this bill make insurance companies the most heavily taxed thrift institution.

Third. Inflation and taxation are causing the trend to pure protection and away from savings through insurance.

Fourth. Federal Social Security program with no tax liability on investment income will be given discriminatory advantage over private efforts to provide for future security.

Fifth. There is an approximate 5 percentage point shift of taxload from mutuals to stock companies. Because of the preponderance of arguments against the bill, I could not agree to the bill in its entirety.

True, this bill is far superior to the 1942 formula, which was not intended to become effective and which we were warned would come into effect for 1958 if we failed to pass this bill. There is an alternative to the 1942 law which we could have used, namely, continuation of the 1955 Mills-Curtis formula with appropriate amendments plugging any loopholes until the full economic impact of this bill could be studied.

My objection and concern is best expressed in the Committee Report's Supplemental View—pages 87 to 88. I am a signatory to these views which state in part:

Individual economic security is now being provided the public by life insurance companies, other thrift institutions, and through the social security system. It is sound public policy to encourage everyone to provide for his own security on a voluntary basis and our tax laws should encourage, not deter, such efforts. This bill, however, makes voluntary provision for one's own economic security relatively less attractive since it increases the tax on life insurance while investment earnings under the social security system are free from either Federal or State tax. This incerases the advantage of the social security system over voluntary individual protection offered by life insurance companies, particularly if the latter must absorb taxes of the magnitude provided in the bill. Public awareness of this differential in cost will most certainly lead to incerased demand for larger social security benefits and less incentive to build security on a voluntary basis.

I feel that our haste precluded the full economic study that is still needed before evolving a permanent formula for life insurance taxation. Perhaps, my relative inexperience as a new members of the Ways and Means Committee in dealing with an extremely complex subject has made me overly cautions.

Program for Relief in Areas of Unemployment

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mrs. KEE. Mr. Speaker, under unanimous consent to extend my remarks in the CONGRESSIONAL RECORD, I include copy of my newsletter which was released today:

KEENOTES

(By Representative ELIZABETH KEE)

Last week I joined 51 of my colleagues from both parties and from all sections of the country in proposing a three-part program which would bring both immediate and long-range relief to those areas which are suffering from persistent and heavy unemployment. The action of the 52 Members dramatizes the gravity of the economic situation facing many areas and the need for immediate action by the Federal Government.

Here is what the 52 Members of Congress proposed:

1. Immediate expansion of the surplus food distribution program, upon which thousands of families throughout the country depend in whole or in part for subsistence.

2. Immediate appropriation of funds by Congress for flood control, reclamation, rivers and harbors development, and other public works in depressed economic areas.

3. Immediate passage by Congress of area development legislation to provide a long-range relief measure which will assist local communities in helping themselves.

Many Members of Congress, especially those from areas which have not suffered severely from the recent economic downturn, do not fully realize just how widespread and intense this economic distress is. Also, the administration has failed to face up to this problem. Perhaps these figures will change their minds—21 percent of the total population in 210 counties in 24 States are now receiving surplus agricultural commodities; 269 different locations, suffering from 6 percent unemployment, are classified as distressed areas; 73 areas, with 15 percent or more unemployment, are acutely distressed.

In the Fifth District of West Virginia, six of the seven counties have 15 percent or more of the total population receiving surplus foods from the Government. In one county, the percentage is 41 percent of the total population.

The 52 House Members who are working together on this problem believe the surplus food program should be expanded to bring immediate relief, that additional foods should be acquired by USDA to bolster the subsistence diet of these people and that greater quantities should be distributed to each family.

Immediate construction of flood control and other public works projects is needed in these distressed areas to provide immediate jobs for men who are unable to find employment. This part of the program would only apply to projects which have already been authorized by Congress but for which no money has been appropriated.

These projects are economically feasible. They are needed. If Congress would make the money available, work could start in about 3 months, thus creating thousands of desperately needed jobs. It is my understanding that foreign aid funds, voted by Congress, are supporting about 100 public works projects abroad but the President does not advocate one new start in this country.

The most important part of the program, in the opinion of many of the 52 Members, is that dealing with area redevelopment. There was unanimous agreement that permanent solutions must be found to rebuild the depressed areas economically. We hope that action by the 52 Members will clearly show the rest of Congress just how urgent this problem is.

The House Banking and Currency Committee plans to open hearings later this month on this legislation. A Senate subcommittee has already started hearing witnesses.

The action of the 52 House Members should serve to indicate the strong support for such legislation in both parties. Perhaps it will speed up final consideration.

The three-point program is urgently needed: (1) More and better surplus foods for the 1,298,201 people forced to subsist on this handout from the Government because of the lack of job opportunities; (2) an immediate public works program to build needed projects and create urgently needed

jobs; and (3) area development legislation to rebuild these areas and provide new and permanent employment.

I was happy to join 51 of my colleagues in setting forth this program and in working for its enactment.

Synopsis of Resolutions Adopted by Governor's Interstate Indian Council

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. BERRY. Mr. Speaker, in October of 1958 the Governor's Interstate Indian Council, composed of 18 States, passed a number of resolutions. The States represented at the council include: Arizona, California, Florida, Idaho, Kansas, Minnesota, Montana, Nebraska, New Mexico, New York, North Dakota, Oklahoma, Oregon, South Dakota, Utah, Washington, Wisconsin, and Wyoming. A synopsis of these resolutions is as follows:

(a) Resolution 3: The Governor's Interstate Indian Council favors legislation to amend Public Law 568, 83d Congress, the Indian Health Program Transfer Act. The primary purpose of the proposed legislation was to clarify the authority of the Surgeon General to institute a program for the provision of Indian sanitation facilities as a part of its overall health program, and S. 3694 will be a great aid in assisting the Public Health Service in carrying out its sanitation program.

(b) Resolution 4: The council strongly urges that Congress double the appropriation for vocational training for Indians to the amount of $7 million a year, and wholeheartedly endorses the philosophy of extending this vocational training program to nonreservation Indians.

(c) Resolution 5: The council requests the Secretary of the Interior and the Commissioner of Indian Affairs to adopt a program to extend certain health and welfare services to Indians residing off the reservations who would otherwise have been entitled to receive such services and benefits had they remained on the reservations.

(d) Resolution 6: The council resolved that the Secretary of the Interior be petitioned to present to Congress more clearly defined statutes to assure that no termination procedure be consummated without direct acceptance of the terms by the tribe and the consent of the State legislature.

(e) Resolution 7: The council resolved that the Secretary of the Interior be petitioned to inaugurate procedures for determining the status of those who claim to be Indians, and establish a roll on that basis in every tribe.

(f) Resolution 8: The council reaffirms its Resolution XI passed in 1957, requesting Congress to provide adequate appropriations for Indian education.

(g) Resolution 9: The council resolved that Congress effect passage of proper legislation amending the Claims Commission Act to clearly define just what matters constitute a valid and equitable offset to aid the Commission in making a fair and just adjudication in an instance when the Government by way of counterclaim and setoff, charges the tribe with certain services and benefits extended to the tribe in the past and other offsets such as for the operation and maintenance on old USIS irrigation projects against individual allottees and old unsettled obligations of renters of said lands belonging to the individual allottee—not obligation of the allottee or Indian tribe.

(h) Resolution 10: The council resolved that the Bureau of Indian Affairs be requested to initiate a more vigorous Indian reservation road improvement program in the immediate future, as good roads on a reservation are the lifeblood of educational and economic development.

(i) Resolution 12: The council resolved that the Bureau of Indian Affairs be urged to place more emphasis upon the secondary high school education program and make the facilities and opportunities for this kind of education more widely available to Indian youth on reservations, because the educational program on Indian reservations is the basic foundation on which the solution of all problems confronting Indian people will be based.

Thomas Masaryk: Man of the Ages

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. MULTER. Mr. Speaker, March 7 marked the anniversary of the birth of Thomas G. Masaryk, the founder and first President of the Czechoslovak Republic.

I want peace, but that does not mean that I am going to meet aggression unarmed; rather the contrary. I want practical, not Utopian, peace.

These were the words of Thomas Masaryk more than a generation ago. And these words alone would link him to America today, if nothing else did. The founder and first President of Czechoslovakia combined practical idealism with realism. Actually, however, we in the United States honor Thomas Masaryk because of the qualities of the political philosopher and the statesman, which link him with the men of all time. He was a man of stature, intellectually, politically, philosophically.

He arose in a day when western civilization was prepared to welcome a man of the people who promoted respect for the individuality of the common man. Not in the sense of Marxism did he plead the cause of the masses; for he rejected Marx. He also rejected Kant, Hegel, Nietzsche. In the truly democratic sense he followed the philosophers Plato, Hume, Mill, Spencer, but, above all, Comte.

His humble birth and struggle to secure an education made him sympathetic with the difficulties of the poor. His zeal for an education and his diligence as a tutor brought to him the realization of the value of the things of the mind and the things of the spirit. His experience as a member of the Austrian legislature gave him political insight. Because of his independence in that capacity he was recognized as a figure of remarkable political, philosophical, and ethical stature. His democratic thought and spiritual freedom were incorporated in his political actions.

When he had been for only 5 years President of the new Czechoslovak nation, of which he was the founder, laudatory messages came from Paris, from Brussels, from London. In them stress was laid upon the fact that the success of his leadership was due to the idealism with which he guided the young state. Comprehension of the kind of freedom desired by the nations in revolt at the time of World War I and a faith in the strength of the democratic feeling within them dominated all of his actions, and gained for him a reputation of rare insight and unusual political honesty.

He believed that Czechoslovakia had a special and unique message for mankind. Marked by religion and spiritual culture of a high order, the mission of the Czechoslovak soul as Masaryk saw it was independence and originality of thought. The shadow of this man stretched not only across and beyond the borders of Czechoslovakia. It has stretched down the decades since his death; and will, no doubt, continue to do so as long as there is a free world to recognize his great contribution to western civilization.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. ALGER. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following newsletter dated March 7, 1959:

WASHINGTON REPORT
(By Congressman BRUCE ALGER, Fifth District, Texas)

"If Patrick Henry thought taxation without representation was so terrible, he should see it with representation." How often great truths are spoken in jest.

The Ways and Means Committee, of which I am a member, continues its almost daily all-day tax hearings. Simultaneously, the House meets to consider legislation already cleared by House committees for floor action. Daily mail and office casework (constituents with need for help in Government contact) continue heavy as ever. Beyond these activities are the necessary studies of issues, meetings, speeches, and papers for the RECORD with somewhere in here, a bite of lunch—these are full days, and had better

be, considering the problems confronting this Congress. Necessarily, my efforts in other legislative fields are limited in view of my increased duties and responsibilities in tax matters. Hearings on technical tax changes to the Internal Revenue Code concerning subchapters C, corporate distributions; J, estates and trusts; and K, partners and partnerships, are completed. Now we are holding hearings on depletion allowances. Oil and gas are not yet a part of these hearings. The depletion question is twofold. (1) The point of cutoff (point up to which depletion allowance is computed, a point between mining and manufacturing in developing a marketable product), and (2) the percentage rate. There are many minerals now benefiting by depletion allowances. Problems to resolve: Court reinterpretation of congressional intent and heavy litigation; and (2) mineral industries are each striving for maximum allowance; (3) a complicated new Treasury suggestion to replace existing law, disturbing to each industry, each of which is unique; (4) are the depletion allowances justifiable capital return, therefore tax free, or subsidy?

A bill to end the tax-exempt status of Federal public housing bonds was my legislative contribution this week. The Federal Government by law cannot sell its own tax-exempt bonds. Yet a practice has grown up whereby these bonds are sold in the open market by a shell or front agency designated by the local public housing authority, and Federal interest payments go directly to this front agency. This is simply a dodge or ruse, as many see it. As such, it is illegal. Further, compare this sale to that of a true municipal bond which is sold by a city such as Dallas. This bond is backed by local credit (not Federal), secured by property taxation, ad valorem taxes. These bonds, too, are tax exempt. Competitively, what chance has a city bond in open sale against a Federal bond? And how about the different Federal bonds? Public housing bonds will pay 3.4 percent tax-free to the wealthy investor, when Joe Doe's Government savings bond earns 3¼ percent, and on this he must pay income tax. Is that fair? It is obvious to me that ending the tax-exempt status of public housing bonds is legally and morally right.

Roundup of current items of interest: (1) The AFL–CIO Machinist published an analysis of the purchasing power of wages today compared to 1938 and found it takes fewer hours of work to earn food, clothes, furniture and other needs; simultaneously, the AFL–CIO's Meany lampooned Russia's claims of "workers' paradise" by comparing the lot of the worker in the United States and Russia. Unanswered: When will labor leaders recognize that the productive capacity of our industry joined with incentive, ingenuity, and sweat of our people is the cause of wage-earner prosperity and not Federal aid, which labor leaders incessantly demand. Unanswered, also, when will the wage earners wise up to inflation that waters the purchasing power of their earnings, inflation caused by big Government spending as demanded by labor leaders. Are the labor leaders trying to create problems for wage earners or solve them? (2) How about a Federal taxpayers' revolt? Taxpayers in the State of Washington have signed a petition pledging they'll seek no new State services. A Dallas taxpayer returned to me a Government check as his contribution to reducing the demand for Federal aid, reversing the trend. It wouldn't take many protests of long-suffering taxpayers across this land, in each congressional district, to make Members of Congress cut back on the big spending. (3) A fearless stay-put attitude on the U.S. part is the only answer to the Berlin crisis or to Khrushchev in any negotiation, and if that fails, as have all other contractual obligations been broken by Russia, then we'd better deny recognition to Russia, tighten our belts and be prepared for anything. Further, it's time, as I see it, to think about another defense attitude than our "let the other fellow strike the first blow" policy. In all-out nuclear war there might not be a counterpunch, let's face it. (4) Balanced budget department: We're just before having the financial roof cave in—fantastically expensive Democrat programs in housing, depressed areas aid, airports, farm subsidy, in the multibillions beyond the administration's budget, are facing us. So we are confronted again with fiscal responsibility versus the political "I'm for the people by spending more of their money" boast. Is it more courageous to spend someone else's money, and politically take credit for allegedly doing good, or to say no, we must live within our income and protect the value of our currency? The right course is not always the easy one. To the big Government planners, I quote former Speaker Cannon: "America is a hell of a success. Why tinker with it?"

Needed: Leadership for Our Economy

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Monday, March 9, 1959

Mr. DODD. Mr. President, last Saturday, March 7, 1959, in Clarksburg, W. Va., the distinguished Senator from Missouri [Mr. SYMINGTON] spoke to a large audience of more than 400 people gathered together at a great West Virginia Democratic victory dinner.

I ask unanimous consent that the remarks of the able Senator from Missouri be printed in the CONGRESSIONAL RECORD. I suggest that my colleagues take the time to carefully read this speech, because it is a serious, brilliant, and responsible address concerning some of the gravest problems which confront this Nation.

I was told by my friend and colleague, the able Senator from West Virginia [Mr. RANDOLPH], who introduced the Senator from Missouri, that the effect of this speech on the audience was electric, and that it evoked a remarkably enthusiastic response.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NEEDED: LEADERSHIP FOR OUR ECONOMY

(Address by Senator STUART SYMINGTON, at Democratic victory dinner, Clarksburg, W. Va., March 7, 1959)

I am most happy to be with you at this fine victory dinner tonight. I bring greetings from the State of Missouri, which shares with you some beautiful mountain country, and also shares your faith in the Democratic Party.

We Democrats in Missouri, and throughout the country, are mighty proud of the Democrats in West Virginia. Last November, you led the entire country by electing not one, but two Democratic Senators; and five Democratic Congressmen.

No one could help admiring the spirit with which the Democrats of West Virginia have tackled the problems of your State. There is a big job to be done; and by their votes last November, the people demonstrated the extent to which they are behind you, and are working with you, for a greater, more prosperous State.

You can always tell a Democrat by his faith in the future—and by his willingness to work with the people to make the hope of the future come true.

For the past 2 months in the Senate I have watched your two fine Senators working together for their and your State—and for the Nation. There was never a better example of teamwork than that between JENNINGS RANDOLPH and BOB BYRD. Together, they have introduced bills to aid depressed areas, expand community facilities, research new uses for coal, and release more farm surpluses to feed hungry families.

They are joined in this effort by your Congressmen, my friends, including the beloved dean of your delegation, CLEVE BAILEY—and fine Congressmen and Congresswoman, ELIZABETH KEE, HARLEY STAGGERS, KEN HECHLER, and JOHN SLACK. These men and women are working to build a better future for West Virginia. They are doing everything in their power to restore prosperity to this State—so that your young people need not leave their homes and go to other States to obtain work. Surely this is a righteous cause which deserves everyone's support—and I intend to do everything possible to support it.

Your victory last fall was not easy. The Republicans poured everything they had into the West Virginia campaign. Someone said there were so many high Republican officials speaking and working out here last October, it would have been easier to get a Cabinet meeting together in Charleston than in Washington.

I wonder what has happened to all those Republican smiles and all that solicitude you saw in West Virginia, before last November 4. There was a lot of sunshine around here then, but it has all disappeared now. And it has disappeared from Washington, too.

I don't know what has become of all those bright Republican promises of the last campaign. The Republican administration does not seem so interested now in helping the people. We Democrats in the Senate passed a bill to provide more and better housing for people everywhere. The Republicans don't like it; they say it's too much, and that the President may veto it. We passed an airport bill, to keep our airports abreast of the rising tide of air travel, and to reduce the danger of airplane crashes. The Republicans don't like it; they say it's too much, and the President may veto it. And so it goes.

We Democrats want to do something about the growing shortage of school rooms and teachers. The President proposes to cut down on what little aid the Federal Government gives now to some school districts; and as for new schools, he comes up with a proposal that is about as helpful as trying to bail out a flooded cellar with an eyedropper.

The Republicans have their eye on the ball, all right, but it is the wrong ball. They are concentrating on the old dollar sign, and not on what the country needs to grow and prosper.

The Republicans' indifference to our needs at home is matched by their failure to properly recognize the growing grave dangers abroad.

We are faced with an immediate threat to our national security by the most ruthless and most powerful dictatorship the world has ever known. There is a real danger of a shooting war or a shameful surrender. But the Republicans seem more worried about a possible deficit in the budget.

Our Nation, which has increased by 30 million persons in a little more than 10 years, is bursting with needs for education, transportation and housing. But the Republicans are more worried about our gold supply.

In our mountains, fields, forests and streams, we have enough untapped abun-

dance to double the standard of living of the American people. But the Republicans tell us we are practically bankrupt, and worry about whether we are living precisely within our income.

If William McKinley had told us that schools and public facilities and housing were not within our income, perhaps we could have understood it. In his day, the American economy was not the mighty giant that it is today. But today we stand at the dawn of the space age, with science adding a hundredfold to the skill of our people; and for the Republican leadership to tell us that we cannot afford these investments shows a lack of vision which surpasseth all understanding.

My friends, with the countdown having already started toward a possible crisis next May 27 in Berlin, we must stop talking of what we cannot afford to do, and start talking of what we must afford to do. The brutal realities of the world in which we live today demand that we start marshaling our national strength—all our resources—so as to protect our country, preserve our freedom, and lead the world to peace. This kind of effort requires leadership. And if the last 6 years have taught us anything, it is that you do not get real leadership from the Republicans—but you do get it from the Democrats.

Let me talk tonight about one aspect of our Nation—our national economy—and what adequate Government leadership can do about that. All of us agree that economic strength rivals in importance our defense strength. For if we allow recession to permanently fasten its claws on our economy, undernourishing our people, lowering their morale and weakening their faith in the free American system, no amount of armament could prevent the present onward march of communism.

Here in West Virginia, as in many other parts of the country we are faced with just that kind of threat. A chronic condition of high unemployment is keeping you from the full benefits of the wealth that lies in your mountains and the skill of your people.

One thing is certain: A depression is not the fault of the people who suffer from it. Depressions are comparable to earthquakes. They are caused by deep-seated faults and shifts in the underlying structure of the country. Like earthquakes, tornadoes, or floods, they are beyond the power of any single individual to prevent.

But there is one difference. The people, acting together, through their Government, can prevent depressions. Let us look at what could be done—and should be done—for States where there is continuous high unemployment, in this, the richest country in the history of the world.

I spent many years in private business, most of them in effort to improve various companies.

When a business lags over a period of time, three things have to be done. First, emergency measures must be established in order to continue operating. Then invariably there must be a reorganization of plant setup and personnel. Finally, working as a team, the reorganized setup must work out comprehensive long-range plans, looking toward permanent growth and prosperity.

Let us apply these techniques to the situation now current in this great State of West Virginia.

For the emergency, there must be an immediate transfusion of the necessities of everyday life. Food is needed, especially proteins and calories, in order to bring the daily diet of the people up to minimum nutritional standards.

Our surplus agricultural commodities already total over $8 billion. The President himself estimates that next year the value of this stored surplus will be over $10 billion. Surely we can, and should, dip into this great ocean of food on an emergency basis, so as to give a more adequate diet to the victims of distress. We do this for the citizens of other nations. As example, right now we are shipping 450,000 tons of wheat a month to one country. I do not say this is wrong. But if it is right abroad, why is it not also right for our own needy people at home?

As a second step, our depressed areas must also be retooled, so as to increase income and employment. In industries where workers have been replaced by machines, they must be trained for new jobs. Where the flow of commerce and industry through the State is slowed by poor roads and inadequate airports, these, too, must be improved.

Such readjustment cannot be done solely by private hands, any more than can flood or tornado relief. There must be action by our Government to bring the men and the jobs together. Such action over here is essential if we are to counterbalance similar action now being taken by the two great imperialist empires which have sworn to destroy us—Russia and China.

A good example of the action required is the area redevelopment bill. I cosponsored this bill last year, and again this year, because America needs it far more than it needs further retrenchment and further unemployment.

Experience has shown that if it is to attract industry, a community must offer good living as well as good business. It takes more than a new factory building, ready for occupancy. It takes roads, schools, sewers, playgrounds, plus all the other things which make any town a good place in which to live and work.

And it also takes water supply development. Here in West Virginia, you have the greatest reserves of coal in the Nation. If nearby sources of water were readily available, it could be used in the process of generating power from coal. Generating plants could be built at the mouth of the mines. This would provide attractive industrial sites for more of the metal, chemical, and petroleum plants you need for your prosperity.

Can communities do this by themselves? Let's be realistic. Local government finances in many of our localities have been drained by the recession until there is barely enough left to meet payrolls. How, therefore, can they afford, on their own, to make the additional investment needed to attract industry?

Where necessary and right, loan capital should be furnished by the Federal Government. And that is exactly what this area redevelopment bill will do.

It was passed before, but vetoed by President Eisenhower. This year it should be passed over any veto.

Now there is something else which can be done that would help not just areas of high unemployment, but the whole country. For a number of years there has been increasing disagreement among certain segments of our economy—especially management, labor, and capital—on some of the most important problems incident to our growth and prosperity. There is disagreement on taxation, interest rates, hours of work, automation, the cause of inflation, and just how far the Government should go into the management of our economy. You have only to read the Chamber of Commerce Washington Report, the AFL–CIO News, and the newsletter of any large New York bank, to see how wide these gaps have now become.

Now, differences of opinion are all right. But these are not mere differences of opinion. These are hardening into battlelines. Like soldiers at the front, each group has stockpiled economic arguments to support its own position; and they spend a good deal of effort lobbing propaganda shells into the trenches of the enemy, each blaming the others for inflation, for recession, and for other economic woes. There is a lessening of the understanding and good will, the ability to see the problems of the other side, that has often characterized relations between these groups in the past.

Ninety-nine percent plus of the members of these various segments of our economy are good Americans who cherish freedom and our way of life. They know that this kind of internal quarreling isn't helping to solve any economic problems, or to cure the recession. It is just making it harder to work out a sensible policy.

I believe there is a much wider area of agreement among these groups than some of them would appear to admit. Why shouldn't these domestic differences be ironed out, face to face? We have heard a lot about summit meetings for international affairs. Why doesn't this administration sponsor a summit meeting for domestic affairs? Real leadership could reconcile most of the differences, find ways to curb inflation, and persuade capital, management, and labor to pull together for the good of America.

Benjamin Franklin said: "We must, indeed, all hang together, or, most assuredly we shall all hang separately." That observation was never more true than it is today.

We must all put aside our unilateral interests, and strive together for full production in our national economy. By full production, I mean the proper use of the great capacity of America, so that every able-bodied man and woman anxious to work can find work, at a wage compatible with self-respect.

Today, 20 percent of America's industrial capacity lies idle. This is not just a West Virginia problem. It is rapidly becoming a national problem. With the some thousand million people of the Sino-Soviet empire now working around the clock to surpass us, this nation can no longer allow a large percentage of its own production capacity to stand unused.

Therefore I recommend:

Interest rates which are low enough to allow businesses to borrow and expand, and homeowners to borrow to build.

A rise in the spendable income of the 7½ million people who still earn under $2,000 a year. (The per capita income from farming of our millions of farm citizens is only $770 a year.)

If we can combine the increased investment opportunity of business with increased purchasing power, our economy will continue to grow and prosper.

So again, let me urge this administration to promote the general welfare by calling a summit conference of banking, business and labor leaders, in an effort to iron out the growing differences among them. These differences can only please the Kremlin.

Now, I want to talk with respect to one more thing that you have been hearing about, this wonderful "balanced" budget of the Republican administration. I am for a real balanced budget. But this is a phony balanced budget. It hopes to be balanced by a margin of $100 million. That leaves a margin of error of just a little over one-tenth of 1 percent. But that's not all. It relies for its balance on a $9 billion increase in revenues that nobody is sure will happen, including higher gasoline and postage stamp taxation we know won't happen.

If a bunch of stock promoters got out a prospectus as misleading and as shaky as the so-called balanced budget of this administration, the SEC would be after them before they knew it. The budget this year is just as phony as it was last year, when they first claimed it was almost in balance, and then ran up a $10 billion deficit.

To slash into the needs of the Nation in order to conform to this phony budget is to sacrifice our opportunities, our future, and

our national security on the altar of politics—and Republican politics at that.

You know better than I what the administration's phony budget will do to West Virginia. It will mean no depressed areas legislation; no help for the coal industry; no relief from unemployment. It will therefore add 12 more months of stagnation to your economy and 12 more months of suffering to your people.

It is now becoming increasingly clear that only the Democrats are willing to take the bold measures equal to the times we face. With Democratic leadership, following Democratic principles, we can break the bonds of economic stagnation. More than anything else, we want a just and lasting peace. To that end nothing is more important than a strong and vigorous economy. Because in addition to our physical strength, we know we must be strong morally and economically, by utilizing to the fullest the great natural resources which have been given us.

If we follow that course, and remain strong in our convictions, we know that we can remain a free people.

Encouraging Development in the Coal Industry

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mrs. KEE. Mr. Speaker, the action of the President in imposing mandatory quotas on the imports of residual fuel oil was an encouraging development for the coal industry. Certainly, it is not the complete answer to the very serious problem of unfair competition offered to the coal industry by this cheap, foreign produced fuel.

Mr. Speaker, this is the first time we have been able to persuade the Federal Government to recognize the threat to coal posed by these imports, and it took strong and definite action and persuasion by the West Virginia congressional delegation. It is true, that in the past, Government officials and agencies have cited residual oil imports as a threat and recommended action. The important difference is that this time the Government acted.

Imports will be limited to the amount brought into the country in 1957. In that year, about 475,000 barrels daily entered the country from abroad. This amount of foreign residual fuel oil represents the equivalent of more than 110 million tons of coal. It would have been far preferable if the 1954 base, which has been suggested as more suitable, had been selected.

The pegging of imports at this high level will not win back many, if any at all, of the jobs in coal mines which have been lost because of the competition with foreign fuels oils. But at least it means that no additional jobs will be lost.

During the first 2 months of 1959, imports have been unusually heavy, running at an annual rate of the equivalent of 191 million tons of coal. I am hopeful that in carrying out the order, the Government will make the 1959 quota retroactive to January 1 and will not agree to an effective date of April. Otherwise, these extremely heavy imports will act as a drag on the coal market.

Mr. Speaker, the President's order for mandatory quotas was extremely gratifying to the West Virginia congressional delegation. The two West Virginia Senators and all Members of the West Virginia congressional delegation worked hard as a unit to convince the executive department of the compelling need for controls of some type on the ever-increasing flow of foreign residual oil into this country. The delegation appeared before every department and agency in Washington concerned with the foreign trade problem, arguing that the great domestic coal industry was being slowly but surely liquidated.

I was extremely gratified to have a colleague from a non-coal-producing State tell me that it was this untiring work by the West Virginia delegation which led to this victory. Perhaps this is an overstatement of the situation, but I know I speak for the entire delegation when I say that no development of recent years has been as welcomed as this.

Mr. Speaker, we have won a battle. However, the war to create a climate in which the coal industry can prosper and expand will be long and difficult, and there will be many battles to fight.

The Birthday of Amerigo Vespucci, 1959

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. BOLAND. Mr. Speaker, today we celebrate the birthday of Amerigo Vespucci, though it is not quite certain that he was born on March 9, and even the year of his birth, thought to be 1652, does not go without question by the historians. But these doubts are quiet, peaceful matters compared to the controversies that have raged as to what discovering the famous explorer ever actually did, and whether discrepancies that appear in his accounts of his voyages are due to falsification, faulty memory, or several slips of Vespucci's pen, or whether transcribers and editors of Vespucci's letters, the originals of which no longer remain for our inspection, may have mistranscribed his figures so as to make him seem to sail right through the Isthmus of Panama into the Pacific, without benefit of canal, and southward well into the Continent of Antarctica. But for all that, we honor the one whom we may call our national and continental godfather, the navigator and explorer, who, like Columbus, was of Italian birth and sailed in the service of Spain—except for one voyage for Don Manuel of Portugal. If, like Captain John Smith after him, he constructed a magnificent myth with himself as its hero, let us still gladly recognize the magnificence of the myth, and the narrative skill and geographic grasp of the writer. For it was surely Amerigo Vespucci who, by his writings as popularized by Martin Waldseemüller, brought home the new world to the hearts and minds and imaginations of the people of Europe, and roused the young ambitions of the boys who became the explorers and colonists of the next generation.

Unborn Americans Cannot Vote

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. ALGER. Mr. Speaker, like many million other Americans, I have fought in a war. Modern warfare has a single basis of comparison with that of ancient times. It consists of 10 percent doing and 90 percent waiting.

During my time of waiting, I had a lot of hours, days, weeks of thought.

I thought, "Do I hate these Japanese people whose property I am going to destroy, whose lives I am going to snuff out?"

This was no easy question. It required the searching of my soul. It demanded that I look into myself, my family teachings, my religious experiences, my formal education.

My answer finally came: "No. I do not hate these Japanese people, whose property I will be called upon to destroy, whose lives I will be called upon to snuff out. I do hate their ideas—that they were justified in their massacre at Pearl Harbor; that they are supermen, accountable only to their leaders; that inhuman cruelty to those other than their own countrymen was natural, even praiseworthy."

I am glad I thought this problem out for myself so many years ago, because, now, I find that I must dedicate my every effort to destroy an idea while respecting and admiring many of the men who hold that idea.

I refer to the idea that it is right to continue one's self in office by providing luxurious Government services which will not alter the present tax structure materially, but which will so increase the national debt that a child born in the United States of America in 2059 will be paying for what is done today.

I am quite confident that no Member of the 86th Congress will be running to retain his same seat in the 136th Congress. The voter of 2059 will have no opportunity to express his resentment of the tax burden we put upon him by using his ballot to defeat any of us.

In my book, it is cowardly, unsportsmanlike, and un-American to injure someone whom you are dead certain will not be able to fight back.

Balance our national budget by cutting all unnecessary expenses to the bone.

Meet present-day problems in the present—do not defer paying for what you get until the next century.

It is not liberalism to promise everything to your contemporaries while leaving your descendants the responsibility of footing the bill.

That, to me, is liberality. That, to me, is the philosophy of the libertine.

Can you still be brave and live with yourselves when you remember, "Taxpayers of today can vote. Taxpayers as yet unborn cannot"?

Amerigo Vespucci

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 9, 1959

Mr. MULTER. Mr. Speaker, today, March 9, marks the anniversary of Amerigo Vespucci, a great Italian who left his mark as well as his name on our country.

Amerigo Vespucci, the merchant and adventurer to whom America owes its name, was born in Florence on March 9, 1451. This is the date given for Vespucci's birth in the "Encyclopaedia Britannica." The "Encyclopedia Americana" gives March 18, 1452, and variant dates in other sources include the year 1454. He was the third son of Nastagio Vespucci, a notary, and Elizabetta Mini. His uncle, Fra Giorgio Antonio Vespucci, to whom he owed his education, was a scholarly Dominican. Amerigo was particularly devoted to the study of geography, and is believed to have encountered frequently the celebrated Toscanelli. For a time he was employed by the great commercial house of the Medici, then the ruling family in Florence. He made an avocation of the collection of maps and charts and became a skilled map draftsman.

Sometime between the middle of 1489 and the end of 1491 he went to Barcelona, probably in connection with the Spanish business interests of the Medici. In 1493, he became connected with the commercial house of Berardi at Seville. Berardi, in the employ of the Spanish Crown, engaged in fitting out vessels for expeditions across the Atlantic. In this position it is probable that Vespucci participated in the fitting out of Columbus' second voyage.

Knowledge of Vespucci's own voyage is based on two letters written by him. One was written in 1503 to Lorenzo di Pier Francesco de'Medici, and the other was addressed in 1504 to his boyhood friend, Piero Soderini, gonfaloniere of Florence. The latter gives an account of four voyages in which the writer took part, the earlier two in the service of Spain and the latter two in that of Portugal. According to this account the first expedition sailed from Cadiz on May 10, 1497. Thus Vespucci visited the American Continent a year before Columbus, touching land at several points, including one not far from Cape Canaveral, Fla.

The letter to Soderini appeared in print in at least two editions, probably without Vespucci's knowledge. A Latin translation was published at St. Dié in Lorraine in April 1507. Martin Waldseemüller made use of it in his "Cosmographiae Introductio," published in St. Dié in the same year. This work contained perhaps the first suggestion in print that the newly discovered fourth part of the world should be called America, because Americus discovered it.

Statehood for Hawaii

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, March 9, 1959

Mr. ENGLE. Mr. President, last week the Senate Interior and Insular Affairs Committee unanimously recommended passage of the bill of the Senator from Montana [Mr. MURRAY] to admit the Territory of Hawaii into the Union as a State. I hope that this legislation receives as prompt and as favorable action on the Senate floor. On February 25 I testified before the Territories and Insular Affairs Subcommittee in behalf of this legislation, of which I am a cosponsor, and I ask unanimous consent that the statement I made at that time be printed in the CONGRESSIONAL RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR CLAIR ENGLE, DEMOCRAT OF CALIFORNIA, BEFORE THE SUBCOMMITTEE ON TERRITORIES AND INSULAR AFFAIRS OF THE SENATE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS ON HAWAII STATEHOOD, FEBRUARY 25, 1959

I am very grateful that this will be my last appearance before a congressional committee in behalf of Hawaii statehood.

It is not my intention today to go into any lengthy documentation of the case for Hawaii statehood. The record is formidable. It is replete with testimony that demands that the 86th Congress act without fail to make Hawaii our 50th State. For a number of years, as a member of the House committee dealing with Territorial matters and as its chairman for 4 years, I was deeply involved in the question of statehood. I am convinced without question that the Territory of Hawaii has long been ready for statehood and that we will be guilty of grave dereliction if we delay any longer to bring it about.

The smoke screen of spurious arguments advanced by the opponents of Hawaii statehood has been thoroughly pierced, and in its disintegration it has been shown up for what it is—a device to hide the personal motives of the opponents of statehood.

The favorite line of the opposition has been to impugn the loyalty of Hawaii's citizenry, but the evidence shattering their accusations continues to grow in volume and strength. In June of 1953, Senator HUGH BUTLER, one-time foe of statehood because of possible Communist influence, made this statement at a Senate hearing:

"I believe the residents of Hawaii during the past 4 years * * * have demonstrated by positive action their awareness of the Communist danger and their determination to face it frankly and never let it strengthen its foothold. During those years they have fought it boldly, have restricted its influence, and to some degree have driven it underground. I believe they have shown that they are as well able as the Federal Government to cope with this measure."

James Michener, in his article in the December 1958 Reader's Digest, came to this conclusion after an extensive study:

"Hawaii does suffer from a Communist threat. So do San Francisco and Baltimore—and all America. Hawaii's problem is no different from that of any other area. * * *

"Hawaii is not a captive of the Communists. It is fighting back exactly like any mainland community. Its record is impressive."

It is no longer necessary to answer the argument of noncontiguity. It was answered firmly and finally when Congress last year made Alaska our 49th State. And there is no need to dwell on the argument of small population. It has been soundly refuted by the fact that Hawaii's 550,000 population exceeds that of five of our present States.

There remains then the basic question of whether Hawaii is economically, socially, and politically ready to become a State. These tests have all been met. There is no disputing the cold hard facts and figures that point up the economic prosperity of Hawaii. There is no mistaking the American culture and philosophy that dominates the lives of Hawaii's polyglot mixture. And there is no disputing the political maturity of the men and women in the legislative halls and the executive corridors of the Territory of Hawaii.

Last fall a joint congressional committee visited Hawaii. It went there with open eyes and open mind, self-consciously aware of the need to keep itself free of preconceived ideas and foregone conclusions. Members of the committee walked and rode and flew around the islands talking to people in every phase of life and meeting with labor and business groups and with fraternal, political, and community organizations. The committee came back enthusiastic. It came back secure in its conviction that Hawaii must become a State. In its report, the House members of the committee concluded that "admission of Hawaii, with its mixed races and its geographical position will vastly improve our posture and relationship throughout the vast Pacific area, where we are striving with all our might and means to keep 800 million free and friendly."

Hawaii will, of course, benefit immeasurably from statehood. But let us not underestimate the economic, political, and diplomatic advantages that the United States as a nation will gain in having as a strong outpost in the Pacific a member of its "family of states." And let us not underestimate the fact that if we fail to bring Hawaii into this family we face the possibility of the Territory becoming a Commonwealth and all that that implies—a nation that belongs to us and yet does not.

In conclusion, I want to emphasize that the question of Hawaii statehood is as much an international issue as it is a domestic issue. The nations in the Far East and elsewhere are watching us very closely on this. If we want to maintain their faith and confidence in us as a great democracy, we cannot afford to equivocate on this matter. There is a gap here between our pretensions and our performance. Let us close the gap by waiting no longer to make Hawaii our 50th State.

Need for Assistance in Economically Distressed Areas

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mrs. KEE. Mr. Speaker, under unanimous consent to extend my remarks in the CONGRESSIONAL RECORD, I include a copy of my newsletter "Keenotes":

KEENOTES

(By Representative ELIZABETH KEE, of West Virginia)

Recently I filed with a Senate Banking and Currency Subcommittee a statement in support of legislation introduced by myself and other Members of Congress to assist economically distressed areas.

This legislation is similar to that passed by the Congress last year but vetoed by the President. There seems to be even more support for the proposal this year and I am confident the bill can be passed by such a large majority that it will not be vetoed.

The bill would establish a Federal loan program under which States and local communities would act to create new job opportunities. The need for such a program is urgent in areas where unemployment has existed for a number of years. In the case of West Virginia, workers have lost their jobs in the coal mines and there is little chance they can ever go back to work there.

The answer is to attract new industries. States and local communities cannot do the job alone. They need the type of financial and technical assistance from the Federal Government which this bill would make possible.

The main financial burden would be borne by the States and local communities over a long period. Local resources simply are not available now with which to do the job. That is why Federal funds would be made available on a loan basis. Cities in the Fifth Congressional District have attacked the problem of lack of job opportunities with vigor and intelligence. Yet, a larger and better financed program is called for.

Some people have criticized the proposed programs as too costly. These people fail to take into consideration the fact that States are paying out hundreds of millions of dollars in unemployment benefits. In West Virginia, these benefits amounted to $50 million in 1958. Is it not more sensible to invest in new job-producing enterprises that will do away with the need for unemployment benefits? No cost tag can be attached to the misery and heartache of a family which is forced to subsist upon handouts because jobs simply do not exist.

The Federal Government is spending billions of dollars abroad to assist underdeveloped countries to build up their economies. Much of the activity financed abroad with tax money from the United States is similar to the type of activity envisioned in the area redevelopment program. Why is it right to do these things abroad and wrong to do them at home?

West Virginia has suffered grievously during the last 5 or 6 years. Coal mines have cut back on production as imported residual fuel oil has taken over more and more of the market. Technological improvements in the coal industry have reduced the number of jobs.

We can go on paying out unemployment benefits and welfare payments and distributing surplus agricultural commodities indefinitely without getting at the root of the problem. The men of West Virginia want jobs. If they cannot find them in the mines and plants for which they once worked, let us start a determined effort to bring in new industries. In the interim, we can build community facilities to provide jobs while the program is getting underway.

No doubt it will be charged that the area redevelopment legislation is a part of the program of the spenders. I insist it is an economically sound program, one that is absolutely essential to many areas all over the country. Soon the House must act upon an administration request for $235 million additional for loans to foreign countries for overseas redevelopment projects. The program we are trying to get for the unfortunate people in this country would not cost as much altogether as this one supplemental foreign aid program.

New York Bank Bill Fosters Monopoly

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. CELLER. Mr. Speaker, the bank bill recommended by the New York joint legislative committee would lead to monopolization of the State's banking resources by a handful of giant banks which, for years, have sought to achieve domination over the banking system of the State and for years have been pressing for such legislation.

It is deplorable that the joint committee reported out this bank monopoly bill without public hearings or without opportunity for its opponents to present their views. It is curious, indeed, that the New York superintendent of banks, G. Russell Clark, gave his enthusiastic endorsement to this measure after having been in office for but 1 day. The unseemly haste of the New York superintendent of banks in rubber-stamping this monopoly bill bodes ill for independent banking in New York State and for future vigorous, effective banking competition.

The bill recommended by the joint committee has two main provisions. First, it would obliterate the bank branch district line between New York City and the outlying suburban areas of Nassau, Suffolk, and Westchester Counties. Second, it would establish two bank holding districts in the State, the first consisting of New York City, Long Island and Westchester and Rockland Counties, the second, of the balance of the State. The bill would allow a bank holding company to acquire banks anywhere within the district. Beyond that, a holding company formed by a bank in the second district could acquire banks in the first district if these first district banks constituted 45 percent or less of the holding company's total assets. Thus, the bill would end the present legislative freeze on bank holding company expansion which was enacted principally to prevent First National City's proposed acquisition, via the holding company device, of the County Trust Co. of Westchester County.

The banking system of New York State traditionally has relied for its vitality on vigorous competition by a multitude of independent banks, locally organized, locally financed, and locally managed. Nevertheless, there has been in recent years a discernible trend in New York State toward concentration of the banking business into fewer and larger hands. Indeed, in New York City, the four largest banks now control over 60 percent of all commercial bank assets. What is more, the two largest—Chase Manhattan and First National City—control almost 42 percent of the city's banking assets.

Present statutory branch bank district lines were drawn 20 years ago in the shadow of the bank holiday in order to arrest undue concentration of banking facilities. The single most important reason for such geographical restrictions was to prevent banks with head offices in New York City from establishing branches in the suburban counties of Westchester, Nassau, and Suffolk and thus to protect independent unit banks outside of New York City from the encroachment of the giant money-market institutions located in the city.

Owing to the increase in concentration among the city's banking institutions in the past 20 years, it is even more important now to guard against the encroachment that would be permitted by the bill. There seems to be little doubt that if giant banks in New York City are allowed to penetrate into the suburban areas, the small unit banks there would be placed in far greater jeopardy. For one thing, their means of competing would be hardly comparable to those available to their huge city rivals. Indeed, to suppose that entry by the giant financial institutions of New York City into the suburban areas might have no adverse competitive effect on the independent banks located in these areas is to suppose that a chicken could dance with an elephant and come out unharmed. With the present district line obliterated, the suburban banking communities would soon be transformed into an area overwhelmingly dominated by a few large city institutions.

As to the second provision dealing with formation of two new bank holding company districts, certainly its most immediate effect would be to place New York State legislative imprimatur of approval on plans like that of the First National City Bank which unsuccessfully sought to form a bank holding company in order to acquire the County Trust Co., of White Plains, N.Y., the dominant bank in Westchester County. It will be recalled that the Federal Reserve Board, after hearing exhaustive testimony on this proposal, concluded that approval of such transaction would be detrimental to competition and contrary to the public interest. Should the State legislature ratify the bill recommended by the joint committee, there would be ignited, as Governor Harriman observed on November 20, 1956, what may be the greatest chain reaction in recent banking history the effects of which will go to the very roots of the entire banking structure of New York State with the distinct possibility of concentration of banking assets in the hands of a few institutions.

Commenting on a holding company proposal similar to the one now contemplated, Mr. George A. Mooney, the former superintendent of banks of the State of New York, had this to say on December 12, 1956:

> The very existence of a number of large bank holding companies would create competition amongst them for future expansion in other communities. If the many unit banks found it impossible to resist the holding company movement, we could expect in short order a heavy concentration of banking assets, facilities, and credit in a handful of giant statewide bank holding company systems.

It is crystal clear that adoption of either provision of this bank monopoly bill would amount to capitulation to a few powerful banking institutions in New York City. If the New York State Legislature desires competition rather than monopoly in banking, it should reject this measure out-of-hand.

Fiscal Responsibility

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. ALGER. Mr. Speaker, shortly after the adjournment of the 85th Congress, this short item—without attribution—became widely circulated in the press:

> If Patrick Henry thought taxation without representation was so terrible, he should see it with representation.

How often great truths are spoken in jest.

Section 7 of the Constitution places the responsibility of originating all revenue-raising bills with the House of Representatives.

No matter how many times in the past we have failed to live up to it, it is still our constitutional responsibility.

If we must collect the money to meet the expenses of our Federal Government, we must, at the same time, be seriously concerned with the cost of that Government.

There are numerous governmental luxuries which we would like to provide for the American people. But we can't afford them.

Many an American family would like to live in a penthouse. But, because they can't afford it, they settle for their mortgaged bungalow.

Many an American family would like to eat steak regularly. Instead, because they can't afford it, they get along with more ham hock than steak.

Many an American family would like to have a new car every year. Yet, because they can't afford it, they make the old jalopy do.

It would be a matter of wisdom for the Members of the House of Congress designed to be closer to the people to follow the example of the people.

It would be a matter of wisdom for us to legislate against those Government services which, while they may seem helpful, are actually luxuries.

Abraham Lincoln provided a most useful yardstick for such services when he said on July 1, 1854:

> The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do, for themselves, in their separate and individual capacities.
>
> In all that the people can individually do as well for themselves, government ought not to interfere.

We are not alone in our making-ends-meet problem. Sweden has its problem, too. Let us look at Sweden's problem in the words of the U.S. News & World Report for January 23, 1959:

> Swedes got a jolt from their Socialist-dominated government. The 1959 budget called for heavy boosts in * * * spending, indicated a deficit of $500 million. The alternative: higher taxes in a land where a couple with two children and $300 a month income pay out nearly $100 a month in taxes and social contributions.

Sweden's Socialists have still another way out—a way which is, even now, being suggested to them by American liberals.

As you well know, both Socialists and liberals enjoy thinking of themselves as being interested solely in people; not things.

Our liberals are not concerned with increasing current taxes to pay for the governmental services they so glibly advocate. They reserve the privilege of increased taxes for your children and mine; for your grandchildren and mine. Taxpayers today can vote. Taxpayers as yet unborn cannot.

I say, "Cut governmental luxuries to the bone. Balance the budget."

I thoroughly agree with the late Joseph G. "Uncle Joe" Cannon, of Illinois, former Speaker of the House of Representatives, in his most frequently quoted remarks:

> America is a hell of a success. Why tinker with it?

H.R. 5464: A Bill Providing for a Patent-in-Fee-Simple Covering Rosebud Tribal Land

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. BERRY. Mr. Speaker, I have today introduced legislation similar to H.R. 5468, directing the Indian Department through the Secretary of Interior to issue a patent-in-fee-simple to Bartley M. Mills, covering Rosebud tribal land he should receive in exchange for deeded land.

In this instance Mr. Mills made application for trade with the Rosebud Tribe in 1950. At that time both tracts of land were appraised at equal value by Indian Bureau appointed appraisers. Mr. Mills proposed to exchange 160 acres of his land in Todd County for 80 acres of tribal land located in Tripp County.

On January 10, 1950, Mr. Mills conveyed his patented land to the United States in trust for the Rosebud Sioux Tribe. The deed was recorded in the register of deeds office in Tripp County on September 20, 1950. Since that time the Rosebud Sioux Tribe has had title to Mr. Mills' 160-acre tract, has collected lease rentals from both pieces of land, and Mr. Mills has been waiting to receive title for the N½NW¼ S. 32, T. 100 N., R. 75 W., Fifth Principal Meridian, in Tripp County, S. Dak., which is the land he was to receive for his land.

Both tracts of land have been off the tax list since 1950. The local governments have been deprived of tax revenues from both tracts. All steps in the transaction have been handled and approved by the Department. There is no excuse for the delay other than abnormal Bureau redtape.

The transaction was never completed, however, and on March 5, 1958, the Rosebud Sioux Tribe adopted a resolution disapproving all exchanges involving tribal lands.

Commission To Study Government Uses of Radio Frequencies Proposed

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. BRAY. Mr. Speaker, I have today introduced a joint resolution which proposes the creation of a Commission to study the utilization of those areas of the radio frequency spectrum which are assigned to the Federal Government.

I sponsored similar legislation in the 85th Congress, and a companion bill in the Senate was introduced by Senator Potter. The Potter bill was reported by the Senate Committee on Interstate and Foreign Commerce, passed by the Senate and then reported by the House committee in the last days of the 1958 session. It appeared for a while that this Commission would become a reality before adjournment last year, but a variety of circumstances contrived to defeat it.

Essentially my purpose remains unchanged. I would establish a Commission composed of experts in the communications field, but men who are not employees of the Federal Government. The idea is to allow persons outside of the Federal Government, but competent in the field, to see how well the frequencies reserved for Government use are being used. The Commission, in addition, might make some assessment about the future requirements for Government use of radio frequencies.

When this bill was introduced 2 years ago the Bureau of the Budget reported adversely on it and endorsed the views set forth in a letter from the Director of the Office of Defense Mobilization to the chairman of the Senate Committee on Interstate and Foreign Commerce. The Director of Defense Mobilization stated

that such an undertaking would require the work of many experts over an extended period of time, and pointed out that a study of only a portion of the spectrum required the efforts of more than 50 experts for an estimated equivalent of 2½ man-years. At that time the reaction of the executive department was that such a report would be impossible to achieve and, if achieved, unnecessary.

A year later the Director of OCDM reported to the House Committee on Interstate and Foreign Commerce, when it was considering the Senate-approved resolution, that he favored the establishment of the Commission but wished to see it encompass a thorough study of the problems concerning frequency allocation and of the utilization of spectrum space, not only by the Federal Government but by all private users as well. These suggestions were incorporated into the bill as it was reported by the House Committee on Interstate and Foreign Commerce.

Now, in 1959 the chairman of the Committee on Interstate and Foreign Commerce has proposed that a subcommittee of that group study the utilization of those areas of the radio frequency spectrum which are assigned to the Federal Government. I believe this is a worthwhile endeavor and I hope that the subcommittee will make such an investigation. I believe this study can logically be carried on by the legislative branch; my only hesitancy has been would they have the time and opportunity to give to such a large-scale undertaking in addition to their many other duties.

The President, through the Director of OCDM, has suggested a new proposal to establish a Commission. The administration proposal requests legislative authority for a five-man Commission, appointed by the President, which would study the entire field of frequency allocations, the methods for making allocations, utilization of allocations, and would propose sweeping changes in the management and control of spectrum problems. This seems to me a full reversal of the opinions held by the executive branch 2 years ago, when I first sponsored legislation on this subject.

I still feel that a study is necessary. My central interest has been and still is utilization. I would like to see a thorough and impartial study of spectrum utilization before attempts are made to change the entire structure of spectrum allocation and control. I believe that the proposal of Representative HARRIS for a subcommittee study is of more immediate value than the Commission proposal as it was delivered to Congress. Or, if the Commission proposal were amended back to the form of the Potter-Bray resolution which was before us last year, which provided for legislative selection of some commissioners and which directed a study of the utilization of the spectrum reserved for Government use, then I would support it wholeheartedly. To have this proposal before the Committee on Interstate and Foreign Commerce I have introduced this measure again.

It provides that a Commission of five members, not officers or employees of the Federal Government, be established to investigate the utilization of the radio and television frequencies allocated to the agencies and instrumentalities of the Federal Government. Two of the Commissioners would be appointed by the President, one by the President of the Senate, one by the Speaker, and one by the Chairman of the Federal Communications Commission.

I am pleased to see the increasing interest in this problem evinced in both the executive and legislative branch. Whereas 2 years ago it was difficult to get support for a study commission, it now appears we might have both a legislative and an executive study of spectrum use. Spectrum problems are likely to become more acute as time goes on. The minimum requirements for solving these problems is understanding and impartial knowledge and analysis. To the extent that these studies can contribute in laying such a foundation, these are eminently worthwhile.

Thomas Masaryk: Champion of Democracy

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. GALLAGHER. Mr. Speaker, it is a privilege to have a part in honoring a man of the stature of Thomas Masaryk. One cannot overpublicize the contribution that this man made to the cause of democracy. His is a name that is likely to endure as long as the world has a place for the cause of individual freedom.

Yet his position of prominence was of relatively short duration in the scheme of things. As President of the Czechoslovak Republic—whose existence as an independent state was itself short-lived—Thomas Masaryk, in a brief 17 years, promoted the true ideal of democracy as few men have been able to do in the space of a lifetime.

Thomas Masaryk founded the Republic of Czechoslovakia. When he became its first President, in 1918, he was chosen for the post because of his ideals, his devotion to them, and his willingness to make sacrifices for them. This characteristic idealism had marked his life.

As a youth of lowly parentage, but encouraged by his mother, he had struggled to achieve an education. As a young man his talent and dedication to high principles was recognized; he was encouraged and assisted to become a teacher. As a teacher he developed an independence of spirit and devotion to mankind that gained for him a place in the legislature of his then mother-country, Austria. As a legislator his chief contribution to his fellowman derived from his independence of spirit. He had sufficient courage and consecration to principle to fight the reactionary government, to insist on the rights of the individual against the state.

Then when World War I liberated his compatriots and generated an independent state, it was he who guided it to the fruition of a faith. He led this new nation for more than half of its independent existence, and his idealism persisted.

As long as the free world shall endure it will be appropriate to recall that whatever the fate of this one-time Republic of Czechoslovakia, now fallen behind the Iron Curtain, its very existence was the culmination of an idea—the idea that men should be allowed to live in freedom and in peace, with emphasis upon the individual, his rights, his dignity, and his high promise.

Thomas Masaryk, Czechoslovakian leader, was the very embodiment of this idea. In his promotion of it he made a contribution to the world which will not be forgotten.

Inflation—Take It With a Smile—But It Is Still Just as Deadly

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 9, 1959

Mr. MUNDT. Mr. President, economists throughout the Nation, students of our fiscal system, and thoughtful leaders in our Government, have continually warned against the dangers of inflation.

Another viewpoint has been offered in the writings of Elmer Roessner, business writer for the McClure Newspaper Syndicate. His approach is in a humorous vein, but nevertheless, Mr. Roessner recognizes the deadly, inevitable results—complete crippling of our economic system—should inflation fail to be controlled.

Although Mr. Roessner has written his articles with tongue-in-cheek, it does not take much reading between the lines to understand that while today we can look at these problems with some humor, there will not be any laughing tomorrow for the millions of elderly people and salaried persons on fixed incomes who will suffer the most if we fail to halt inflation.

Added to the persuasive words of wisdom and economic science Mr. Roessner has brought out a statement of sarcasm, cynicism and humor in an effort to alert Americans to the perils of inflation as they exist today.

Mr. President, I ask permission to have printed in the CONGRESSIONAL RECORD my weekly newsletter, which includes one of Mr. Roessner's columns, and a second column by Mr. Roessner.

There being no objection, the newsletter and article were ordered to be printed in the RECORD, as follows:

FISCAL SOUNDNESS AN ESSENTIAL CONDITION OF ECONOMIC HEALTH

Sharpest debate in the Congress these days concerns the effect that inflation has

on the economy. This concern over the dangers of inflationary practices is also reflected in the statements by many economists and leading administration spokesmen. The debates are not without humor, and for one tongue-in-cheek observation, I refer your attention to an article written by Mr. Elmer Roessner, noted business writer for the McClure Newspaper Syndicate. His article follows:

"BUSINESS TODAY—INFLATION HAS GOOD POINTS—RUNAWAY ECONOMY BOOSTS INCENTIVE

"(By Elmer Roessner)

"NEW YORK.—Inflation is good.

"It is the cocktail of democracy.

"Yeah, I know. For years your boy has been denouncing inflation. He has called it the hole in the dike of business, the leukemia of the economy.

"Now your columnist, with a switch typical of his addled thinking, espouses inflation.

"Like lanolin, filtertips, and hexochlorophene, inflation is good for you. Here are some of the benefits:

"1. It rewards the smart. The wise ones who put their money in growth real estate and growth stocks gain more than the saps who store the cash in banks, Government bonds, or insurance.

"Robin Hood angle

"2. Inflation penalizes the rich and helps the poor as far as it diminishes the real indebtedness of those who owe money and diminishes the equities of those who lend it.

"3. Inflation is an incentive for simple people to work harder. The only way they can keep up with rising food prices is by swinging the ax faster or hitting the gong harder.

"4. It gets lazy wives off the sofa. Since inflation constantly increases the cost of living, more wives have to go to work to get more income to support their families. Government statistics show that the number of working females has risen directly with inflation."

"5. It encourages private enterprise. Workers often get weary of the wage-price rat race, in which they must strike once every year or so to get enough to keep even. They go into business for themselves, adding to the number of free enterprises in the country and eventually to Dun & Bradstreet statistics.

"Ants punished

"6. Inflation penalizes those who imitate the ants. It reduces the buying power of hoarded money and rewards the grasshoppers who, living for the day, spend their income.

"7. It keeps oldsters out of mischief. Because their savings are attenuated and social security benefits rise slower than prices, old people must keep to their grindstones. This keeps old gaffers from wasting their time flirting with girls.

"8. It keeps the younger generation alert. Youths realize that if they do not learn the economics of inflation along with reading, 'riting, 'rithmetic, and fingerpainting, they will be the knuckleheads of tomorrow.

"If a young man can't parse inflation, he's likely to spend his later years washing dishes—either in a hashhouse or in a jail for income-tax law violators.

"So, it's obvious that inflation is good for the Nation and anyone against it is in a class with those opposed to mother, clean fingernails, bright teeth, and the Boy Scout oath."

ANDERSON SOUNDS WARNING

Secretary of the Treasury, Robert B. Anderson, testifying before the Joint Congressional Economic Committee, illustrated fully why inflation is not merely an "opportunist political slogan," but is a stark dangerous reality that seriously threatens our economic stability.

In clearly defining the need for a balanced budget, Mr. Anderson said he is fearful "that price pressures may eventually revive, if we do not * * * close the budget gap," and expressed the belief that a nation as rich and productive as the United States, in times of prosperity, must "at least pay its way."

He said, "The fact of the matter is there is almost nothing which is more positive and more important * * * than fiscal soundness. This is an essential condition of our economic health, without which we can have neither adequate military security nor the adequate provision of other needed governmental services. Meeting our expenses currently and all that that means in the way of fiscal soundness and a healthy economy is a highly positive objective which deserves the support of everyone."

DEFICIT SPENDING FANS FIRES OF INFLATION

Dr. Don Paarlberg, administration economist, said, "* * * deficit spending is far more likely to fan the flames of inflation than to add substantial increments to economic growth. Little good and much harm can come from a price rise which is the result of fiscal irresponsibility or a speculative orgy."

Dr. Paarlberg rejects the contention that inflation is necessary for economic growth. Faster growth results primarily from actions undertaken in the private sector of the economy and by Federal measures to encourage and unleash private enterprise—not by Federal deficits. He said, "Historically, economic growth has been achieved by such methods as improving efficiency, accumulating savings, and encouraging investment. Solid and continued economic growth cannot be achieved by having the Federal Government continuously live beyond its means."

MASSIVE IRRESPONSIBILITY MEANS BANKRUPTCY

Senator BARRY GOLDWATER, Republican, of Arizona, in a Senate floor speech, said, "We are witnessing the spectacle of massive irresponsibility by those who believe that spending funds we do not have will bring an unprecedented prosperity." He warned that if inflation is not halted, there will be nothing to prevent Americans from hauling a wheelbarrow full of dollars to the grocery store to buy a loaf of bread.

"The four horsemen of bankruptcy ride again—deficit, debt, inflation, and waste—spurred on by the disciples of massive irresponsibility, and if their mad gallop is not stopped, their devastation of our money and the future of world peace will be complete," GOLDWATER said.

BUSINESS TODAY—HERE'S HOW TO GIVE THE PEOPLE WHAT THEY WANT WITHOUT INCREASING TAXES

(By Elmer Roessner)

Things were tough in the republic of Democrastan. The people were clamoring for new schools with swimming pools, government sponsored art shows, and classier pensions.

But income taxes had reached 90 percent in top brackets, every thing from autos to light bulbs carried excises, and milk was taxed so much that the people would have drunk whisky instead if it were not for the fact it was taxed even more.

The President called in his Chancellor of the Exchequer and the head of his Federal Reverse Board. "We have taxed everything to raise money," he said. "Nothing is made, nothing is done without the payment of a tax. We tax the dead, we tax the unborn—the former with estate taxes, the latter by loading them with a share of the national debt. We tax everything. Well, everything except savings."

An idea

"Hm." said the Chancellor. "Not savings? How did that escape us?"

"We wouldn't dare," said the President. "Thrift—the ant and the grasshopper—Benjamin Franklin and all that. It would undermine our cultural and ethical concepts. Besides the banks, the insurance companies, the savings and loan associations and all the other savings institutions would raise hell. We can't afford to have trouble with them if we ever hope to get elected again."

"Right," said the Federal Reverse man. "We couldn't just tax savings. People would say," his eyes twinkled, "that it would be confiscatory. But perhaps we can dip into the people's savings without calling it a tax, without even letting them know it's happening."

"It doesn't sound honest—I mean I don't think we could get away with it," said the President. "How would we go about it?"

The old formula

"It's easy," said the Fed man. "We just give the people all the things they want, even the swimming pools. But instead of increasing taxes, we borrow the money."

"Couldn't we just print more?" asked the President.

"Of course not," said the Fed man. "That would be debasing the currency. People wouldn't stand for it. We'll borrow the money from banks, giving them bonds to hold. Then whenever they need money, they can put up the bonds as security, thus increasing the supply of credit."

"How will that tax the savings?" asked the President.

"By doubling the amount of credit, the plan will simply cut the buying power of savings in half," the Fed man answered. "The plan takes away half the real value of the savings and uses it to build swimming pools—or highways, apartment houses, or whatever the people want."

"Won't the savers object?"

No one alarmed

"Not very much. In the first place, this plan works fairly slowly. It will be years before they realize that half their savings are gone. Even then, what they have left will have the same name as their savings used to have—a thousand pesos, 10,000 marks, a hundred thousand dollars, a million pounds, or whatever the label was.

"Besides, those who own real estate or stocks will think they are richer, because the name of the prices of those things will have gone up. A one-hundred-simoleon stock will be worth 200 simoleons; a 10,000 bucko house will be priced at 20,000 buckos. Of course, they won't be any more valuable. It will just seem so because there is so much more credit bidding for them."

"Say, this is a great system," exclaimed the President. "We raise the money and the people we take it from never know its gone until it's too late. Something as good as this ought to have a name."

"It already has a name," said the Chancellor of the Exchequer. "It's called inflation."

"Nice boomy sound to it," remarked the President. "I have only one other question. Is it honest?"

Greater Safety in the Mining Industry

EXTENSION OF REMARKS

OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 9, 1959

Mrs. KEE. Mr. Speaker, the action of the Public Health Service in approving a research grant of $79,775 for the Beckley Memorial Hospital at Beckley, W. Va.,

for studies in cardiopulmonary diseases is a well-deserved recognition of the fine hospital and medical system created by the miners welfare fund.

The Federal grant will go to build and equip a health research laboratory, supplementing existing facilities, for studies in the disease which is prevalent in the West Virginia mining area, much of it being pneumoconiosis presumably related to coal dust.

The facility will provide for biochemical studies, microbiological studies, morphologic pathology with a limited amount of space for animal quarters.

This facility represents another step forward in the program to bring greater safety into the mining industry.

West Virginia University received a grant of $56,328 for equipping a new medical center building, and for this we are very grateful, Mr. Speaker.

H.R. 10—Equality for the Professional or Self-Employed Citizen

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. McGOVERN. Mr. Speaker, I feel constrained to speak out against a present inequality in the tax treatment of our self-employed citizens. The Congress can proudly point to its legislative record of providing financial security for our growing elderly population. One of the milestones in this record is the tax exemption to encourage employee retirement plans. Unfortunately, however, we have discriminated against the industrious self-employed individual by not extending to him a similar opportunity and encouragement to invest in his retirement.

Under private pension plans, which now cover over 15 million workers, the employer's contribution to the individual worker's pension plan is deducted as a business expense by the employer and is not currently taxable to the employee. However, there is no provision in the law for a similar partial tax exemption for retirement contributions made by the self-employed.

H.R. 10, reported out favorably by the Ways and Means Committee, would rectify this inequity by permitting a self-employed person to take a tax deduction for strictly defined types and amounts of retirement investments. This bill is extremely well drafted to insure that it actually will do those things for which it is designed, while precluding abuses. It has had the benefit of exhaustive hearings during the 7 years it has been under consideration.

All self-employed persons who fall within this definition in the Social Security Act, plus doctors and ministers, would be permitted to deduct for retirement investments 10 percent of their annual earnings with a ceiling of $2,500 a year and $50,000 for a lifetime. So that older persons would have an opportunity to build up retirement plans within a shorter period, the annual deduction could be higher for persons over 50 years of age on January 1, 1959.

In simplest terms, the principle of the bill is to permit—for example—the small businessman to spread out his income over a greater number of years. During his middle years, when his income is normally the highest, the greatest bite is taken from him under our progressive income taxes. Spreading consists in earmarking a part of his peak earnings for future taxation when his income will be less and consequently the tax will be reduced.

Since 1951, when Representatives KEOGH and REED introduced a bill to correct this tax discrimination, bipartisan attempts by Representatives Keogh, Simpson, Jenkins and the late Representative Reed have been made, without success, in each Congress to pass the necessary legislation. Last year the House passed the bill but it languished in the Senate.

This bill has been tested in practice. Both Great Britain and Canada have with success put similar schemes into operation.

Although previously supporting it, the administration is now opposed to this bill because of the revenues which will be lost to the Treasury. The administration estimates that H.R. 10 may result in a loss of revenue of $320 million for fiscal 1960 and $365 million for the first full year of operation. While $365 million may indeed be the loss in 5 years or so, based on experience in Canada and Great Britain, and on analogy with other forms of saving programs, it appears highly unlikely that the loss will even begin to approach this figure in 1960.

Furthermore, if revenue loss is to be the criterion by which a law is judged good or bad, then I submit that few inequitable laws will be corrected. It seems to me that we would recover many times the funds lost by this bill, if we applied the criteria of both revenue gain and equity to our present revenue codes and plugged some of the more glaring loopholes. I urge the passage of this measure instituting tax equality for the self-employed.

New Bill Would Give Durum Separate Consideration It Deserves

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. SHORT. Mr. Speaker, at the request of Durum growers in North Dakota, Senator YOUNG of North Dakota has introduced a bill consponsored on the Senate side by Senator LANGER, and by Senators MUNDT and CASE of South Dakota. I am today introducing a similar bill on the House side and I have some hopes that it will be included among the bills our Agriculture Subcommittee will consider during the next several days. One of the problems in promoting Durum legislation has been that Durum is just a subdivision under wheat, as far as a lot of people are concerned, and they want to treat it as such. Macaroni products made with our North Dakota Durum are superior, but that fact—so far, at least—is not appreciated here in the East.

Under the bill I am introducing today, it should be pointed out, is the provision that farmers cannot raise hard wheat on their farms if their Durum allotment is increased. Durum growers would be allowed to grow enough of their product to satisfy the demand. Under the mechanics of this bill, the allotment would be lessened if at any time the demand for Durum lessened.

I hope the Durum growers, who neither create nor add to the surplus—which is in other classes of wheat—will receive the serious and separate consideration they deserve. That is all we ask in this bill.

A Bill To Amend the Social Security Act

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. WALLHAUSER. Mr. Speaker, on Tuesday of last week, I introduced in the House of Representatives a bill (H.R. 5219) that would amend the Social Security Act to permit those receiving social security benefits to earn up to $150 a month and $1,800 a year, rather than the present limit of $100 a month and $1,200 a year.

I have taken this step as the present earnings limitation imposes undue hardship on many retired people because of the loss of benefits that results when the $100-a-month figure is exceeded through their part-time employment.

Since my election to Congress last year, many of my retired constituents have explained to me the plight in which they find themselves because of the low earnings limitation imposed by the Social Security Act.

From the information given me, it appears evident that many of our retired people are suffering because of the $100-a-month and the $1,200-a-year earnings limitation. Many do not receive enough in social security benefits to take care of their most basic needs. When, through their own willingness and desire, they undertake part-time employment to bolster their incomes they find themselves denied benefits because they overstep the $100-a-month limitation.

The modest increase in the earnings limitation that I propose will enable many retired people to keep on with their part-time employment and thus maintain the independence they so earnestly desire and which they so justly deserve. In many instances, the $150-a-month and $1,800-a-year limitation that I propose will make the difference as to

whether or not our retired people can enjoy even the most modest necessities and comforts of life. This is particularly true in the great metropolitan district that I have the honor of representing.

The raising of the earnings limitation cannot in any way be regarded as a handout for our retired citizens. Through their years of regular employment, they earned their right to social security benefits. Now, they are willingly seeking to bolster sometimes meager benefit payments through part-time employment, but are thwarted in part by the low earnings limitation. They are more than willing to help themselves and we in the Congress should be willing to help them. Their willingness is in the tradition of true Americanism.

The statistics of the Department of Health, Education, and Welfare that I obtained this week show that the average monthly social security benefits now paid are: Retired man with wife, $119; retired single worker, $67; and eligible widows of deceased workers, $56.

Certainly, those average figures show the need for the legislation that I propose, and particularly when it is borne in mind that there was a great increase in the cost of living both during and since the days of World War II.

It is my sincere hope that this very necessary amendment to the Social Security Act will be enacted at the earliest possible date.

Peanuts and People

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 9, 1959

Mr. COOLEY. Mr. Speaker, the peanut is more closely associated with fun and pure enjoyment than any other crop.

It is as American as baseball.

What would a circus be without a peanut vendor?

The peanut is a symbol of America at play—with children and grownups alike. It tempts the palate. It gives us energy. It is a solid food on our table. It is the constant companion of good appetite and good humor everywhere.

Versatility vies with taste to give the peanut its standing not only in America but throughout the world.

Its flavor is beyond challenge in the crunchy whole nut, or in spreads and confections. It has an affinity both for salt and for sugar. Throughout many areas of the world it is the most common substitute for meat, answering also the need for oil in the diet. The oil is used widely in chemistry and in commercial enterprises. Not only is the peanut a direct human food, but fed to hogs it makes the tastiest hams; and when the hay of the vine is eaten by cows, we get the sweetest milk.

Only perfect peanuts are used for edible purposes. Others are crushed for oil. The oil is ideal for frying because of its high smoke point of 450°. It does not scorch easily. It does not absorb flavors and can be strained and used repeatedly. The oil is best for salads because its tastes, it clings, it sparkles. It has many other aptitudes. It is the basis for many cosmetics, shaving creams and hair lotions. I am told that the energy value of 1 pound of peanuts equals 4 pounds of beefsteak, or 21 pounds of cheese, or 10 quarts of milk, or 33 eggs.

Mr. Speaker, it is fitting that we should be reminded occasionally of those things so often overlooked but which mean so much in our daily lives.

Peanuts are found on every continent and in almost every country where climatic conditions are suitable for their cultivation. They are a major source of food throughout the world.

The United States ranks fifth of all the countries of the world in the production of peanuts and produces a little more than 5 percent of the total world supply of 14 million tons. About one-third of all peanuts are grown in India. China produces a little less than a tenth of the total world supply and sizable quantities are produced in French Equatorial Africa and Nigeria.

Like many cultivated crops, plants similar to the domesticated peanut cannot be found in the wild state. Selection and cultivation of the plant have changed its characteristics until it can be scarcely identified with the wild form.

For a time it was thought that the peanut was a native of Brazil, but later it was found that the wild forms were grown extensively in Paraguay and Uruguay and the northeastern part of Argentina. It is assumed that the peanut came to the United States in the colonial days from Africa which had in turn received it from South America.

In the early part of the 19th century the cultivation of peanuts in the United States was limited to a small portion of eastern Virginia. The expansion of the crop to other areas and its development into an important agricultural commodity occurred, for the most part, in the early part of the 20th century.

During World War II, in response to the vast need in this country for vegetable oil, almost 5 million acres were devoted to peanut production. Much of the problems of the peanut industry today stem from the necessity for reducing this wartime level of production to that required to meet peacetime domestic demand. Peanut acreage has now been reduced to between 1½ to 2 million acres, but with the increased yields per acre annual production at the present time is near a million tons.

Peanut production is an important source of cash income to almost 200,000 farmers. It is particularly important in areas of Virginia, North Carolina, Georgia, Alabama, Texas, and Oklahoma, where soil and climatic conditions favor its production.

This is a brief chronicle. But I cannot close it without mentioning the wonderful work of the National Peanut Council in building markets. The work of this organization is beneficial not only to producers, but also to consumers as well, for the more peanuts we eat and the more we use, the healthier and happier we all will be.

Mr. Speaker, I appreciate the House joining, with its attention, in this salute to the most versatile, the most convivial, of all the products of our farms, the peanut.

The Place of Government in Agriculture

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Monday, March 9, 1959

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a very thoughtful speech by the Honorable HAROLD D. COOLEY, chairman of the House Agriculture Committee, summarizing the farm situation. I think it is of such a character as to provoke discussion on one of the most important problems of our times, and it summarizes the very difficult situation that faces America's agriculture.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PLACE OF GOVERNMENT IN AGRICULTURE

(Address by Representative HAROLD D. COOLEY, Committee on Agriculture, U.S. House of Representatives, before the National Farm Institute, Des Moines, Iowa, February 21, 1959)

Mr. Chairman, farmers and friends of farmers, I am indeed honored and I am bound in gratitude to you for the opportunity to speak before this great gathering of agrarian intelligence which is mingled here with the business leadership of this vast Midwest. I am always happy to visit this region where your economy rests fundamentally upon your agriculture, and where the farm people are making such a tremendous contribution to the health and strength of our Nation.

My mission today is to present to your attention, and to the conscience of the Nation, the troubled conditions on our farms and to make common cause with you to search out the approaches to solutions of our problems.

I am going to talk about the place of Government in agriculture. But, at the outset, I want to emphasize to you that it is people such as you here within the sound of my voice—students, thinkers, and leaders—who must discover the way out. You must master the means of unity among us. You must amass the Nation's opinion to solid solutions for these baffling problems which confront us.

In dealing generally with my subject, "The Place of Government in Agriculture," I shall endeavor to be impersonal and entirely objective. However, all of us must realize that it is hardly possible in these times to take any affirmative position on any matter relating to farm policy without exposure to the charge of political motivation.

THE PRESIDENT'S MESSAGE

The President has submitted his farm message to the Congress. Mr. Ezra Taft Benson has made his statement before our House and Senate Committee on Agriculture. The President and his Secretary of Agriculture have proposed further withdrawal of the Government from responsibility in the

price stability of agriculture and from farm production adjustment undertakings.

Mr. Eisenhower called in his latest message for outright repeal of the parity principle, which is the only means under law to determine a fair relationship of farm prices and income with farm costs and the total of the Nation's economy.

These proposals by the President and the Secretary relate fundamentally to our subject, "The Place of Government in Agriculture." My views are vastly different. They represent my studied and sincere convictions. I am a farmer and I have lived close to agriculture all my life. My views are not political convictions. These convictions are of my mind and of my heart.

I am deeply persuaded that the parity concept, which the Nation had come to accept as sound and just, embraces the aspirations of the farm people for a decent sort of life, that they may walk in equal dignity with the people working in industry, in business, and in the professions.

Of course we should constantly seek the soundest and fairest standards for parity determinations. But we are told now that the principle of parity is old and outmoded, that its overall standards date back before 60 percent of our present population was born. It occurs to me that if mere age of a principle is sufficient to condemn it, why then cannot it be put forth, with equal force and persuasion, that we repeal the Bill of Rights, the Ten Commandments, or the Sermon on the Mount?

The Congress is called upon to scrap the parity principle and to provide price supports for our major crops at 75 to 90 percent of average prices in the market place for previous years. The proposition obviously would withdraw the Government from effective responsibility in the price structure of agriculture.

Why, now, is it not proposed that the Congress repeal the minimum wage and collective bargaining laws, and that labor be paid 75 to 90 percent of its average wage of preceding years?

Why is it not suggested that the Nation's greatest industrial plants, performing on multibillion-dollar Government contracts with profits guaranteed, henceforward be paid on these contracts at only 75 to 90 percent of the former price?

Why is it not now proposed that Federal and State regulatory bodies abandon the fair earning standards and fix the rates of railroads, airlines, and all the great utility and service industries, at 75 to 90 percent of their accustomed charges to the public?

THE FARMER'S PRICE—PAID AND RECEIVED

It is clear that the increases in prices paid by farmers for items required in farm production are no longer determined by supply and demand in the marketplace. The price tags on farm trucks, steel, farm machinery and other things bought by farmers represent "administered prices." This means that the prices are set by officials of the firms manufacturing these things and they proceed to "administer" those prices in making sales to their customers, limiting supplies as necessary to maintain these prices. The concentrated industries have the economic power to modify supply-and-demand substantially in fixing their prices.

This is the simple explanation why, in 1948, a farmer out here in the Midwest could sell 686 bushels of corn and buy a two-row cornpicker, but in 1958 it took 1,972 bushels of corn to buy a two-row corn picker; it is why a farm truck cost 1,080 bushels of corn in 1948 and 2,813 in 1958; and why 1,133 bushels of corn would buy a tractor in 1948 but it took 2,897 bushels to buy a similar tractor last year.

And I make this prediction on the basis of staff studies: If the Government withdraws from the wheat program as it has from feed grains, within a few years it will take at least 2,600 bushels of corn to buy the cornpicker, 3,800 bushels to buy the truck, and 3,900 bushels of corn to buy the tractor.

Why is the farmer singled out?

Others rely upon Government protections, or upon concentrations of economic power, to protect their wages and profits, but the farmer is told to find his price in the naked competition of the marketplace.

That is where he was bankrupted in the late 1920's and early 1930's and thus he entered the whirl of the economic storm that brought on the great depression. That is where—helpless without bargaining power—the farmer is unable to set a price on what he produces but takes what is offered him. This is where, before we had a farm program in America, he was reduced to a lesser economic position so that others in our society treated him with mirth, calling him a yokel, a hayseed, a country bumpkin.

THE INHERITED PROGRAM

Mr. Chairman, I feel compelled here to identify myself as an advocate and a defender of the basic philosophy and purpose of our past farm program. In recent years the critics have been so numerous that I am sure you will welcome the words of one who is proud of this old program that it now is so fashionable to condemn.

The President, in his recent message to the Congress, gave support to efforts now abroad to convince the country that all of our present troubles in agriculture—with all the surpluses and all the costs to taxpayers—are caused by inherited programs.

To view agriculture with any perspective, we must look first at the program prior to 1953, and we must then make some comparisons with the program as it has been operated for the last 6 years. How can we truly examine the place of government in agriculture without asking questions and without making comparisons?

In 1953 we had a farm program under which for 11 consecutive years farm prices generally had averaged 100 percent of parity or higher. The Commodity Credit Corporation price support program for 20 years had cost only $1,064 million. Programs for the basic crops—corn, cotton, tobacco, wheat, peanuts and rice—actually showed a small profit of $13 million. In contrast, for the last 6 years net farm income has been almost $20 billion less than in the previous 6 years. CCC losses in these 6 years have been five times the total of the previous 20 years. CCC had commodities in inventory and on loan of a value of $2,452 million on January 1, 1953; as of January 1, 1959, the figure had reached the staggering sum of $8,716 million. Expenditures of the Department of Agriculture have increased from $1,800 million in 1952 to around $7,300 million for fiscal 1959.

It is true that war stimulated the farmers' markets during some of those 11 years when prices stood at 100 percent of parity or above; but it is true, also—though little noted—that during the last 6 years, because people generally have had more money to spend, the demand for what the farmer produces has been substantially greater than in wartime.

But here is the difference. In 1957, American consumers, with 13 percent higher per-capita incomes than in 1952, bought 11 percent more food from farmers, including more high cost animal products. Yet in 1957 the farmers received $600 million less than in 1952, although consumers paid $6,100 million more for the food in 1957 than in 1952.

The costs, to farmers and to taxpayers, during the last 6 years are not the costs of the farm program which was in operation prior to 1953. They are the costs of the program which has been recommended in the last 6 years and which the Congress reluctantly has allowed to be put into practice.

With misgivings, the Congress in 1954, allowed the sliding scale price supports to become effective. So did the Congress put into operation the soil bank of 1956. Then in 1958, with reluctance and grave doubts, the Congress authorized the reduction in support levels on corn and other feed grains and on cotton and rice.

The program we have today is not an inherited program. It is a completely redone program meeting every major request that the administration put to Congress in the past 6 years except the proposal to remove the minimum 75 percent of parity support level for all crops.

TWO PHILOSOPHIES

The great difference between the past and the present program is the basic philosophy for bringing production to reasonable balance with market requirements.

There are two main roads—two vastly different philosophies—to the accomplishment of essential balancing of supplies with available market outlets in agriculture.

The first is to set up machinery whereby farmers, at their own election, may bring their marketings into balance with assurances, as a matter of national policy, that they will receive, through price supports or other operations, profitable returns for their ample but not excessive supplies going to market.

The second course is to let farm prices decline—in the competitive marketplace—thus driving enough farmers off the land, and diminishing and weakening the productive resources of those who remain, so that total output will adjust itself to demand, in a mistaken expectation that prices may become and remain satisfactory to those who survive.

The old farm program took the first route. This program, based upon the parity principle, set up machinery for farmers to pattern their production to their markets and to give to farmers a voice—bargaining power—in the prices of their commodities as they delivered them into the markets. These are the requirements of any successful industry in a free enterprise economy. This program simply sought to place in the hands of farmers the tools for profit—control of their own supplies and price bargaining power—which have been used by industry since free enterprise was commenced.

Admittedly this program needed some changes in recent years, to adjust to the great technological advances in agriculture and thus to achieve the goals set for it. Adjustments were imperative, but never a change in the basic philosophy.

It is my opinion, it is my deep fear, that the policy we now follow surely will lead to the destruction of the family farm system which was our strength in the founding of our democracy, and it will wreck fine rural trading centers here in the Midwest and elsewhere throughout this great Nation.

Who would say that the Government has no responsibility in this?

FARM POLICY AND FARM INCOME

Let us assess for a moment the part farm policies have played in farm income.

Government programs in the past quarter of a century have increased farmers' net incomes by as much as 20 to 50 percent, in the years when these incomes otherwise would have been lowest due to excessive production in relation to market demand.

And hear this:

Government programs—even in time of dwindling effectiveness, probably have held net farm income at least one-third—$24 billion—higher than it otherwise would have been—in the last 6 years.

These figures and facts are on the authority of competent economists.

Government programs have reduced price and income uncertainty. They have accelerated the adoption of technological advances.

On a national basis they have been a positive force for increased efficiency in agriculture.

Statisticians in the Department of Agriculture find that agriculture's efficiency has been increasing twice as rapidly in the past 25 years when farm programs were in operation, as in the previous 20 years.

Preliminary estimates indicate that the Commodity Credit Corporation by its loan and surplus disposal operations on a net basis removed $1.5 to $2 billion of farm products from commercial market channels in 1958. Without the soil bank payments and, had this additional $1.5 to $2 billion been pushed through commercial markets, it is reasonable to assume from past supply-price relationships that farm income in 1958 would have been $4 to $6 billion lower. Except for the price support operations net farm income in 1958 might have been only $7 to $9 billion, instead of $13 billion.

WHERE WOULD THE MIDWEST BE?

What would be the financial situation of Midwest farmers today if there had been no farm program since World War II? It is my considered judgment that most of you, and most of your financial and farm service institutions in the Midwest, would be flat broke.

What if the $8 to $9 billion of farm products now in Commodity Credit Corporation hands, or on loan, had been forced through commercial market channels in the last few years? What if the $1 to $2 billion of farm products sent abroad under Public Law 480 in each of the last few years instead had been channeled through commercial markets at home and abroad?

The questions go directly to "the place of Government in agriculture," the subject your program committee asked me to discuss.

You know the answers, and I am sure you understand my bewilderment when people who call themselves farm leaders, and who pretend to represent the Midwest farm opinion, come to Washington and tell us to destroy the parity principle, to scuttle what is left of the farm program and, as I must interpret it, to restore the farmer's freedom to go again into the marketplaces and, hat in hand, meekly accept in price not what he asks but whatever is offered him.

Is that what the great Midwest wants? Do you people out here want agriculture to be cast adrift again in the economic stream, while others, enjoying the protection of Government on utilizing the raw force of economic concentration, bargain away our profits, denying us fair rewards for the unmatched contribution our farm families are making to our great Nation?

I'll never believe it.

I say to the farmers of this great Midwest: Let your voice be heard. Let us know who speaks for you.

TRUE NATURE OF FARM INCOME PROBLEM

The critical elements in the farm problem today should be clear to everyone by now. Farmers are introducing new technology at such a rapid rate that they are fully replacing the labor which leaves the farm and in addition they are expending output faster than market outlets can be expanded.

Utilizing both a smaller crop acreage base and a shrinking labor supply, farm output increased 23 percent between 1950 and 1958 while total population increased only 15 percent. This increase in total farm output is largely the result of our excellent research and educational programs for farmers. It is a product of science and technology. We planned it that way. It is a wonderful blessing to American consumers, to the American economy, and to the hungry people of the free world.

But here is the rub. Individual farmers find it profitable to introduce these new production techniques, to expand their output even though the increase in total output outruns available markets, forces prices down, and reduces the total income to be divided among all producers. It is this feature of our agricultural economy which makes what is a blessing to consumers, economic suicide for farmers.

Other groups in our economy who manufacture and sell the supplies purchased by farmers, and those who process and market farm products have various degrees of market power. In the absence of marketing agreements and farm price supports the commercial farmers have virtually none.

Furthermore, this technological advance which tends to bankrupt farmers in the absence of an adequate farm program, would be substantially the same as it is today even though the current decline in farm numbers continues until there are only half as many commercial farmers in the United States as at the present and even though farms were increased to twice their current size.

As long as improved technology is available and farmers on an individual basis find it profitable to increase output more rapidly than markets can be expanded, it does not matter whether there are 5 million farmers, 1 million, or even 500,000, prices will fall faster than costs. In the absence of programs giving farmers bargaining power in relation to other groups in our economic society farm prices and incomes will be forced to disastrously low levels.

Any group, if it is to exercise bargaining power in the marketplace, must have a measure of control over its supplies. This is the key consideration in the formulation of an effective Government program giving farmers increased bargaining power.

THE ROAD AHEAD

Now where are we—the farmers of America—where are we headed?

We in Congress who have the well-being of farmers at heart are working on every conceivable approach to the problems now carying for remedies. But I must be frank with you. We shall never have another sound and effective farm program until a substantial majority of farmers—people like you who are gathered here—make up your minds. We shall never impose a program upon farmers. We are eagerly responsive to the will of farmers.

Now I have tried here to shed some light on the circumstances of agriculture and to illuminate the magnitude of the problems which confront us. It is far easier, of course, to reach an understanding on what is wrong in any particular situation than it is to agree on appropriate remedies.

But surely there can be no disagreement that the basic source of farmers' economic difficulties today in the rapid rate of technological advance in agriculture.

Surely there can be no disagreement that in the absence of a farm program in recent years farm income would have dropped precipitously.

Surely there can be no disagreement that current farm program costs are excessive in relation to the income of agriculture.

Surely no one will disagree that current stocks of storable farm products are excessive.

But can we agree on new approaches for dealing with the farm income problem I have described?

I have been bitterly disappointed in recent years in the wide differences in the recommendations of our national farm organizations. I was discouraged by the absence of constructive ideas in the President's farm message to the Congress last month.

Some basic determinations must be made. These determinations must precede any action by the Congress on a sound, long-range farm program. Our course must lie in one of a number of directions.

We can rebuild the old program, with more efficient means of production adjustment, more of the storable crops made eligible for such adjustment—all programs, as heretofore, subject to the election of farmers themselves—and provide assurance of reasonable prices for farmers who willingly adjust their outputs to market requirements.

We can provide a system of production payments or parity payments by the Government to pay to farmers the difference between the market price and a reasonable price, on all or part of what they produce.

We can formulate a program embracing a combination of production adjustment and price support, with supplemental production payments.

Or we can, if you desire it, employ either or both of these approaches to devise a program of tolerable security, as a shield behind which farmers may organize programs of their own for specific commodities, through marketing agreements, self-help plans or similar machinery designed to assure the producers increased bargaining power by creating an ability to regulate the flow of their commodities into the market. Producers of each commodity should be allowed a wide latitude to develop a program which would give them as much bargaining power as can be developed in the market.

Of course we must continue such programs as those making part of our overabundant supplies of food available to other countries in the operation of our foreign economic assistance program, and the programs of research into better distribution and utilization of food and more extensive industrial uses of farm commodities.

Those are perhaps the most discussed approaches. There are many other suggestions for the direction a farm program should take.

Now, what do we do? Where do we go?

Specifically, you have asked me: What is the Government's responsibility in agriculture? It is this:

The nature and the structure of agriculture are a matter of concern to all the people. I say to you that this exploding technology on the farm is creating a disastrous economic situation for agriculture. Our Government research and educational programs, mixed with the intelligence and labor of our farmers, have given us the most efficient agriculture in the world. They are giving consumers the cheapest food—in relation to wages—on record. Government cannot now stand idly by, wringing its hands, crying all old programs have failed and all new programs are doomed to failure. Government cannot say there is nothing we can do to avert the impending economic misery of the farmer resulting from this rapid rate of technological advance in relation to available market outlets. The Government has a moral, an ethical, an inherent, a constitutional obligation to create public policies that will open to the operators in agriculture the opportunities of due rewards for their management and their labor on a parity with the workers in all other undertakings in this free enterprise economy and in this democratic society. The safety, the health, the aspirations of all the people—the strength of our Nation—demand this.

This is my creed. It is the starting point.

The Government has given labor the minimum wage law and the collective bargaining law. It has given industry the corporate structure, the tariff and the many statutes that soften the perils of unregulated, unrestrained competitive enterprise. How, then, can the modern, highly mechanized farmer survive, ever selling in a free market and buying in a protected market? Where can there be doubt of the Government's obligation to agriculture?

I pledge common cause with the farmers of America to the fulfillment of this obligation, in public policies farmers themselves shall devise, and which will be fair alike to our farm people and to our great consuming urban populations.

Address by Hon. James C. Davis of Georgia at the Virginia Democratic Jefferson-Jackson Day Dinner, Richmond, March 7, 1959

EXTENSION OF REMARKS
OF
HON. HOWARD W. SMITH
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 9, 1959

Mr. SMITH of Virginia. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I present a speech delivered by Representative JAMES C. DAVIS of Georgia at the Virginia Democratic Jefferson-Jackson Day dinner in Richmond on March 7, 1959.

Today our Government and the Constitution upon which it is founded are under heavy attack. It comes in a form which was anticipated by one of your greatest fellow citizens, the Father of our Country, General and President George Washington. In his farewell address on September 17, 1796, he said:

"If, in the opinion of the people, the distribution or modification of the constitutional powers be, in any particular wrong, let it be corrected by an amendment, in the way in which the Constitution designates—but let there be no change by usurpation; for though this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed."

The threat to our Constitution comes from activities of the Federal Supreme Court. The trend of the Supreme Court, as presently constituted, has been to flaunt the law and the Constitution; to regard the whole body of the law as an uncharted sea; to arrogate unto themselves complete authority to make law as they think it should be made. These would-be reformers want to write the law to conform with their own perverted ideas of what law should be instead of what it is. They want to read into the Constitution alleged meanings which no lawyer or judge or layman ever read into that document in the history of the country before.

In the 17-year period beginning with 1929, that Court rendered 28 favorable decisions to defendants who were either Communists or charged with subversive activities. This is the Court which struck one of the hardest blows at our Constitution in the school segregation decision of May 17, 1954. I want to talk some tonight about this case, where all pretense at following the law was dropped; where its decision was in effect that changing times and conditions required a changed interpretation of the 14th amendment, and, they said we therefore change it. The people of my State, and I believe the people of your State, do not intend to see our constitutional rights struck down by judicial dictatorship. We shall resist it by every legal means.

I have not come tonight to talk about what cannot be done. I have come to speak of what can be done—what is being done—and to repeat the age-old truism that where there's a will, there's a way. I know of no better philosophy than the motto of David Crockett: "Be sure you are right, and then go ahead." I am convinced that when right is challenged by arrogant authority, a bold defense of that right will rally to its cause the support of the people. I well remember the occasion in Georgia when a President of the United States declared himself against the reelection of our senior Senator who had refused the demand of that President to pack the Supreme Court. In ringing words, the Senator said: "Mr. President, I accept the challenge." The people of Georgia rallied to his side and returned him to the Senate with a tremendous majority.

The arrogant brutality of Mr. Eisenhower in running roughshod over the citizens of Little Rock with his paratroopers so crystalized sentiment in Arkansas that they did the almost unheard of thing to re-elect a Governor of the State for a third term, and to defeat an eight-term Member of the United States Congress with a write-in candidate. For the first time in the State's history the gubernatorial candidate carried all its 75 counties.

The answer to the threat which you people face in Virginia, and which my people in Georgia face, is first, to satisfy ourselves that we are in the right; second, to firmly resolve that we will support and defend that right; and third, to organize with all who believe as we do and then work together with all the energy and determination we possess to win the battle.

The most effective method, I think, of protecting ourselves against the fraudulent destruction of our constitutional rights is for the great mass of American people who believe in constitutional government to organize for the purpose of preserving it, to alert and convince our people of the need for active, continuous, cooperative effort to stop this encroachment upon our liberties. It is of the utmost importance that we all realize this need for organized, unending, cooperative effort, and that we make it our number one goal and objective until we have brought a stop to this Federal encroachment upon our States' rights and local control of our own affairs.

I can tell you, and I do tell you, that our people in Georgia have resolved that we will never surrender the control of our schools to a judicial dictatorship operating in Washington. When the fraudulent and outrageous school desegregation decision was foisted upon us in 1954, Georgia's people said—there will be no integration in Georgia schools. To this day there has not been the first instance of integration in Georgia schools. The determination to resist is as strong in the hearts of Georgians today as it was when they resisted the carpetbaggers of the Reconstruction Era, and again when they declared their determination to resist modern carpetbaggers and modern reconstruction in 1954.

You Virginians do not have to look to Georgia, however, or to Arkansas, to point you the way. Within the borders of your own State, the determined people of Front Royal, Va., have shown you and the country one solution to the problem. The Communists, the NAACP with its multitude of Red front officers and members, that queer aggregation known as the ADA, aided and abetted by the local quislings and traitors, have all been loudly proclaiming that Front Royal children must go to integrated schools. But the good people of that community are going right along day by day operating their own schools in the way they have chosen to do. It is to their everlasting credit that, when the day came upon which the judicial dictatorship said Negro children would mix and mingle with white children in their high school, not one white child entered the schoolhouse door. The pickaninnies found themselves still as far from association with the whites as they were before the Supreme Court undertook to amend the Constitution in 1954.

The Front Royal people have simply accepted a fact which we all will realize when we look it in the face. It is this: that in the long run, whether public or private, the cost of operating schools is going to have to be paid by the white people of the country.

If the worst comes to worst, and the public schools are closed, white people will adjust themselves to the situation and educate their children in private schools, and bear the cost of operating them. There may be some Negro private schools set up. I am confident that good white people will help the Negroes whose aim is an education for their children and not social equality. I am confident also that Negroes of the NAACP persuasion, whose aim is not education, but social equality, will have to go someplace like Philadelphia, Chicago, New York City, or Washington. And when they get there, they will still find that the same feelings of race pride exist, that white people will move out rather than accept race mixing, and that they have been following a will-o-the-wisp and have been led astray by the false doctrine first expounded by the Communist Party when it proclaimed its platform at its national convention on May 26, 1928.

You will recall that just 8 days after the Supreme Court's constitutional amendment on May 17, 1954, the District of Columbia School Board ordered the schools to be opened the following September as integrated schools. President Eisenhower, eager to pander to those he thought controlled the Negro bloc vote, announced that Washington integrated schools would be a model for the Nation, a showcase for the country. The schools were integrated as ordered. But that which was advertised to be a model for the Nation to follow when and if it knuckled under to the judicial dictators turned out to be a monumental failure, a horrible nightmare.

Appalled by the tragic possibilities which they knew awaited their boys and girls under this rotten social experiment, white fathers and mothers of school-age children began a mass exodus out of the District of Columbia. They began to flee into the white suburbs in 1953 when the leftwing sociological Supreme Court turned the Negroes into the Washington restaurants and hotels in the Thompson Restaurant case. The handwriting on the wall was clear. The school cases were pending, and the first year 20,000 white people moved out. The next year the mass exodus increased to 33,000; the following year the outmigration had swelled to 42,000. In 1957, only 6,000 fled but by July 1, 1958, another 22,000 moved out, making a total loss to the District of Columbia of 123,000 white residents in 5-year period following the Supreme Court-Eisenhower forced integration program in Washington. In the same 5-year period, while Washington's white population was decreasing 123,000, its Negro population was increasing by 98,000. The Board of Commissioners of the District of Columbia finally got around to the point of facing facts, and on Monday of this week they issued a statement acknowledging that 53 percent of the population of the Nation's Capital are Negroes. Washington is rapidly becoming a second Harlem.

It was evident from the first that this sociological experiment was a miserable failure.

One of the immediate and obvious results of mixing the schools in Washington was that white children were held back in the schools because the Negro children showed they could not keep the educational pace. As early as June 10, 1955, the U.S. News & World Report announced that white people were moving out of Washington to nearby Virginia in great numbers; the exodus of white people from Washington had resulted in a public school system in June 1955, of 61 percent

Negro pupils and 39 percent white. The same magazine, 6 months later on November 25, 1955, reported that Negroes were pouring into Washington and white families leaving in droves, with the result that at that time 64 percent of the students were Negroes and only 36 percent white.

In 1956, 2 years after the schools were mixed, the House District of Columbia Committee set up a subcommittee and charged it with the duty of investigating the District of Columbia integrated public school system. I was chairman of that subcommittee. The tragic facts of the school situation had been concealed behind an iron curtain in Washington. The radical NAACP and other sponsors of integrated schools, including the notoriously radical newspaper, the Washington Post, wanted desperately to keep the facts concealed. They made frantic efforts to prevent our subcommittee from functioning. The NAACP sent telegrams of protest to the President, to the Democratic candidate for President, to the Speaker of the House, to the Democratic and Republican floor leaders in the House, to each member of the House District of Columbia Committee and others. The NAACP held protest meetings in Negro churches in Washington. Never have I seen such desperate and frantic efforts made to prevent a duly constituted committee of Congress from performing its function.

We let nothing stop us, however, and when the facts were uncovered, it was easy to see why proponents of mixed schools wanted to keep the facts secret. We brought before us witnesses best qualified to give the facts.

Our witnesses consisted solely of members of the school board, officials such as the superintendent of the school system, assistant superintendents, principals, and teachers. We had white witnesses and Negro witnesses. We had witnesses in favor of integration and witnesses opposed to integration. The testimony showed that, from the standpoint of mentality, the Negro pupils were not able to keep pace with the white children in the schools. That resulted in lowering the education standards.

We learned from accurate comparisons based upon recognized achievement tests, known as the Iowa Achievement Test, Standard Achievement Test, and IQ tests, that there was a very wide difference in scholastic achievement and mental ability between white and Negro pupils. To illustrate, we found that in Cardozo school, with 6 white and 1,694 colored pupils, there were 512 pupils in the tenth grade; 230 of that 512 were able to read only from fourth grade to seventh grade level; more than 300 were able to work arithemetic only at seventh grade level or below; and 283 of the 512, which is 55 percent, were classified as being in a category which would never be able to achieve beyond the sixth grade level.

One teacher in Roosevelt High School, with a class about 75 percent colored, said she had more failures in 1 year of integrated teaching than she had in 10 years of teaching in a segregated school.

The assistant superintendent in charge of all high schools testified that in 4 high schools, with a total of 8 white students and 5,011 colored students, these 4 colored high schools tested under the Iowa Achievement Test rated or scored in the lowest 5 percent of schools taking this test across the entire Nation.

Time does not permit me to give you the detailed results of these achievement and IQ tests. They are set forth in detail in the committee report, and it will be my pleasure to send a copy of that report to anyone furnishing me his name and address.

Testimony of many of the teachers showed that the Negro pupils, because of low achievement and mental ability, required so much time and attention that the white pupils had to be neglected, and failed to receive the time and attention they would have had otherwise.

I have given you just a few examples of testimony concerning scholastic achievement and mental ability of Negro pupils in the Washington schools. This testimony is typical of the bulk of testimony we took for 9 days from school officials, principals, and teachers.

Such conditions, of course, retard able pupils. They have a disastrous effect upon children from an educational standpoint. Yet, there is far more involved in this matter than just the educational problem. There is a human side and a moral side. This means even more in shaping and influencing the lives, the character, and the future of our children, which furnishes additional and imperative reasons for our insisting upon segregation in schools.

Among other objections to this close association with Negro children are the important matter of health, the Negroes' high crime rate and disrespect for law, the lower mentality level, and the high rate of illegitimacy among Negroes. It is well known that the crime rate among Negroes far exceeds that of whites. Washington, D.C., is noted for the great number of serious crimes committed within its limits. Its crimes of violence are more than twice the number committed in Boston, a city of comparable size; more than twice of those committed in Milwaukee; and, nearly twice those in New Orleans, La.

Negroes are responsible for this high crime rate. Over the years, they have averaged committing 82 percent of the major crimes in Washington, and during some periods the percentage has gone as high as 88 percent. The current rate of Negro illegitimacy in Washington is that more than one out of four births is illegitimate: Negroes constitute 87.1 percent of the names on the relief rolls, and the current reports of venereal disease in the District of Columbia show that, of total cases reported during the past year, 220 were white and 9,126 were colored.

These are repulsive statistics, but they show some of the impelling reasons for segregated schools. They show what an unspeakable tragedy it is for white children to have integration forced upon them.

We asked about personal relations between white and colored pupils, both as to pupils of the same sex and pupils of the opposite sex.

Practically without exception, the testimony was that dances, plays, senior proms, picnics, and similar social functions were discontinued when the schools were integrated.

At Roosevelt High School, where white and colored were about equally divided, it was necessary to discontinue girl cheer leaders and use only male cheer leaders because of remarks and incidents which occurred at the basketball games.

The testimony was that Negro girls were antagonistic to white girls, and did such things as stepping on their heels in the halls, sticking pins in them; a Negro girl would stand in the aisle and dare a white girl to pass her. A group of Negro girls attacked a white girl on the way home from school and inflicted personal injury upon her.

They testified that similar personal antagonism existed between Negro boys and white boys. At McKinley High School a group of Negro boys attacked two white boys who had been circulating a petition opposing an integrated prom. They beat them horribly and left one of the boys unconscious on the sidewalk. Fourteen stitches were required to sew the wounds inflicted inside this boy's mouth. His father brought him to the Capitol so that I could see the serious injuries he received.

There were numerous fights, beatings, stabbings, etc. The principal of McFarland Junior High School testified that, although it was never necessary to call for police assistance when operating segregated schools, in the last school year in his integrated school, he had to call for police assistance approximately 50 times to prevent fights and keep order.

Many of the witnesses testified as to obscene remarks, obscene literature, indecent proposals, indecent handling, and indecent approaches of Negro boys to white girls.

The principal of Roosevelt High School testified that she had two cases of Negro boys approaching white girls in her school the same week she was testifying as a witness. She said she had this trouble the preceding year, and the year before that, which was the entire period of integrated schools at the time of her testimony.

The former principal of Eastern High School swore that he retired the preceding year because of ill health brought on by conditions resulting from integrating the schools. He testified that it was necessary to require that all teachers leave their desks when the bell rang to keep order in the corridors. He said he heard colored girls at times use language that was far worse than any he had ever heard, even in the Marine Corps.

He said that fighting, including several knifings, went on continuously—that such incidents became more or less commonplace following integration; that there were more thefts in his school in 2 years of integration than he had known in all his 30-odd years of experience before; that there were many sex problems following integration; that colored boys wrote notes to white girls giving their telephone numbers and asking for the girls' telephone numbers; that colored boys touched white girls in a suggestive manner when passing them in the halls and made obscene remarks about them.

He stated that one white girl was surrounded by a group of colored students after leaving school one afternoon; that a colored boy put a knife to her back, forced her down an alley and against a wall, and while they were debating making her take her clothes off, she broke away and ran home. The principal stated that a dozen or more colored girl students became pregnant at his school during his last school year.

The principal of Jefferson Junior High School testified to 27 pregnancies in his school during the preceding year, 2 white and 25 colored.

The number of pregnancies among the colored girl pupils has created a serious problem in the high schools and the junior high schools.

The official report of the doctor at Southwest Health Center Clinic in Washington of illegitimate pregnancies during the 1956–57 school year in the junior high schools of the city of Washington is a shocking thing. Among other things that report stated that there was a rise of over 1,000 percent in the number of junior high school pregnancies in comparison with 1948–49 school year figures.

The report further states: "In the early part of the 1956–57 school year one school in Southwest reported over half of the 240 children enrolled were illegitimate." The report and exhibits attached to it tell a story of almost unbelievable and shocking conditions of health, illegitimacy, venereal disease, and assembly-line production of illegitimate children who promptly go on the relief rolls at the expense of the taxpayers.

These reports are made annually, and the last one available is almost a repetition of the report made available to the school investigating committee in 1956.

Mr. Howard West of the District of Columbia Department of Public Health stated that in the year preceding the school investigation there were 996 illegitimate babies born to girls of school age in Washington; further that it was a close estimate to say

that one out of every four colored schoolchildren in the District of Columbia public schools was an illegitimate child. He furthere stated from the records of the District of Columbia Department of Health that in the year in question the total number of cases of venereal disease reported to the Department by persons of school age was 854. To bring the figures down to date, the records of that Department for 1957 show that of Negro birth more than one out of four was illegitimate.

For a long time the NAACP veiled their aims with the pretext that they wanted integrated schools for purposes of better education. They have now become so bold as to cast that pretext aside and boldly state that their objective is complete social equality. One of the Negroes who claims to represent the views of the NAACP stated in a magazine article as long ago as 1952, that the aim of the Negro is intermarriage with white people. It is a blind person indeed who is not now aware of that purpose.

School conditions in Washington for white children and white parents are pathetic today. They are worse than in 1954 and 1956. Some 10 days ago I heard a rumor that a Negro teacher in one of the Washington elementary schools had staged a play in the school in which two of the characters were husband and wife. The Negro teacher cast a little white girl in the role of the wife and a Negro boy in the role of the husband. I investigated the rumor and found it to be true. I obtained a copy of the fourth grade reading book which contained the play. This is it.

A few weeks ago, a worried father told me that a Negro boy tried to kiss his daughter; that she was able to fight him off, but he did succeed in kissing her girl companion.

One parent of a daughter in one of the Washington schools brought me this valentine from a Negro boy to his daughter, and this valentine from another Negro boy to another white girl in the same school.

It is distasteful to speak of such repulsive happenings, but you should know that if you permit this integration program to get a foothold in your State, you are opening your doors to a revolting systematic, progressive, disgusting campaign of race amalgamation.

By 1957 the mass exodus of white children out of Washington schools had become so great, the promoters of forced integration saw the need for desperate measures to stem the tide. Carl F. Hansen, then assistant superintendent of the District of Columbia school system, permitted a pamphlet to be issued in his name by the Anti-Defamation League. It was entitled "Miracle of Social Adjustment: Desegregation in the Washington, D.C., Schools, by Carl F. Hansen." It consisted of 70 pages of drivel and slanted propaganda in a labored effort to present the miserable District of Columbia integrated public school system as a system where everyone was happy and integration a huge success.

When we had our school investigation in 1956, it was obvious then to anyone with a thimbleful of brains that the parents of white children would move out of Washington as soon as they were able to, and that public schools would soon be segregated again because the pupils would all be Negroes. I so stated at the time of the investigation.

On Thursday of this week, the same Carl F. Hansen, the alleged author of "Miracle of Social Adjustment," said in a speech in Nashville, Tenn., that the Washington school system, pressured by powerful social and economic forces, is drifting back to a form of segregation.

He is quoted as saying among other things that "83 percent of the elementary schools are predominantly white or Negro, indicating clearly that if a numerical balance in enrollments does occur, it does not remain for long."

Even the notoriously radical newspaper, the Washington Post, one of the most zealous and fanatical promoters of integration in all phases of life in Washington has been forced to acknowledge, although most reluctantly, that the result is being attained which sensible people saw and tried to prevent, namely, that integrated Washington is slipping into the gutter. On Wednesday of this week, that pink newspaper, in a long editorial headed "New Form of Segregation," made this statement:

"The present problem arises because the District proper is moving very rapidly toward becoming largely a Negro city. We do not think that this sort of imbalance is good for either the white or the colored race. Certainly it is not good for the National Capital or for the District as a civic community."

Further along in the editorial, they say:

"Fortunately, there are many steps that can be taken to curb the trend toward an all-Negro District and an all-white suburbs."

They then suggest that the suburban communities share the blessings of integration by building a lot of Negro houses for Washington Negroes to move into, and to provide mass transportation to carry them to and fro.

It is unfortunate, but also true, that the integrationists' chickens are coming home to roost on the doorsteps of the radical zealots who disregarded all warnings, and who resisted all efforts to prevent the disastrous consequences of integration, which they now recognize with wails of anguish, and for which they seek to blame everyone else but themselves.

I warn you tonight that we must not accept this integrated school plan. We must defeat this fraudulent, strong-arm attempt to cram this integrated school plan down our throats. Unless we reject this school decision in toto, as certain as night follows the day, this sociological Supreme Court is going to hand down another decision holding that our marriage laws violate the 14th amendment. That decision will be the final step to mongrelize this country. The groundwork has already been laid for that decision, and it was laid in Virginia. Your State law prohibits interracial marriages. This was the case I believe in 28 of the States in this Union until Tuesday of this week, March 3, when the State of Idaho repealed its law banning interracial marriages in that State. In the Virginia case of *Naim* v. *Naim*, 87 S.E. 2d, 749, 350 U.S. 891, the Virginia Supreme Court, pursuant to Virginia law, declared invalid a marriage between a Chinese seaman and a white woman and annulled the marriage. The case was appealed to the U.S. Supreme Court, and appellant asked that Virginia's marriage law be declared unconstitutional in violation of the 14th amendment.

I do not think the Federal Supreme Court would hesitate a moment to strike down the marriage laws of Virginia and the other States now, if these sociological experts felt that public opinion would accept such a shocking decision now. They know that public opinion will not accept it now, but they saw in this case an opportunity to kick the question back and forth for a while between Washington and Richmond, to give the Communist Daily Worker, the so-called liberal press, the NAACP, the Americans for Democratic Action, the American Civil Liberties Union, and other integrationists and mongrelizers some time in which to condition the public mind for a judicial decision striking down the last legal barrier which stands in the path of mongrelization. The Federal Supreme Court entered an order vacating the State court judgment of annulment, and sent the case back to the State court for further action, saying that it wanted additional evidence as to whether Virginia's court had jurisdiction in the case.

In rejecting this further attempt of the Federal Supreme Court to meddle in affairs belonging exclusively to the State, the Supreme Court of Virginia joined the Supreme Court of Georgia in refusing the recognize the right of the Federal tribunal to remand cases to State courts for further action where no ground for reversal was shown in the record. The Virginia Supreme Court on January 18, 1956, notified the Federal Supreme Court that it refused to take further action and closed the case.

But you may be sure that if the school integration question is finally settled against us, there will quickly come a Supreme Court decision declaring our marriage laws invalid.

There are some faint-hearted souls among us who say "Let's accept token integration. Let's keep our schools by admitting a few Negro children to white schools."

Do not be lulled into a sense of security by any statement we can have token integration and continue with segregated public schools. There will be no such thing as token integration. Token integration will not be approved by the Supreme Court. It will not be accepted by the NAACP. If you have any doubts on that score, settle them quickly. You are familiar with the fact that North Carolina 2 years ago inaugurated a token integration plan by admitting 11 Negro children to white schools in Charlotte, Greensboro and Winston-Salem.

On February 11 the Associated Press sent out a story headed "NAACP Trained Guns on Token Integration." It began with this paragraph:

"Negroes launched new attacks on North Carolina school laws Tuesday, filing integration suits in Federal courts at Charlotte and Greensboro, and promising more suits."

The news story further states:

"The presence of Thurgood Marshall, NAACP general counsel in both suits, hints that North Carolina—despite its token integration—may be the NAACP's next school segregation battleground."

The lengthy article concludes with this statement:

"The suits assert that the North Carolina Pupil Assignment Act, is designed to impede, rather than carry out Supreme Court integration edicts and therefore is unconstitutional."

The Richmond News Leader of February 17, 1959, carried a news item headed "Limited Integration Held Mistaken Motion." It reported a speech by the executive secretary of the NAACP to a Negro audience of more than 2,000 in Portsmouth, Va. He urged Negro children in Virginia to apply for transfer to white schools by the hundreds. The news item stated:

"He called on them to proceed under pupil assignment laws not by twos and threes, but by hundreds. The laws can stop only so many, else they will be declared unconstitutional; so the more who apply, the more who will have to be transferred."

The notoriously radical Washington Post carried a story on February 28 headed "Wilkins Scorns Token Integration." The article stated:

"Roy Wilkins, executive secretary of the National Association for the Advancement of Colored People, declared last night that the admission of 4, or 12 or 20 Negro students can be regarded only as a beginning of school desegregation in Virginia.

"Speaking at the annual dinner at All Souls Unitarian Church, Wilkins said that it is not reasonable to expect Negro citizens to accept a few Negro students as full satisfaction of the Supreme Court ruling."

Let us not delude ourselves with any mistaken notion that this problem will be settled by token integration. Make no mistake about it; we will either have segregated

schools with white students and white teachers, or we will have mixed schools with mixed students and mixed faculties. It is a decision which cannot be dodged. It must be made. When it is made, it must be carried out.

Egypt was once the center of the world. Its pyramids, the Sphinx, the tombs of its monarchs marked the grandeur of that once great nation which existed until their people became a mongrel race. The greatness of Egypt is gone forever.

Egypt will never again have the opportunity to make the choice which we have in America today. Throughout Virginia today are memorials to the courage and bravery of American patriots who struck the blow which brought freedom to the land. Almost within the sound of my voice is historic St. John's Church where Patrick Henry, speaking to men who were smarting under tyranny and oppression, with his eloquence fanned the spark of resentment smouldering in their breasts into revolution against the strongest world power of that date. In Virginia are Mount Vernon, Gunston Hall, Kenmore, Monticello, Stratford, Williamsburg, and many monuments to remind us of the architects of this Republic who, down to this day, have given us as great a degree of human liberty as mankind has ever known.

I am confident that the Virginians of today will make no decision which will stamp them as being unworthy descendants of their forebears. I am confident that we of this generation will no more accept oppression or dictatorship than they did. This principle which has come down through the ages rings as loudly in our ears as it did in theirs, that resistance to tyranny is obedience to God.

Let me say to you again that the fight is ahead of us, not behind us.

Address by Speaker of the House Sam Rayburn at Democratic National Victory Dinner, February 28, at Sheraton Park Hotel, Washington, D.C.

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include an address of Democratic accomplishments made by the great American and Mr. Democrat, our beloved Speaker, the gentleman from Texas, Mr. RAYBURN.

The Speaker's address, made at the Democratic national victory dinner, the evening of February 28, 1959, in Washington, D.C., clearly shows the Democratic Party is the "party of the people."

As Speaker RAYBURN well said: "It was our party that wrote into law the great reforms of the 20th century, beginning with Woodrow Wilson's "new freedom" and going forward under the New Deal and the Fair Deal.

"It was our party which successfully piloted this Nation through the dark days of the depression and the fateful struggle of World War II and its aftermath.

"And let us never forget that it was the Democratic Party, under Woodrow Wilson, Franklin D. Roosevelt, and Harry S. Truman, which moved this great Nation from isolation to the leadership of the free world."

There is no Member of Congress whose views carry greater weight with the people than those of Speaker RAYBURN.

ADDRESS BY SPEAKER OF THE HOUSE SAM RAYBURN

I'm mighty happy to be here tonight.

I'm always happy to break bread with Democrats of all shades of opinion and beliefs—but Democrats with a single, guiding purpose—the safety and well-being of the American people.

I never come to one of these great gatherings without a feeling of humility and gratitude for your friendship and your support through the more than half a century that I have labored as a loyal Democrat and an American lawmaker.

And I might add that the longer I serve under the Republicans, the prouder I am to be a Democrat.

I am proud to be a Democrat for many reasons.

Let me list a few:

First, our party is a party with a heart.

It was our party—the Democratic Party—that created the ideal of humane government on this continent way back in the days of Thomas Jefferson and Andrew Jackson.

It was our party that wrote into law the great reforms of the 20th century, beginning with Woodrow Wilson's new freedom and going forward under the New Deal and the Fair Deal.

It was our party which successfully piloted this Nation through the dark days of the depression and the fateful struggle of World War II and its aftermath.

And let us never forget that it was the Democratic Party, under Woodrow Wilson, Franklin D. Roosevelt, and Harry S. Truman, which moved this great Nation from isolation to the leadership of the free world.

There is another reason I am proud of the Democratic Party.

It has always been—it is today—and it will continue to be—the party of responsibility. It acts and works responsibly when it is in power, and when it is in the minority it still works responsibly for the good of the American people.

Regardless of party advantage, regardless of who is in the White House, the Democratic Party puts its responsibility to the American people first. We do not dislike the Republicans; we do not dislike Republicans who happen to be President. When we think they are acting for the good of our country, we help them; when we think they are wrong or unwise, we try to correct them.

The Republicans could profit by our example.

Today, under a Republican President, the Democratic majorities in the House of Representatives and in the U.S. Senate are still working as always as the party of responsibility.

We are charged by the American people with a heavy, and sometimes we feel a terrible, responsibility for their safety and their welfare.

We gladly accept this burden.

We are ready to meet the challenge of our times.

We welcome the opportunity to write sane, financially sound legislation to meet the needs of a rapidly growing population which has a rising productivity, requiring more homes, more highways, more schools, more factories, and more food.

We have taken, and we will continue to take, the responsibility for building the framework of laws under which we develop the atomic age and the space age.

The Democratic Party is ready to act responsibly to help our young families, our veterans, our elder citizens, and our poor to have decent homes that they can afford. We know that good homes make good citizens.

We accept the task of saving the independent farmer, of conserving our soil and water and natural resources, of bringing the blessings of electricity and good roads to those who till the soil which feeds our Nation and many underprivileged peoples in other lands.

We accept the responsibility to help the aged, the disabled, the sick, and the unemployed.

We gladly undertake the task of helping our cities to clear their slums, unsnarl their traffic, and modernize their facilities.

We have always made the promotion of trade with other nations a cardinal tenet of our democratic faith.

And let all the world know this—both inside and outside the Iron Curtain—the responsible Democratic Party is going to give the Republican President such sinews of defense that, if wisely used, this Nation cannot be driven from position to position by any power on earth, however strong. Our military posture will be made so mighty that troublemakers everywhere will decide that peace, not aggression, is the path of wisdom.

And let me make something else crystal clear.

The Democratic Party has been, and will continue to be, the party of financial responsibility. The air is full of deliberate political propaganda about reckless spending and liberal spendthrifts.

Let's look at the record:

In the Democratic 85th Congress, we appropriated $5,600,000,000 less than the Republican President asked us for.

And in the Democratic 84th Congress, we appropriated $2,300 million less than the Republican budget requested.

In the last 4 years of Democratic Congresses, we have cut $8 billion out of the Republican President's budget.

And the Washington Post on February 9 carried a news item that the President's director of the budget admitted to the House Appropriations Committee that President Eisenhower actually has asked Congress for more money than it has been willing to give him.

Now, I ask you, which party has been the party of financial responsibility?

As usual, it has been—it will continue to be—the Democratic Party.

Now let me say this: The rate of progress which we make in meeting all the Nation's problems never satisfies everybody. A lot of people say that we are going too slow; a lot of other people think we are going much too fast.

But I think the American people have proved, by their vote at the polls in three successive elections, that they like the rate of forward progress which the Democratic Congress has been making.

After only 2 years of a Republican-controlled Congress—the 83d—the American voters in 1954 elected the Democratic 84th Congress.

When it had written its record of responsible, forward-looking legislation the people voted for a Democratic 85th Congress in spite of the fact that they at the same time selected a Republican military hero as President.

Two more years we worked hard, responsibly, effectively, and submitted our record of legislation to the people. Last November they overwhelmingly elected the Democratic 86th Congress.

I think these election results prove that the American people like to have the responsible party—the Democratic Party—to make their laws, and they like the rate of

speed at which we have been moving forward to meet the needs of a growing, sound and strong America.

At the polls the American voters have voiced their enthusiastic approval of the Democratic congressional program planned and put through by the splendid House leaders—JOHN MCCORMACK, of Massachusetts, CARL ALBERT, of Oklahoma, and the great committee chairmen, and by the brilliant leadership of LYNDON JOHNSON of Texas, MIKE MONRONEY, of Montana, and the great committee chairmen.

You know, this new Republican line about reckless spending reminds me of their old propaganda line which has fallen flat. They went up and down the land in 1952 crying alarm about all the socialistic laws enacted under the New Deal and the Fair Deal. Well, they have been in the White House for 7 years now and, my friends, they have not even tried to repeal a single one of those laws that they made such a commotion about. If the Democrats were socialistic for putting them on the statute books—then the Republicans are just as socialistic for leaving them there.

I want to say something else.

Ours is the only national party, strong and active in every State, embracing people of every type of economic and political interest. All shades of opinion and belief are represented and considered in our party councils.

Being responsible men and women dedicated to our Nation's welfare, we cannot be expected to agree on everything, but we do agree on the basic fundamentals that have been the tenets of the Democratic Party from its earliest days.

So I have no patience with people who claim to be Democrats who say they want to run other people who claim to be Democrats out of the party. Let us differ; let us debate; let us struggle to have our views prevail in the party's councils.

But after that is done, and the will of the majority of Democrats is freely expressed, we will do—we must do—as we have always done. We will be good soldiers, and we will live up to the meaning of the word "democracy" by accepting the will of the majority.

I want to give you an example of how we can work together. In 1952 and again in 1956 after full discussion and arguments, the Democratic Party under wise management was able to write a platform on which all good Democrats could stand. If all of us are wise enough and generous enough, we can write such a platform in 1960, and I want to make the prediction that when we do this and when the 86th Democratic Congress writes its record of sane, financially sound legislation, the American people in 1960 will overwhelmingly elect a Democratic President and a Democratic Congress.

The responsibility of leadership of a great Republic is a fearful thing anytime. Particularly is it an awesome task today, when, in my opinion, there are more forces of evil and destruction stalking the earth than at any time in 20 centuries.

But I am an optimist; if I were not, I could not have carried my burdens all these years.

I want to close on this note of faith:

We accept the responsibility for guiding this great land and its friends into the wonderful world of tomorrow.

Inspired by the memory of Jefferson, Jackson, Woodrow Wilson, Franklin D. Roosevelt, and Harry S. Truman, we Democrats gladly face the challenge of leading a prosperous, strong, solvent America—and with it free men everywhere—into what Woodrow Wilson foresaw long ago—"pastures of quietness and peace such as the world never dreamed of before."

United as good soldiers, we cannot fail.

Patents-in-Fee-Simple to Certain Lands on Indian Reservations

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. BERRY. Mr. Speaker, I have today introduced legislation directing the Indian Department through the Secretary of Interior to issue patents in fee simple to certain lands on various Indian reservations in my district, most of which have been approved and should have been issued years ago, but because of redtape, continuous delays, and lack of decision, have never been issued.

In each instance there was an exchange of lands with Indian owners. In each instance the exchange was approved by the Indian, it was approved by the tribal land committee, it was approved by the Indian Department, and in most instances those involved in the deals expected that title would be transferred in a very short time. However, years have gone by, in many instances as many as 10 years, and nothing has been done and probably never will be done, unless and until the Congress takes action to direct action.

It is my purpose to herein explain briefly the transaction involved in each of the land exchanges described in the bill I am today introducing.

1. ROSEBUD INDIAN RESERVATION—EARL ADRIAN

In the first case I am asking a patent to be issued to Earl Adrian on the SE¼ 27 and NW¼ 34–40–31, which was in exchange for the NW¼ 32–40–28. Application for this exchange was submitted in September 1949. The tribal committee approved the exchange November 9, 1949. Mr. Adrian conveyed his land with improvements, including a dwelling, shed, chickenhouse, and so forth, by deed in trust for the tribe at the time of making the application, September 22, 1949. The two tracts were appraised, each being appraised at $1,128, and as such determined to be of equal value. The Billings area office requested a patent to be issued to Earl Adrian by the Bureau of Land Management in Washington on August 8, 1950. No apparent reason has ever been given why such patent was not then issued, however, it dragged along year after year. Mr. Adrian feeling that his Government would protect him, did not press for patent until on March 5, 1958, the Rosebud Sioux Tribal Council adopted a resolution which would prohibit all pending land exchange applications.

Mr. Speaker, these cases would not be so serious were it not for the fact that there is more involved than just the deal between the Indian and his guardian, the Indian Department, and the non-Indian who has entered into this exchange. In this case, as in nearly every other case, the Indian Department required the applicant to transfer his land by warranty deed to the tribe, or to the Federal Government in trust for the individual, at the time of making the application for transfer. The deed was recorded which took the land off the tax list. The local governmental units have not had the benefit of taxes either from the originally patented land nor from the tribal or allotted land. Local governments have lost 10 years of taxes on this and practically all of the other land exchanges set forth in this bill. Another thing, in most instances the non-Indian rancher has been required to pay lease on the Indian land he has been using all down through the years, regardless of the fact that he has turned his land over to the Indian Department without consideration and without credit for the use of such land.

My bill simply asks that the Congress direct patents to be issued on this and other exchanges in order to straighten out some of these messes.

2. ROSEBUD INDIAN RESERVATION—JOHN FERNEN

In this case application was made in 1948, wherein Mr. Fernen agreed to exchange lands with the tribe on the basis of two acres for one acre he was receiving of tribal land. The Rosebud Land Committee approved the exchange November 17, 1948. Mr. Fernen was advised by the superintendent that everything was in order and that the land he was receiving was his and that title soon would be in his name. He has been using this land for the past 10 years and has spent thousands of dollars putting improvements on it, including a large quonset granary, a machine shed, a new well with pressure pump and tank, fences, and so forth. He has planted 30 acres to trees. In the meantime, the tribe has been leasing the land, which Mr. Fernen deeded to them in exchange, to another individual. It seems that part of the delay in this case has been occasioned by the fact that it was discovered that the tribe did not hold full title to one of the parcels involved, that the tribe finally acquired title and apparently everything was in order except that no one got around to issue the patent to Mr. Fernen, and then the Rosebud Tribal Council adopted a resolution disapproving all pending land exchanges.

If this resolution of the Rosebud Tribal Council, adopted March 5, 1958, is to serve as a complete bar to justice, Mr. Fernen stands to lose thousands and thousands of dollars, because he trusted, because he had faith that the word of the Department of Interior was good and that he would be protected if he went in and improved this land for which he was exchanging.

3. ROSEBUD INDIAN RESERVATION—ROY J. KELLEY

In this instance, Mr. Kelley returned from the military service, and being anxious to get started in the farming and ranching business, entered into an agreement with Simon Thunder, an allotted Indian, wherein Mr. Kelley was to buy a house for Mr. Thunder in exchange for his quarter of land. All negotiations were handled in the agency office. The house was appraised before Mr. Kelley bought it. The house was

purchased by Kelley and moved where the Superintendent agreed it should be moved for Mr. Thunder's use. Mr. Kelley advanced $2,086 to Mr. Thunder for him to purchase his father's interest in Tribal Land Enterprise shares so that full title could be transferred to Mr. Kelley. Mr. Kelley made other advances from time to time and has a sizable investment in this property.

The application for exchange was submitted in 1951. The Rosebud Land Committee approved the exchange February 16, 1951, determining both the house and land of approximately equal value. Kelley conveyed title to the house to the United States in trust February 15, 1951. Since that time Simon Thunder has had the house, has used it without rent, has permitted it to depreciate in value. Today Mr. Kelley has nothing except a lot of promises by the Indian Department and a sad experience.

4. ROSEBUD INDIAN RESERVATION—MRS. FRANCES MULLEN

Application was submitted in February 1949 for the exchange of 8 quarters of land for 10 quarters of land belonging to the Tribe. This land was appraised at almost equal value, and in order to make up the difference, Mrs. Mullen paid the tribe $383.14. The exchange was approved by the Rosebud Land Committee March 30, 1949 and August 17, 1949. The exchange was never completed and again was blocked by the resolution of the tribal council, April 24, 1957. Again in this instance, title to the Mullen land was transferred to the tribe years ago. The tribe has title to all the land, the difference in the consideration, et cetera, and nothing is being done.

5. ROSEBUD INDIAN RESERVATION—THOMAS F. ARNOLD

In this case an exchange was worked out through the Indian office in Rosebud with the Indian landowner, Frederick White Face Woman, and $300 was paid by Mr. Arnold to balance the difference in the appraised values of the properties. This was in 1949. Mr. Arnold went into court and quieted the title in the land, and recorded the title in the United States in trust for the Rosebud Sioux Tribe on April 26, 1952. The exchange was never completed. The tribal council by resolution protested the exchange being completed under date of February 24, 1957. The tribe has Mr. Arnold's land, has the White Face land, has the cash, and no one is doing anything to correct the situation.

6. PINE RIDGE RESERVATION—DANIEL HOLCOMB

Application was submitted for land exchange in 1954. The executive committee of the tribal council approved the application August 26, 1954. The properties were appraised and it was determined that there was $500 difference in the value, which amount Mr. Holcomb deposited at the agency office in 1954. On October 29, 1957, the Aberdeen area office disapproved the exchange for the reason that it was then decided that there was more than $500 difference in value. The area office decided that the difference in value was $680 instead of $500. No action has been taken, however, although more than ample time has elapsed in which the deal could have been consummated.

The So-Called Equal Time Section of the Federal Communications Act

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. CUNNINGHAM. Mr. Speaker, section 315(a) of the Federal Communications Act has been termed "impossible" and "broadcasting's biggest headache." This is the so-called equal time section, which reads:

If any licensee shall permit any person who is a legally qualified candidate for any public office to use a broadcasting station, he shall afford equal opportunities to all other such candidates for that office in the use of such broadcasting station: *Provided*, That such licensee shall have no power of censorship over the material broadcast under the provisions of this section. No obligation is imposed upon any licensee to allow the use of its station by any such candidate.

I am introducing a bill today which will add the following sentence and exempt regular newscasts and news commentaries from this provision:

Appearance by legally qualified candidates on any news program, including news reports and news commentaries, where the format and production of the program are determined by the broadcasting station, or by the network in the case of a network program, and the candidate in no way initiated the recording or the broadcast, shall not be deemed to be use of a broadcasting station within the meaning of this subsection.

In my mind there are good and bad things about section 315(a) as it now stands. It is good to have the equal time requirement for programs or announcements purchased by a candidate. The provision is also fair as it pertains to major candidates who appear on forum or debate programs.

The section is poor because it does not differentiate between a major party and a very minor party whose candidate or candidates have no possible chance of victory. It is poor because a station cannot delete libelous material but can be held liable. It is poor because it has been interpreted to apply to pure news reports.

My bill does not attack the problem of minor party candidates, because Congress refused several years ago to try to define this question, and it is a knotty one. My bill does not change any of the provisions pertaining to purchased programs or spot announcements nor to panel, interview or town meeting type programs. Nor does it change the "no censorship" provision.

My bill would merely ease the requirement as it pertains to legitimate news reports and news commentary. These two types of programs are the types that the Federal Communications Commission considers news programs, as defined in the report to be made by licensees to the FCC.

Many of my colleagues are aware of the recent interpretation given section 315(a) by the FCC. The Commission ruled that a Chicago television station must provide time to a mayoralty candidate in Chicago equal to the time provided the incumbent mayor—a candidate for reelection—when the mayor was shown on regular television news programs opening a charity drive and welcoming the visiting President of Argentina at the airport.

Strangely enough, this is a reversal of the FCC policy in a similar situation, in which the Commission refused to order equal time and held that—

The facts clearly showed that the candidate had in no way, directly or indirectly, initiated either filming or presentation of the event, and that the broadcast was nothing more than a routine newscast by the station in the exercise of its judgment as to newsworthy events.

It has been suggested that the Commission's recent ruling is an effort on the part of the Commissioners to force Congress to clarify this section. I have no proof of such a motive, but I do believe Congress should act to clarify the situation.

The Public Hazard of Nuclear Blasting in Oil Shale

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 9, 1959

Mr. FLOOD. Mr. Speaker, the whole realm of nuclear energy is one of great interest and vital importance to our country, as well as to the world.

Several weeks ago in an extended talk on this subject I said "As goes the atom so goes the world."

In my pursuit of this arresting subject, I have become increasingly concerned with the proposed nuclear blasting of oil shales in the Rocky Mountains.

I feel it is a fortunate development for the United States that among the scientific fraternity there is one man who took a second look at this proposed nuclear blasting of oil shale and entered a strong dissent. I refer to Morgan G. Huntington, Salt Lake City engineer, former engineer of the U.S. Bureau of Mines, and a specialist in the construction of nuclear reactors.

Thanks to Mr. Huntington, the American public is becoming acquainted with the hazards to public safety of the proposed nuclear blasting of oil shales. It has been my privilege to have championed Mr. Huntington's lone dissent and although the odds were very heavy against us, it appears we have been successful in making the Atomic Energy Commission stop, look, and listen. I now make so bold as to venture the prediction that the nuclear blasting of oil shales

will never be made. This phase of "Operation Plowshare," I am certain will be scratched. Already we have had the admission from Chairman McCone of the AEC that the blast will produce no oil for the commercial market, although original publicity for the project was cast in terms of 25 million barrels of oil from a single nuclear blast.

Today, I am privileged to bring before you a specially prepared hazards report on the proposed nuclear oil shale blast. I urge each and every one of you to read it and carefully consider its import. Mr. Huntington shows his complete mastery of the subject, and his analysis of the problem at hand constitutes a distinguished public service which places his countrymen in his debt.

If the AEC should by any chance set off the nuclear explosion of a 10-kiloton device in the oil shales, Mr. Huntington describes the following results:

Within 6 hours following the nuclear blast in oil shale (described in the January 1959, AEC-distributed brochure entitled "Application of Nuclear Explosions to Oil Shale Utilization") borne by the prevailing westerly winds, a huge dust cloud will settle out on Denver and its environs and how long the city will remain a scene of desolation during decontamination is speculative. To subject a population to such a risk is certainly foolish if not downright criminal.

Huntington also shows scientifically that a huge crater will be formed by the blast, millions of tons of rock, much of it radioactive, will be flung far and wide, and that after all of this, no oil will be forthcoming.

Mr. Speaker, I am equally concerned with another aspect of this whole project. It has been given intensive and fanciful publicity. The whole thing smacks of a well-conceived promotional campaign. All of this could have been done unwittingly out of an overabundance of enthusiasm, but nevertheless, we can readily see how such dramatic presentation could well cause lively speculation in oil leases and oil stocks. These are matters that are the concern of government, for the public interest, I submit, is paramount. We are all for progress, sound substantial progress, but we don't want the American investing public taken for a sleigh ride. I would suggest that certain agencies of Government, the Department of Justice and the Securities and Exchange Commission give this matter their attention.

I now submit for the RECORD at this point, Mr. Huntington's carefully prepared and persuasive findings on the hazards report of proposed nuclear oil shale blast along with Mr. John A. McCone's letter to me of February 11 and my reply of February 14.

UNITED STATES
U.S. ATOMIC ENERGY COMMISSION,
Washington, D.C., February 11, 1959.

DEAR MR. FLOOD: I am pleased to reply to your letter of January 17, 1959, asking for information concerning the Commission's plowshare program and raising certain questions concerning the proposed oil-shale experiment.

The Commission's plowshare program is an attempt to encourage the development and utilization of nuclear explosives for peaceful purposes. The Commission and its staff have considered a number of experiments to utilize the phenomena associated with nuclear explosions to open the way for greater public benefits from our natural resources. Our present knowledge indicates that nuclear explosives might be used in large civil engineering projects, power production, isotope production, and in basic research studies, as well as natural resource development.

As a specific part of the plowshare program the Commission, in cooperation with the U.S. Bureau of Mines, for some time has been studying the feasibility of using nuclear explosives in recovering oil from oil shale. It is our expectation that the shock and rock crushing effects of an underground nuclear explosion would provide a means for breaking up the shale so that oil can be extracted with an in-place recovery process. The proposed oil-shale experiment is a research project to determine the possibility of developing thereby a process for economic extraction of oil.

This plowshare project has progressed to the point where a meeting was conducted on January 6–7 by the Bureau of Mines with representatives of industry to review proposals for an experiment. The Commission and its contractor, University of California Livermore Radiation Laboratory, presented data on Commission experience with underground nuclear detonations and results theoretically to be expected from a 10 kiloton, or smaller, detonation in the Green River shale. Copies of technical papers presented are attached for your information.

At the Dallas meeting the Government offered to consider the experimental detonation of a device, providing conditions of health and safety could be guaranteed, and providing industry would arrange for emplacement and the making available to the public of important technical information resulting from the experiment. As yet the Commission has not given firm authorization for such an experiment, nor has a site been selected. The next step will depend largely on how industry reacts to the proposal and this phase of the matter is being investigated by the Bureau of Mines.

So far as the public health and safety of such a project is concerned, the Commission will not approve any action that would endanger human or animal life, vegetation, water systems, or property. If there should be enough industrial interest to warrant concluding feasibility studies which are now in their initial phases, complete data on public health and safety would be compiled with the assistance of independent experts before the Commission would authorize a project.

In your letter you raise the following specific possibilities which were suggested to you by Mr. Morgan G. Huntington. I would like to comment on each in some detail.

1. A conical crater will be blasted about as wide as the explosion is deep.

Comment: The AEC is advised by its best technical experts that no such crater would be formed. On the basis of six nuclear underground shots that have been fired in Nevada and on the basis of experience in underground high explosive detonations, it is believed that the cratering effect of nuclear shots can be predicted with reasonable accuracy by our staff. The direct evidence from nuclear shots relate to tuff only and not to oil shale but the HE high explosive experiments relate to many kinds of materials including Green River oil shale. Mr. Huntington argues that the rock heaving gases formed in an explosion in oil shale will have more serious effects than hitherto encountered. Actually, the detonation of high explosive produces by its own combustion more rock heaving gas than can be obtained from an equivalent nuclear explosion in oil shale. Therefore, existing experimental results are sufficiently conclusive to assure us of the necessary safety of a particular nuclear detonation in oil shale with respect to cratering.

2. Millions of tons of rock will be thrown over the countryside, much of it radioactive.

Comment: As has been mentioned already, it is the intent of the Commission to insure that, before authority to proceed is granted, safety is guaranteed. Under such conditions this eventuality would not occur.

3. The huge dust cloud so formed will consist largely of carbon black from the destruction of shale oil.

Comment: Here the answer is similar to that of 2 above.

4. No oil whatever will enter commerce as the result of such a blast.

Comment: This is probably true in fact. This particular nuclear explosion and consequent technical investigation is planned as an experiment. Our hope is that it will show whether or not such extraction is technically and economically feasible.

5. The direct cost of this proposed nuclear blast will be in the order of $10 or $15 million, aside from the liability incurred from damages.

Comment: According to preliminary estimates the experiment over all would cost about $3 million. This sum will be spent partly on the nuclear detonation and partly on investigation by the Bureau of Mines of an oil extraction process. During the meeting on January 6–7, it was proposed that the petroleum industry share in the costs of this experiment.

Attached to your letter to me was a letter from Mr. Huntington setting forth certain more technical questions bearing on the above matters. I am attaching, as enclosure 1, detailed answers to his questions.

Your letter mentions that Mr. Huntington has not received an answer to his January 9, 1959 letter to Dr. Potts. This letter is being answered simultaneously by Dr. Potts.

I trust we have adequately replied to the questions you and Mr. Huntington have presented. If you should want further information I shall be pleased to send it to you or should you desire to discuss this matter with the technical experts, we will be pleased to arrange for them to meet with you during their next visit to Washington, or if you wish Commissioner Libby will be glad to discuss this matter with you. In addition, should Mr. Huntington desire to visit the University of California E. O. Lawrence Radiation Laboratory, Livermore, to explain his ideas we will arrange for the proper people to discuss the matter with him.

I assure you that the Commission will undertake plowshare projects only after determining that they can be carried out without endangering public health and safety and that the project is justifiable from the standpoint of opening the way to greater public benefits.

Sincerely yours,

JOHN A. MCCONE, *Chairman.*

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., February 14, 1959.

Mr. JOHN A. MCCONE,
Chairman, Atomic Energy Commission,
Washington, D.C.

DEAR MR. MCCONE: Your letter of February 11 replying to mine of January 17 has been read with interest.

I have seen your January 31 announcement to the public press that you would detonate the first of a series of nuclear devices in Rocky Mountain oil shale sometime during the fiscal year beginning July 1. Now, less than 2 weeks later, you tell me that you won't explode any such weapons in oil shale unless industry asks you to do so.

I am greatly surprised and alarmed by your letter to me in which you state that

you have not yet investigated the public hazard of nuclear blasting in oil shale.

It appears that your many press releases have lead a great number of people to believe that large scale nuclear blasting is the solution to the winning of oil from oil shale. Yet, you tell me in your February 11 letter that probably no oil would enter commerce as the result of your proposed 10-kiloton oil shale blast.

The data presented by Mr. Morgan Huntington, president of the RNB Corp. of Salt Lake City, Utah, clearly shows that no sizeable nuclear blast in oil shale can be contained beneath the surface because the great amount and pressure of the gases generated will inevitably blast a crater. Isn't this exactly what caused your small (100-ton) Neptune blast to heave out thousands of tons of rock October 14, 1958?

Because of the probably great public hazard involved and the apparent carelessness of your staff, I feel it my duty to ask several specific questions:

1. Why do you permit to be published under your name articles carrying the specific size, placement and geographical location of a nuclear blast in oil shale without first preparing the usual hazard report, i.e., your best estimate of the maximum credible accident?

2. Do you yourself consider the nuclear blasting of oil shales a safe and reasonable experiment when you consider that each ton of TNT equivalent could instantly liberate some 50,000 cubic feet of hydrogen at 25 tons per square inch pressure? Didn't your October 8 1958 Tamalpais 50-ton blast produce about half this amount of highly explosive hydrogen with only a small amount of paraffin present? In the words of your own A.E.C. report, "the explosives gases were in such concentrations and amounts as to create a hazardous situation."

3. Since you tell me in your letter that the Atomic Energy Commission will not undertake the nuclear blasting of oil shale unless the oil industry requests it, I am compelled to ask: Can you name any major oil company executive who considers the nuclear blasting of oil shales an entirely safe and reasonable experiment?

4. Please identify the individual proponents of oil shale nuclear blasting in Government as well as in industry.

Because you have not yet compiled your usual "nuclear hazards report" on the blasting of oil shale, I have requested that Mr. Huntington prepare for publication a "maximum credible accident" report on the nuclear blasting of oil shales.

I shall appreciate an early answer to the questions posed in this letter as well as to my letter of February 11.

Sincerely yours,

DANIEL J. FLOOD,
Member of Congress.

RNB CORP.,
Salt Lake City, Utah, March 3, 1959.

Re The public hazard of nuclear blasting in oil shale as proposed by the AEC.

HON. DANIEL J. FLOOD,
Committee on Appropriations,
House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: At your request, I have prepared the following estimate of the maximum credible explosion which could be expected from the detonation of a 10,000 ton TNT equivalent nuclear weapon 900 feet deep in oil shale.

The conditions, placement and size of the device are specified in the January 1959 unsigned, unidentified brochure currently circulated by the Atomic Energy Commission entitled "Application of Nuclear Explosions to Oil Shale Utilization." Although this AEC-circulated brochure is widely accepted as an official Bureau of Mines publication because "Bureau of Mines Laramie Petroleum Research Center" appears on the cover, its authorship remains uncertain.

To summarize my estimate of the hazard of nuclear blasting in oil shale or other rich hydrocarbon impregnations, I find that not even 1/10 of the AEC's proposed 10-kiloton device could safely be detonated in such hydrogen rich rocks 900 feet beneath the surface. Whether this 10,000-ton TNT thermal equivalent explosive is in the form of conventional dynamite or whether the heat is released from a nuclear device, a crater would surely result. However, it is true that a conventional explosive would probably be very much less hazardous than the nuclear device for three reasons:

The conventional explosive cannot produce the tremendously devastating subsequent aerial explosion; and secondly, the power of conventional explosives can be precisely predicted while the energy of nuclear devices cannot be estimated nearly so accurately; also, the conventional explosives are completely free of the virulently poisonous radioactive isotopes generated by all nuclear blasts.

The 300,000 ton weapon described as containable in oil shales by Dr. Herbst of the AEC at the January 1959 Dallas oil shale meeting could completely pulverize the material blown from its crater. The power of such a weapon exploding in oil shale is so fantastic that I am reluctant to believe such a proposal could have been seriously made, particularly to such a gathering.

Given certain conditions of geological structure, somewhat less than a 1-kiloton nuclear explosive could very likely break the surface and heave a considerable tonnage of rock and dust into the air. From any nuclear blast in oil shale which should erupt through the surface, a highly spectacular aerial explosion of the hydrogen generated by the thermal destruction of hydrocarbons could be expected. The energy generated by this subsequent aerial explosion of hydrogen could yield more than double the heat of the initial nuclear blast.

Quite definitely, no sizable (10 kiloton or greater) nuclear device could safely be detonated anywhere in the Rocky Mountain oil shales because at no point could the depth of burial afford sufficient weight of overburden to contain the great volume of high pressure gases inevitably produced. Even a single kiloton weapon in oil shale would probably disrupt the surface at a depth of 900 feet. Certainly, the hydrogen generated from even this modest device could produce a devasating aerial explosion.

On page 2 of Chairman McCone's February 11 letter to you, he contests my prediction that, should a 10,000-ton-TNT-equivalent nuclear device be detonated 900 feet beneath the surface in Rocky Mountain oil shale, "a conical crater will be blasted about as wide as the explosion is deep." Mr. McCone comments as follows: "The AEC is advised by its best technical experts that no such crater would be formed. On the basis of six nuclear underground shots that have been fired in Nevada and on the basis of underground high explosive detonations, it is believed that the cratering effect of nuclear shots can be predicted with reasonable accuracy by our staff. The direct evidence from nuclear shots relate to tuff only and not to oil shale, but the high explosive experiments relate to many kinds of materials including Green River oil shale."

Apparently, Mr. McCone's best technical experts hold that 10,000 tons (two miles of fully loaded freight cars) of conventional explosive 900 feet deep in oil shale would not blast a crater.

It is respectfully suggested that AEC Chairman McCone consult with the experienced staffs of such explosive manufacturers as Du Pont, Monsanto, Atlas, or others who do have extensive background in explosive engineering. It is further suggested that Mr. McCone specifically ask what size crater would probably result from the thermal equivalent of 10,000 tons of TNT in the form of, say, 60 percent ammonium dynamite exploding 900 feet deep in oil shale. (This is an explosive ratio of only 100 to 300 tons of rock per ton of dynamite.)

I must also refute the contention of Mr. McCone that "the detonation of high explosive produces by its own combustion more rock-heaving gas than can be obtained from an equivalent nuclear blast in oil shale."

The facts are that 4 million B.t.u. (AEC's arbitrary thermal equivalent of a ton of TNT) transferred to nearly pure hydrocarbon can instantly generate at least twice the rock-heaving gas produced from TNT. (Parts of the oil shale are 40 percent pure kerogen.)

It is abundantly evident that the Atomic Energy Commission's technical staff have considered carefully neither the public hazard nor the feasibility of this highly publicized project. Atomic Energy Commission Chairman McCone has freely admitted these facts to you in his letter to you February 11.

The scanty amount of time and thought so far devoted by the staff of the AEC to this widely discussed phase of "Operation Plowshare" is apparent throughout the voluminous press releases and other literature on the subject. The purpose of the Atomic Energy Commission in widely advertising this very unlikely oil shale blast is open to speculation.

For instance, opposite page 16 in the January 1959 AEC-circulated brochure is a graphic summary of the assumptions presented in that text. Specifically shown, 900 feet of rock capping exerting a maximum rock pressure of 900 pounds per square inch contains in equilibrium 10 million standard cubic feet of gas at a pressure more than six times as great, or approximately 6,000 pounds per square inch. It should be obvious even to the layman that there is no restraining force sufficient to prevent such high pressure gas from expanding to rock pressure with explosive force.

It is impossible for me to agree with Dr. Libby and with his assistant, Dr. John Potts, that even in this relatively mild, unrealistic case (10 million cubic feet of gas is but one-fifth to one-twentieth of the volume of hydrogen which would probably be produced under the conditions described by the AEC) that the surface of the earth would remain undisturbed and all fission products would be contained.

In Chairman McCone's February letter to you, he states that public hazards of nuclear blasting would be evaluated only after feasibility studies were affirmatively completed. One cannot help but wonder why public safety is considered by the A.E.C. to be of secondary importance in this completely unexplored, highly dangerous concept of exploding nuclear weapons within hydrocarbon impregnations. (The building of even the smallest research reactor is always preceded by a full-dress public hearing on all conceivable credible accidents and a detailed hazards report is published.)

In projecting "Operation Plowshare," of which oil shale blasting is a part, the Atomic Energy Commission leans very heavily upon the results of the six underground nuclear explosion tests conducted in Nevada in September, 1957 and in October, 1958. These are described in a report to the Atomic Energy Commission by the University of California Radiation Laboratory Report, UCRL—No. 5124, Rev. 1, dated December, 1958.

It is clearly apparent to me that the A.E.C.'s staff has grossly misinterpreted the results of these underground tests in a number of respects and that the erroneous conclusions so drawn lead directly to the questionable assumptions that nuclear blasting of

hydrocarbon impregnations is feasible and safe and that the commercial production of petroleum can be achieved thereby.

I shall now explain why the effects of nuclear explosions in the porous, permeable, weakly-consolidated volcanic ash of Nevada are radically different from what can be expected of nuclear blasting in the dense, completely impervious oil shales of the Rocky Mountains:

First let me say, that in my 20 years of experience as a mining engineer, I have found very "fast" [1] high explosives to be relatively ineffective in breaking spongy rock, such as volcanic tuffs. On the other hand, a comparatively small amount of such explosive is fairly effective in shattering, heaving and breaking the dense hard rocks, such as granite, limestone and tightly laminated shales.

Volcanic ash of high porosity does readily absorb, without heaving, considerable kinetic energy imparted by high explosives. Dense, nonporous, noncompactible rocks such as oil shale can absorb relatively little kinetic energy without shattering and erupting.

Volcanic tuff is readily compactible to the extent of 20 or 30 percent while high grade oil shale is not at all compactible beyond about 1 percent.

In the Rainier blast in volcanic tuff (September 1957), a 110-foot spherical chamber was formed as a result of the compaction of the surrounding porous rocks. To provide the volume of the 110-foot cavity, 120,000 tons of the volcanic ash must necessarily be compacted to the extent of 25 percent. However, to produce such a cavity in oil shales, more than three million tons of rock surrounding the blast must be totally compacted. Moreover, the crushing strength of the Rainier volcanic tuff is only about 5,000 pounds per square inch while the compression strength of oil shale in test specimens is generally about 25,000 pounds per square inch. En masse, this compacting strength of oil shale is probably somewhat greater.

It is, therefore, patently impossible to spring [2] any comparable cavity in oil shale 900 feet deep without violently disturbing the surface.

Before examining in detail the relative differences of nuclear blast effects in volcanic tuff and oil shales, let me briefly criticize the AEC's claim of feasibility and appraise the possibility of producing any oil from oil shales through nuclear blasting:

The total heat generated by an AEC rated 10-kiloton device would pyrolize [3] no more than 40,000 tons of oil shale and free (if no violent explosion were to occur and if the 2,000,000° fireball somehow failed to destroy any hydrocarbon) no more than 30,000 barrels of shale oil, and the direct cost therefor would amount to $100 a barrel. (Oil shale is worth about $2 a barrel.)

The heating effect of nuclear devices is evidently unimportant in this particular application, except for the explosive effect of the hydrogen instantly produced at high pressure.

In the Rainier experiment, no rock was shattered nor fragmented save the 50,000 tons which caved of its own weight above the 110-foot cavity.

In the much-quoted Rainier experiment, the surrounding rock which was originally permeable and highly porous to the extent of 30 percent of its original volume, was compacted by the blast to practically zero permeability.

In blasting oil shale, because of its almost complete incompactibility, no sizable chamber can be sprung without heaving the surface and because of its strength, very little oil shale could be expected to cave. How, then, do the proponents of such a project expect to make large tonnages of impermeable oil shale freely pervious, and yet contain all fission products within the ground and not disturb the surface of the earth?

When solid rock in place is fragmented by blasting, it normally occupies at least 125 percent of its original volume. If this completely nonporous, entirely impermeable oil shale is to be shattered by nuclear blasting and to become freely pervious, from where is this extra space to come if the surface is to remain undisturbed? This I cannot explain nor has anyone been able to explain it to me.

Please refer to the appended "Comparison of the More Obvious Physical and Chemical Properties of the Rainier Volcanic Ash With Rocky Mountain Oil Shales and Tabulation of the Relative Effects of Thermally Equivalent Nuclear Blasts in the Two Different Rocks."

From this tabulated comparison of the corresponding characteristics of the spongy volcanic ash with those of the incompactible, impervious oil shale, a number of paramount differences become immediately apparent. Among these are:

1. In the nuclear blasting of volcanic tuff, because it contains 10 to 20 percent of water, steam is the principal gas produced and this can exert a maximum pressure of about 3,000 pounds per square inch at 700° F. (Compare this with the maximum pressure of hydrogen at this temperature. There is, of course, some disassociation of the water molecule to hydrogen and oxygen, and no doubt, some monatomic gases exist in the first instant of detonation. However, beyond the initial shock, the effects of gases other than steam are minor.)

2. So long as the surrounding rock temperature is below the boiling point of water, steam is instantly condensed upon passing into the porous cold rock and no effective amount of expanding gases remains to crack and heave the rock. Thus, the total destructive force of a nuclear blast in such saturated, spongy volcanic tuff is very much less than an equivalent nuclear blast in air.

3. Because hydrogen is the principal gas produced by the blasting of hydrocarbon impregnated rocks such as oil shales, the rock heaving capacity is enormous. Should pure hydrocarbons (containing from 10 to 15 percent of hydrogen) be exposed to the thermal radiation from the nuclear fireball, some 40,000 standard cubic feet of hydrogen would be instantly liberated at an initial pressure in the order of 25 tons per square inch. In this case, evidently (because hydrogen occupies about 14 times the volume of air per unit weight) the explosive force (pressure times volume of the gases) of a nuclear device is very substantially greater than an equivalent nuclear blast in air.

In order to calculate this maximum possible explosive effect, the following criteria are employed:

1. Per ton of TNT equivalent the heat radiated to the surroundings is 4 million B.t.u.

2. What the AEC rates as a 10 kiloton device may yield as little as 3,000 tons of TNT equivalent, or under completely favorable conditions of detonation, as much as 30,000 tons of TNT equivalent.

3. All the heat radiated is immediately absorbed by kerogen, the hydrocarbon in oil shale.

4. Some 40,000 standard cubic feet of gas is instantly generated at a pressure in the order of 25 tons per square inch.

5. More than 1 billion cubic feet of hydrogen at 25 tons per square inch would be instantly generated in a lateral area 100 feet square.

6. Vertical joint cracks occur in the oil shale with reasonable frequency, say on a hundred foot grid. Thus, the shearing strength of the rock is no factor.

From these several criteria, the following results appear credible:

1. A plug of about 600,000 tons could be ejected straight up at high velocity.

2. At least 3 million additional tons would be heaved and broken and a large portion of this would be scattered laterally over the surrounding area.

3. Instantly following the ejection of the central plug an aerial explosion of more than a billion cubic feet of hydrogen would generate more heat energy than the initial nuclear blast.

In conclusion, I must state that no sizable nuclear blast in Rocky Mountain oil shale can be considered completely and absolutely free from any likelihood of jeopardizing the public safety.

Yours very truly,

MORGAN G. HUNTINGTON,
President, RNB Corp.

ENGINEERING ANALYSIS OF THE EFFECTS OF NUCLEAR BLASTING IN TUFF AND IN OIL SHALE

Comparison of the more obvious physical and chemical properties of Rainier volcanic ash with Rocky Mountain oil shale, and tabulations of the relative effects of thermally equivalent nuclear blasts in the 2 materials

	Rainier volcanic ash	Mahogany bed, Rocky Mountain oil shale
Crushing strength	About 5,000 pounds per square inch	Greater than 25,000 pounds per square inch absolute (en masse).
Attainable compaction	At least 25 percent	Nil.
Porosity	30 percent	Do.
Moisture	20 percent	0.5 percent.
Gas per ton evolved at 2,000° F.	8,000 standard cubic feet of steam plus small amount of H_2-O_2.	Pure kerogen yields some 40,000 standard cubic feet of hydrogen when destroyed by heat of 1 ton TNT equivalent.
Rock-heaving gas pressure at rock temperature.	Nil (atmospheric), at 200° F. Volume, nil; some H_2-O_2 probably remains unrecombined.	Above 15,000 pounds per square inch at 200° F. Standard volume unchanged.
Effect of nuclear blast	Highly compactible; absorbs large amounts of kinetic energy. Spherical chamber results from the compaction of the surrounding porous rock.	Not appreciably compactible; absorbs relatively little kinetic energy. Horizontal splitting along bedding planes followed by vertical cracking normal to bedding planes.

[1] Very fast explosives are considered to be those with a propagation rate above 20,000 feet a second.

[2] Fast explosives are commonly used in small amounts to spring or chamber the bottoms of small diameter blast holes in order to accommodate sufficient amounts of slower explosives with more suitable rock breaking and heaving characteristics.

[3] The pyrolysis of oil shale begins about 400° F. To effect complete destructive distillation, the oil shale must be heated to above 800° F.

Communism, Hawaii, Statehood

EXTENSION OF REMARKS
OF

HON. JOHN R. PILLION

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 9, 1959

Mr. PILLION. Mr. Speaker, I would like to insert a statement which I made before the House Rules Committee on March 5, 1959, on the subject of Hawaii statehood:

Mr. Chairman and gentlemen, in my humble opinion, the issue of statehood for the Territory of Hawaii ought to be deliberated from three broad aspects. This statement will deal with the subject in the following order:

First. The grant of statehood to Hawaii will expropriate sovereign personal political power from one segment of our population and bestow that power upon another segment of our citizens.

Second. The next phase of this discussion will attempt to refute the arguments advanced in favor of statehood. I will try to demonstrate that the reasoning for statehood is based either upon political error, or is of minor importance, or is irrelevant, or is of an emotional origin.

Third. The concluding portion of this statement will deal with communism in Hawaii and its dangerous political consequences.

THE POLITICAL POWER ASPECTS OF STATEHOOD

There is a mistaken popular notion that the people of the Territory of Hawaii are being deprived of their right of self-government. There are some differences between the powers of the governments of the 49 States and the powers of the Territorial Government of Hawaii. But, these differences are insignificant.

Essentially, under the Organic Act, the Territory of Hawaii possesses full power to enact laws relating to its property, affairs, and government. Its powers in relation to the conduct of its affairs are substantially as extensive as the powers of the State governments of the 49 States.

Although Congress has reserved the right to disapprove Territorial legislation, no law passed by the Legislature of the Territory of Hawaii has ever been invalidated by Congress.

Although the Governor of Hawaii is appointed by the President, there has never been any substantial complaint that the administration of the Governor's office has been contrary to the best interests of the people of that Territory.

To my knowledge, there has been no complaint by the Territory of Hawaii of a lack of power in the Territorial Legislature to adequately deal with its problems on the basis of home rule.

The concern of the proponents of statehood lies not in their need or desire for power to conduct the affairs of the Territory, but rather, in their desire for power to conduct the affairs of the 49 States. They seek the power associated with the election of two U.S. Senators, two U.S. Representatives, and four electoral votes in the choice of a U.S. President.

THE TRANSFER OF POLITICAL POWER FROM THE PEOPLE OF THE 49 STATES TO THE PEOPLE OF HAWAII

As you gentlemen know, all governments, good or bad, are mere organizations of political power.

It is a fundamental principle that our constitutional representative form of government shall give every citizen an equal voice in the conduct of our Government. The right of a citizen to participate in our Government, almost exclusively, rests with his right to vote. The importance of the right to vote lies in the effectiveness of this right to vote.

Although the Russian voters are granted the equal right to vote, it is not effective political equality in our estimation.

Senate representation

Statehood would entitle the people of Hawaii to two U.S. Senators. It is our responsibility to decide whether this amounts to an equitable apportionment of legislative power.

The population of Hawaii, according to the census estimate as of July 1, 1957, was 613,000. Of this population, 59,000 were military personnel. An additional 25,000 people are civilian Federal employees. If we consider these 84,000 Federal civilian and military personnel to each have only 1 dependent, then the basic population figure should be reduced by 168,000. This would reduce the Hawaiian citizen population to 445,000.

With the grant of statehood, the people of Hawaii will be represented by 1 U.S. Senator for each of its 223,000 citizens.

The 2 Hawaii Senators representing 445,000 citizens would nullify the will and the representation in the U.S. Senate of: New York's 16 million people; California's 14 million people; Georgia's 4 million people; and of the voters in each of the other 49 States.

The framers of our Constitution founded a Republic, combining the features of both a federal and a national type of government.

The plan to give each State two Senators conforms to a pattern suitable to a Federal Government, with limited powers, where the bulk of the sovereign power is reserved to the States.

The plan to apportion representatives on the basis of population conforms to the framework of a National Government where all power is concentrated in a Central Government.

The grant of equal representation, that of two U.S. Senators, to each State was adopted for the protection of the sovereign powers of the States from encroachment upon their powers by the Central Government. In furtherance of this purpose, it was provided that the U.S. Senate be chosen by State legislatures.

The framers of our Constitution repeatedly stated that the U.S. Senate would represent the States in their corporate governmental capacities. The election of Senators by the legislatures was an integral part of that historic compromise under which each State became entitled to two U.S. Senators.

The 17th amendment to our Constitution was adopted on April 8, 1913. This amendment fundamentally altered the basis for the allotment of two Senators to each State. This change in the mode of the selection of our Senators to that of popular suffrage totally destroyed the justification, the rationale, for equal representation for each State in the U.S. Senate.

There have been drastic changes in our Republic. The framers of our Constitution envisioned a Central Government of limited powers, with the bulk of the residual sovereign power being reserved to the States.

There is no mathematical formula for the measurement of the division of power between the States and our Central Government. However, we can measure the exercise of power by the expenditures of our governments.

In the year 1957, our total gross national product amounted to $440 billion. Of this sum, $79 billion, or 18.1 percent, was expended by the Central Government. The State and local governments expended $34 billion, or 7.7 percent.

It is evident that there has been a continuing erosion of power out of the States and a continuing concentration of power in our Central Government. We have become a National Government wherein the States are being relegated to mere provinces. We have evolved from a Federal Republic into a national democracy.

Twenty-five States, with a population of 31 million people, constituting only 18 percent of the Nation's population, control 50 votes and have a majority power in the U.S. Senate.

This imbalance of power is a prime factor in our huge Federal bureaucracy, its wastages, and the consequent huge Federal taxes. Our bankrupt agricultural program with Federal subsidies for surplus products and Federal subsidies paid to reduce crops is an example of the inconsistency between the possession of power and the accountability for that power.

The U.S. Senate is accountable to the pressure of their constituents rather than to the preservation of State powers. Their prime interest must lie in expanding national power.

The alarming growth of Federal aid is another example of the inequitable distribution of Senate power. These programs are a practical means of socializing the wealth of the State based upon the political combinations of State powers in the U.S. Senate.

Statehood for Hawaii will reduce the effectiveness of the right of suffrage of every citizen in the 49 States. It takes away the right of representation and transfers an excessive amount of representation to the people of Hawaii.

The average representation in the U.S. Senate is one Senator for approximately 1,700,000 citizens. Hawaii will have one Senator for each 223,000 citizens.

POWER IN THE EXECUTIVE BRANCH

In the event of statehood, Hawaii will become entitled to 3 electoral votes toward the election of a President of the United States in the 1960 elections. This can be reduced to 1 electoral vote for each 145,000 of its population. The voters in the 49 States will only have 1 electoral vote for about each 320,000 citizens.

Again, the voting rights of the people of the 49 States are reduced in order to transfer excessive voting power to the people of Hawaii.

REPRESENTATION IN U.S. HOUSE OF REPRESENTATIVES

Under the present bill, Hawaii becomes entitled to one member in the House of Representatives. Actually, under the Census estimates, Hawaii would be entitled to two Representatives.

The proponents are waiving their entitlement of two Representatives on the theory of "don't raise any controversy now, we'll get two Representatives anyway, right after the 1960 Census reapportionment."

Since the membership of the House of Representatives is fixed at 435, the two U.S. Representatives from Hawaii and the one Representative from Alaska will displace three U.S. Representatives from the 48 States after the 1960 reapportionment. The voting effectiveness of the voters of the 48 States will be, thus, further reduced.

STATEHOOD FOR OTHER POSSESSIONS

Statehood for Hawaii will intensify the demands for representation in Congress for the citizens and inhabitants of all other possessions of the United States.

If Alaska is admitted with a resident population of about 100,000 people, why isn't Guam entitled to statehood with its population of 59,000 citizens?

If the psychological impact upon the Oriental countries is a valid reason for admitting Hawaii, then Guam should be admitted because it is farther west and closer to the oriental cultures.

I received this invitation which is postmarked February 27, 1959, from the National Association for the Statehood of Puerto Rico. If Puerto Rico seeks admission, shall we admit her to statehood in the interest of reducing the possible enmities of South American countries.

Senator CASE recently introduced a bill to grant three delegates in the House of Representatives to the District of Columbia. Are its 900,000 citizens less entitled to two U.S. Senators than 445,000 citizens of Hawaii?

The Virgin Islands has a population of 30,000. Shall we admit the Virgin Islands on the ground that it will improve our relations with the African countries?

Before we further distort the structure of our Government, we ought to be prepared to deal with these prospective troublesome problems on the basis of a principle that is equally just and fair to all of these people and is also just and fair to the people of the 49 States.

EXTRANEOUS ISSUES

Just about any and every conceivable argument has been advanced by the proponents of statehood. The Territory of Hawaii has carried on a high-powered, soft-sell, campaign for the past 12 years. The Hawaii Statehood Commission is the official agency for the promotion of statehood. Since 1947 it has spent more than $1 million for public relations and lobbying. This sum far exceeds the spending by any other lobbying group.

I would like to comment on some of the arguments being advanced by this Commission.

They have raised the slogan of "taxation without representation." Taxation has never been the test of voting rights. The person who pays no taxes is entitled to one vote just as the citizen who pays $1 million of taxes per year. The alien resident who has no voting rights is still duty bound to pay taxes.

The taxes paid by the Hawaiian people just as the taxes paid by the residents of the 48 States was spent to protect all of us, equally, from foreign invasion. The Hawaiian people received from their taxes substantially the same benefits as the people of the 48 States. This is language of incitement.

No one has disparaged the bravery of Hawaiian troops in World War II and in the Korean conflict, except the Hawaii Statehood Commission. They have raised this issue by attributing it to the opponents of statehood. It is inflammatory, emotional language that puts the opponents on the defensive and furnishes an emotional impact in Hawaii, coupling statehood with a defense of honor.

The loyalty of the Hawaiian people is conceded but it cannot and should not be the basis for the equitable apportionment of representation in Congress.

I might remind our fellow citizens in Hawaii that the people of the 48 States did not hesitate to bravely and completely repel the inglorious attack by Japan, not upon the U.S. mainland, but their attack upon Hawaii. The United States discharged its obligations to its fellow citizens in Hawaii in full measure.

The proponents say that denial of statehood would cause an unfavorable psychological impact upon oriental countries. This reasoning is a political mistake. It is an admission of weakness. This is a domestic problem that should not be decided by an emotional foreign opinion.

The Hawaiian Statehood Commission advances the argument that Hawaii has met every test of statehood. The Constitution provides no tests for statehood. Congress has not enacted any tests for statehood. The proponents refer to dicta emanating from the Supreme Court.

The opinion of the Supreme Court in this matter is another unwarranted intrusion upon the constitutional powers of Congress.

The height of irrelevancy was attained by a prominent proponent of Hawaiian statehood. He advanced this argument: "The delectation of visitors, the sweetness of Hawaiian music, and the rhythm of its dance." The muscular gyrations of the hula dance is certainly far afield from the crux of the statehood problem.

I received a rather strange Christmas card during this last holiday season.

It contains the words "Mele Kalikamaka." I do not know the meaning of this language nor do I care. It contains no Christian or religious sentiment.

This card is an irreligious and clever, too clever, attempt to associate, in the subconscious mind of the recipient, his regard for the Christmas holiday and his image of a feminine form wrapped in a sarong, with a favorable response to statehood. Since Mrs. William Howard III, uses her stage name of Dorothy Lamour, this card should be regarded merely as advertising fiction.

These are some of the soft-sell techniques of the Hawaiian Statehood Commission. The Madison Avenue advertisers could learn a great deal from the Hawaiian Statehood Commission about the motivation of the masses.

COMMUNISM IN HAWAII

Mr. Chairman, I have said, in and outside Congress, that in granting statehood to Hawaii, we actually invited four Soviet agents to take seats in the U.S. Congress. I repeat this statement.

Oh, yes, they will be carefully selected by Communist agents. They will bear no visible brand marks. They will not be Communist Party members. All that the Communists demand of them in return for political support is to cleverly follow the Soviet party line, although always appearing to be merely liberal.

The infiltration of communism in Hawaii continues to influence every phase of territorial activity to an alarming degree.

The Communist network is centered in two unions, the International Longshoremen's and Warehousemen's Union (ILWU) and the United Public Workers (UPW). From these centers, their influence spreads into both the Republican and Democratic Parties, into the territorial legislature, into the county and city governments, into the newspapers, the radio, the television, and into every home.

The ILWU has a membership of about 25,000 workers. The UPW has a membership of about 2,700 employees.

Both of these unions were expelled by the CIO in 1950 on the ground that "their policies follow the Communist Party" and that "Communists control these unions."

Gentlemen, the policies of these unions have not changed one iota. I quote from the report of the Territorial Commission on Subversive Activities which was submitted to the Governor this last Monday, March 2, 1959 (p. 16):

"The propaganda line disseminated by the ILWU has continued to follow and further the Russian international and domestic viewpoint."

These unions continue to be dominated by the same Communist officials as in 1950. The ILWU in Hawaii is known as local No. 142. The international president is that most dangerous and effective Communist agent, Harry Bridges.

Since last August, Harry Bridges has been actively engaged in promoting an alinement of American labor unions with foreign Communist unions. This, of course, is part of the U.S. Communist Party's and the Soviet Communist Party's present program.

Since August 1958, Harry Bridges has made overtures to: (a) The all-Japan Dock Workers Union; (b) the Waterside Workers of Australia; (c) the Madras Harbor Workers of India; (d) the Waterside Workers of Indonesia. These unions are all Communist dominated.

Since January 1, 1959, Harry Bridges has had conferences with the Communist leadership of unions in London, Paris, Hamburg, Prague, Moscow, Leningrad, and Helsinki. I quote from a newspaper article in the Buffalo Evening News dated February 13, 1959.

"Bridges Lauds Democracy in Russian Unions.

"Bridges has also alined his union with the International Brotherhood of Teamsters, headed by James R. Hoffa.

"Jack Hall is regional director of the Hawaii ILWU, Local No. 142. He and six other Hawaiian Communists were convicted in 1953 for conspiracy to overthrow our Government by force and violence. These cases were reversed under the authority of the series of shocking Supreme Court pro-Communist decisions.

"The UPW's officers are Henry Epstein, Stephen Murin, Max Roffman, and Jeanette Nakama Rohrbough, all identified Communists.

"Both the ILWU and the UPW have exploited its members and continue to use the dues and the membership to further the Communist Party line.

"The UPW has 235 public employees employed by the government of the Territory of Hawaii. The city and county of Honolulu have 567 employees belonging to the UPW including 37 members of the sheriff's department.

"The county of Hawaii has 279 UPW, public employees; the county of Kauai has 203; and the county of Maui, 537.

"The ILWU and its conspiratorial Communist partner, the UPW, share the same large ILWU office building. This nonpublic building was recently exempted from public taxation by the Hawaiian Legislature.

"These two unions continue to spend upwards of $200,000 annually for propaganda and agitation.

"Although the English evening broadcasts by their chief English-speaking propagandist, Robert McElrath, have been discontinued, it is a mere tactical shift.

"The radio broadcasts in the Ilocano and Tagalog, Filipino dialects, continue every weekday.

The Japanese broadcasts are continued on three stations every Sunday.

"The Commission on Subversive Activities monitored 350 ILWU radio broadcasts from Honolulu alone in 1957–58.

"The ILWU continues to operate another propaganda apparatus. It has a book lending library service that disseminates nothing but Communist literature featuring class conflict and other Communist doctrine. It has a Communist movie loan service. These Communist films are stored and checked in and out by the Public Library of the Territory of Hawaii. This Communist service is paid for by the Hawaii and the U.S. taxpayers."

Although the weekly Communist newspaper, the Honolulu Record, has discontinued publication, the ILWU has announced that it will publish a daily newspaper to take the place of the weekly Honolulu Record.

To demonstrate the growing and expanding power of the Communist ILWU, I show you two newspaper clippings.

The Honolulu Advertiser of November 26, 1958, reports the union election among the Foodland Super Market meatcutters.

The ILWU vote was 205.

The AFL–CIO vote was 14.

I show you a report of the Honolulu Advertiser of March 1, 1959, last Sunday, re-

porting on an election among the clerks of the Foodland Super Market: "The ILWU won with 134 votes. The AFL–CIO union received 42 votes."

This result is in spite of the fact that the Communist control and the 100 percent Communist propaganda efforts of the ILWU have been broadcast by newspapers, radio, television, hundreds of times to every citizen of Hawaii.

This certainly does not show any lessening of the influence of the Communist Party in Hawaii.

Mr. Chairman, I would like to describe just one incident to show how the Communist Party infiltrates the cultural activities of a community.

The Honolulu Community Chorus is a civic musical organization. It has planned to produce a festival of folk songs this spring in conjunction with the Honolulu Symphony Orchestra. More than 300 vocalists and musicians are to participate.

The choral chairman, Mr. John M. Kelly, Jr., is insisting that the symphony orchestra present the "Song of the Forests," by the Communist composer, Dmitri Shostakovich. This music and words were written in praise of Dictator Joseph Stalin.

Mr. Kelly also insists upon the rendition of "The Lonesome Trail." This music is by Earl Robinson and Millard Lampbell. Both of these men have Communist affiliations for 20 years.

Mr. George Barati, the director of the Honolulu Symphony as of today, still refuses to play these two numbers on the ground that they are of poor musical composition.

The wife of Mr. Kelly is the former secretary to Jack Hall, the Communist director of the ILWU. The secretary of the choral group is Mrs. An Qwon Leong McElrath, the wife of the Communist ILWU propagandist.

There has been a recent change in the Communist tactics in Hawaii. They are now using the soft velvet approach to gain respectability and complete acceptance.

Last year, Mr. Newton Miyagi, secretary of the ILWU, was appointed to the Red Cross board. Mr. Miyagi is a die-hard Communist who took the 5th amendment more than 30 times on questions relating to his Communist affiliations before the U.S. Senate Subcommittee on Internal Security. Mr. Blissard, the U.S. Federal attorney, was so outraged that he resigned as a member of the board.

Strangely, the Federal judge, there, also a member of the board, criticized Mr. Blissard and defended Mr. Miyagi's appointment. The Federal judge was seeking Presidential reappointment.

On November 8, 1956, Gov. Wilder King forced the resignation of his attorney general for attending a testimonal dinner for Jack Hall. Governor King was not reappointed.

Judge Stainback, a former Democratic Governor, vigorously opposed to the Communists, was also refused Presidential reappointment.

In the 1956 elections, Mr. William F. Quinn accepted the ILWU endorsement for the Territorial senate on the Republican ticket. He is now the Republican Presidential appointed Governor of Hawaii to replace Governor King. I show you newspaper clippings of Governor Quinn tendering a public office appointment to Jack Hall, the prominent Communist leader, as a member of the Hawaii Traffic Commission.

It is a well known political fact of life, that you can't receive the recommendation of the Department of the Interior today under a Republican administration or yesterday under a Demrocatic administration for a Presidential appointment in Hawaii without the blessing of the Communist ILWU.

Mr. Chairman, I would like to conclude my remarks by brifly reviewing the political power that is exercised by the Communist apparatus in Hawaii.

In the 1954 elections, the ILWU gave its endorsements to 71 candidates. A total of 58 of the 71 ILWU-endorsed candidates won. Of these candidates, 22 out of 28 candidates for the Hawaii Legislature won.

In the 1956 elections 21 ILWU-endorsed candidates won out of 30 representatives in the Hawaii House of Representatives.

In this last election of November 1958, there were 69 offices to be filled by election. For these offices, 57 candidates were endorsed by the ILWU. Four of these candidates rejected the ILWU endorsement. Fifty-three candidates accepted these Communist dominated ILWU endorsements.

Thirty-seven of the ILWU-endorsed candidates won their elections.

Thus the ILWU succeeded in electing 37 out of 69 elective positions in the Hawaii Territorial Legislature for a winning percentage of 55 percent out of all public elective offices.

The ILWU succeeded in electing 37 out of 53 candidates whom it endorsed and who accepted this Communist support for a winning percentage of 70 percent.

It must be remembered that four identified Communists sit on the ILWU political endorsement committee that handed out these endorsements. Their long standing Communist affiliations are well known to every person in Hawaii. These four Communists are: Thomas Yagi, Newton Miyagi, Castner Ogawa, and "Slim" Shimizu.

Mr. Newton Miyagi is the same gentleman whose recent appointment to the Red Cross board raised such a furor. During the 1956 U.S. Senate committee hearings on internal subversion, Mr. Miyagi invoked the fifth amendment 71 times and declined to answer when asked if he had been in contact with Russian military and intelligence agents.

These are the men whose political endorsements are sought for and accepted in order to attain public office. These are the same Communists who will pass upon and either reject or give political endorsement to the two U.S. Senators and the two U.S. Representatives to be elected in Hawaii and sent to our Congress. Is there any reason to believe that their self interest will be any less or any different than the 70 percent of those candidates who received, accepted, and were elected with this Communist support?

We can best judge the political power of the ILWU by comparing the results of their endorsements with the results of the endorsements of the Republican Party.

Out of the 69 offices in which the ILWU endorsed candidates, 37 won seats, the Republican-endorsed candidates won only 24 seats. In other words, the ILWU endorsement is much more valuable than the Republican Party endorsement.

Mr. Chairman, I reiterate that the power of the Communist Party continues to be so potent that it is a menace to the people of Hawaii and to the people of the 49 States. There is no evidence of the lessening of that power.

In the event of statehood, the Communist Party will, in all probability, exert a continuing tremendous influence on the election of Hawaii's two Senators and two Representatives. The probable election of ILWU-endorsed representatives to the U.S. Congress will mean that the Communist Party will exert a substantial influence upon these Members of Congress.

The Communist Party will have succeeded in infiltrating the U.S. Congress and establishing a fifth column in this last defense of the free world.

Mr. Chairman, I respectfully suggest that this committee refuse to grant a rule on this bill. There will be no harm done. The sponsors of this bill can bring this measure to the floor of the House without a rule. This committee might prefer not to lend its implied approval to this proposal by the grant of a rule.

Thank you.

H.R. 5123, a Bill To Extend and Amend the Renegotiation Act of 1951

EXTENSION OF REMARKS
OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 9, 1959

Mr. KING of California. Mr. Speaker, toward the end of the last session of the Congress, I introduced a bill, known as H.R. 13092, proposing amendments to the Renegotiation Act of 1951. Time did not permit a full study of this and other bills proposing much-needed reforms in the procedures which now govern the renegotiation of defense contracts. One of the proposed amendments, providing for the judicial review of Tax Court decisions in renegotiation cases, was passed unanimously by the House of Representatives. In reporting favorably the bill incorporating this provision, the Ways and Means Committee announced that it was limiting the extension of the Renegotiation Act to a period of 6 months, because the committee intended to undertake a broad review of the entire subject of renegotiation early in this Congress. The report stated that at that time—

> Consideration will be given to the scope, objectives, and procedures of renegotiation and to possible amendments, including those proposed at the hearing on the present bill.

INFIRMITIES OF ACT SHOULD BE ELIMINATED

Since the last session of the Congress there has been considerable study of the problems of renegotiation. I believe, as a result of what we learned during the last session and from the studies made since that time, that certain basic factors indicate quite clearly the course we should follow in providing the necessary reforms in the conduct of renegotiation. In the first place, renegotiation of contracts with the United States was initiated as a temporary wartime measure, because the exigencies of a national emergency required the expeditious procurement of property and services under conditions which precluded the safeguards attendant upon normal contracting procedures within the Government. At that time it was not expected that the renegotiation of Government contracts would last beyond the emergency. Nevertheless, we have now found that, despite the implication of a temporary existence inherent in usual provisions for a short extension of the act each time it expires, renegotiation has been a part of defense procurement for almost the entire period since the war. Many infirmities have remained in the act from the beginning, on the theory that it is purely temporary. As a result, controversies arise as to the reasonableness of the Board's action, particularly in view

of the wide discretion given to the Board in determining excessive profits in individual cases and the secrecy which surrounds its deliberations and findings. Under the present act the Board is permitted to operate in a manner that is foreign to any other administrative agency of the United States having quasi-judicial powers.

CONTINUATION OF RENEGOTIATION IS NECESSARY

It may be that the continuation of renegotiation is necessary, because recurring threats to peace still require the expenditure of large sums of money for the national defense. However, I believe that contracting procedures within the Government are now adequate to prevent the accrual of profits beyond those contemplated by the parties in most cases, but the Government should be provided a means of recouping profits which may be considered excessive by appropriate standards. In other words, we should guard against windfall profits, which was the objective of statutory renegotiation in the first place. It is important to emphasize that the head of the department or agency of the Government negotiating a contract has the primary responsibility for preventing the accrual of excessive costs and profits by the effective use of available contracting procedures, and when this responsibility has been properly discharged, the integrity of Government contracts must be preserved to the same extent as contracts between private individuals. In my opinion it is morally wrong for the United States to contract in good faith with a person and years later, after performance has been satisfactorily completed, permit the Renegotiation Board to change the contract and take away profits that were openly and fairly negotiated by the parties in the first place.

EMPLOYEES DEPENDENT UPON SOUND DEFENSE INDUSTRY

I am especially concerned with renegotiation as it presently exists, because in California, and particularly in my district, there are thousands of employees who are dependent upon the soundness of the defense industry for their livelihood. Throughout the country there are millions of employees in the same position. In a situation as important and as serious as this, a maximum of publicity should accompany the findings of the Board to guard against unreasonableness and discrimination, and to allay suspicion of such shortcomings in the conduct of the Board's operations.

OBJECTIVES OF H.R. 5123

Accordingly, H.R. 5123 has four principal objectives:

First. The bill would add to the statutory factors which the Board must take into account under section 103 of the present act, the need for financial stability and incentives to efficiency and economy in the defense industry, and the desirability of comparing costs and profits of the defense industry with other industries in determining the reasonableness of profits.

Second. The bill seeks to preserve the integrity of contracts fairly negotiated with the Government by rendering subject to renegotiation profits in any year which exceed by more than 10 percent a portion of the profits contemplated by the parties.

Third. The bill seeks to give the Congress, the public and the individual who is affected thereby, more information on the reasons for the Board's decisions and the results of its determination in important cases. Freedom from congressional and public scrutiny has been a privilege enjoyed by the Board for reasons which do not appear on the surface, and in this age, which demands that Government activities be carried on in the light of day, a change in this respect is badly needed.

Fourth. The bill also provides for appeals from Tax Court decisions in renegotiation cases to the same extent as in ordinary Tax Court cases. In view of the favorable reception given to a similar proposal during the last session, the justice of this amendment seems obvious.

TWO-YEAR EXTENSION OF THE RENEGOTIATION ACT

During the last session of the Congress, the Renegotiation Act was extended for only 6 months to June 30, 1959. Section 1 of H.R. 5123 provides for a 2-year extension of the act to June 30, 1961.

AMENDMENTS PROVIDING ADDITIONAL STATUTORY FACTORS TO BE CONSIDERED IN DETERMINING EXCESSIVE PROFITS

Section 2 of H.R. 5123 amends section 103(e)—title 50, United States Code Appendix, section 1213(e)—to insert new statutory factors among those which the Board must now take into account in determining excessive profits. In subsection A, it is provided that the Board must take into account, in addition to those items now set forth in the comparable provision of the present act, "a comparison with the costs and profits of other industries." Since the defense industry is in competition with industry generally, it is appropriate that the reasonableness of costs and profits be determined in the light of costs and profits incurred and enjoyed by other industries. Whether or not the Board now takes this into account is problematical. It is believed appropriate that it should be directed to give this factor due weight.

A new statutory factor is included in subparagraph F, which requires the Board to take into account in determining excessive profits:

> The need for financial stability in the defense industry and for proper financial incentives under a system of free enterprise in order to produce the highest degree of efficiency and economy in the performance of contracts with the departments and related subcontracts.

The defense industry has become a permanent part of the economic life of the Nation. The need for financial stability to the same extent as other industry forming part of our national life would seem apparent. The proposed statutory factor would require the Board to take this into account in determining excessive profits.

At the present time, section 103(e) enables the Board to take into account, in determining excessive profits, such other factors the consideration of which the public interest and fair and equitable dealing may require which factors shall be published in the regulations of the Board from time to time as adopted. The Board has not seen fit in its entire history to adopt any additional statutory factors by regulation. It would seem appropriate to direct the Board to take into account other factors if the public interest and fair and equitable dealing require it regardless of whether it is constrained to adopt regulations with respect thereto. By eliminating the requirement of a regulation a person subjected to the Board's jurisdiction would, if this amendment were adopted, be able to urge matters consistent with the public interest and fair and equitable dealing, which he is now precluded from presenting under the existing act.

PROTECTION OF AGREED PROFITS

Section 2 proposes a further amendment which is designed to encourage efficiency and cost reduction and at the same time give some support to the integrity of contracts entered into in good faith by the U.S. Government.

In substance it provides that the Board's determination of excessive profits cannot reduce the contractor's retained profits below the sum of the aggregate of agreed profits plus 10 percent of such agreed profits. The proposal includes a definition of the term "agreed profits" which is designed to produce an amount of such agreed profits generally less than those actually agreed upon. This amendment places renegotiation in its proper perspective, namely a method whereby "windfall" profits are recouped. Renegotiation is not the equivalent of an excess profits tax. Congress has not set up a formula or any real standards to enable the Board precisely to determine what profits are excessive. As a result controversies and inconsistencies appear to exist which should be eliminated to the greatest possible extent. The proposed amendment is designed to accomplish this end. This particular amendment will operate with respect to those contracts in which the profit negotiated by the parties is ascertainable either by specific reference in the contract or by other proof. It is to be noted that the departments may adopt rules where appropriate to identify the profits agreed upon by the parties.

PUBLICITY OF BOARD'S FINDINGS AND DETERMINATIONS

Section 3 entitled "Renegotiation Proceedings" is designed to provide the contractor with a full exposition of the reasons for a determination of excessive profits by the Renegotiation Board and the facts used by the Board in arriving at its decision before an order is actually issued. At the present time, not until an order is issued fixing excessive profits is a contractor entitled to any statement explanatory of the Board's position. Moreover, the statement itself cannot be used in the Tax Court for any pur-

pose. There is a specific provision in the proposed amendment that such statement may not be used in the Tax Court as proof of the facts or conclusions stated therein but may be used as proof of the reason for such determination. The proposed amendment would also require the Board to make available for inspection by the contractor all data relating to the renegotiation proceeding and to supply the contractor, upon request, with copies of any part thereof which may be requested by the contractor. All of this is designed to give more attention to the basic principles of fair play to the end that the contractor may be fully apprised of the basis for any determination alleging excessive profits.

EXEMPTION OF STANDARD COMMERCIAL ARTICLES

H.R. 5123 in section 4 proposes an addition clarifying one of the criteria in the definition of a standard commercial class of articles.

JUDICIAL REVIEW OF TAX COURT DECISIONS IN RENEGOTIATION CASES

Section 5 permit appeals from Tax Court decisions in renegotiation cases to the same extent as other tax cases. It also removes any presumption of correctness in the determination of the Board from which an appeal is being taken. The act now provides that a proceeding before the Tax Court is a proceeding de novo. In such a proceeding the contractor and the Board should have equal status with respect to the controversy since the Board's determinations are not made in accordance with the Administrative Procedures Act. It is not a true de novo proceeding if the Board's findings are entitled to a presumption of correctness. The proposed amendment is designed to eliminate the possibility of such an interpretation of the present act.

REPORTS TO CONGRESS

Section 114 of the act now provides for a report to the Congress by the Renegotiation Board. The report contains no information with regard to the specific determinations of the Board in individual cases. As a consequence, the Congress, the public, and the adversaries before the Board are unaware of inconsistencies which may develop in the administration of the act resulting in unfairness and discrimination regardless of an innocent motive. There should be no objection to exposing findings of the Board to the light of day. The requirements of the proposed amendment simply provide that certain information already made available by the Board to the specific contractor involved be made public in its report to the Congress in all cases where the renegotiable business of a contractor exceeded $20 million in the year in question. I believe the public is entitled to know, where these vast sums of Government money are involved, how the Board has interpreted this law which is designed to eliminate excessive or windfall profits. The consolidated statistics that are submitted under the present law do not permit me or the public to learn how the Board is exercising its broad discretionary powers. It would seem to be a help to all—the Renegotiation Board, the Congress, procuring services, the public, and the companies who are receiving such large amounts of Government money—to open these actions to the light of day. Not only will this information be of interest to the Congress and the public but it will be in such form as to assure its use in Tax Court proceedings involving renegotiation determinations.

CONCLUSIONS

The amendments proposed by H.R. 5123 are designed to accomplish a greater degree of due process than is now the case and to surround the Board with the same safeguards against unreasonableness, discrimination, and abuse that apply to other administrative agencies with the power and authority similar to that conferred by the Renegotiation Act. Their adoption will tend to bring about stability in the defense industry to the advantage of the Government, the public, the defense industry, and its employees.

SENATE

TUESDAY, MARCH 10, 1959

(Legislative day of Monday, March 9, 1959)

The Senate met at 10:30 o'clock a.m., on the expiration of the recess.

Rev. William Gowland, president of Luton College for Industrial Evangelism and chaplain of Luton Industrial Mission and Community Center, Luton, England, offered the following prayer:

Almighty God, our Heavenly Father, we thank Thee for this new day with all of its possibilities for glorifying Thy Holy Name. We ask that in all our concerns we may seek Thy will.

We bring before Thy throne this day all those who represent the people of this great Nation. As we thank Thee for all the rich heritage of the past, we pray that our hopes and aspirations in this day and generation shall be according to Thy Holy will.

Teach us how to promote true righteousness, freedom, and justice throughout the whole world, and to face with courage and true insight those principalities and powers of darkness which would bring disaster to the whole of Thy family. Save us from holding lightly and defending halfheartedly the basic beliefs of all free peoples. Recalling the cost to our forefathers in their struggle for liberty and freedom from tyranny, grant that our sacrifices shall be no less than theirs.

All this we ask in Thy Holy Name and only for Thy sake. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Monday, March 9, 1959, was dispensed with.

TRANSACTION OF ROUTINE BUSINESS—LIMITATION OF DEBATE

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that there be the usual morning hour for the transaction of routine business, and that statements in connection therewith be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING THE SESSION OF THE SENATE

On request of Mr. JOHNSON of Texas, and by unanimous consent, the Committee on Interior and Insular Affairs, the Committee on Foreign Relations, the Committee on Labor and Public Welfare, and the Subcommittee on Antitrust and Monopoly of the Committee on the Judiciary were authorized to meet during the session of the Senate today.

On request of Mr. STENNIS, and by unanimous consent, the Military Construction Subcommittee of the Committee on Armed Services was authorized to meet today during the session of the Senate.

On request of Mr. MAGNUSON, and by unanimous consent, the Committee on Interstate and Foreign Commerce was authorized to meet during the session of the Senate tomorrow.

LEAVE OF ABSENCE

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the junior Senator from Iowa [Mr. MARTIN] be granted a leave of absence for today and the remainder of the week. He is on official business with the Aeronautical and Space Sciences Committee in California.

The PRESIDENT pro tempore. Without objection, leave is granted.

ORDER FOR RECESS TO 10 O'CLOCK A.M. TOMORROW — LEGISLATIVE PROGRAM

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that when the Senate concludes its business today it stand in recess until 10 o'clock a.m. tomorrow.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. JOHNSON of Texas. Mr. President, I make that request for this reason: There are 98 Members of the Senate. The Senate has one of the most dedicated and efficient staffs I have ever worked with. When business is pending, we like to consider it thoroughly and get action upon it.

We all wish to be as accommodating as possible to individual Senators and to the employees of the Senate. We do not wish to have sessions 6 days a week, if that can be avoided, because we find that a part of our senatorial duties is to keep

in touch with our constituents throughout the Nation, and in order to do so we must return to our States at frequent intervals.

I have received numerous requests that no bills be scheduled for a vote on Thursday, Friday, or Saturday of this week. Of course, I could not comply with such requests, because if every time a Senator asked me not to schedule a vote I complied the Senate would never vote.

Our policy will be to try to accommodate Senators as much as possible, without making any commitments with respect to votes. It would be very difficult to obtain a vote in the Senate on Monday. Tuesday will be St. Patrick's Day, and a substantial number of Senators have engagements out of the city.

The Senate would probably be in session later than usual tomorrow evening were it not for the fact that there will be congressional night at the Press Club. We wish to be understanding in that connection, too.

Tomorrow there will be a joint meeting of the two Houses, which will consume some time. It is our plan and hope before this weekend to dispose of three pieces of legislation now before the Senate. Printed hearings, reports, and bills are available for all Senators to read and study. We may not be able to get action on these measures. It will depend upon how long Senators desire to talk. I have no desire to curtail discussion. One Senator told me only Thursday at the policy committee meeting that he anticipated that the consideration of a certain bill would require 4 or 5 days. Yesterday it was reported that no speakers desired to discuss the bill at any such length. So we must adjust our plans accordingly.

It is our intention to hold the Senate in session until late this evening, and to consider bills in this order:

The unfinished business, which is the space bill. To be followed by the draft bill, which will be presented by the Senator from Georgia [Mr. RUSSELL]. That will be followed by the Hawaiian statehood bill. I expect quorum calls and yea-and-nay votes during the day. I should like to have the attachés of the Senate locate any absent Senators, and keep themselves informed as to where they are, so that there will be no unusual delay, and so that 75 Senators will not be kept waiting for 2 to reach the Chamber. There will be a yea-and-nay vote on the space bill, and a yea-and-nay vote on the draft bill, as well as on the Hawaiian statehood bill.

EXECUTIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of executive business, beginning with new reports.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE REPORTS OF COMMITTEES

The following favorable reports of nominations were submitted:

By Mr. FULBRIGHT, from the Committee on Foreign Relations:

T. Graydon Upton, of Pennsylvania, to be U.S. Executive Director of the International Bank for Reconstruction and Development; and

Henry J. Heinz II, of Pennsylvania, to be representative to the 14th session of the Economic Commission for Europe of the Economic and Social Council of the United Nations.

By Mr. MURRAY, from the Committee on Interior and Insular Affairs:

Elmer F. Bennett, of Colorado, to be Under Secretary of the Interior;

George W. Abbott, of Nebraska, to be Solicitor for the Department of the Interior; and

Edward Elliott Johnston, of Hawaii, to be Secretary of the Territory of Hawaii.

The PRESIDING OFFICER (Mr. BARTLETT in the chair). If there be no further reports of committees, the clerk will state the nominations on the calendar, beginning with new reports.

THE ARMY

The Chief Clerk proceeded to read sundry nominations in the Army.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the nominations in the Army be considered en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered; and, without objection, the nominations are confirmed en bloc.

THE AIR FORCE

The Chief Clerk proceeded to read sundry nominations in the Air Force.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that nominations in the Air Force be considered en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered; and, without objection, the nominations are confirmed en bloc.

THE NAVY

The Chief Clerk proceeded to read sundry nominations in the Navy.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that nominations in the Navy be considered en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered; and, without objection, the nominations are confirmed en bloc.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the President be immediately notified of all nominations confirmed this day.

The PRESIDING OFFICER. Without objection, the President will be notified forthwith.

LEGISLATIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

ADDRESS BY PRESIDENT JOSE MARIA LEMUS, OF EL SALVADOR, BEFORE JOINT MEETING

Mr. JOHNSON of Texas. Mr. President, I announce for the information of Senators that President Jose Maria Lemus, of El Salvador, will address a joint meeting of Congress tomorrow at 12:30 o'clock p.m.

I ask unanimous consent that it be in order for the Chair to declare a recess tomorrow at approximately 12:15 o'clock p.m., subject to the call of the Chair, and that Senators assemble and proceed to the Chamber of the other body.

The PRESIDING OFFICER. Without objection, it is so ordered.

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. ENGLE:

S. 1348. A bill to authorize the Secretary of the Interior to construct, operate, and maintain the Folsom south unit, American River division, Central Valley project, in California; to the Committee on Interior and Insular Affairs.

By Mr. McCARTHY:

S. 1349. A bill for the relief of Song Song Tai; to the Committee on the Judiciary.

By Mr. GORE:

S. 1350. A bill to provide for the registration of finance companies; to the Committee on Interstate and Foreign Commerce.

By Mr. BEALL:

S. 1351. A bill to authorize assistance under the Small Business Act of 1953 to certain small-business concerns displaced as a result of urban renewal activities under the Housing Act of 1949; to the Committee on Banking and Currency.

By Mr. YOUNG of North Dakota:

S. 1352. A bill to authorize enrolled members of the Three Affiliated Tribes of the Fort Berthold Reservation, N. Dak., to acquire trust interests in tribal lands of the reservation, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. BUTLER (by request):

S. 1353. A bill to amend the Interstate Commerce Act to remove certain restrictions as to persons who may engage in the business of a motor carrier and upon the issuance of certificates or approvals for engaging in such business or acquiring control of another engaged therein;

S. 1354. A bill to amend the Civil Aeronautics Act to remove certain restrictions as to persons who may engage in the business of an air carrier and upon the issuance of certificates or approvals for engaging in such business or acquiring control of another engaged therein; and

S. 1355. A bill to amend the Interstate Commerce Act to remove certain restrictions as to persons who may engage in the business of a water carrier and upon the issuance of certificates or approvals for engaging in

such business or acquiring control of or an interest in another so engaged; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. BUTLER when he introduced the above bills, which appear under a separate heading.)

By Mr. COOPER (for himself, Mr. MORTON, Mr. RANDOLPH, and Mr. BYRD of West Virginia):

S. 1356. A bill to amend the act authorizing the disposal of certain obsolete Federal locks and dams in order to increase a certain authorization in such act relating to dam No. 3 on the Big Sandy River, Ky.; to the Committee on Public Works.

(See the remarks of Mr. COOPER when he introduced the above bill, which appear under a separate heading.)

By Mr. HUMPHREY:

S. 1357. A bill to extend the copyright provisions of title 17 of the United States Code to musical compositions produced without the use of a conventional system of notations; to the Committee on the Judiciary.

By Mr. MURRAY (by request):

S. 1358. A bill to authorize the Secretary of the Interior to provide a headquarters site for Mount Rainier National Park in the general vicinity of Ashford, Wash., and for other purposes; and

S. 1359. A bill to revise the boundaries of the Montezuma Castle National Monument, Ariz., and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. LANGER (for himself and Mr. YOUNG of North Dakota):

S. 1360. A bill to authorize Dunn Center Special School District No. 29, North Dakota, to apply and receive payments for certain fiscal years under the provisions of Public Law 874, 81st Congress, providing financial assistance for local educational agencies in areas affected by Federal activities; to the Committee on Labor and Public Welfare.

By Mr. WILEY:

S. 1361. A bill for the relief of Henrique Ferreira Das Neves; to the Committee on the Judiciary.

By Mr. ALLOTT:

S. 1362. A bill to encourage and stimulate the production and conservation of coal in the United States through research and development by authorizing the Secretary of the Interior, acting through the Bureau of Mines, to contract for coal research, and for other purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. ALLOTT when he introduced the above bill, which appear under a separate heading.)

By Mr. ALLOTT (for himself and Mr. CARROLL):

S. 1363. A bill providing for the appointment of an additional district judge for the district of Colorado; to the Committee on the Judiciary.

(See the remarks of Mr. ALLOTT when he introduced the above bill, which appear under a separate heading.)

By Mr. ALLOTT (for himself and Mr. BENNETT):

S. 1364. A bill to amend part IV of subtitle C of title 10, United States Code, to authorize the Secretary of the Navy to take possession of the naval oil shale reserves, and for other purposes; to the Committee on Armed Services.

By Mr. KEATING (for himself and Mr. WILEY):

S. 1365. A bill to amend the Federal Property and Administrative Services Act of 1949 to authorize the disposal of surplus property to certain welfare agencies; to the Committee on Government Operations.

(See the remarks of Mr. KEATING when he introduced the above bill, which appear under a separate heading.)

By Mr. SALTONSTALL (for himself and Mr. KENNEDY) (by request):

S. 1366. A bill for the relief of Laura Irene de Courten, Candida Rommel, Selina Rommel, and Nikolaus Rommel; to the Committee on the Judiciary.

By Mr. MAGNUSON (by request):

S. 1367. A bill to amend title 14, United States Code, entitled "Coast Guard," to authorize the Coast Guard to sell supplies and furnish services not available from local sources to vessels and other watercraft to meet the necessities of such vessels and watercraft; to the Committe on Interstate and Foreign Commerce.

(See the remarks of Mr. MAGNUSON when he introduced the above bill, which appear under a separate heading.)

By Mr. JAVITS:

S.J. Res. 75. Joint resolution to provide for the designation of the month of May of each year as Senior Citizens Month; to the Committee on the Judiciary.

(See the remarks of Mr. JAVITS when he introduced the above joint resolution, which appear under a separate heading.)

By Mr. MAGNUSON:

S.J. Res. 76. Joint resolution to establish a commission to study and report on the U.S. telecommunication resource with special attention to the radio spectrum; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. MAGNUSON when he introduced the above joint resolution, which appear under a separate heading.)

CONCURRENT RESOLUTION

Mr. HARTKE submitted a concurrent resolution (S. Con. Res. 15) relating to priority in temporary employment of persons in taking the 1960 census, which was referred to the Committee on Post Office and Civil Service.

(See the above concurrent resolution printed in full when submitted by Mr. HARTKE, which appears under a separate heading.)

PROPOSED LEGISLATION RELATING TO INTERSTATE COMMERCE

Mr. BUTLER. Mr. President, by request, I introduce, for appropriate reference, three bills which would remove the restrictions now imposed by Federal statute upon the entry of American railroads into water, motor, and air transportation.

I am introducing these bills specifically at the request of the railroad industry. By this means the railroad industry will be afforded an opportunity to present to the Congress the various arguments and circumstances which it believes make it necessary and appropriate for the railroads to be freed of these restrictions.

Furthermore, at hearings incident to these bills, other transportation industries will be given an opportunity to present their views also. Introduction of this proposed legislation does not indicate any preconceived conclusion on my part. It is essential, in my opinion, however, that the American railroads be given this opportunity to express their views on the basis of specific legislative proposals without delay.

I ask unanimous consent that a memorandum prepared by the railroad industry describing the purposes of these bills be printed in the RECORD as a part of my remarks.

The PRESIDING OFFICER. The bills will be received and appropriately referred.

The bills, introduced by Mr. BUTLER (by request), were received, read twice by their titles, and referred to the Committee on Interstate and Foreign Commerce, as follows:

S. 1353. A bill to amend the Interstate Commerce Act to remove certain restrictions as to persons who may engage in the business of a motor carrier and upon the issuance of certificates or approvals for engaging in such business or acquiring control of another engaged therein;

S. 1354. A bill to amend the Civil Aeronautics Act to remove certain restrictions as to persons who may engage in the business of an air carrier and upon the issuance of certificates or approvals for engaging in such business or acquiring control of another engaged therein; and

S. 1355. A bill to amend the Interstate Commerce Act to remove certain restrictions as to persons who may engage in the business of a water carrier and upon the issuance of certificates or approvals for engaging in such business or acquiring control of or an interest in another so engaged.

The memorandum presented by Mr. BUTLER is as follows:

MEMORANDUM ON TRANSPORT DIVERSIFICATION

Under existing law, as it has been interpreted by the Interstate Commerce Commission and the Civil Aeronautics Board, special restrictions have been imposed upon the entry of railroads into motor and water transportation and upon the entry of any surface carriers into air transportation. These special restrictions grow out of certain language found in various sections of the Interstate Commerce Act and the Civil Aeronautics Act and are in addition to the general restrictions of those two acts that no one may begin new carrier operations, or acquire control of existing carriers, by motor or water without the approval of the Interstate Commerce Commission or by air without the approval of the Civil Aeronautics Board.

As a result of the special restrictions referred to: (1) Except where unusual circumstances prevail, permission to railroads or railroad affiliates to operate as motor carriers has been generally restricted to service that is auxiliary or supplemental to train service; that is, in general, to transportation by truck of the rail traffic of the railroad, at railroad rates and on railroad bills of lading, to and from only such points as are located on the rail line of the railroad and with either a requirement for prior or subsequent movement by rail or a key-point condition (movement only between certain specified key points on the railroad); (2) surface carriers, including railroads, and their affiliates have been almost totally excluded from air operations; and (3) railroads were compelled years ago to cease water carrier operations on the Great Lakes, and have been deterred from instituting operations on other inland waterways or from reinstituting various coastwise ocean operations conducted by them prior to World War II.

The evolution of these restrictive policies which, especially in the case of motor and air operations, have come about almost entirely by reason of administrative interpretation and construction of the statutes, rather than because of the specific terms of the statutes themselves, is briefly reviewed in the appendixes accompanying this memorandum.

It would be in the public interest to permit railroads and their affiliates to enter into, or acquire existing rights to engage in, motor, water, or air transportation on the same basis as any nonrailroad operator.

In the first place, the shipping public would benefit from transport diversification. Greater freedom for the railroads to engage in other forms of transport would make it possible to do away with much unnecessary duplication of facilities, and would result in improved service and lower cost, to the ultimate advantage of the shipper. If the management of one form of transportation also managed other forms, a shipper could arrange through one manager for the complete service he needed and be directed to the most efficient and most economical means of handling his particular traffic either by one mode or a combination of modes.

Furthermore, it should be borne in mind that the railroads are admittedly the backbone of our transportation system. If they are to remain progressive and be given opportunity to regain their financial health, in the interest of the preservation of a strong national transportation system for the benefit of the economy as a whole as well as for the national defense, they should be allowed to diversify their operations just as other businesses do. In industry generally, diversification has been demonstrated to be sound economic practice. Diversification for the railroads means making use of technological developments in other fields of transportation. Special restrictions in this regard, applicable to the railroads but not to others, should be wiped out.

Aside from the obvious benefits that could be expected to flow from transport diversification as such, removal of the special restrictions upon railroad use of other forms of transportation would enable the railroads to share in the use of facilities furnished their truck, water, and air competitors through tremendous public subsidies to which the railroads, as important taxpayers, contribute. As it is, the railroads not only must provide their own comparable facilities out of their own pockets but, as large taxpayers, must share heavily in the cost of expensive projects vitally benefiting competing transportation agencies. It is only fair that this indefensible situation be ameliorated.

What is sought by the railroads in the way of freedom to engage in other forms of transportation is not in the nature of a one-way street, but is intended to be equally applicable to the right of each of the several forms of transport to engage in other forms. It is proposed that the Interstate Commerce Act and the Civil Aeronautics Act be so amended as to make it clear that none of the several forms of transportation when seeking to engage in another form is to be subjected to special standards or limitations or restrictions merely by reason of the circumstance that it is a different form.

It should be understood that even with removal of the special restrictions the railroads, like any other applicant, would still have to prove to the satisfaction of the regulatory authorities that their entry into another transportation field is required by public convenience and necessity or is consistent with the public interest as the circumstances may require. In such cases, whether a new entry or an acquisition of existing facilities were to be involved, the regulatory agency would consider the competitive effect upon existing carriers in the field.

APPENDIX A

MOTOR CARRIER OPERATIONS

In the early days of motor carrier operation and before its regulation, the Interstate Commerce Commission conducted two independent investigations of the situation. In the first, motorbus and motortruck operation (140 ICC 685 (1928)), the Commission found that certain railroads were already making use of motor transport in their operations, and recommended that the railroads should be authorized to engage in interstate commerce by motor vehicles on the public highways subject to existing provisions of the Interstate Commerce Act. In the second investigation, coordination of motor transportation (182 ICC 263 (1932)), the Commission directed its attention to the particular question of the use of motor transport by other transportation agencies. After an extensive study the Commission found that there had already been a great deal of diversion of highway traffic from the railroads to the motor carriers and concluded with the recommendation "that railroads, whether steam or electric, and water carriers, should be specifically authorized to engage in transportation of both persons and property by motor vehicles in interstate commerce over the public highways." Thus, prior to enactment of the Motor Carrier Act of 1935 the Interstate Commerce Commission was of the view that railroads should be allowed to diversify their operations into other forms of transportation.

The Motor Carrier Act of 1935 did not follow the recommendation of the Interstate Commerce Commission that railroads should be specifically authorized to engage in interstate motor transport.

In section 206 it did provide for so-called grandfather rights so that any carrier already engaged in motortruck operation could be issued a certificate to continue its operation without further proof of public convenience and necessity.

Section 207, pertaining to the issuance of certificates for new motor carrier operations, did not then nor does it now make any distinction whatsoever as to what type of carrier the applicant may be. It merely required and still requires that there be a finding that the applicant is fit, willing, and able properly to perform the service proposed, and that the proposed service is, or will be, required by the present or future public convenience and necessity.

In section 213 pertaining to authority for consolidation, merger, acquisition and control of an existing motor carrier, however, it was provided that if the applicant for control or merger of an existing motor carrier was a carrier other than a motor carrier, "the Commission shall not enter such an order unless it finds that the transaction will promote the public interest by enabling such carrier to use service by motor vehicle to public advantage in its operations and will not unduly restrain competition."

It will be noted that the Motor Carrier Act of 1935 as originally enacted did not single out the railroad industry for specific discriminatory limitations in this respect, but made the same conditions applicable to other carriers as well. By the Transportation Act of 1940 section 213 of the Motor Carrier Act was repealed but its substance was carried into section 5 of the Interstate Commerce Act, with one important change: It was provided by the 1940 Act that only in cases where a railroad is the applicant for control or merger of a motor carrier will the limitations apply. Section 5(2)(b) of the Interstate Commerce Act provides that in the case of any railroad acquisition of an existing motor carrier the Interstate Commerce Commission must determine that the proposed control or ownership of the motor carrier by the railroad "will enable such [rail] carrier to use service by motor vehicle to public advantage in its operations and will not unduly restrain competition."

It should be noted, too, that neither the provisions of the act of 1935, imposing special limitations on other forms of carriers entering into the motor carrier field nor the superseding provisions of section 5(2)(b) of the present act, imposing those limitations on railroads alone, specifically indicate or require in terms that the present type of restrictions (to be shown later) be imposed practically as a matter of routine as conditions for approval of railroad control or acquisition of a motor carrier. It remained for intepretation or constuction by the administrative agency to accomplish that effect.

The first proceeding in which the Commission dealt with the question of acquisition of control of motor transportation operations by a railroad or a railroad controlled subsidiary was *Pennsylvania Truck Lines, Inc., Control-Barker*, 1 M.C.C. 101, 5 M.C.C. 9, in which an affiliate of the Pennsylvania Railroad sought authority to acquire control over Barker Motor Freight. Although the railroad's professed intention in acquiring the operating rights of the motor carrier was to facilitate the establishment of a coordinated truck and rail service in Ohio similar to that already furnished in its eastern territory, it did not propose to abandon or dispose of those portions of the acquired motor operations which would not necessarily contribute to coordinated truck-rail service. On the contrary, it maintained that its greater financial resources would permit it to give improved and more frequent motor service over all the routes previously operated by Barker, including those not adjacent to its rail lines. Division 5 of the Commission, however, after first finding that some of Barker's route could indeed be used by the railroad to public advantage, indicated disapproval of any proposal by railroads "to go into the kinds of truck service which were not auxiliary and supplementary to their railroad operations." In a later report, 5 M.C.C. 9, the Commission's position and intent were clarified and restated as follows: "* * * Approved operations are those which are auxiliary and supplemental to train service. Except as hereinafter indicated, nonapproved operations are those which otherwise compete with the railroad itself, those which compete with an established motor carrier, or which invade to a substantial degree a territory already adequately served by another rail carrier."

Thus, in this initial decision on the question, the Commission established the general principle that railroads would only be permitted to make use of motor transport to the limited extent that such was auxiliary or supplemental to rail service and would not be permitted to compete generally with established motor carriers. Motor carriers were thus given absolute protection from general competition by railroads by use of motor transport and the principle of competition as between various forms of transportation, which has subsequently proved to be both inefficient and ruinous, was established as the controlling principle in the transportation industry.

The statutory restrictions upon which the Commission relied in the Barker case were those in section 213 of the act pertaining to acquisition by purchase or merger of existing motor carrier rights. The Barker case was, of course, such an acquisition. This same policy, however, was early carried over as controlling also in the disposition of applications by railroads or their affiliates for new certificated motor carrier rights under section 207, which does not specifically contain any such restrictions for acquisition of rights by other agencies of transportation. In *Kansas City Southern Transport Company, Inc., Common Carrier Application*, (10 M.C.C. 221, 28 M.C.C. 5), a rail affiliate sought new motor common carrier rights over certain routes which it represented would be

auxiliary to and supplementary to its rail service and coordinated therewith. However, it asked to move some shipments entirely by truck. Division 5 of the Commission applied the Barker case principle and made the authorizations subject to the five following conditions which, with one later modification, have grown to be standard and customary in cases of this kind.

1. The service to be performed shall be limited to service which is auxiliary to, or supplemental of, rail service.

2. No motor service shall be rendered to or from any point not a station on a rail line of the railroad.

3. Shipments to be transported shall be limited to those on a through bill of lading, including a prior or subsequent movement by rail.

4. All contractual arrangements between the applicant motor carrier and the parent railroad shall be reported to the Commission and shall be subject to revision.

5. The motor service shall be subject to such further specific conditions as the Commission in the future may find it necessary to impose, in order to insure that it will remain auxiliary and supplemental to the rail service.

This decision was rendered on November 12, 1938, and from that date to the early part of 1940 it was followed consistently and substantially identical restrictions were imposed in disposing of numerous railroad applications for motor carrier operating authorities.

In 1941, on reconsideration in the same proceeding, the entire Commission substituted a different requirement for condition No. 3, which required a prior or subsequent movement by rail. In the case *Kansas City Southern Transport Company, Common Carrier Application,* 28 M.C.C. 5, a new type of condition was substituted; namely, a so-called key point condition. This permitted the movement of some shipments entirely by motor, but only between local way points on the railroad, and then only provided that such shipments did not move by motor between any two usual break bulk key points. The remaining conditions were left unchanged.

With rare exceptions confined to very unusual circumstances these restrictions, including either a prior or subsequent movement by rail or a key point restriction, have been uniformly imposed alike upon later railroad applications for both acquisition of existing and for new motor carrier rights.

The result of these restrictions has been to limit railroad or railroad affiliate operation of motor transport entirely to that which is auxiliary and supplementary to railroad operation, and prevents any general motor competition whatever with existing motor carriers. This policy of restriction that has been practiced by the Interstate Commerce Commission does not per se protect the inherent advantages of the mode of transportation by motor vehicle, but rather protects the business of the motor carriers engaging in that form of transportation. The Commission has limited the effective use of motor transport solely to motor carriers as such and has forbidden it to be used by other forms of transportation companies where the inherent advantages of such transport might fit in well with the operations of such company.

If the matter had not been already determined to the contrary, the railroads could point out that there is nothing in the statement of policy in the Transportation Act of 1940, nor in the express provisions of section 5(2), the successor to section 213 in the original Motor Carrier Act of 1935, which requires that railroad operation of motor equipment on the public highway be limited to that which is merely auxiliary or supplemental to rail service. The national transportation policy expressed in the act of 1940 refers simply to the public interest and the preservation of the inherent advantages of each mode of transportation. The railroads submit that it would be in the public interest, and it would further promote the inherent advantages of each mode of transportation, if the railroads were permitted to offer a diversified transportation product to the public as it would strengthen all functions of the transportation company and put it in a better economic position to offer all services to the public.

Furthermore, the only direct statutory restrictions on railroads and their affiliates are those contained in section 5, applying to acquisition of existing motor carrier rights by merger, purchase, or otherwise. There is nothing expressed in sections 206 and 207, concerning applications for new motor carrier authority, which necessitates discrimination against railroads and affiliates in the granting of such authority, and it is only through the Commission's interpretation of the law that they are imposed.

As stated heretofore, the Commission has, in some cases, held that where special circumstances are present, a rail affiliated applicant can obtain unrestricted motor carrier authority. In the absence of such special circumstances, the Commission has not issued unrestricted motor carrier rights to rail affiliates. It has been the Commission's view that a railroad applicant for authority to operate as a common carrier by motor vehicle, although required by statutes to do no more than prove as any other applicant that the service is required by public convenience and necessity, nevertheless has a special burden by reason of the fact that it simply is a railroad. The Commission has used the words of the national transportation policy to carry over the language from section 5 of the act into section 207, and this requires railroads in certification cases to show circumstances negativing any disadvantage to the public because the applicant is a railroad. This policy of the Commission was approved by the Supreme Court in *U.S. v. Rock Island M. Transit Company* (340 U.S. 419, 427–428).

The Commission's policy of granting rail affiliates unrestricted motor carrier rights in situations where special circumstances exist has been given legal sanction by the Supreme Court in *American Trucking Associations* v. *U.S.*, 355 U.S. 141 (1957). The net effect of the decision, however, is not only to limit the area in which a rail affiliate can engage in unrestricted motor carrier operations but also to constitute a straitjacket for the railroads rather than an avenue permitting further motor operation. In the case, the Rock Island Motor Transit, a subsidiary of the Rock Island Railroad, had authority from the Interstate Commerce Commission to operate interstate motor carrier service between certain points in Illinois, Iowa, and Nebraska, subject to restrictions designed to limit the service to that which was auxiliary to or supplemental of the Rock Island's rail operations (keypoint restrictions, forbidding transport to stations not on the rail lines), and filed an application for a certificate under section 207 to serve without the restrictions several of the communities under restriction. The authority was granted in part by the Commission when it was found that the applicant was willing to provide services which other trucking companies would not provide. The Court stated that the rigid requirement of section 5(2)(b) of the act applicable to acquisition cases applied also to proceedings for new certificates under section 207 and that the auxiliary or supplemental conditions applied unless the special circumstances were present, as they were in the instant case. The case seems to approve only those unrestricted motor operations by a rail affiliate in situations where trucking companies do not want the traffic.

Appendix B

Air Carrier Operations

There are two provisions of the Civil Aeronautics Act[1] that must be considered in any discussion of the performance of air carriage by surface transportation forms. One is section 401, providing that no air (common) carrier may operate in air transportation without a certificate issued by the Civil Aeronautics Board upon a finding that the transportation proposed is required by public convenience and necessity. Section 408 of the Civil Aeronautics Act gives the CAB control over the consolidation of two or more air carriers and over transactions in the nature of consolidations, mergers, acquisitions and the like between air and surface carriers or their affiliates.

Proposed consolidations of air carriers are required to be approved unless the CAB finds that they would not be consistent with the public interest. This standard is also applicable where unification of air and surface carriers is involved, but in transactions where a surface carrier is the applicant the following additional requirement of section 408 of the Civil Aeronautics Act must be met:

"That if the applicant is a carrier other than an air carrier, or a person controlled by a carrier other than an air carrier or affiliated therewith within the meaning of section 5(8) of the Interstate Commerce Act, as amended, such applicant shall for the purposes of this section be considered an air carrier and the authority shall not enter such an order of approval unless it finds that the transaction proposed will promote the public interest by enabling such carrier other than an air carrier to use aircraft to public advantage in its operation and will not restrain competition."

There has been very little common ownership as between railroads and other surface carriers on the one hand and air carriers on the other. Before the Civil Aeronautics Act became law in 1938, a substantial interest in a New England air carrier was held by certain railroads, but the CAB early indicated that it would probably not look with favor on any increase in the railroads' control of this air carrier or on expansion of the air carrier's operations so long as it remained railroad-controlled (*Railroad Control of Northeast Airlines,* 4 C.A.B. 379 (1943)). Subsequently the railroads involved sold their holdings. Furthermore, when subsidiaries of two other railroads made application for authority to operate as common air carriers, those applications were denied (see Interstate Commerce Commission, Bureau of Transport Economics and Statistics, Historical Development of Transport Coordination and Integration in the United States (1950), p. 177).

The philosophy of the Civil Aeronautics Board is perhaps best expressed in certain cases relating to efforts of overseas steamship operators to participate in foreign air service. The language used in these cases is at least indicative of the Board's attitude toward any future cases involving common

---

[1] The discussion in this appendix is couched in terms of secs. 401 and 408 of the Civil Aeronautics Act. Actually, these two sections were repealed by Public Law 85–726, August 23, 1958; but they were reenacted as secs 401 and 408 of the Federal Aviation Act of 1958. Administration of these two sections still rests with the Civil Aeronautics Board.

ownership in respect of air carriers and surface carriers engaged in domestic transportation.

The first line of decisions involved an attempt by American Export Lines, an ocean steamship company, to organize and then control an air carrier subsidiary in order to engage in foreign air transportation. The Board denied the application of the steamship company to control the air line because, it said, the requirements of section 408 (above quoted) were not met. The Board went on to say that section 408 applies not only when a surface carrier organizes a subsidiary to engage in air transportation but also when a surface carrier seeks to enter the field of air transportation directly by obtaining new operating rights under section 401 (certification) of the act.

At the request of several steamship companies the CAB later reconsidered its view that the provisions of section 408 apply in certificate proceedings (e.g., *North Atlantic Route*, 6 C.A.B. 319 (1945)). The conclusion of the Board, based on a different interpretation of the statute and the congressional intent, amounted to a reversal of its previous holding in the American Export case, since it was found that compliance with the restrictive requirements of section 408 could not properly be held a condition to the granting of air carrier operating rights to a surface carrier.

Importantly, however, the majority of the CAB indicated that the fact that an applicant was a surface carrier would nevertheless necessarily be weighed in reaching a rounded judgment on the question of fitness, willingness, and ability to engage in air transportation.

APPENDIX C

WATER CARRIER OPERATIONS

Under the Panama Canal Act of 1912 (now section 5(14–16) of the Interstate Commerce Act), restrictions are imposed on the ability of railroads to engage in water transportation whenever the water transportation in question does or may compete with the rail carrier itself. Where water transportation that is competitive with a rail carrier is carried on through the Panama Canal, the railroad is absolutely prohibited from having interest in the water carrier.[1] Where the water transportation is carried on elsewhere, a railroad may, even where the water service does or may compete with its own rail service, be allowed by the Interstate Commerce Commission to engage in water operations if it can be shown that this will not prevent such service "from being operated in the interest of the public and with advantage to the convenience and commerce of the people, and that it will not exclude, prevent, or reduce competition on the route by water under consideration."

As a result of this legislation and the refusal of the Interstate Commerce Commission, apparently as a matter of continuing policy, to find very much control of water carriers by railroads to be in the public interest, many railroad-water carrier relationships (principally on the Great Lakes) had to be dissolved; and in the view of many the Panama Canal Act has been and continues to be a rather effective bar to any new large-scale railroad participation in domestic water transportation.

[1] The railroads do not seek repeal of the specific and absolute prohibition as to the transportation through the Panama Canal.

INCREASE OF AUTHORIZATION FOR THE RESTORATION OF LOCK AND DAM NO. 3, BIG SANDY RIVER

Mr. COOPER. Mr. President, for myself, my colleague, the junior Senator from Kentucky [Mr. MORTON] and the Senators from West Virginia [Mr. RANDOLPH and Mr. BYRD], I introduce for appropriate reference a bill which would increase the authorization of the Corps of Engineers for the restoration of lock and dam No. 3 on the Big Sandy River at Louisa, Ky., and Fort Gay, W. Va., from $50,000 to $90,000.

This restoration and authorization of $50,000 was approved in 1956 by Public Law 966 of the 84th Congress. Subsequently it has been ascertained that the information upon which the $50,000 figure was based was not obtained by the usual study of the Corps of Engineers, but was furnished as an estimate. It has now been determined by the Corps of Engineers that more than $90,000 is required for the project.

The local communities are willing and able to provide necessary rights of way and to maintain the lock and dam, as required in the original legislation. Their financial circumstances are such, however, that they are unable to contribute more to the restoration costs.

Of great importance, I think, is the fact that the Congress intended in its original action to authorize an adequate sum of money to complete satisfactorily the restoration of the dam. I believe, therefore, that we have the obligation to adjust the authorization to the correct and detailed estimate of cost. The bill which we are introducing today undertakes to do that by increasing to $100,000 the amount that is authorized for the lock and dam No. 3 project. The benefits to the two communities in providing a year-round water supply and recreational benefits, as contemplated in the original legislation, require prompt and favorable action.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1356) to amend the act authorizing the disposal of certain obsolete Federal locks and dams in order to increase a certain authorization in such act relating to dam No. 3 on the Big Sandy River, Ky., introduced by Mr. COOPER (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Public Works.

Mr. RANDOLPH. Mr. President, I, too, am a cosponsor of the proposed amendment, and would like to speak in support of it.

I want to stress that the myriad of benefits to the Big Sandy Valley, which my colleague has outlined, was the original objective of the 84th Congress when, in the passage of Public Law 996, it provided a sum of $50,000 for the restoration of Dam No. 3. This restoration might already have been carried out if it had not been for the fact that a subsequent reevaluation of the project has shown that the original appropriation was inadequate.

The original cost estimate of $50,000 was incorporated into the measure on the assumption that the dam might be restored as a lock-type structure. Since that time, however, it has been decided that this method of restoration would be ill-advised, due to the deterioration of the dam. It is now suggested that a cutoff wall be built across the lock chamber, and that other rebuilding be carried out at a cost of nearly $100,000.

Therefore, Mr. President, you see that the proposed amendment now before us is not a new project in itself, but merely a rectification of an inaccuracy in the previous act. By approving this amendment, we will allow the original intention of the portion of Public Law 996 applying to Dam No. 3 on the Big Sandy River to be brought to fruition.

Therefore, I, too, express my wholehearted endorsement of this proposed amendment, and respectfully invite my colleagues in this body to join in its support.

Mr. BYRD of West Virginia. Mr. President, I have today joined with the senior Senator from Kentucky in cosponsorship of an amendment to the act authorizing the disposal of certain obsolete Federal locks and dams, in order to increase a certain authorization to provide for the restoration of dam No. 3 on the Big Sandy River between West Virginia and Kentucky, and I wish to make a short statement in support of the amendment.

Dam No. 3, between the cities of Louisa, Ky., and Fort Gay, W. Va., is virtually useless in its present state. It is on the Government's obsolete list and is not used for navigation purposes. It merely sits in the Big Sandy River untended, with the unchecked stream coursing through it.

However, if the proposed restoration which is provided by this amendment could be carried out, dam No. 3 would again be of great benefit to the residents of the area. A large, beautiful reservoir of water would be created to enhance the region. It would assure the surrounding cities of an adequate water supply. It would serve as an attractive recreation spot. It would make possible the establishment of industries dependent upon water resources. It would contribute to flood control in the Big Sandy Valley. And it would bring to the area the many other advantages of a developed and controlled watercourse.

Therefore, Mr. President, I urge and recommend the prompt passage of this measure which would bring such benefits to the people of this border region of West Virginia and Kentucky.

PROMOTION AND CONSERVATION OF COAL RELATING TO COAL RESEARCH THROUGH CONTRACTS

Mr. ALLOTT. Mr. President, I am one of the several cosponsors of Senate bill 49, introduced by the Senator from

Illinois [Mr. DIRKSEN] to establish a Coal Research and Development Commission in order to encourage and stimulate the production and conservation of coal in this country. The program which would be authorized by that bill is an important one. I hope, and have reason to believe, that it will receive serious consideration by the Committee on Interior and Insular Affairs.

In order that our committee may consider a somewhat different approach to the same problem, I introduce, for appropriate reference, a bill to authorize the Secretary of the Interior to carry out a research program through the existing staff of the Bueau of Mines, by contract, or otherwise. This bill is a companion measure to one offered in the other body on January 26 by my good friend Representative SAYLOR, of Pennsylvania, H.R. 3375.

I ask unanimous consent that the text of the bill be printed in full at this point in my remarks.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1362) to encourage and stimulate the production and conservation of coal in the United States through research and development by authorizing the Secretary of the Interior, acting through the Bureau of Mines, to contract for coal research and for other purposes, introduced by Mr. ALLOTT, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior, acting through the Bureau of Mines shall—

(1) develop through research, new and more efficient methods of mining, preparing and utilizing coal;

(2) contract for, sponsor, cosponsor, and promote the coordination of, research with recognized interested groups, including but not limited to, coal trade associations, coal research associations, educational institutions, and agencies of States and political subdivisions of States;

(3) establish technical advisory committees composed of recognized experts in various aspects of coal research to assist him in the examination, evaluation, of research progress on all research proposals and contracts and to ensure the avoidance of duplication of research; and

(4) cooperate to the fullest extent possible with other departments, agencies, and independent establishments of the Federal Government and with State governments, and with all other interested agencies, governmental and nongovernmental.

SEC. 2. Research authorized by this act may be conducted wherever suitable personnel and facilities are available.

SEC. 3. No research shall be carried out, contracted for, sponsored, cosponsored, or authorized under authority of this act, unless all information, uses, products, processes, patents, and other developments resulting from such research shall be available to the general public. Whenever in the estimation of the Secretary of the Interior the purposes of this act would be furthered through the use of patented processes or equipment, the Secretary is authorized to enter into such agreements as he deems necessary for the acquisition or use of such patents on reasonable terms and conditions.

SEC. 4. (a) It is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, to remain available until expended, not to exceed $20,000,000 to be used to carry out the purposes of this act for the fiscal year beginning July 1, 1959.

(b) There is hereby authorized to be appropriated for each fiscal year beginning after June 30, 1960, such sums as may be necessary to carry out the purposes of this act.

ADDITIONAL DISTRICT JUDGE FOR DISTRICT OF COLORADO

Mr. ALLOTT. Mr. President, on behalf of myself, and my colleague, the junior Senator from Colorado [Mr. CARROLL], I introduce, for appropriate reference, a bill providing for the appointment of a third district judge for our State. The need for another judge is critical; the backlog of cases which continues to mount because of this void is appalling. And there is no slackening of this caseload in sight.

Our citizens are forced to wait endlessly between the time a case is filed and the time it is heard in court. Oftentimes, in Colorado, our people are forced to await their day in court for as long as 3 or 4 years.

Even in comparison with the national picture, the situation in Colorado stands out as singularly critical. The average time from filing to disposition of civil cases in Colorado is 21 months, compared with the national average of 14. Forty-six percent of the trials during recent years had to be conducted by visiting judges. This means that half of Colorado's judicial business in Federal courts was handled by visiting judges. The problem is compounded when we realize the time these good men had to take from their own areas in order to lend a hand in our State.

Mr. President, an injured claimant whose earning power has been terminated can run into terribly hard times without compensation when the decision is delayed for years as so often happens now. I know that my colleagues agree with me wholeheartedly that justice delayed is no justice at all and may even amount to injustice.

The appointment of a third judge in Colorado has long been a recognized necessity. It was recommended by the Judicial Conference in March 1955, and again a year later. We no longer can delay. It is our responsibility to provide this needed help. Congress no longer can turn its back on our people.

Mr. President, Colorado is one of the Nation's fastest growing States. We are forced to drop further and further behind in our efforts to give fair play to those of our citizens who seek recognition in the Federal courts. What a pathetic commentary on our Federal judicial system.

I ask that this bill receive the speedy attention of my colleagues so that the citizens of Colorado will no longer be denied the full advantage of our great system of justice, an advantage to which they are fully entitled.

Mr. President, I ask unanimous consent that the bill be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1363) providing for the appointment of an additional district judge for the district of Colorado, introduced by Mr. ALLOTT (for himself and Mr. CARROLL), was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President shall appoint, by and with the advice and consent of the Senate, an additional district judge for the District of Colorado. In order that the table contained in section 133 of title 28 of the United States Code will reflect the change made by this act in the number of judgeships for the District of Colorado, such table is amended to read as follows with respect to such district:

"Districts	Judges
* * * * *	
"Colorado	3
"* * * * *	

ELIGIBILITY OF WELFARE AND RECREATION AGENCIES FOR FEDERAL SURPLUS PROPERTY

Mr. KEATING. Mr. President, I introduce for appropriate reference a bill to amend the Federal Property and Administrative Services Act of 1949 to authorize the disposal of surplus property to certain welfare agencies.

Under the present law, such surplus property can go only to medical institutions, health centers, schools, colleges, and related organizations. The proposed bill would broaden eligibility to include agencies such as the Salvation Army, Y.M.C.A., Y.W.C.A., Travelers Aid, and other similar organizations.

The bill grows out of recommendations drawn up by a national welfare assembly committee, which included members drawn from American Foundation for the Blind, Child Welfare League of America, Council of Jewish Federations and Welfare Funds, Council on Social Work Education, Girl Scouts, National Council of Churches of Christ in America, National Federation of Settlements and Neighborhood Centers, National Jewish Welfare Board, National Recreational Association, Salvation Army, United Community Funds and Councils, Young Men's Christian Association, and Young Women's Christian Association. In addition, the following organizations have expressed their interest in this subject: American Hearing Society, Board of Hospitals and Homes of the Methodist Church, National Catholic Community Service, and United HIAS Service.

My proposal contains carefully formulated language to insure that only tax-supported or tax-exempt welfare or recreation agencies would be eligible for this property. Also, a tax exempt voluntary agency would have to have a license from a State standard-setting agency, or receive funds through a State or local community fund, or be affiliated with or a part of a national standard-setting organization.

The present law, which limits eligibility for surplus Government property to educational and health organizations, should be expanded to include worthy welfare and recreational agencies. These include settlement houses, homes for the aged, youth centers, character building agencies, and adoption centers.

These agencies are doing a magnificent job of helping our young people, our aged, and many of our needy citizens. They need and can make good use of surplus property in their work.

Since the Department of Health, Education, and Welfare cooperated with the National Welfare Assembly Committee in drawing up the agreement out of which this bill grew, the bill deserves wide support and should be acted upon as soon as possible.

We should endeavor to help these worthy organizations in every possible way, for through them we will all be building a better America.

Mr. President, there was a great deal of interest evidenced in the proposed legislation in the last session of Congress, and I therefore ask unanimous consent that the bill be printed in the RECORD, and lie on the table for a period of 1 week, in order to give other Members the opportunity to cosponsor it if they desire to do so.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD, and lie on the desk for 1 week, as requested by the Senator from New York.

The bill (S. 1365) to amend the Federal Property and Administrative Services Act of 1949 to authorize the disposal of surplus property to certain welfare agencies, introduced by Mr. KEATING (for himself and Mr. WILEY), was received, read twice by its title, referred to the Committee on Government Operations, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That paragraph (1) of subsection (j) of section 203 of the Federal Property and Administrative Services Act of 1949 (40 U.S.C., sec. 484), is amended by inserting immediately after "or for research for any such purpose" the following: ", or for utilization by welfare or recreation agencies".

SEC. 2. Paragraph (3) of such subsection (j) is amended—

(1) by inserting immediately after "or for research for any such purpose" the following: ", or for utilization by welfare or recreation agencies";

(2) by striking out "and (B)" and inserting "(B)"; and

(3) by inserting immediately after "Internal Revenue Code of 1954" the following: ", and (C) welfare or recreation agencies".

SEC. 3. Paragraph (2) of subsection (k) of such section 203 is amended—

(1) by striking out "or" at the end of subparagraph (D);

(2) by striking out "law," in subparagraph (E) and inserting in lieu thereof "law; or"; and

(3) by inserting immediately after such subparagraph (E) the following:

"(F) the Secretary of Health, Education, and Welfare, in the case of property transferred pursuant to this act to welfare or recreation agencies—".

SEC. 4. Such section 203 is further amended by adding at the end thereof the following new subsection:

"(p) As used in this section, the term 'welfare or recreation agencies' means tax-supported or tax-exempt welfare or recreation agencies which serve people in institutions and in groups, but in the case of any such agency which is a tax-exempt voluntary agency, includes only an agency which meets at least one of the following criteria—

"(1) such agency is licensed by a State standard-setting agency;

"(2) such agency receives funds through a State or local community fund or similar federated fund-raising body; or

"(3) such agency is affiliated with, or is a part of, a national standard-setting organization."

AMENDMENT OF TITLE 14, UNITED STATES CODE, ENTITLED "COAST GUARD"

Mr. MAGNUSON. Mr. President, by request of the Acting Secretary of the Treasury, I introduce, for appropriate reference, a bill to amend title 14, United States Code, entitled "Coast Guard," to authorize the Coast Guard to sell supplies and furnish services not available from local sources to vessels and other watercraft to meet the necessities of such vessels and watercraft. I ask unanimous consent that the letter from the Acting Secretary of the Treasury, requesting the proposed legislation, be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The bill (S. 1367) to amend title 14, United States Code, entitled "Coast Guard," to authorize the Coast Guard to sell supplies and furnish services not available from local sources to vessels and other watercraft to meet the necessities of such vessels and watercraft, introduced by Mr. MAGNUSON, by request, was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

The letter presented by Mr. MAGNUSON is as follows:

MARCH 4, 1959.

The PRESIDENT OF THE SENATE:

SIR: There is transmitted herewith a draft of a proposed bill, "To amend title 14, United States Code, entitled 'Coast Guard,' to authorize the Coast Guard to sell supplies and furnish services not available from local sources to vessels and other watercraft to meet the necessities of such vessels and watercraft."

The purpose of the proposed legislation is to provide basic legislative authority similar to that possessed by the Navy in title 10, U.S.C. 7228, to authorize the Coast Guard to furnish necessary fuel, supplies, and services to vessels and watercraft that (1) are unable to procure the necessary supplies or services at their present location; and (2) are unable to proceed to the nearest port where they may be obtained without endangering the safety of the vessel or watercraft, the health and comfort of its personnel, or the safety of the property aboard.

The proposed legislation is not designed to impair or change the traditional giving of assistance and comfort by the Coast Guard to those found in distress whose pressing condition warrants immediate succor. It is intended rather to allow a reimbursement of costs to the Government in those cases where furnishing of a material or service is in the nature of a humanitarian gesture.

It would be appreciated if you would lay the proposed bill before the Senate. A similar bill has been transmitted to the Speaker of the House of Representatives.

The Department has been advised by the Bureau of the Budget that there is no objection to the submission of this proposed legislation to the Congress and that its enactment would be in accord with the program of the President.

Very truly yours,

A. GILMORE FLUES,
Acting Secretary of the Treasury.

SENIOR CITIZENS MONTH

Mr. JAVITS. Mr. President I introduce, for appropriate reference, a joint resolution requesting the President to proclaim the month of May every year as Senior Citizens Month during which appropriate ceremonies and activities will be held in recognition of the contribution and capabilities of the growing number of citizens age 60 and over in the United States.

Slowly but surely, the attitude of our Nation toward its more than 21 million senior citizens past 60 is itself coming of age. No longer in our mind's eye do we automatically exile the aging to a quiet and unproductive retirement. We cannot afford to, for the advances of medical science resulting in a lengthening life span for all of us indicate that by 1980, nearly 35 million Americans—15 percent of our total population—will be 60 years or over. It is highly probable that this vast human resource of experienced and trained manpower at many levels of business and industry will constitute an indispensable element in the U.S. economy which must expand tremendously to keep pace with the needs of its own population and the demands of world markets.

However, if our senior citizens are to have an opportunity to play their role to the full—if we are to erase the old habit of thinking of them in the past, rather than in the present and future tense—I believe we should direct national attention to the problems confronting the aging as well as their contributions, their needs as well as their capabilities. Therefore, I am introducing this joint resolution which asks the President to proclaim May each year as Senior Citizens Month.

In the next two decades, the proportion of our population past 60 will increase more than 65 percent. This

means that all of us must be made aware now of the need to initiate and support legislation and promote programs aimed at preventing discrimination because of age in employment—only a handful of States presently have such a law on their books—and of equal importance providing special housing for older people including those who have retired and often live on sharply reduced incomes. The Department of Health, Education, and Welfare reports that less than 5 percent of the housing problems of the aged have actually been met so far by existing State and Federal efforts.

However, some progress has been made in the area of broadened social security for the aged which was passed by Congress last year, although further steps need to be taken. In 1957 the Center for Aging Research in the National Institutes of Health was established, marking a real step forward.

The appropriate ceremonies and activities to be held by States and localities in celebration of Senior Citizens Month should also focus on the tremendous desire of our aging to expand their horizons, to train for new tasks and to cultivate fresh interests. Nearly 3 million Americans past the age of 50 are attending adult education courses, including more than 50,000 Americans over 75 years of age. Their deep interest in courses in civic and public affairs, general education, trade courses, and classes offering business, technical, and agricultural training reflect the healthy, vigorous outlook of the great majority of our senior citizens who wish to continue developing their manual skills and mental capacity to benefit themselves, their families, and their Nation.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred.

The joint resolution (S.J. Res. 75) to provide for the designation of the month of May of each year as Senior Citizens Month, introduced by Mr. JAVITS, was received, read twice by its title, and referred to the Committee on the Judiciary.

COMMISSION TO STUDY TELECOMMUNICATION RESOURCE

Mr. MAGNUSON. Mr. President, I introduce, for appropriate reference, a joint resolution to establish a commission to study and report on the United States telecommunication resource with special attention to the radio spectrum. I ask unanimous consent to have printed in the RECORD a letter from the Director, Office of Civil and Defense Mobilization, Executive Office of the President, relating to the proposed legislation.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred; and, without objection, the letter will be printed in the RECORD.

The joint resolution (S.J. Res. 76) to establish a commission to study and report on the United States telecommunication resource with special attention to the radio spectrum, introduced by Mr. MAGNUSON, was received, read twice by its title, and referred to the Committee on Interstate and Foreign Commerce.

The letter presented by Mr. MAGNUSON is as follows:

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF CIVIL AND DEFENSE MOBILIZATION,
Washington, D.C., March 3, 1959.

The Honorable RICHARD M. NIXON,
The President of the Senate,
Washington, D.C.

DEAR MR. PRESIDENT: The President, in his letter of March 3, 1959, recommended that the Congress establish a five-member commission on telecommunication to conduct a thorough and comprehensive study of certain problem areas of telecommunication management and allocation of radio frequencies which could not be examined by the Special Advisory Committee in the time available.

I believe that the President's purpose could be accomplished by the establishment of the recommended commission with the duty to conduct a thorough and comprehensive study of:

1. The role of the Federal Government in the management of the U.S. telecommunication resource.

2. The administrative organization for discharging the Government's responsibilities, with particular reference to the division of responsibility under the Communications Act of 1934, as amended, with a view to determining what changes, if any, should be made in the existing administrative organizations or statutes to improve the management of that resource.

3. The existing methods and procedures for allocating (apportioning) radio frequencies and bands of radio frequencies as between Federal Government and non-Federal Government users, with a view to determining what changes, if any, should be made to insure, insofar as practicable, the allocated frequencies may be utilized to the maximum degree possible, and to facilitate planning to take advantage of technological change in achieving maximum return from the use of the radio spectrum.

4. The existing national table of radio frequency allocations with respect to the apportionment of the various parts of the radio frequency spectrum as between Government and non-Government users, with a view to determining whether the current division of the spectrum serves the national interest to an appropriate degree and whether any frequency space (and if so, how much of such space) may, in the public interest, be reallocated to other uses.

The commission should be required to submit to the President for transmission to Congress within 12 months after the appointment and qualification of its members a report of the results of the study, together with such recommendations as the Commission may deem desirable and applicable. There is attached for your consideration a draft joint resolution designed to accomplish the foregoing.

I am addressing a similar letter to the Speaker of the House of Representatives.

Sincerely,

LEO A. HOEGH.

PRIORITY IN TEMPORARY EMPLOYMENT OF PERSONS IN TAKING 1960 CENSUS

Mr. HARTKE. Mr. President, the time is once again approaching when we must make preparations for taking a national census. Never before, Mr. President, has this Nation approached a decennial census task with so many unemployed, or so many people receiving social security benefits.

Mr. President, this is the responsibility of the executive branch to plan and execute the census. Those who do the actual interviewing and counting of heads throughout this great Nation are usually chosen because of certain political loyalties.

However, Mr. President, it is my observation that unemployment and social security coverage know no political bounds. In these trying days of making ends meet on a limited income we must take every possible step to make available employment opportunities to those persons receiving such incomes.

It is for this reason then, Mr. President, that I submit a concurrent resolution to express the sense of the Congress that the President take such action as is necessary to cause the Bureau of the Census to give priority to the recipients of social security when selecting individuals for temporary employment in connection with taking the 1960 census.

The PRESIDING OFFICER. The concurrent resolution will be received and appropriately referred.

The concurrent resolution (S. Con. Res. 15) was referred to the Committee on Post Office and Civil Service, as follows:

Resolved by the Senate (the House of Representatives concurring), That it is the sense of the Congress that the President take such action as may be necessary to cause the Bureau of the Census, in selecting individuals for temporary employment in connection with the taking of the 1960 census, to give priority, insofar as may be practicable without jeopardizing any priority that disabled veterans or others may now enjoy with respect to obtaining such employment, to applicants for such employment who are recipients of insurance benefits under title II of the Social Security Act; except that such priority shall not be accorded to such applicants in areas determined by the Secretary of Labor to be surplus-labor areas.

THE TEMPORARY UNEMPLOYMENT COMPENSATION ACT OF 1959—ADDITIONAL COSPONSORS OF BILL

Under authority of the order of the Senate of March 9, 1959, the names of Senators PASTORE and HARTKE were added as additional cosponsors of the bill (S. 1323) to authorize temporary unemployment benefits for individuals who exhaust their benefit rights under existing unemployment compensation laws, and for individuals who were employed in noncovered employment, introduced by Mr. MCNAMARA (for himself and other Senators) on March 9, 1959.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were

ordered to be printed in the RECORD, as follows:

By Mr. HUMPHREY:

Address entitled "The Need To Know," delivered by him at the national debate banquet held at Northwestern University, Evanston, Ill., on February 13, 1959.

By Mr. ENGLE:

Statement by him before Subcommittee on Education of the Committee on Labor and Public Welfare on proposals for Federal aid to education.

By Mr. TALMADGE:

Editorial entitled "Can TALMADGE Bail Out U.S. Farm Program?" and letter from him to the Wall Street Journal published on February 26, 1959.

NOTICE OF HEARING ON NOMINATION OF OGDEN ROGERS REID TO BE AMBASSADOR EXTRAORDINARY AND PLENIPOTENTIARY TO ISRAEL

Mr. FULBRIGHT. Mr. President, as chairman of the Committee on Foreign Relations, I desire to announce that the Senate today received the nomination of Ogden Rogers Reid, of New York, to be Ambassador Extraordinary and Plenipotentiary of the United States to Israel, vice Edward B. Lawson.

In accordance with the committee rule, the pending nomination may not be considered prior to the expiration of 6 days.

AUTHORIZATION OF APPROPRIATION TO THE NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

The Senate resumed the consideration of the bill (S. 1096) to authorize appropriation to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes.

Mr. JOHNSON of Texas. Mr. President, I have a very brief statement to make at this time. I am obliged to be absent from the Chamber for a time, and for that reason I make the statement now.

First of all, I should like to commend the very able, distinguished, and dedicated Senator from Mississippi [Mr. STENNIS] and the members of his subcommittee, who will very shortly present the bill in all its details. The members of the subcommittee are the very gracious and intelligent lady from Maine [Mrs. SMITH], the very able Senator from Ohio [Mr. YOUNG], the very able Senator from Iowa [Mr. MARTIN], the very able Senator from Connecticut [Mr. DODD], and the very able Senator from Nevada [Mr. CANNON].

This subcommittee, ably assisted by its professional staff member, Max Lehrer, has done a thorough and expeditious job in handling the NASA supplemental authorization bill for 1959. All the pertinent facts were developed during the committee's hearings and the important highlights are set forth clearly in the committee report.

In introducing this bill, the senior Senator from New Hampshire and I were anxious to see that the National Aeronautics and Space Administration was provided with necessary supplemental authorization for fiscal year 1959. To assure that there would be no delay in the program due to any lack of funds, the 1959 requirements were separated from the requirements for 1960. The speed and thoroughness with which the committee has done the job is therefore most gratifying.

In considering the authorizations requested for the National Aeronautics and Space Administration, there was complete agreement on the part of all members of the committee that we must be guided by only one standard—and that is to take whatever action is necessary in the national interest.

If that meant adding money, we were prepared to do so. If we could find places to economize, we were also prepared to do so.

The end result of the committee's consideration has been to recommend the authorization of supplemental appropriations for 1959 totaling $48,354,000. That is the exact amount requested.

This does not mean that the committee has simply rubber stamped the administration's request. The record of the detailed hearings and the comprehensive committee report amply demonstrate the thoroughness with which this supplemental request has been handled.

It was the considered judgment of the committee that the justifications presented for the 1959 supplemental authorization were sound and well supported.

Furthermore, while there are a number of problem areas that must be explored in connection with the 1960 program, the committee believes that the items covered by the 1959 supplemental authorization can be approved now with assurance that they will fit in with the program ultimately approved for 1960.

We may be sure that the Senator from Mississippi and his subcommittee will examine the 1960 NASA authorization request with the same completeness and dispatch with which they handled the 1959 bill. Before they complete their action, we hope they will have the benefit of the findings of the new subcommittee, headed by the junior Senator from Missouri, which we have appointed to look into Governmental Organization for Space Activities.

Mr. President, the Aeronautical and Space Sciences Committee has considered this bill with the widespread viewpoint of being as prudent as possible, yet providing fully for all essential requirements. This bill meets that test.

That was the recommendation of the subcommittee, and the subcommittee's recommendation was approved by each member of the full committee, of which I have the honor to be chairman.

The Aeronautical and Space Sciences Committee recommends that the bill be given favorable consideration, as reported. I shall await with great interest the details of the report to be presented by the distinguished chairman of the subcommittee.

The PRESIDENT pro tempore. Is there further morning business? If not, morning business is closed.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed a bill (H.R. 4282) to supplement and modify the act of May 24, 1828 (6 Stat. 383, ch. CXII), insofar as it relates to the corporate powers of the Sisters of the Visitation, of Georgetown in the District of Columbia, in which it requested the concurrence of the Senate.

HOUSE BILL REFERRED

The bill (H.R. 4282) to supplement and modify the act of May 24, 1828 (6 Stat. 383, ch. CXII), insofar as it relates to the corporate powers of the Sisters of the Visitation, of Georgetown in the District of Columbia, was read twice by its title and referred to the Committee on the District of Columbia.

AUTHORIZATION OF SUPPLEMENTAL APPROPRIATION FOR THE NATIONAL AERONAUTICS AND SPACE ADMINISTRATION FOR FISCAL YEAR 1959

The PRESIDENT pro tempore. The Chair lays before the Senate the unfinished business which is S. 1096.

The Senate resumed the consideration of the bill (S. 1096) to authorize appropriation to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes.

Mr. JOHNSON of Texas. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. STENNIS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. (Mr. MCGEE in the chair). Without objection, it is so ordered.

Mr. STENNIS. Mr. President, S. 1096 is the first bill which has been reported to the Senate concerning legislation for the National Aeronautics and Space Administration, which was created only last July 29. The hearings on the bill marked the first appearance before Congress of Dr. T. Keith Glennan and his able staff directly concerning proposed legislation for their Administration.

At the subcommittee hearing, there were present Dr. T. Keith Glennan, who is the Administrator; and also Dr. Hugh L. Dryden, the Deputy Administrator of NASA. Dr. Dryden was formerly Administrator of the NACA. Also present were Dr. Abe Silverstein, Director of

Space Flight Development; Mr. Edgar M. Cortright, chief of the advanced technology program; Dr. Homer E. Newell, Jr., Assistant Director for Space Sciences; Mr. DeMarquis D. Wyatt, Technical Assistant to the Director of Space Flight Development; and Mr. Ira H. Abbott, Assistant Director of Research—Aerodynamics and Flight Mechanics. I mention them by name because this is a new agency, and the presentations these gentlemen have made constitute their first presentation of proposed legislation. They have been organized as a staff and an administration for only a few months. We were very greatly and most favorably impressed with their ability, their dedication, and their very fine knowledge of the subject matter. The pioneer work they are doing seems to be well handled.

Mr. President, Senate bill 1096, which now is being considered by the Senate, authorizes supplemental appropriations totaling $48,354,000 for the National Aeronautics and Space Administration for the fiscal year 1959. Copies of the hearings, together with a detailed committee report, are on the desks of Senators. I propose to cover the highlights of the bill, for the record.

Mr. President, the record of the hearings, which includes the testimony given in this case, sheds very interesting light upon this little known subject. I refer particularly to the Appendix, beginning on page 135 of the hearings, which includes remarkable photographic reproductions of a number of exhibits with reference to space flight, illustrations of a man placed in the instrument, reproductions of weather satellite pictures, and related matter. I think these will be of special interest to the Members of Congress and to the general public.

At this time I should like to state that the bill and the report were unanimously recommended by the subcommittee on which it is my privilege to serve as chairman. The bill and report have also been approved unanimously by the Committee on Aeronautical and Space Sciences. So there are no real differences of opinion concerning the authorization covered by the bill.

In considering the bill, the committee addressed itself to three questions: First, are the projects sound and essential?; second, are the amounts requested enough to do the job?; third, are these amounts requested excessive at this time?

Before proceeding, it should be made clear that the bill covers only the supplemental requirements of NASA for the current fiscal year. While the bill incorporates the exact amounts requested by the Administration, the bill is not in the form originally requested. In January, the Administrator of NASA, with the approval of the Bureau of the Budget, submitted a draft authorization bill covering both the fiscal year 1959 and the fiscal year 1960, and requested its introduction. In view of the need for thorough examination and careful consideration of the overall space program proposed for the fiscal year 1960, and of the $485,300,000 requested for NASA for its part of that overall program, it was clear that combining the supplemental request for the fiscal year 1959 with the authorization for the fiscal year 1960 would involve needless delay for the former.

To assure expeditious provision of additional authorizations required for present needs, the Committee on Aeronautical and Space Sciences separated its consideration of NASA needs for 1959 from its requirements for 1960. On behalf of the committee, Senators JOHNSON and BRIDGES introduced Senate bill 1096, which covers NASA's supplemental needs for 1959; and it is on this bill that the committee has held its hearings.

Mr. President, I may point out that under present law, and for another year, all authorizations for NASA, not only for new construction, but also all authorizations, including those for salaries and expenses and research and development, have to come before the Senate.

As shown on page 1 of the committee report, the total authorization of $48,354,000 breaks down into three major categories, as follows:

Salaries and expenses	$3,354,000
Research and development	20,750,000
Construction and equipment	24,250,000

SALARIES AND EXPENSES

The $3,354,000 supplemental item for salaries and expenses is required to cover the cost of salary increases enacted last year, but for which no funds were requested by the executive branch. This is essentially a mathematical computation, and involves no policy issue.

RESEARCH AND DEVELOPMENT

The $20,750,000 supplemental for research and development is earmarked entirely for the manned space-flight program, known as project Mercury. These funds are needed in order to permit rapid progress to be made in developing our capability to put man into space.

At the present time, most of our research in the space field involves the development of incredibly complex devices to perform the complicated tasks necessary for the mastery of space. The capabilities and complexity of many of these devices stagger the imagination. Nevertheless, no machine devised can substitute for the analytical and decision-making abilities of the human mind. All our scientists are in agreement that space exploration and exploitation will require the participation of human beings, in order to cope with unanticipated problems and provide the flexibility of action that is beyond the capabilities of machines.

For this reason, we are engaged in an aggressive program to develop our capabilities for manned space flight. The 1959 budget for NASA already contains some $37,660,000 for project Mercury. The $20,750,000 additional authorization in this bill will increase the 1959 program to $58,400,000. The budget request for 1960 for project Mercury is $70 million; and Dr. Glennan, the Administrator of NASA, has testified:

> Before we have completed this first U.S. effort to put man into space, the bill will have exceeded $200 million.

It is clear that the development of capabilities for space flight will be an expensive proposition; and Dr. Glennan is to be commended for his candor in putting the facts before us. However, even the reference to a $200 million cost for completing the first U.S. effort to put man into space does not tell the full story.

If project Mercury is successful—and it is essential that it be successful—we can soon expect to be spending billions of dollars a year on various types of space vehicles, unless there is a drastic change in the world situation.

We must make no mistake about this: Space flight is of the highest importance and of the highest practicality. Very properly, NASA is stressing the peaceful, scientific aspects of space flight, of which project Mercury is the first major step.

Even more significant, however, are the military potentialities of successful space flight.

At the present time, our national security is primarily dependent upon our nuclear deterrents. With every passing day, we are placing more and more reliance on ballistic missiles. Of course, Soviet Russia has been doing the same thing. At best, we can hope that this will result in a nuclear standoff.

Consider, however, what would happen if any adversary outstripped the United States in the development of manned space vehicles that could deliver nuclear weapons. The effect on our security could be disastrous. For this reason, we must continue to press forward with the development of manned space vehicles.

On page 2 of the report will be found a breakdown of the $20,750,000 requested for project Mercury in 1959. Four million dollars of this is for the design, engineering, and early construction phases of a program involving the delivery of 12 satellite capsule systems.

On page 146 of the hearings on the pending bill will be found a picture of just what a capsule system is.

Sixteen million dollars is for four Redstone and four Atlas boosters, which will be used for short-range test and qualification flights. Two hundred thousand dollars is for data acquisition and handling equipment, $500,000 is for simulators and other training equipment, and $50,000 is for miscellaneous research and development costs.

CONSTRUCTION AND EQUIPMENT

The third principal segment covered by the bill is for $24,250,000 for construction and equipment. As shown on page 2 of the report, this, in turn, consists of three major items: $9,000,000 is for expansion and relocation of facilities at the Jet Propulsion Laboratory, Pasadena, Calif.; $12,050,000 will provide for the expansion of tracking facilities needed to cover the satellites and space

vehicles to be flown during the next 12 to 18 months; $3,200,000 will cover the cost of additional propulsion development facilities needed for the development and test of the 1-million-pound-thrust, single-chamber rocket engine.

Since the committee report and the hearings cover the individual items covered by these amounts in considerable detail, I will not attempt to go into them at this time. I will, however, touch upon a few of the additional highlights. For example, page 3 of the report gives a breakdown of the $9 million required for relocation and expansion of the facilities at the Jet Propulsion Laboratory, and the individual line items covered by these amounts are listed on pages 35 through 37 of the report. The committee went into this in some detail, and the hearings developed the fact that this expansion was necessary to permit the outstanding work being done at the Jet Propulsion Laboratory to continue.

This is another story, Mr. President, of very small beginnings of the Jet Propulsion Laboratory at the site in Pasadena, leading to a greatly expanding program and new developments. Now, in connection with the present need, the laboratory must be expanded, the grounds must be enlarged, and additional buildings must be constructed.

The $12,050,000 for tracking facilities is discussed on pages 3, 4, and 5 of the report. A summary of the amounts requested is shown on page 5 and the specific line items are listed on page 37 of the report.

Mr. President, with reference to many of our warning systems, as a member of the Armed Services Committee, I am familiar, at least to a degree, with the very expensive installations that are necessary for the different systems, with the possibility of duplication as between those programs and other programs, and the possibility of duplication in the new programs for the development of satellite and space vehicles. We are certainly trying to avoid the duplication of systems or the duplication of expenditures.

The additional tracking facilities will involve nine new tracking sites. Only two of these are in the continental United States, while the remaining sites are planned to be located in Alaska, Newfoundland, Europe, Australia, South Africa, Hawaii, and Bermuda. Senators will all be interested to know that it is hoped to locate these new stations either on existing United States property or on leased land, so that no new land purchases will be involved. Each of the tracking stations will require an area of some 30 to 50 acres for initial installation, plus an additional 30 to 50 acres to allow for possible future expansion. However, these stations will not require many people to operate them. Present plans call for the employment of an average of 20 to 25 persons at each of these tracking stations.

Even though the number of personnel seems small—and it is hoped it will be kept small—it illustrates the ever-increasing need of money to operate our present military systems, in which more and more areas of development, more and more instruments, and more and more manpower, are required. Our concern is not so much the initial cost of the project, which is large, as will be the cost of operations in years to come.

On pages 5 through 10, the committee report devotes considerable space to the $3,200,000 requested for propulsion development facilities required for the 1 million pound thrust engine—a highly important part of our entire space program.

Simply stated, the committee encountered what appears to be some confusion in the assignment of funding responsibility between the various governmental agencies involved in the space program. In view of the urgent need for providing funds for these development facilities now, the committee has not attempted to resolve the basic problems involved, since considerable time will be required to do so. The committee is satisfied, however, that an appropriate interim solution has been effected, and intends to review the situation in considerable detail in connection with consideration of the 1960 authorization request.

While the committee did not examine the 1960 NASA program in any detail, it did consider it sufficiently to assure that the items and amounts recommended for 1959 were necessary and were consistent with the overall program planned for 1960. Needless to say, the space program involves many uncertainties, and any estimates of timing and costs in this area are subject to some variation.

Mr. President, the National Aeronautics and Space Administration did not come into being in time for it to have available the usual number of weeks and months which are considered necessary, as a minimum, to give an agency an opportunity to prepare its budget properly.

However, we believe the hearings demonstrate that the program presented for 1959 is sound and well conceived, and that the cost estimates are as reliable as is to be expected in a program of this sort.

As indicated at the outset of my remarks, the committee was concerned with three questions: First, are these sound and essential projects; second, are the amounts requested enough to do the job; and, third, are the amounts requested excessive at this time?

The testimony given to the subcommittee leaves no doubt about the essentiality of the items covered by this supplemental authorization bill.

With respect to the adequacy of funds, Dr. Glennan, the Administrator of NASA, has stated categorically that the supplemental authorization bill provides the amounts needed to do the job and that he could see no additional funding requirements for fiscal year 1959.

With respect to the need for the funds, the committee examined the programs in some detail and could find no basis for either reducing or deferring any of the amounts requested.

DUPLICATION

We are all aware of the waste and unnecessary expenditure of funds that has arisen from unnecessary duplication in the military missile programs. We must not permit these same mistakes to be made in the new missile programs. To meet this situation, the chairman of the Aeronautical and Space Sciences Committee, the distinguished majority leader, has appointed a Subcommittee on Governmental Organization for Space Activities, under the chairmanship of the distinguished junior Senator from Missouri. The findings of this subcommittee will be very helpful in acting on the authorizations for fiscal year 1960.

In considering the 1959 supplemental authorizations, the committee was concerned about any possible duplication with the military departments with respect to any of the items covered by the supplemental request. Accordingly, this was gone into in considerable detail in the subcommittee hearings. In addition, to assure that there would be no possible misunderstanding in this matter, a letter was sent to the Secretary of Defense and each of the service Secretaries, asking them to examine the record and to inform the committee whether they agreed with the NASA witnesses that there was no such duplication. The Secretary of Defense and each of the military departments affirmed that no such duplication existed. These letters appear on pages 25 through 27 of the report, and a number of significant excerpts from the hearings are shown on pages 13 to 18 of the report. I mention this in some detail because I believe this information will be helpful in answering letters from the public expressing their valid concern about possible duplication in this field.

VALUE OF SPACE PROGRAM

In view of the large prospective costs involved in the space program—involving the expenditure of billions of dollars per year within the next few years—we must obviously consider whether such expenditures are justified. I have already mentioned, in connection with project Mercury, one overriding aspect of the potential military significance of space vehicles. It is important to note that there are also important nonmilitary advantages that may result from the space program. Direct advantages, involving demonstrable benefits involving hundreds of millions and perhaps billions of dollars, can be expected from the application of space technology to such areas as meteorology, communications, and navigation. Satellites may also play an important role in the detection of high altitude nuclear explosions, thus making a vital contribution to our national security. In order to provide material that might be useful in answering public questions on this matter, the report contains, on pages 20 through 24, a number of excerpts from the testimony before the subcommittee concerning the value of the space program.

Mr. President, we emphasize this at this point because it is a new program, and there needs to be a further dissemination of knowledge and information as to the practical aspects and practical values, military as well as nonmilitary.

For example, there is this statement by Dr. Glennan quoted on page 21 of the report:

> The cost of our space programs will continue, year after year, and it will increase, year by year.
>
> I couldn't begin to say precisely what the payoffs will be, or how soon they will be realized. We expect that in the relatively near future satellites will be widely used in meteorology—witness this Vanguard II cloud cover experiment—and in worldwide communications.
>
> Experts in those fields have estimated that the value of such advances will be counted in the billions of dollars.

On that same page of the report, there is quoted the following statement by Dr. Glennan:

> The things that we expect to find in those areas, which thus far have been identified as possibly to be of use commercially or in a military sense, such as the weather forecasting business, many people have estimated that these would pay many times over the cost of the programs on which we are embarking.
>
> Communications the same way. It may, indeed, be some way, the only way, in which we will be able to handle communications in the future may be through satellite channels.
>
> The return in general scientific information is never possible of pricing, but throughout the time that we have been pursuing scientific investigations of this sort, we have always found that there was a payoff at some point along the line.

The Vanguard II satellite which was launched on February 17 was the first of a series of satellite experiments designed to obtain truly worldwide weather observations. I should like to read a portion of the testimony given to the subcommittee by Mr. Edgar Cortright in this planned use of satellites. This appears on pages 60 and 61 of the subcommittee hearings:

> Now the reason the earth satellite will be so beneficial to meteorology, we feel, is twofold: One, it enables us for the first time to get truly worldwide weather observations, and secondly, by virtue of its position above the earth's atmosphere, the satellite will make possible measurements which have never been possible before.
>
> Now, some of these measurements are indicated in the first chart here. They include, most obviously, observations of the clouds over the earth's surface. From these observations we hope to be able to determine the extent of cloud coverage, the types of clouds, their layers, thicknesses, heights above the earth, and that sort of thing.
>
> And then we would hope to be able to measure precipitation, associated with the clouds, and the location of the thunderstorms under the blanket of clouds by the electrical disturbances resulting from lightning flashes.
>
> Another set of measurements would be directed to the determination of temperatures of the stratosphere, tropopause, cloud tops, and surface of the earth. I think it is interesting to point out here that we feel ocean currents may be tracked by surface temperatures, and these are related to weather, in general.
>
> There is also hope of being able to determine some of the constituents of the atmosphere, and their distribuiton, such as water vapor, ozone, and carbon dioxide.
>
> Then there is a whole set of experiments which can be related to what is frequently referred to as the heat budget of the earth. This is essentially the local imbalance between incoming solar radiation, reflected solar radiation, and outgoing radiation from the atmosphere and the earth.
>
> Now, all of these measurements are detected by radiation sensing devices such as television cameras, radar, photocells, and thermistor bolometers.
>
> There has been one practical demonstration of this utility.
>
> A photograph was obtained from a rocket a hundred miles over White Sands, and in the outer region of the photograph was a rather severe cyclonic disturbance building up over the gulf coast of Texas. Now, interestingly enough, the Weather Bureau stations in the area were not able to detect this disturbance, and yet the high altitude photograph shows it very clearly. This disturbance did develop into a severe one causing considerable damage from heavy rainfall.

It is obvious that improved knowledge of weather conditions will be important from the viewpoint of increasing the comfort and safety of the American people. Perhaps not as obvious is the fact that it will provide definite benefits which can be measured in dollars and cents, particularly in the field of agriculture.

Before concluding, Mr. President, I should like to invite my colleagues' attention to the fact that the hearings contain a series of striking pictures and illustrations of a number of significant elements of the space program. This is contained in an appendix to the hearings which starts on page 135. Many of these pictures have not been published previously and will be of considerable interest to the public, as well as to the members of this body.

In conclusion, Mr. President, I should like to express my appreciation to the other members of the subcommittee, the Senator from Maine [Mrs. SMITH], the Senator from Ohio [Mr. YOUNG], the Senator from Iowa [Mr. MARTIN], the Senator from Connecticut [Mr. DODD], and the Senator from Nevada [Mr. CANNON].

I think every single one of the members of the subcommittee was present at each of the hearings, except for a part of one of the hearings when one Member had to be away. Every member was present at the markup of the bill, as I recall; and every member except one, who was unavoidably detained, was present for the full committee consideration of the bill. I especially appreciate their fine attitudes and their wonderful help in grasping this subject, in writing up the bill, and in presenting it to the full committee and presenting it today to the Senate.

Mr. President, the Committee on Aeronautical and Space Sciences recommends the bill be given favorable consideration, as reported.

Mrs. SMITH. Mr. President——

The PRESIDING OFFICER (Mr. BARTLETT in the chair). The Senator from Maine is recognized.

Mrs. SMITH. Mr. President, the distinguished chairman of the subcommittee has made his usual able and comprehensive presentation of the pending bill. I see no need, therefore, to go into any further detail on this matter.

I do want to say that I am in complete accord with the remarks of the chairman, and join with the other members of the committee in recommending approval of the bill as presented to the Senate.

The committee has made a rather painstaking review of the items covered in the supplemental authorization, and concluded that the programs which were presented merited the wholehearted support of the Congress and the American people. We must be frank to say, however, that it is impossible for any individual to state categorically that each and every item is of equal soundness and that each and every cost estimate is correct.

We are all keenly aware of the rapid progress and change which are occurring in all areas of technology today. In no field is the rapid change more pronounced than in the area of space activities.

As is customary in hearings of this sort, the witnesses from NASA were sworn in at the beginning of their testimony. Dr. Homer E. Newell, the Assistant Director for Space Sciences of NASA, prefaced his testimony with these remarks:

> Now when we first came in here you asked all of us to swear to tell you the truth. One of the difficulties in this discussion is going to be that we do not always know the truth.

Obviously when we are dealing in a field in which even the most competent scientists cannot be sure of what the facts are, the individual members of the committee have no basis for interposing technical judgments of their own. We can, however, judge the competence of the witnesses appearing before us, and examine the rationale and methodology underlying the estimates their programs presented to us. This we have done.

I am sure I speak for the committee as a whole when I say that we were encouraged and impressed by the ability and the candor of Dr. Glennan, Dr. Dryden, Dr. Silverstein, and the other witnesses appearing before our committee. We believe that the program which has been presented is logical and has been prepared carefully. The witnesses have indicated that they recognize the need for getting the maximum return from every dollar spent on this program.

Mr. YOUNG of Ohio. Mr. President, we on the NASA authorization subcommittee feel that we are very fortunate indeed in having the distinguished Senator from Mississippi as chairman of our subcommittee. What I say today will be brief, and to the point, I hope.

At the outset I wish to express my complete agreement with the remarks made by the Senator from Mississippi. Also, I listened with great interest and with complete agreement to the remarks

of the distinguished Senator from Maine [Mrs. SMITH].

On our authorization subcommittee, as well as in the full Committee on Aeronautical and Space Sciences, of course politics cuts no figure whatever. We are all trying to render real and needed service to our country in this grim period of international anarchy.

The bill involves a total of $48,354,000. However, this is only a downpayment on a program that will inevitably grow in size, cost and importance in the years ahead.

The Senator from Mississippi has stated that in the not-too-distant future we may expect to be spending billions of dollars a year for space activities. This is certainly a sobering thought.

What the Senator from Mississippi and the Senator from Maine have had to say certainly furnishes a subject for sober thought on the part of all of us, as well as on the part of the American people as a whole.

In the very short time that it has been my privilege to serve as a member of the Space Committee, I have been asked a number of times: "Why spend money on space activities when there are so many important things to do here in the United States?" I may have asked the same question myself at the outset.

The distinguished Senator from Mississippi has already mentioned a number of the military and nonmilitary applications of satellites and other space vehicles. Informed estimates have been made that the increased knowledge about the weather that may be obtained through meteorological satellites may result in ultimate savings of billions of dollars—not millions, but billions. Similarly, any price tag put on the potential value of communications satellites at this time would probably be far too small.

Despite some of the obvious benefits from the space program that we can see now, I do not believe we can consider the problem on this narrow basis. In this connection, I should like to quote from a colloquy between the distinguished Senator from Nevada [Mr. CANNON] and Dr. Dryden, which appears on pages 53 and 54 of the hearings:

Senator CANNON. Doctor, yesterday you heard me ask Dr. Glennan about the value of this program in view of the fact that the American public is going to be very vitally concerned with having approximately a billion dollars a year spent on a space program.

Dr. DRYDEN. Yes, Senator.

Senator CANNON. In view of budgetary problems at the present, I would like to have you state your views as to the value of this program, compared to its cost, in our overall budget picture today.

Dr. DRYDEN. Yes, sir.

I think I mentioned that the situation is a little bit like determining the value of the airplane at the time of the Wright brothers. We have the utmost confidence, based on the past, if nothing more, that man is going to be in space, find useful things to do in space; that we must begin to study the problems associated with that.

This project, in my mind, will advance the general technology of space at a faster rate than almost anything else that I can think of.

If you do not have such an integrating project, what you get engaged in is a lot of research in various directions but not concentrated on accomplishing a mission, and we found in the X–15, for example, that this enabled a much greater integration and advance in the technology of high-speed flight than you could get by all sorts of general research.

Now, basic research is necessary, but this must be followed by research directed toward a mission to work out the applied research and the development problems, and this, I think, is one of the great returns which will come.

A secondary result of all of this work already reflected rather widely throughout our industrial structure or the developments in materials, devices, fabricating methods which come because this is at the forefront of our technology. The most difficult jobs that you could possibly think of.

Take the rapid development of transistorized and miniaturized equipment. To do these early satellites you have to make those developments.

Now as a byproduct, this has given you hearing aids that are in your spectacles. I do not mean to imply the space program has done this. The electronics program which was certainly stimulated by our missile program in this direction, has brought you such devices, and very small radios and all the rest of it.

The things developed in our ballistic missile program and space program have a tremendous influence in directions that you would not think of at the start.

Now, from a purely practical point of view, as I mentioned in the beginning, I do not think you could go to a banker and sell him on security and prove to him that you know just how he is going to get his money back. But again I say, if you look back at the airplane you could not have proved, in fact I mention that as a result of the lack of faith in our own country, the airplane was taken abroad and developed in other countries, and we entered the First World War without an airplane of our own and we had to buy them from other countries.

Now, you couldn't prove at that time the industry that you see today. No one looking at the wire and wood over here in the Smithsonian could contemplate, it is amazing now, that in 50 years you have gone from that to the big bombers, to the jet transports that we see today.

I think there is every confidence that space is going the same way. I don't know how fast; how fast depends on how much money you put into it.

I think Dr. Glennan made this point: that if it were not for the competitive aspect of the situation, perhaps it wouldn't go this fast, it wouldn't put this much money into it, but you would go in this direction, and if we don't someone else is.

Of course I refer directly to the Soviet Union. I emphasize Dr. Dryden's last few words: "If we don't, someone else is." This is really the heart of the problem. This program will be increasingly costly—but it would be even more costly to us as a Nation if we failed to devote our resources, skill, and determination to the new and vital dimension of space.

In short, we have no other alternative but to pursue this program with all the energy at our command. Since this is so, we must also assure that costly duplication is avoided, so that every dollar invested in the program brings us a full dollar's return.

Obviously we must promote and accelerate our space program so that we shall not lag behind.

In spite of the obvious benefits from the space program apparent to all, I suggest we should not consider the problem on a narrow basis.

Our military potential is only one of a variety of elements upon which the safety of this Nation and its people depends.

Today, in our efforts to halt the aggression of the Soviet Union and of Soviet expansion throughout the world, we find ourselves engaged in a tremendous struggle for the minds of mankind.

More than half of the people of this world live in abject poverty and in ignorance.

Every night more than half of the world's people go to bed hungry.

To such hundreds of millions of people we should demonstrate that our way of life and our system of government is the way of liberty and peace in this troubled world.

This is an age of challenge. This Nation must be in the forefront of all the nations of the world in fields of science.

We take a forward step by today voting in the affirmative and passing this bill. In fact, we have no alternative but to pursue this program with all the energy at our command.

Mr. CANNON. Mr. President, I very heartily concur with the report of the committee on the NASA authorization bill and with the explanation of the committee's action set forth so lucidly by the distinguished chairman of the subcommittee, the Senator from Mississippi [Mr. STENNIS]. I consider it a privilege to be associated with him and the other members of the subcommittee in dealing with this important field.

I do not intend to discuss further the various specific items covered by the $48,354,000 authorized by this bill, since they have already been covered fully and adequately. I would like to comment briefly, however, on one particular matter that I believe will be of interest to the Members of this body.

The $9 million authorized for relocation and expansion of the Jet Propulsion Laboratories at Pasadena, Calif., includes $375,000 for the acquisition of approximately 68 acres of land. The committee hearings developed the fact that 7 acres of this land is proposed to be acquired at a cost of $75,000 in order to prevent it from being used for commercial or housing purposes when a current lease expires on July 1, 1959. This is the last parcel of land contiguous to the site of the Jet Propulsion Laboratory that could be used for future expansion.

This proposed transaction raised in the committee's mind the question of the future role of the Jet Propulsion Laboratory. Certainly we did not want to be in the position of investing $9 million at this site now, only to find in a few years that the Laboratory could no longer function because of its inability to expand further, so that it would then be necessary to scrap our investment and rebuild at a new site.

The committee has been assured that this will not be the case. With these land acquisitions, the Jet Propulsion Laboratory will be able to continue its outstanding work in the years ahead.

There will be certain experiments, particularly those involving hazardous types of fuels, which will not be able to be carried out at the site of the Jet Propulsion Laboratory. However, the 1960 program for NASA includes provision for a new propulsion development facility, remote from urban areas, which will be used for research involving toxic high energy propellants. Even though such experiments will be carried out at this new, and as yet undetermined, location, the NASA expects to continue important work at the present site of the Jet Propulsion Laboratory for many years to come.

I very heartily concur in the report presented by the able chairman of the subcommittee and urge immediate action on the bill.

Mr. DODD. Mr. President, my remarks will be brief, since the basic considerations involved in the bill before us have already been presented fully and clearly by the very able chairman of the subcommittee, the Senator from Mississippi [Mr. STENNIS] and by the succeeding speakers.

To a very large extent, I believe that the unanimity with which the subcommittee has spoken and given its approval to the bill is an expression of confidence in our chairman.

As a member of the subcommittee that considered and unanimously approved S. 1096, I should like to express my support of this measure and join in the remarks that have been made by the other members of the committee.

The unanimous committee vote in favor of the NASA supplemental authorization bill was an expression of Senate determination to give our scientists all the help we can give them as they struggle with the problems of outer space technology.

We are not scientists. We have no yardstick by which to measure the needs of this unprecedented program. But we do know of the fearful responsibility which rests upon the staff of NASA. And we know the men of NASA. We have had a chance to observe them and to talk with them, and to hear their testimony. I believe I speak for all members of the subcommittee when I say that they have inspired confidence in us. They have our confidence in their ability and their dedication.

Our space program, as has been suggested, is an indispensable element in our national survival in this awesome era, when one technological development might well spell freedom or slavery for this planet.

But, more than that, we dimly see the broad vistas of peaceful progress that conquest and exploration of outer space open before us.

We all want to help this program in every way possible.

Mention has already been made of the committee's concern about possible duplication in space activities. This is something that cannot be stressed too strongly. While we must invest the amounts that are necessary to pursue these important space programs, we cannot afford the luxury of waste and duplication.

Because of the doubts as to whether the various space programs are organized properly to avoid costly duplication, the distinguished majority leader has created a new Subcommittee on Governmental Organization for Space Activities to study and review this problem area. I consider it a privilege to serve on this new subcommittee.

Dr. Wernher von Braun pointed out in a recent hearing that it is time to be rethinking our national philosophy as regards space exploration. Up to now, space exploration has been a sort of by-product of our ballistic missiles programs. We have now reached the point where the space program must be set up on its own feet with an organization and appropriations equal to its great task.

But reorganization lies in the future. Right now we can best help by giving to the men of the National Aeronautics and Space Administration an expression of our confidence and our encouragement, and by voting the money which this agency needs for the next few months.

I join with the Senator from Mississippi [Mr. STENNIS], the chairman of our subcommittee, and my other distinguished colleagues, in urging the passage of this measure.

TRAGIC CONDITIONS OF UNEMPLOYMENT IN WEST VIRGINIA

Mr. BYRD of West Virginia. Mr. President, the matter about which I rise to speak is one of crucial importance to our Nation, and one which, although often brought to the attention of Congress, I feel needs to be raised again and again until it is eventually resolved.

I refer to the tragic and disgraceful economic conditions which have settled upon America's regions of chronic unemployment.

On last Wednesday, Thursday, and Friday, I returned to my State of West Virginia in order to hold public hearings, as a member of the Senate Subcommittee on Production and Stabilization, on aid-to-depressed-areas legislation. For 3 days, from morning until late evening, the subcommittee viewed a grim and disheartening picture of the suffering which has come to once-prosperous coal-mining areas, glass producing cities, agricultural counties, and other portions of the State. Even though the desperation of the unemployed has long been known to me, I came away more appalled than ever that such senseless and purposeless hardship could be allowed to exist in our booming, thriving Nation.

In the course of the hearings, the evidence of the painful dilemma of economic desperation was repeated again and again. The bleak story was told and retold of how thousands of strong-bodied men who are able to work and eager to work are being forced to stand idle and watch themselves and their families sink deeper into terrible destitution.

Although this disheartening situation exists in many scattered regions of the United States today, I should like to present just the West Virginia picture, as it was exhibited to me at the hearings.

I may say, Mr. President, that I was fortunate in having attending with me at the hearings the distinguished senior Senator from West Virginia [Mr. RANDOLPH], who is a cosponsor of S. 722, introduced by the Senator from Illinois [Mr. DOUGLAS] and cosponsored by 37 additional Senators. I was very much pleased that the senior Senator from West Virginia could attend the hearings for the 2 full days. He participated in the questioning of the witnesses and made statements concerning the proposed legislation. I am confident that he will verify the conditions which I am about to reveal.

Government officials testified that an estimated 89,700 West Virginians have lost their jobs and have been unable to find new work. This means that 13.6 percent of West Virginia's working men and women—or more than one person out of every eight—is without a means of livelihood. Of this large number, a total of 53,331 men and women are now receiving small unemployment benefits of one sort or another under various programs, while the rest—who have exhausted their benefits or could not qualify for them in the first place—are receiving nothing at all. This high rate of unemployment, coupled with a serious degree of only part-time employment in many of the industries, has had agonizing, far-reaching effects which have touched many corners of the State's way of life. Welfare officials testified that a total of 278,000 West Virginians are receiving surplus Government foods in an effort to stave off hunger, even though these commodities provide only a fraction of the minimum nutritional needs. Business officials testified that retail sales have slumped considerably—as much as 35 percent in some items in some cities—causing the pinch of declining profits to be felt by many, and causing hundreds of smaller business establishments to go under. Law enforcement authorities testified that lawlessness and theft of food and clothing are growing in the seriously affected areas. Welfare officials said doctors are finding rickets among children; and other diseases long thought to have been eradicated are making their reappearance. One welfare worker reported that in many instances the fathers of families had deserted the families, in order that the wives and children would become eligible for welfare support under the State public assistance program. One sheriff testified that many men in his county are turning to moonshining as a means of earning a meager income. Throughout the State, witnesses said, time and again, that the blight which has come to their respective communities is as critical as that during the terrible depression of the 1930's. Even some cases of actual starvation were reported.

Mr. President, this is nearly a life or death matter in those stricken, helpless communities. It is a matter of children going hungry to school in the morning, and then finding that the school hot-lunch program has been canceled because

too few youngsters are able to pay for it. It is a matter of conscientious, hard-working couples who have spent much of their lives paying for a home suddenly seeing that home lost to them. It is a matter of families watching their automobiles, appliances, and furniture being repossessed or sold in a desperate effort to obtain money for day-to-day necessities.

Therefore, Mr. President, I feel that it is imperative that bold steps—both emergency and long range—be carried through to alleviate these evil conditions, before the damage now being felt is imparted to coming generations.

On the basis of those hearings, it is my belief that this grave menace must be attacked from two fronts. First we must concentrate on emergency measures to sustain the unfortunate persons who are caught in the jaws of unemployment. Second, we must work for long-range measures that will provide a healthy rebuilding in the economic sore spots, and will prevent future recurrences of hardship. This will give us a one-two approach to the problem, allowing us to aid the stricken areas now, and giving them a chance for better conditions in the future.

Among the emergency measures now before us which I feel are desperately needed by the regions of hardship are the following:

First, an extension of the Government's temporary unemployment compensation program. This vital program, which presently is saving hundreds of thousands of American families from serious hunger, is due to expire March 31, just 3 weeks from today. My senior colleague from West Virginia [Mr. RANDOLPH] and I have joined with other Senators in cosponsoring proposed legislation which will permit a continuation of this very vital legislation.

Mr. President, if the Congress allows this most necessary relief effort to lapse, it will stifle the hopes of these families, and perhaps will prolong the economic recession in their regions.

Second, I believe that the emergency foods bill which my colleague from West Virginia [Mr. RANDOLPH] and I, together with 24 other Senators, have introduced, is a badly needed emergency measure. The 278,000 West Virginians to whom I referred earlier are only a portion of the 5.2 million Americans who are dependent upon Government surplus commodities; and these commodities provide only a meager fraction of the nutritional needs for even the lowest standards of health. By permitting the purchase of additional, more varied, foods to supplement the diets of these people, we shall be insuring that they and their children will not fall victim to the infirmities of the impoverished, backward countries of the world.

Third, another emergency measure that is sorely needed is one for a public works program that will create jobs for the idle men in our depressed areas. If we can put them to work on projects to serve their fellow citizens, we shall not only utilize for good ends their now unused abilities, but we shall also make it possible for them to support their families without the stultifying onus of receiving free handouts.

These are some of the temporary, emergency steps that may be taken, Mr. President. On a long-range, lasting basis, however, it is my belief—and I am sure that my senior colleague from West Virginia [Mr. RANDOLPH] joins me in this—that the salvation of our Nation's depressed areas must lie in area redevelopment legislation such as that now being considered by the Banking and Currency Committee's Subcommittee on Production and Stabilization.

It is evident that the immediate need for this type of legislation is recognized throughout Congress, judging by the large number of bills for area redevelopment which have been introduced. But it is my belief that only the most forceful and far-reaching of the measures is adequate to deal with the tremendous task at hand. Thus it is that I have given my support and cosponsorship to the most ambitious of the bills—that produced by the genius and insight of the Senator from Illinois [Mr. DOUGLAS]. I believe that, if our areas of economic blight are ever to be restored to health, it must be done through a bold program which will bring in new industries and new jobs and will stimulate private initiative and private enterprise in the depressed areas, as only the Douglas bill is equipped to do.

It is interesting to note that, among the learned leaders of my State who were given opportunity to study the various area-redevelopment proposals which have been made, virtually all of them—and I speak of the Governor of West Virginia, the director of the department of employment security, the director of the department of public assistance, and the many other government officials of West Virginia—gave unanimous endorsement to the Douglas bill in their testimony before the hearings in West Virginia last week. These men, who live with this problem every day, evinced nearly unanimous belief that only the strongest and most energetic program would be capable of meeting the needs of a region that has suffered economic atrophy due to a long-term decline in employment.

In conclusion, Mr. President, I wish to reemphasize that the need is so great in our Nation's areas of chronic unemployment that it can be met only by a forceful program of both emergency and long-range measures. All these steps, and perhaps many others, must be taken without delay if America is to aid her citizens who have fallen victim to unemployment, and who have been allowed to languish all too long in their plight.

Mr. RANDOLPH. Mr. President, will my esteemed colleague from West Virginia yield?

Mr. BYRD of West Virginia. Mr. President, it is a pleasure for me to yield to the senior Senator from West Virginia.

Mr. RANDOLPH. Mr. President, if I were to indulge in a pleasantry, it would not be appropriate. Sometimes, when reading the CONGRESSIONAL RECORD, and finding that a Senator has spoken well of another, one is inclined to feel that such a remark falls in the category of courtesy or easy compliment. But I assure my colleagues on both sides of the aisle that last week it was my privilege and my responsibility to associate myself with the able junior Senator from West Virginia [Mr. BYRD]. He conducted the hearings to which he has made reference in the course of his remarks here today—remarks not only of clarity, but also of the utmost challenge.

Mr. President, the urgency of this problem cannot be disregarded. Earlier, in this Chamber, we heard the statement of the Senator from Ohio [Mr. YOUNG], who spoke about the starvation or near starvation of millions of people throughout the earth.

Let me say—with no attempt to overdramatize the seriousness of the situation—that in the valleys and on the hillsides of our State of West Virginia, people are desperately in need of food.

My colleague [Mr. BYRD] will recall the testimony of Sheriff Howard Chambers of Mingo County. His language was forthright as he told of the plight of the people in that area. He indicated to us that 41 percent of the population of that county is wholly dependent upon surplus food commodities—provided free of charge by the Federal Government—in order to maintain a bare existence.

I congratulate my colleague from West Virginia [Mr. BYRD] on bringing to the attention of the Senate the acuteness of this situation.

Mr. President, the pitiful plight of these West Virginians and the dire distress in which they find themselves are matters which my colleague well understands.

I am sure that if he desires to take the time to do so—although, under the allotment of time we have today for debate on this subject, the time is running out—my colleague could appropriately state that he was reared in an area of mining production, where coal has been the basic industry. I am sure that the conditions of the 1930's are being matched and even exceeded by the more critical conditions in 1959.

Would my colleague care to comment about the present problem, as compared with that in the 1930's, in that section of West Virginia with which he has been closely associated?

Mr. BYRD of West Virginia. Mr. President, I thank the senior Senator from West Virginia for his contribution.

In answer to his suggestion that I comment on the conditions which exist today, as compared with those of almost 30 years ago, at a time when the Federal Government quickly instituted programs to absorb the unemployment and to put people to work and to spare the suffering millions from continued penury, poverty, and want, I wish only to say that I grew up in the home of a coal miner. I came to know early in life what it is to do without the everyday necessities. I knew what it was, in those days, to wear tennis shoes in the snow, and to see Christmas come and go without a stick of candy in the house.

Somehow or other, there did not seem to exist in those blighted communities,

at that time in our Nation's history, the desperation, the feeling of frustration, that we find today in West Virginia.

I think I can truthfully say, Mr. President, that in West Virginia today there are communities and people who have sunk to a lower position, insofar as the standard of living is concerned, than they ever endured in those days of the early 1930's.

I am afraid, Mr. President, that we cannot readily assess the disastrous and the permanent effects which these conditions will have upon our people. They contribute to a lowering of the morale, to a lowering of morality, and to a lowering of the mentality of the next generation.

We are concerned today because the Russians are seizing the lead in the scientific race. Yet here in our own country children are going to school hungry. And I would only ask this question: What can a child's mind concentrate upon when his stomach is empty, and when he remembers that his baby brother or baby sister at home is hungry, that his father is out of work, or that his father has even deserted the family in order that the family can qualify under the State program for public assistance? What is this doing to the next generation? How can our children learn the rudiments of science, how can they memorize the multiplication table, what care they about Gresham's law or Boyle's law, or what interest have they in Newton's theory of gravitation when they are hungry and ill-clothed?

I am grateful for the opportunity I have been given to go into these communities with the Subcommittee on Production and Stabilization, joined by my colleague, the Senator from West Virginia, to talk to these people, and to give them an opportunity to give their testimony in behalf of this vitally needed legislation.

I can assure you, Mr. President, that this will not be the last time this subject will be called to the attention of the Congress. I know that my senior colleague will join me in continuing from day to day to bring this matter to the attention of the Congress and to the attention of the people of the United States—yea, to the attention of those leaders in this administration upon whose shoulders rests the responsibility to make it possible for upstanding, loyal, patriotic citizens to live, and to live well and comfortably, and to work and to enjoy the pursuit of happiness.

Mr. RANDOLPH. Mr. President, the junior Senator from West Virginia [Mr. BYRD] has indicated that it will be not only our desire, but, sir, it will be our purpose to rise in this body, almost on a daily schedule, and bring to the attention of our colleagues, and the country as well, the scope of this matter.

I again indicate that I associate myself with the junior Senator from West Virginia [Mr. BYRD] in this factual presentation.

I do not want to seem to detract from what my colleague has so well said; but, Senator BYRD, you saw last week the pinched faces of little children in West Virginia, and you realize that many children were in school without hot lunches. You know too, that hunger was the uninvited guest at tens of thousands of tables in West Virginia.

When we find these conditions existing today, it augurs well for this body to think carefully and constructively about the challenging words which have been spoken today by the junior Senator from West Virginia.

I assure my colleague [Mr BYRD] that I join with him vigorously in bringing to fruition, I hope with the assistance of our colleagues, a measure such as you have discussed today, in which you are a leader for its passage—the area redevelopment bill.

Mr. BYRD of West Virginia. I thank the Senator.

AUTHORIZATION OF APPROPRIATION TO THE NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

The Senate resumed the consideration of the bill (S. 1096) to authorize appropriation to the National Aeronautics and Space Administration for salaries and expenses, research and development, construction and equipment, and for other purposes.

Mr. STENNIS. Mr. President, I, as the acting majority leader, will now ask for a quorum call, with the hope that at its conclusion we may have the yea and nay votes on the pending measure.

Mr. ELLENDER. Mr. President, I wonder if the Senator from Mississippi will yield now for a question.

Mr. STENNIS. On the bill?

Mr. ELLENDER. Yes.

Mr. STENNIS. Very well.

Mr. ELLENDER. I am very sorry I was unable to be present to hear what the Senator from Mississippi had to say; but, as I understand, when the original bill was enacted there was a provision placed in it whereby there would have to be an authorization each year for the operation of the National Aeronautics and Space Administration.

Mr. STENNIS. An authorization each year; yes.

Mr. ELLENDER. Can the Senator tell us why that was necessary?

Mr. STENNIS. The provision was enacted in a supplemental appropriation bill. Public Law 85–766 has this paragraph:

> No appropriation may be made to the National Aeronautics and Space Administration for any period prior to June 30, 1960, unless previously authorized by legislation hereafter enacted by the Congress.

As the Senator from Mississippi recalls, that provision was put in the law as a part of an agreement with the House. The amount to be appropriated last year was in disagreement. There was also disagreement on the provision of the Senate bill which required specific authorization for all appropriations to be made to the administration. It was suggested, as a part of an agreement by the conferees on a figure, that there would be no further appropriation, except by express authorization, until June 30, 1960.

Mr. ELLENDER. The Senate insisted on that provision; is that correct?

Mr. STENNIS. The Senator is correct. The Senate bill provided that all appropriations must be specifically authorized while the House bill contained no such requirement. It was agreed to compromise to require specific authorizations through June 30, 1960. This would permit ample time for further review of the desirability of making this authorization requirement a permanent one.

Mr. ELLENDER. Is it the hope that after 1960 a general authorization will be made for this agency, except for construction, which would be specifically authorized, so that it will be in the same category as any other arm of the armed services?

Mr. STENNIS. We are glad to have the Senator's interest shown. The entire matter will be taken up in the 1960 authorization bill. The committee expects to consider that very point.

Mr. President, before I suggest the absence of a quorum, may we have the third reading of the bill?

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the third reading of the bill.

The bill was ordered to be engrossed for a third reading and to be read the third time.

The bill was read the third time.

Mr. STENNIS. Mr. President, on the question of final passage of the bill I ask for the yeas and nays.

The yeas and nays were ordered.

Mr. STENNIS. Mr. President, I suggest the absence of a quorum.

Mr. BUSH. Mr. President, will the Senator yield?

Mr. STENNIS. We have promised other Senators that if they would not speak we would have a vote.

Mr. BUSH. Very well.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Aiken	Fulbright	Morton
Allott	Goldwater	Moss
Anderson	Gore	Mundt
Bartlett	Green	Murray
Beall	Gruening	Muskie
Bennett	Hart	Neuberger
Bible	Hartke	O'Mahoney
Bridges	Hayden	Pastore
Bush	Hickenlooper	Prouty
Butler	Hill	Proxmire
Byrd, Va.	Holland	Randolph
Byrd, W. Va.	Hruska	Robertson
Cannon	Humphrey	Russell
Capehart	Jackson	Saltonstall
Carlson	Javits	Schoeppel
Carroll	Johnson, Tex.	Scott
Case, S. Dak.	Johnston, S.C.	Smathers
Chavez	Keating	Smith
Church	Kennedy	Sparkman
Cooper	Kuchel	Stennis
Cotton	Langer	Symington
Curtis	Lausche	Talmadge
Dirksen	Long	Thurmond
Dodd	McCarthy	Wiley
Douglas	McClellan	Williams, N.J.
Dworshak	McGee	Williams, Del.
Eastland	McNamara	Yarborough
Ellender	Magnuson	Young, N. Dak.
Engle	Mansfield	Young, Ohio
Ervin	Monroney	
Frear	Morse	

Mr. MANSFIELD. I announce that the Senator from Missouri [Mr. HENNINGS], the Senator from North Carolina [Mr. JORDAN], the Senator from Tennessee [Mr. KEFAUVER], and the Senator from Oklahoma [Mr. KERR] are absent on official business.

I further announce that the Senator from Pennsylvania [Mr. CLARK] is absent attending the funeral of the late Senator Joseph F. Guffey of Pennsylvania.

Mr. KUCHEL. I announce that the Senator from Iowa [Mr. MARTIN] is absent by leave of the Senate on official business of the Committee on Aeronautical and Space Sciences.

The Senator from New Jersey [Mr. CASE] is necessarily absent.

The PRESIDING OFFICER. A quorum is present.

The bill having been read the third time, the question is, Shall it pass? On this question, the yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from Missouri [Mr. HENNINGS], the Senator from North Carolina [Mr. JORDAN], the Senator from Tennessee [Mr. KEFAUVER], the Senator from Oklahoma [Mr. KERR], are absent on official business.

I also announce that the Senator from Pennsylvania [Mr. CLARK], is absent attending the funeral of the late Senator Joseph F. Guffey, of Pennsylvania.

I further announce that, if present and voting, the Senator from Pennsylvania [Mr. CLARK], the Senator from Missouri [Mr. HENNINGS], the Senator from North Carolina [Mr. JORDAN], the Senator from Tennessee [Mr. KEFAUVER], and the Senator from Oklahoma [Mr. KERR], would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Iowa [Mr. MARTIN] is absent by leave of the Senate on official business of the Committee on Aeronautical and Space Sciences, and if present and voting, he would vote "yea."

The Senator from New Jersey [Mr. CASE] is necessarily absent, and if present and voting, would vote "yea."

The result was announced—yeas 91, nays 0, as follows:

YEAS—91

Aiken	Eastland	Lausche
Allott	Ellender	Long
Anderson	Engle	McCarthy
Bartlett	Ervin	McClellan
Beall	Frear	McGee
Bennett	Fulbright	McNamara
Bible	Goldwater	Magnuson
Bridges	Gore	Mansfield
Bush	Green	Monroney
Butler	Gruening	Morse
Byrd, Va.	Hart	Morton
Byrd, W. Va.	Hartke	Moss
Cannon	Hayden	Mundt
Capehart	Hickenlooper	Murray
Carlson	Hill	Muskie
Carroll	Holland	Neuberger
Case, S. Dak.	Hruska	O'Mahoney
Chavez	Humphrey	Pastore
Church	Jackson	Prouty
Cooper	Javits	Proxmire
Cotton	Johnson, Tex.	Randolph
Curtis	Johnston, S.C.	Robertson
Dirksen	Keating	Russell
Dodd	Kennedy	Saltonstall
Douglas	Kuchel	Schoeppel
Dworshak	Langer	Scott
Smathers	Talmadge	Yarborough
Smith	Thurmond	Young, N. Dak.
Sparkman	Wiley	Young, Ohio
Stennis	Williams, N.J.	
Symington	Williams, Del.	

NAYS—0

NOT VOTING—7

Case, N.J.	Jordan	Martin
Clark	Kefauver	
Hennings	Kerr	

So the bill (S. 1096) was passed.

Mr. DIRKSEN. Mr. President, the distinguished Senator from New Jersey [Mr. CASE] is unavoidably absent from the session today. Therefore, he could not be recorded when the vote was taken on Senate bill 1096, the bill to authorize appropriations for the National Aeronautics and Space Administration. However, if he had been present, he certainly would have supported the bill; and I should like to have that fact noted for the RECORD.

EXTENSION OF THE UNIVERSAL MILITARY TRAINING AND SERVICE ACT

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 89, H.R. 2260, the draft extension bill.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (H.R. 2260) to extend until July 1, 1963, the induction provisions of the Universal Military Training and Service Act, the provisions of the act of August 3, 1950, suspending personnel strength of the Armed Forces, and the Dependents Assistance Act of 1950.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Armed Services with an amendment on page 2, after line 10, to insert a new section, as follows:

SEC. 5. Section 203 of the Career Compensation Act of 1949, as amended, is amended by striking out "July 1, 1959" wherever such date appears therein and inserting "July 1, 1963" in lieu thereof.

Mr. JOHNSON of Texas. Mr. President, I announce for the information of the Senate that several Senators desire to make statements. Then the distinguished Senator from Georgia [Mr. RUSSELL], the chairman of the Committee on Armed Services, will give an explanation of the bill. There will then be further discussion of the draft bill. The committee feels that a vote can be had on the bill this afternoon. There will be a quorum call before the vote.

Mr. President, I ask for the yeas and nays on the passage of the bill.

The yeas and nays were ordered.

Mr. JOHNSON of Texas. Mr. President, at the conclusion of action on the draft bill, it is planned to start the discussion of the Hawaiian statehood bill.

INFLATION, THE NATION'S NO. 1 PROBLEM

Mr. BUTLER. Mr. President, for a few years after the end of World War II, the demands of the American market were so great that it was possible to raise costs and prices and still sell all the products our industry could produce.

Today, it is becoming increasingly clear that foreign competition is not only invading our oversea markets but is becoming an increasingly important factor in our domestic markets.

President Eisenhower in his Economic Report said:

> It is not the function of Government in our society to establish the terms of contracts between labor and management; yet it must be recognized that the public has a vital interest in these agreements. Increases in money wages and other compensation not justified by the productivity performance of the economy are inevitably inflationary. They impose severe hardships on those whose incomes are not enlarged. They jeopardize the capacity of the economy to create jobs for the expanding labor force. They endanger present jobs by limiting markets at home and impairing our capacity to compete in markets abroad. In short, they are, in the end, self-defeating.
>
> Self-discipline and restraint are essential if agreements consistent with a reasonable stability of prices are to be reached within the framework of the free competitive institutions on which we rely heavily for the improvement of our material welfare. If the desired results cannot be achieved under our arrangements for determining wages and prices, the alternatives are either inflation, which would damage our economy and work hardships on millions of Americans, or controls, which are alien to our traditional way of life and which would be an obstacle to the Nation's economic growth and improvement.

In these statements when the President refers to productivity, he is referring to the productivity of the economy as a whole and not to the productivity of any particular firm or industry.

I have been greatly disturbed that in recent weeks many labor leaders have urged wage increases which they state would generate purchasing power for other industries. In effect, they suggest that we attempt to raise ourselves by our bootstraps.

More and more we are face to face with the fact that our price and wage structure is becoming less competitive in terms of world markets. Before this year is over the steel industry will once again negotiate a new contract with its employees.

Mr. President, two editorials from the magazine American Metal Market are worthy of the attention of my colleagues. I ask unanimous consent that they may be printed in the body of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From American Metal Market, Jan. 28, 1959]

FRUSTRATING AND DISTURBING

There is something utterly frustrating and disturbing about the reaction in the highest echelons of organized labor to the President's economic message. With racketeers ensconced in high labor offices openly defying public indignation and arrogantly

daring the Congress to do its damnedest, and with demands for stratospheric wages and for basic hours that constitute little less than subsidized idleness, running almost rampant, one might have hoped for a different response to the President's urgent recommendations, from the more respected officials of the labor movement. The integrity of these latter officials is deservedly undisputed, but the irresponsibility of their criticism strongly suggests that the country may have more to fear from their sophistry than from the palpably unsavory elements who almost unfailingly overreach themselves.

All during the postwar years the country has heard business admonished on prices with as much or greater severity than labor has been urged to be temperate in its demands. In fact, the usual pattern has been for our highest officials to plead with business and labor to be moderate—after labor has exacted concessions from business. This appearance of impartiality has inevitably misled millions to blame business alone for price increases. Among this unsuspecting multitude, labor has escaped even contributory responsibility for price increase, because labor has already got theirs before officialdom in Washington has expressed its concern, whereas the price increases forced by cost increases have followed the appeals.

A conspicuous example of a congressional contribution to this deceptive practice was the hearings held last spring in anticipation of steel price increases after last July 1. The investigators carefully ignored the scheduled substantial wage increase that was automatically to go into effect on that date, pursuant to the agreement of July–August, 1956. They also piously refused to consider the possible effects of the already-demanded wage increases in the automobile industry (which had not by then been granted) and which, if denied, would have deprived the industry of justification for the price increases of last fall that followed the ultimate granting of the uninvestigated wage demands.

This seeming immunity of labor to accountability for the effect of higher wage costs on the national economy would appear to have led the leaders of the labor movement to expect continuing exemption from official comment in advance of their obtaining current demands. Restrained as the President's admonition was, it has been bitterly resented, not only because it would obviously forestall the additional demands on industry that are clearly in the making, but because, at long last and for once, the President has sought to brake the inflation at its source, before the spiral is launched.

There will be virtually no one, outside the small circle of labor leaders and the advocates of some constant inflation, to dispute the fact that, in the effort to stop the corrosion of the dollar and the destruction of savings, "leaders of labor have a particularly critical role to play, in view of the great power lodged in their hands." Nor is it to be doubted by any impartial observer, that "the terms of agreements * * * will have a critical bearing * * * in attaining * * * economic growth with stable prices." Nor will any informed person be likely to dispute the assertion that "increases * * * not justified by the productivity performance of the economy are inevitably inflationary."

Yet the leadership of our most powerful unions declares that stable prices mean "stagnation and perhaps depression" and that the unions' drives for wage increases will go forward. Mr. McDonald, president of the United Steelworkers, has publicly appealed to the automobile industry to support his forthcoming demands, so as to provide his membership with $1 billion to buy automobiles. Yet, if the past is any guide to the future, Mr. McDonald will hold that the steel industry will have no excuse to raise prices if it raises wages by $1 billion. One marvels at the mental process which can conceive of an industry supplying another with $1 billion of undiluted purchasing power without first having to earn it. Obviously, the application of this logic, by which wages would be arbitrarily raised in industry after industry to provide purchasing power for the goods of other industries, would soon reduce the value of the dollar to that of trading stamps.

In its arrogance, labor leadership has come to the stage where it preempts the right to tell management and industry to augment productivity by whatever margin is needed to compensate for the demands it chooses to impose from year to year. It not only assumes the capacity of management to accomplish this miracle, but it takes for granted labor's exclusive right to all the fruits of increased productivity (in practice it demands even more), and denies the right of management, of ownership, and of consumers to any share in the greater abundance brought about by the greater efficiency of industry, in which greater efficiency labor, per se, plays so infinitesimal a part in a modern plant. If this is not a very clear indication of the great power lodged in the hands of labor leadership, there is no explaining it. And it is frustrating and disturbing that this great power should be exercised with such irresponsibility, in defiance of all known methods for operating a solvent economy, by those from whom the public have a right to expect enlightened and responsible leadership.

[From American Metal Market, Feb. 27, 1959]

THAT BILLION DOLLAR BUNDLE

The contract between the steel industry and the 1¼ million employees marshaled under the banners of the United Steel Workers still has another 4 months to run. In these changeable times, it would be hazardous, this far in advance, to attempt to say just what the issues will have proved to be when the contract is extended. But it is certain that the billion dollar bundle will loom large in the negotiations, because Mr. McDonald and his associates have deliberately put it on the line already.

In costly and widely distributed full-page newspaper advertisements, the USW has been propagandizing other industries, the ranks of labor, and the general public to support its demand for this additional purchasing power from the steel industry. They have painted alluring pictures of what they would do with this new income, buying automobiles, building new homes, buying groceries, patronizing moving picture houses and generally administering a blood transfusion to the U.S. economy. There will, unfortunately, be many who will think it a good idea—and not necessarily only those who would benefit directly. But, of course, as has already been asked, if this is a sound idea, why should Mr. McDonald and his partners want to keep it to themselves? Isn't this being a bit selfish? Why shouldn't all of us workers get in on this so-simply created prosperity? Why not, as the chairman of the United States Steel Corp. asked the other day, cut everybody in, take care of all 65 million gainfully employed workers on the same basis, and create not $1 billion of new money, but $52 billion so all might enjoy the good times?

These are questions well worth asking. It would be a mighty good idea if they were asked of every Tom, Dick, and Harry that thinks the picayune $1 billion proposition is a good idea. Possibly, in that way, some of the effects of this proposal might be brought home to those who still think that it is, and should be, only necessary for labor to demand in order to receive. It cannot be expected that those who swallow the specious arguments behind the demand will be impressed with orthodox refutations, based on the time-proven economic principles which have confirmed again and again, since time immemorial, that you can't get something for nothing. But there are a couple of other relevant points that we would like to bring up at this time.

The first is to ask, just what have the steelworkers done to justify an increase of $1 billion a year in wages and benefits? Isn't that a fair question? Or has money become so inconsequential that a group leader is entitled to ask for a handout of any figure that first comes into his head—particularly if it has a liting sound to the ear, like a billion dollars? When he has done so, are we not to anticipate that the next step—possibly following a diffident hesitation by industry, instead of yielding with alacrity—will be to accuse industry of endangering industrial peace by being unreasonable? Where have we seen such tactics worked by others in a different field of negotiation? They are identical with the practices of another group also having power that is much too great for their own good, in international affairs. Time was, of course, that most people felt they had to perform some useful service to justify better recognition. Is this billion dollar bundle not suggestive of the idea that industry is no longer built up and conducted with some consideration for those who have directed and financed an operation, but that it exists primarily to meet the demands—whatever they may be—of those who control the working staff? Have we arrived at this concept of what industry really is?

Secondly, Mr. McDonald and his friends are not looking for any token or symbolic advantages. They want something substantial—something that will buy automobiles, build houses and provide their members with genuine purchasing power. Although one would never think it to be the case from U.S.W. propaganda, this implies that the steel industry has this additional $1 billion current purchasing power available for distribution—for the asking. Now it so happens that automobiles are made mostly of steel and that, in order to get what it takes to make the cars Mr. McDonald says his boys will buy, the automobile makers will have to come to the steel mills for supplies (just as the steel mills have to go to the coal mines, the iron mines, the limestone quarries, the railroads and many other sources for raw materials to make steel).

The question naturally arises as to whether, after providing Mr. McDonald's boys with $1 billion in new money, the steel mills are to supply steel to the auto companies at old prices, so that the boys will not find a higher cost of steel reflected in the price they pay for all those new cars? Or does he expect the steel companies to get the $1 billion from the auto companies, without having them include the higher steel cost in the price of the cars the boys buy?

If it is one case or the other, what he is asking is that his boys be given the billion dollars, at the expense of others. That is, if he sincerely believes that the $1 billion (or the $52 billion, if all the workers are counted in) can be magically produced from the ether without impairing the purchasing power of everybody's dollar and without ultimately bankrupting industry. We are quite confident that everyone knows that every one of the U.S.W. leaders knows better.

LIBERALIZING "EXTRA EARNINGS" ALLOWANCES FOR SOCIAL SECURITY BENEFICIARIES

Mr. WILEY. Mr. President, today, I should like to discuss a problem which

is confronting a growing number of our people—that is, our senior citizens. Particularly, I am speaking of those folks receiving benefits under the social security program.

Today, there are over 12½ million people eligible for benefits under this program. During 1959, it is estimated that these folks will receive payments of about $10 billion. In Wisconsin, over 281,000 persons are now receiving benefits.

For the future, it is estimated that 9 out of 10 of the Nation's workers—who are now contributing to social security—will be able to look to this program to help meet the needs of their retirement.

A big question is: Will it be adequate? Too, is it being kept up to date?

We recall that during the 2d session of the 85th Congress, these folks under social security were granted a 7 percent increase in benefits.

At the time, I felt—and still feel—that the increase was indeed very modest in view of the increased costs of living.

Consequently, I believe that a continuous effort must be made to improve the program.

Now, I should like to comment on a particular provision of the program which I believe should be liberalized to enable our maturing folks to better meet their economic needs. Specifically, I refer to the unrealistic limitation on extra earnings—now restricted to $1,200 annually—which folks can earn in addition to social security benefits.

Unfortunately, this limitation obstructs—and often prevents—our aging folks from supplementing their social security benefits to the degree that might otherwise be attainable.

We recognize, of course, that it is not always easy for folks, 65 or over, to find a job. When work is available, however, I believe it is absolutely unrealistic and undesirable to unwisely restrict their earnings and, as a consequence, their ability to improve their standards of living.

Today, the costs of food, rent, clothing, and other necessities of living are high, very high. To many of our folks in the upper-age brackets, prices are just out of reach of their often too-low incomes.

The liberalization of the limitation—from the present $1,200 to at least $1,800 annually, for example—would enable many of our maturing folks to maintain better standards of living.

This action—in keeping with our spirit of encouraging individual initiative—would be in the best interests, not only of our senior citizens, but also of the Nation.

During the 85th Congress, I introduced proposed legislation to have the limitation lifted to $1,800 annually. At that time, I was pleased to note widespread support for the measure, both in Wisconsin and elsewhere in the country. For example the National Federation of Independent Business, by poll, learned that 81 percent of its 100,000 independent business and professional members were in favor of my proposal.

Currently, there are a number of bills before the Finance Committee in the Senate, and before the Ways and Means Committee in the House to allow increased earnings. We recognize of course that the House Committee will need to take initial action on these legislative proposals.

I would hope, however, that at the earliest opportunity Congress will take action to liberalize the limitation for folks on social security.

From time to time, I receive messages for contributions stressing the need for liberalization of this social security limitation.

I ask unanimous consent to have two of these communications printed at this point in the RECORD.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

MILWAUKEE, WIS., *January 4, 1959.*

Hon. ALEXANDER WILEY,
U.S. Senator, Washington, D.C.

DEAR SENATOR WILEY: I take the privilege of writing to you about the limited earnings of people receiving social security pension.

First, because of age limits and other reasons, we are forced to give up our jobs. Many of us like to work, and rightly so. It is better for mental, physical, and spiritual welfare. Under existing conditions it is difficult to hold a job for the simple reason that many times we cannot put in the time that is required on the job.

Because of these circumstances many people are made unhappy. After all, it is better for those who desire to do so, to carry on. That is the way God intended it to be.

May I urge you, therefore, to make every effort to increase the amount of yearly earnings for the people receiving social security pension.

Thanking you in advance,
Sincerely,

SUN PRAIRIE, WIS.

Senator ALEXANDER WILEY,
Washington, D.C.

DEAR MR. WILEY: I hope you lawmakers will do something this session to change the social security law so I can earn all I am able to and still collect my social security payments.

This year I will be 70 and this means 2 more years of $1,200 net under the present law, before I can earn enough to keep up with inflated prices.

Surely many of our elder citizens must feel the way I do about this. It works a hardship on me, as I work on a commission job, and could make enough to get along in good shape if I were allowed to do so.

With kindest regards,
Yours truly.

THE REMOVAL OF CHEESE FROM THE LIST OF PRICE-SUPPORTED COMMODITIES

Mr. WILEY. Mr. President, I received today from the Wisconsin Cheese Makers' Association a copy of a letter which was addressed to the Honorable Ezra Taft Benson, Secretary of Agriculture, which I now read:

DEAR MR. SECRETARY: Statistical reports from your Department showing cheese production, consumption, cold storage stocks, and Government purchases under the price support program for the past year, show ample justification for the removal of cheeses from the list of price-supported commodities, and we so recommend.

Until such action is taken, we urge you to continue the present support price of cheese after April 1, 1959.

This recommendation is by order of our board of directors.

Respectfully submitted,

GEO. L. MOONEY,
Executive Secretary.

At the bottom of the letter is written:

DEAR SENATOR WILEY: The above copy is self explanatory. We hope you agree with us, and will promptly use your office to effectuate the recommendations of our directors. In haste and

Very sincerely,

GEO. L. MOONEY.

On receipt of this letter I called Secretary Benson's office and read the letter to his secretary. Mr. Benson was busy in consultation. The secretary stated that she would take the matter up at once with the Secretary of Agriculture and that very definitely in the near future I would hear what was the Secretary's reaction to the letter.

INVENTORY OF DELINQUENT FEDERAL TAXES

Mr. WILLIAMS of Delaware. Mr. President, today I shall incorporate in the RECORD the fifth annual report of the inventory on delinquent Federal taxes.

Five years ago upon my request the Treasury Department initiated an annual inventory of all types of delinquent taxes as of the end of each year, with this inventory broken down as to districts and types of tax delinquencies.

The 1958 report will be incorporated in the RECORD along with a statistical breakdown showing the percentage change in total tax delinquencies and in employment tax delinquencies for each of the 65 districts.

A comparison of this 5-year report gives a clear picture of the trend of these delinquencies with special emphasis upon those districts which are showing good progress in collections as well as pointing out those districts in which collections were poor.

The total amount of delinquent taxes has declined for the 3d successive year, with this year's decline being from $1,504,709,000 to $1,375,737,000, or 8.6 percent. This compares with a 7-percent decline last year. Employment taxes—social security and income taxes withheld by employers from their employees—which last year showed a 7.6-percent increase, declined 12.5 percent this year, or from $300,678,000 to $263,186,000. The employment tax collection was assisted this year by the enactment of a law providing additional penalties on employers refusing to forward to the Treasury Department these taxes which were withheld from the employees' pay envelopes.

The Treasury Department in submitting this report has recognized the need for additional effort to reduce these delinquent accounts; however, they very properly in their letter take credit for improvements in many of the former

troublesome areas. For instance, in last year's report I was critical of the Chicago office, which had shown a 56.9-percent increase in employment tax delinquencies and a 27.3-percent increase in total tax delinquencies. Those increases came on top of substantial increases in the 2 preceding years, and the Treasury Department was requested to give special attention to that area. As a result, their report this year shows a substantial improvement, which will be mentioned later in this statement.

Offices in which major changes have occurred in the amount of delinquencies during the past year are as follows:

In Augusta, Maine, the total tax delinquencies were reduced 22.7 percent although employment tax delinquencies were increased 8.3 percent.

Burlington, Vt., is still a troublesome spot. Employment tax delinquencies for the 3d consecutive year showed a substantial increase. In 1956 the increase was 38.6 percent; in 1957, 17.4 percent; and in 1958, 36.4 percent. In 1958 their total tax delinquencies increased 67.1 percent. This office should be given special attention by the Department.

Albany, N.Y., shows a reduction of 26.5 percent in total tax delinquencies and a reduction in employment tax delinquencies of 4.9 percent.

Brooklyn, N.Y., shows a decline in both employment tax delinquencies and total tax delinquencies of 12.5 percent and 27.6 percent respectively.

Buffalo, N.Y., likewise shows a decline in both categories, with a reduction in employment tax delinquencies of 13.5 percent and a reduction in total tax delinquencies of 20.9 percent.

Lower Manhattan, N.Y., shows a 25.8 percent reduction in employment tax delinquencies and a 5.5 percent reduction in total delinquencies.

Baltimore, Md., has turned in an excellent report, with a 21.4 percent reduction in employment tax delinquencies and a 28.7 percent reduction in total accounts.

In Camden, N.J., the employment tax delinquencies have risen for the fourth consecutive year, with this year's increase being 16.8 percent. I reemphasize that these employment taxes are, in effect, trust funds. They represent cash which has been withheld by the employers from the pay envelopes of the employees; and there can be no justification for allowing a diversion of these funds to the use of the employer. Employment tax delinquencies in the Camden office have doubled within the past 5-year period, while at the same time the total tax delinquencies have increased nearly 50 percent. This trend of continuous increases in the Camden office should be checked.

Newark, N.J., has a good report. This office has reduced the employment tax delinquencies for the fourth consecutive year, and the total tax delinquencies have been reduced from $92,962,952 in 1954 to $44,825,000 in 1958. These reductions represent a 22.6 percent decline in employment tax delinquencies and a 19.5 percent reduction in total delinquencies.

The Philadelphia office, of which I was critical a few years ago, also has a good report. It has reduced the employment tax delinquencies from $15,700,488 in 1954 to $8,944,000 in 1958, with last year's reduction being 13.3 percent. During the same 5-year period total tax delinquencies have dropped from $63,450,420 in 1954 to $42,563,000 in 1958.

The Pittsburgh, Pa., office, which last year showed a commendable drop in both employment tax and total delinquencies, has this year reversed that trend, and reports a 27.5 percent increase in delinquent employment taxes and a 10.8 percent increase in total delinquencies.

Scranton, Pa., last year showed a reduction of 22.2 percent in employment tax delinquencies, and a 23.3 percent reduction in total tax delinquencies.

Wilmington, Del., reduced the total delinquent accounts last year by 13.5 percent, and showed the total tax delinquencies to be at an all-time low for the past 5 years, having brought the figure down from $22,009,168 in 1954 to $3,296,000 in 1958. However, it reports a 27.6 percent increase in employment tax delinquencies, bringing that item to an all-time high for the past 5 years.

Cincinnati, Ohio, shows a reduction of 22.8 percent in employment tax delinquencies, and a 5.3 percent reduction in total delinquencies. It should be noted that the total tax delinquencies in this office have dropped for the fourth consecutive year, or from $15,128,835 to $9,681,000.

Cleveland, Ohio, has a good report. It shows a 34.5-percent reduction in employment tax delinquencies, against a 20.1-percent reduction in total accounts. Cleveland, too, has a good 5-year report, both in the reduction of employment tax delinquencies and in the reduction of total delinquencies—from $5,272,650 in 1954, to $3,794,000 in 1958; and from $42,963,755 in 1954, to $29,076,000 in 1958, respectively.

The office at Columbus, Ohio, however, needs the Department's attention. For 4 consecutive years the employment tax delinquencies have risen from $594,431 in 1954 to $1,087,000 in 1958, with last year's increase being 23.8 percent. During the same 5-year period the total tax delinquencies in that office have increased from $6,652,735 to $10,244,000, with last year's increase being 12.8 percent.

Indianapolis, Ind., shows reductions of 14.1 percent in employment tax delinquencies and a reduction of 25.4 percent in total delinquent taxes.

Louisville, Ky., shows a 19-percent reduction in employment tax delinquencies and a 23-percent reduction in total delinquent accounts.

Parkersburg, W. Va., shows a 3.6-percent reduction in employment tax delinquencies and a 21.7-percent reduction in total delinquencies. This office has reduced total delinquent accounts from $12,931,609 in 1954 to $5,372,000 in 1958, which is very commendale.

Richmond, Va., likewise has turned in a good report. Last year it reduced employment tax delinquencies another 14.8 percent and total tax delinquencies 21.4 percent. This brings the 5-year total of delinquent accounts in that office from $20,986,659 down to $12,333,000.

Toledo, Ohio, reduced its employment tax delinquencies by 21 percent, and shows a reduction of 25.4 percent in total delinquent accounts.

Greensboro, N.C., is another office which has turned in a good report. In 1958 the delinquent employment accounts were reduced 32.8 percent, while the total delinquent accounts were brought down another 14.5 percent. In the past 5 years the total of all delinquent taxes in that office has been reduced from $26,395,319 to $12,716,000, while during the same period delinquent employment taxes have been reduced from $2,016,860 to $1,359,000.

Jackson, Miss., shows a 24.6-percent increase in delinquent employment taxes for 1958, but a 19-percent reduction in the total amount of all delinquent accounts.

Nashville, Tenn., shows a reduction in both categories, with a 23.3-percent reduction in delinquent employment taxes and a 25.3-percent reduction in total delinquent accounts.

The Chicago, Ill., office, which last year was subjected to special criticism for having shown alarming increases in its accounts, does show a reduction this year. It has reduced employment tax delinquencies by 29.7 percent and total accounts by 21.9 percent. This is good progress; however, it should be noted that in that office the total of their employment tax delinquencies is still $22,996,000, as compared with $12,802,486 5 years ago. At the same time, even with this year's reduction in the total delinquent accounts, the outstanding balance still shows nearly a 50-percent increase over the 1954 total. The Department in its report points out that it has given this office their special attention, and the office certainly shows progress; but it still needs watching. These accounts should continue their downward trend.

Springfield, Ill., has shown a commendable reduction both in employment tax delinquencies and in total delinquent taxes, with reductions of 31.3 percent and 24.5 percent, respectively.

Aberdeen, S. Dak., reports sizable reductions in both categories, with a 20.8 percent reduction being shown in employment tax delinquencies and a 30.2 percent reduction in the total of its delinquent accounts.

Employment tax delinquencies in Cheyenne, Wyo., have increased 28.8 percent, thus erasing last year's decline and bringing these accounts to a 5-year high for that office. At the same time it reports a 4.7 percent increase in the total of all delinquent accounts.

Des Moines, Iowa, has brought its total of all delinquent accounts down to less than half of what they were 5 years ago, or from $9,737,729 to $4,564,000, with this year's reduction being 39 percent. Employment tax delinquencies in this office, however, have not done so well, for

while they do show a 10.2 percent reduction for last year, they are still higher than they were 5 years ago.

In Fargo, N. Dak., employment tax delinquencies have increased 30.1 percent, bringing them close to a 5-year high. The total of all delinquent accounts was reduced by 5.1 percent.

Omaha, Nebr., while showing a 1.5 percent increase in overall delinquencies, still has a good report. Its total delinquent accounts in the past 5 years have been reduced from $4,180,447 in 1954 to $2,770,000 in 1958. During the past 12 months it has reduced their employment tax delinquencies by 54.4 percent, bringing this item to a 5-year low, or from $548,945 in 1954 to $267,000 in 1958.

Dallas, Tex., shows a reduction of 32.1 percent in employment tax delinquencies and a reduction of 17.3 percent in total tax delinquencies.

Little Rock, Ark., reports a tremendous increase in total tax delinquencies, being 181.1 percent above the 1957 figure, or from $2,465,000 to $6,930,000 in 1958. In fairness to this office, it should be pointed out that the big increase is in its inactive accounts, which are the accounts on which collection has been deferred pending the outcome of court decisions, audit examinations, or other contingent actions. This does not mean that the substantial increase should not be given attention. The office did report for 1958 a 23.5 percent reduction in employment tax delinquencies.

Boise, Idaho, reported a 23 percent reduction in employment tax delinquencies and a 2.9 percent reduction in total outstanding accounts.

Honolulu, T.H., reduced its employment tax delinquencies by 21.5 percent and its total tax delinquencies by 12.4 percent. This is the fourth consecutive reduction in the total of outstanding delinquent accounts for the Honolulu office.

Seattle, Wash., reported 17.8 percent reduction in delinquent employment taxes, and a 15.3 percent reduction in total delinquent accounts.

Puerto Rico, which has been a troublesome area from the standpoint of tax collections, does report a reduction in both employment tax delinquencies and total tax delinquencies. These reductions are 22.6 percent and 17.8 percent, respectively.

Under international operations, which is a category started in 1956, representing the delinquent accounts of taxpayers abroad and out of the reach of the respective offices, jumped 139.8 percent, or from $17,443,000 to $41,823,000. The Treasury Department explains this enormous increase as being the result of having had the district offices transfer to this division the delinquent accounts of all taxpayers known to be out of the country and out of the reach of those offices. While this explains the increase in the international operations category, it could also offset some of the reported reductions in the various district offices.

In conclusion, while it is pleasant to note that the amount of total delinquent accounts has declined approximately $240 million from the total of 5 years ago, these accounts are still too high. Also, the employment tax reduction of 12.5 percent this year, while being a trend in the right direction, nevertheless is still $9 million higher than 5 years ago.

It must be remembered that when speaking of employment tax delinquencies, we are speaking of income and social security taxes which have been withheld by the employer from the pay envelopes of his employees. They are in effect trust funds, and under no circumstances should they ever be considered as belonging to the employer or as representing funds which he can divert to his own use.

I am glad to report last year's progress of the Treasury Department in reducing these outstanding accounts, and again express my appreciation to them for their cooperation in furnishing statistics for this report.

I ask unanimous consent to have the report submitted by the Treasury Department under date of March 2, 1959, along with my own statistical breakdown of the 5-year report of the various offices, together with a letter from the Commissioner of Internal Revenue incorporated at this point in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

U.S. TREASURY DEPARTMENT,
Washington, D.C., March 2, 1959.

Hon. JOHN J. WILLIAMS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR WILLIAMS: In answer to your request of January 22, 1959, we are enclosing a tabulation pertaining to the inventory of taxpayer delinquent accounts. The tabulation shows a breakdown of the total number of delinquent accounts by income, employment, and other taxes as of December 31, 1958, and December 31, 1957. Data relating to total number and amount of inactive accounts are also provided.

The overall picture in the taxpayer delinquent accounts area shows that a great deal has been accomplished in the past year. During 1958 the number of delinquent accounts was reduced from 1,554,876 to 1,280,642, a reduction of 18 percent, and their dollar value was decreased from $1,505 million to $1,376 million, a reduction of 8.6 percent. Each of the tax groups, income, employment, and other, shows a decline in inventory both as to number and dollar value. Confining ourselves to dollars, the percentage reductions were 6.7 percent in income, 12.5 percent in employment, and 15.3 percent in all other classes of tax. We feel that this general overall improvement is particularly noteworthy in view of the adverse economic conditions prevailing in certain areas during 1958.

These improvements were widespread, with nearly all offices accomplishing a percentage reduction in dollar amounts outstanding. Looking first at the total closing inventories of each office as compared to a year ago, we find that 46 of our 65 offices have reported gains, the highest being a 39.0 percent reduction. The employment tax area, in which you have expressed a particular interest in the past, reflects an even brighter picture, with 50 of our 65 offices contributing in varying degrees to the overall reduction of 12.5 percent. The greatest district office reduction was 54.4 percent.

Also, particularly gratifying is that substantially all of the offices about which you expressed concern a year ago are among those which made material gains in the reduction of dollar amounts outstanding. For example Chicago's overall inventory went from $154.1 million to $120.3 million, a reduction of 21.9 percent. Its employment tax inventory declined from $32.7 million to $23 million, a 29.7 percent gain.

The offices reflecting higher dollar inventories are for the most part the smaller offices, although a few of the larger offices are among those which lost ground during the year. In this connection, it is pertinent to mention that percentage increases, and in some instances even relatively high percentage increases, can be due to normal fluctuations. Further, it can and will happen that one or two large accounts going into a delinquent status late in the year can distort the picture when endeavoring to evaluate the performance of a particular office. Conversely, high percentage declines in inventories are often reflected solely as a result of normal fluctuations or the closing of one or two particularly large accounts. Individual office inventories also rise or decline, depending upon the economic conditions in the area. It is for this reason that we normally prefer to look at the inventories from a regional or national point of view. Incidentally, the increase of 139.8 percent in the International Operations Division is the result of our having had the district offices transfer to this division the delinquent accounts of taxpayers known to be abroad and out of their reach.

The additional table which follows contains a summary as of December 31, 1957, and 1958, of the taxpayer delinquent accounts broken down as to those in an active and an inactive status. As we have previously advised you, inactive accounts are those on which collection action has been deferred pending the outcome of court decisions, audit examinations or other contingent actions. It is to be noted that there is a reduction in the number and dollar value of both active and inactive account inventories as of December 31, 1958.

	Active	Inactive	Total
Amount (thousands):			
Dec. 31, 1957	$944,256	$560,453	$1,504,709
Dec. 31, 1958	868,509	507,228	1,375,737
Change from Dec. 31, 1957 to 1958	−75,747	−53,225	−128,972
Number:			
Dec. 31, 1957	1,395,035	159,841	1,554,876
Dec. 31, 1958	1,122,137	158,505	1,280,642
Change from Dec. 31, 1957 to 1958	−272,898	−1,336	−274,234

In previous years we found it necessary to give you a separate accounting of taxpayer delinquent accounts which had not been issued. This year our offices are current in the issuance of their delinquent accounts with the result that the enclosed table includes all accounts which had reached a delinquent status as of December 31, 1958.

Even though we feel that we have substantially improved our position in the delinquent accounts area, we do not want to leave you with the impression that we are complacent about this situation. We are keenly aware of the necessity of reducing our inventories to the lowest possible level. You may be assured that we will continue to exert every effort toward that end.

Sincerely yours,

DANA LATHAM,
Commissioner.

Enclosure.

Inventory of taxpayer delinquent accounts, December 1958 and 1957

FISCAL POLICY

Mr. SMATHERS. Mr. President, in view of the great debate over our Nation's fiscal policy, and whether there should be in effect a hard money or tight money-unemployment policy, or whether there should be in effect a soft money-high employment policy, I believe Senators will find an article which was published in last Sunday's New York Times magazine, entitled, "Argument for Creeping Inflation," both stimulative and informative.

I ask unanimous consent that the article may appear in the body of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARGUMENT FOR CREEPING INFLATION

(By Sumner H. Slichter)

The principal economic issue dividing the American people today is the issue of growth of the economy vs. stability of the price level. Mr. Eisenhower has declared that a stable price level is an indispensable condition for achieving vigorous and continuing economic growth and has placed strong emphasis on the prevention of inflation in his state of the Union message, his budget message, and his economic report.

His critics accuse him of discouraging growth in order to stabilize the price level. The AFL–CIO economic policy committee has charged that Mr. Eisenhower's program is a sure-fire prescription for stagnation. The Joint Congressional Economic Committee, under the chairmanship of Senator PAUL H. DOUGLAS, of Illinois, is about to start hearings on the problem of reconciling full employment, an adequate rate of growth, and price stability.

Is it true, as Mr. Eisenhower says, that there is no conflict between vigorous economic growth and a stable price level? Or must permanent inflation be accepted as a necessary condition to maximum growth? And if maximum growth entails creeping inflation, what will be the consequences for the economy? Will the United States price itself out of world markets? Will confidence in the dollar be undermined and will there be a disastrous flight from the dollar with creeping inflation developing into a gallop? Will creeping inflation produce great suffering among recipients of fixed incomes? Or are the consequences of creeping inflation greatly exaggerated?

The recent inflation in the United States has been caused by a mixture of strong demand for goods and a strong upward push of costs, but the principal reason the price level has increased and slow inflation must be expected to continue more or less indefinitely is the strong tendency for labor costs to rise faster than output per man-hour. During the past 10 years, for example, hourly compensation of employes in private industry outside agriculture has risen more than twice as fast as output per man-hour.

The unions explain this by asserting that wages were simply chasing prices up, but the facts refute the claims of the union spokesmen. In every one of the past 10 years the percentage rise in the hourly compensation of workers exceeded the percentage rise in the consumer price index. Furthermore, in 9 out of the past 10 years, the rise in hourly compensation of workers exceeded the rise in the wholesale prices of finished goods. Wages were not chasing prices up; on the contrary, prices were chasing wages, and were falling behind each year.

The tendency for wages to outrun output per man-hour is bound to occur in an economy of private enterprise and powerful trade unions whenever the demand for goods is strong—that is, whenever the conditions are favorable for rapid growth. Wages could be prevented from outrunning output per man-hour if the bargaining power of unions were weakened and the bargaining power of employers strengthened by the maintenance of a fairly high rate of unemployment.

Some members of the Board of Governors of the Federal Reserve System, some members of the Council of Economic Advisers, and some private economists have proposed that tight credit policies be used to create the amount of unemployment necessary to keep wages from rising faster than productivity and to keep the price level steady. The amount of unemployment needed would vary with the phase of the business cycle, the vigor of foreign competition and the year-to-year fluctuation in the size of crops, but recent experience indicates that an unemployment rate of 5 to 8 percent would be required.

Fostering unemployment in order to keep wages from outrunning productivity, however, would mean retarding the growth of the economy. Hence the conflict between maximum growth and stable prices is real—the community must decide which it prefers. There is little doubt which way the decision will go because the loss to the community from a retarded rate of growth would increase at a compound rate and would soon become intolerably burdensome. Suppose that the economy, which is capable of increasing its productive capacity at the rate of 4 percent a year, were held to a growth of only 2 percent a year in order to keep the price level steady. At the end of 10 years the economy would have a productive capacity more than 26 percentage points less than it would have had at the greater rate of growth.

What about the longrun effects of creeping inflation? Would not creeping inflation bring frequent recessions, so that in the longrun more real growth would be achieved under a stable price level? There is no doubt that rapid growth entails the risk of recession, but the occasional recessions that accompany a high rate of growth need not be severe. Much progress has been made in building up resistance of the economy to contraction. The recession of 1958 illustrates

this progress. The drop in business investment and the liquidation of inventories were moderately severe, but personal income and retail sales remained remarkably steady. As a result, the recession was both mild and short. In view of the growing capacity of the economy to resist contraction, one must reject the view that a stable price level is a necessary condition to the maximum rate of growth.

Are not changes possible in our institutions, policies, or business practices that would enable us to avoid creeping inflation and at the same time realize our maximum growth potential? There are many changes that would diminish the tendency for prices to rise, but none of them would assure that unions would not push up wages faster than industry could raise output per man-hour in the strong sellers' markets that would characterize a rapidly growing economy.

The possibility of price and wage controls may be dismissed, partly because the people would not tolerate controls in time of peace and partly because controls are easily evaded by changing the quality of goods and by introducing substitute goods. Strong public hostility to excessive union wage claims will have some effect on wages, but not much. Union members expect their officers to get all that they can for the members and would displace officers whom they suspected of failing to represent them faithfully. Union members, however, are not immune to public opinion, and strong public hostility to excessive demands will tend to weaken by a small amount the upward pressure of unions on wages.

What about the possibility of curbing the power of the trade unions by organization on the part of employers, by depriving unions of some of their present privileges and immunities, or by imposing new restrictions on unions? More organization among employers would help, but too much should not be expected from it. The employers are organized for dealing with unions in the steel industry, the coal industry, the railroad industry, and at the local level in many of the building trades, but in none of these industries have employers been able to prevent wages from outrunning output per man-hour.

Depriving unions of some of their present extraordinary privileges, such as the use of coercive picketing to force people to join or the conscription of neutrals in labor disputes, would remove some glaring injustices, but would have little effect upon the bargaining power of most unions. Breaking up some of the large unions, as has been suggested by George Romney and others, would have consequences that are hard to predict. Unions would lose some of their present ability to support strikes by some members while other members work and pay special assessments into a strike fund. Nevertheless, the new unions might drive hard bargains. There would be rivalries among them and each would have a strong desire to make a good showing.

Thus, if there were three or four unions in the automobile industry, each might feel a strong urge to make a better settlement than any of the others. Hence, breaking up the unions might increase their militancy and make reasonable settlements with them more difficult.

But whatever the possible results of the breaking up of unions, that step is not going to be taken. The American workers want their unions, and any effort to destroy or seriously weaken organized labor would cause the workers to rally to the support of the unions and make them stronger and more aggressive than ever.

The most promising methods of checking the tendency of rising labor costs to push up prices are new methods of management that enlist the ingenuity and imagination of the men at the machines and benches in reducing the ratio of labor costs to income from sales. Experience in more than a score of plants shows that amazing things begin to happen when workers share in a plant-wide bonus, based upon their success in narrowing the ratio of labor costs to income from sales, and are given good opportunities to discuss their ideas regularly with management. The common interest that everyone in the plant has in reducing labor costs produces an almost startling degree of teamwork and cooperation.

The new methods of management were introduced a few years ago by the late Joseph Scanlon, and his work is being carried out by his followers. But a generation or more will probably be required to spread the new methods throughout industry and adapt them to enterprises of various sizes and kinds. Eventually American industry will drastically modify its methods of handling labor and draw on the great capacity of rank and file workers to contribute to improvements in technology.

The new methods of management may or may not be adequate to prevent wages from outrunning productivity, but they hold more promise for checking rising labor costs than any device that has yet been developed.

If a generation or so will be required for new methods of management to check the rise in labor costs, what will happen in the meantime? Fears that the United States will be priced out of world markets are far-fetched. Prices in most other important industrial countries have been rising in recent years even faster than in the United States. Between 1950 and 1957, for example, the increase in the index of wholesale prices in Britain was more than twice as large as in the United States. In Sweden and Norway it was more than three times as large, in France almost three times as large, in West Germany almost twice as large, in Austria four times as large.

No one knows, of course, whether prices in other industrial countries will continue to rise faster than in the United States. Since the principal industrial countries are in competition with one another and since they all are more or less subject to the same influences (such as powerful trade unions and an insistent popular demand for social services that precludes important reductions in taxes), all of the industrial countries are likely to experience about the same movement of the price level.

The competitive position of the United States is very strong, especially in manufacturing. This is indicated by the fact that our exports of finished manufactures are nearly three times as large as our imports. But if important industrial countries were to succeed in underselling us on a broad scale, that would not be a calamity for us. On the contrary, it would help us check inflation by stiffening the resistance of American employers to union demands and by encouraging employers to cut prices.

Also ill-founded are fears that creeping inflation will precipitate a flight from the dollar and that creeping inflation will sooner or later become a gallop. Every country in Europe has had creeping inflation during the past 10 years. The idea has become pretty well accepted that a continued drop in the purchasing power of money is to be expected. And yet in virtually all countries the rise in prices between 1953 and 1957 was considerably less than in the period 1948 to 1953.

As for a general flight from the dollar, the practical question arises: "Where is the money to go?" Other currencies have limited attractiveness because almost any country one might name has economic and political problems as formidable as those confronting the United States. Flight into commodities is not satisfactory because the future price of each commodity depends upon specific market conditions (supply, demand, competition of substitutes) far more than on what happens to the general price level. Some shifting of investment is bound to occur and already has occurred, but the process tends to limit itself.

For example, if the price level is expected to rise 2 percent a year, a good bond yielding nominally 5 percent has a true yield of 3 percent. Such a bond may be as attractive as a stock that has been bid up so that it yields only 2.5 percent.

Our conclusion is that there is no immediate prospect that conflict can be avoided in advanced industrial countries between the desire for the maximum possible economic growth on the one hand and a stable price level on the other hand. This conflict is created by the rise of the relatively new institution of collective bargaining which is too well established and produces too many important benefits to be disturbed simply because it produces creeping inflation.

But the prospect that we shall be living under creeping inflation does call for various commonsense adaptations and adjustments. Efforts should be made to speed the adoption of new methods of management that automatically reward workers for helping reduce the ratio of labor costs to sales income. Pension plans, including the Federal old-age and survivors insurance plan, should be adapted to creeping inflation. This means that they should either be fitted with escalator clauses or revised every now and then to compensate for the rise in the price level.

People should review their investment policies and should not hold long-term bonds or other long-term fixed-income investments unless the yield is sufficient to compensate them for the probable annual loss in purchasing power. Long-term wage contracts should cotain escalator clauses. But, in general, people should realize that living under creeping inflation in the future will not be essentially different from living under creeping inflation in the past—in fact, prices will probably rise considerably less in the next 10 years than in the past 10.

Most important of all, people should realize that the alternative to creeping inflation is a fairly substantial amount of chronic unemployment. The problems of creeping inflation are a small price to pay for avoiding the much greater problems of unemployment and a rate of growth that falls far short of our potential.

SPENDING AUTHORIZATIONS

Mr. BYRD of Virginia. Mr. President, the effect of the two major bills as passed by the Senate thus far in the current session of Congress would be to provide for back door expenditure of $3.3 billion before the first appropriation bill is even reported from the House Appropriations Committee.

The housing bill, as passed by the Senate, would completely by-pass the appropriation process by authorizing $575 million in expenditures from public debt receipts, and circumvent effective appropriation control over $2,250 million in contract authorizations. Likewise the airport bill, passed by the Senate, would provide $465 million in contract authorizations.

And as HHFA Commissioner Norman Mason has pointed out, the public housing provision in the housing bill virtually commits future appropriations running into multi-millions of dollars in Federal contributions to projects under this program. Federal contributions to public housing projects in existence are now running at a rate of more than $100 million annually, and increasing every year, and to date they have totaled ap-

proximately $0.5 billion, exclusive of loans.

These two bills, as passed by the Senate, exclusive of further commitments such as those for public housing, represent an increase of $1.3 billion over administration requests for new spending authorization.

No one can foretell at this date what the effect of these bills would be on expenditures in the coming and subsequent fiscal years, but this type of fiscal legislation outside of annual appropriation control makes a shambles of orderly efforts to keep the budget in balance.

Assuming enactment of the Senate housing bill, $11.9 billion would be available for expenditure in Federal housing programs, including $9 billion in unexpended balances remaining in prior authorizations. Assuming enactment of the Senate airport bill, $610 million would be available for expenditure in the airport program, including $145 million in unexpended balances remaining in prior authorizations.

In addition to the $2.8 billion in new cash spending authorizations outside of effective appropriation control, the housing bill as passed by the Senate would further commit public credit for the insurance of private housing mortgages by a total of $10 billion.

I ask unanimous consent to have printed in the RECORD at this point tables showing the status of these bills to date.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

TABLE 1.—*Federal credit and money available for housing and related programs under pending bills as compared with administration requests*

Fiscal year 1961	$20,000,000
Fiscal year 1962	15,000,000
Fiscal year 1963	10,000,000
Total	45,000,000

THE NATION'S HIGHWAY PROGRAM

Mr. COOPER. Mr. President, last month the National Crushed Limestone Institute, Inc., held its annual convention at the Statler-Hilton Hotel, here in Washington, on January 21 and 22. The luncheon address delivered at the convention on Thursday, January 22, concerns the question of the scope and adequacy of the Nation's highway programs. It was delivered by Dr. Robinson Newcomb, who has served as an economic consultant for several congressional committees, and as an economist in governmental agencies.

I ask unanimous consent that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HIGHWAY PROGRAM IS BIG, BUT IT'S NOT BIG ENOUGH

(Address by Dr. Robinson Newcomb presented at the annual convention luncheon of the National Crushed Limestone Institute, Inc., January 22, 1959, Hotel Statler-Hilton, Washington, D.C.)

Mr. Chairman, ladies, and gentlemen, the one thing about which I am fairly certain is that our highway program has to be bigger. Each of you has a simple one-line chart No. 1 in front of you. I hope this chart gives my story. I hope it tells all I want to say. If it does, any of you can leave this minute without missing anything, because you'll have the idea. This chart shows that in constant dollars, if there were such a thing, the economy has grown from 3 to 3½ percent year in and year out including the depression years—including the 30's. I believe—and most technicians in the field believe—that the economy in the future can grow at least this fast and very possibly slightly faster. The economic report the President issued last Tuesday goes into some detail in explaining why and how we've been able to reduce the likelihood of serious recessions in the future. So, if the economy has grown this fast with serious recessions, it certainly should grow this fast without them and very likely faster without them.

There's another simple reason why the economy should grow at this rate in the future. Unless we think our kids are dumber than their parents, we should expect them to progress as fast as our parents and as fast as we progressed. If your children are as smart as I think my children are, we "ain't" seen nothing yet. So, if you will agree with me that this country will grow in the future as least as fast as it grew in the past, may I pass on to the next point?

Traffic has to grow faster than business as a whole. If business as a whole grows 3½ percent per year, traffic has to grow faster—at least 4 or 5 percent per year. Advancing culture and the increasing complexity of civilization require a greater and greater interchange of materials and of services. The self-sufficient peasant may make cloth for his own needs, and provide most of the materials and labor for his own food and shelter. He may depend on others for very little more than salt and the simplest of tools. He needs little in the way of roads or other transportation. But, with the onset of specialization, one of the essentials of increasing productivity and rising standards, must come more transportation. A man who weaves more cloth than he uses tries to exchange it for food and other things that he needs. Roads or other means of transportation must be developed if he is to exchange his cloth for what he considers the necessities of life. Otherwise, he must go back to a pastoral or a hunting economy.

Specialization means exchange—exchange means traffic—and the type of mass traffic which has been growing most rapidly is highway traffic. And that highway traffic requires facilities in the form of better highways. Highway traffic for all except basic commodities, such as coal, steel, timber, and grain, is proving the most efficient transport when all things, including time, are considered. So, if traffic as a whole grows faster than the economy, highway traffic particularly grows faster than the economy. Vehicles traveled twice as many miles over highways for each given value of business done in 1929 as they traveled for the same volume of business transactions in 1922. Or to put it differently, there were twice as many vehicle miles per dollar of business done in 1929 as there were for the same volume of business done in 1922. This is all, of course, in constant dollars.

The growth in business about which I have been talking, this chart you hold in your hands, represents an increase in real, not inflated, dollars. The highways, no matter how you look at it, have to be improved. The growth in highway traffic during the twenties followed the normal growth pattern of most healthy new industries. Traffic grew 11 percent per year compounded annually, more than did business during the twenties. And, traffic grew even during the depression in relation to the volume of business. From the peak of prosperity in 1929 to the depths of depression in 1933 traffic per volume of business done grew at an annual rate compounded at about 10 percent per year. That's almost as much during the recession as it grew in the prosperous years of the twenties. Even the depression did not stop the growth in relative highway use.

Here the story begins to get a little complicated, and if it's hard to follow, don't worry because the concept is basically the same one. If the economy continues to grow then highway traffic should grow somewhat more.

New industries tend to show a standard growth pattern. They tend to grow slowly at the onset, then the rate speeds up, then the rate of growth finally declines. But in any basic industry the rate of growth does not suddenly stop. As a new industry is replaced by an old one, as the railroads were replaced by highways, or canals were replaced by railroads, the rate of growth in these industries slowed down. But it didn't suddenly reverse itself. The growth of highway traffic did not follow this historic, yet basic economic pattern. The growth of highway traffic did not taper off as normally happens. It stopped abruptly. It shifted from a positive rate of growth of 10 percent per year even during the depression years to a sharp decline. Such a sharp reversal in trend from a high rate of growth to a nega-

tive rate is unusual. In no basic industry can I recollect this having occurred except in highways.

What happened is fairly obvious. Highway construction was fairly well maintained through 1931. Real expenditures on a constant dollar basis rose about 10 percent per year from 1921 to 1931. This according to the Bureau of Public Roads studies provided a capital investment in 1931 that was about 4.6 times as great as it was in 1921. As the highway traffic was about 4 times as great in 1931 as it was in 1921, highways were about as well equipped to carry the higher volume of traffic in 1931 as they had been equipped to carry the lower volume of traffic in 1921. But, highway construction stopped almost completely in 1932. Construction dropped over 10 percent in real terms from 1931 to 1932 and another 30 percent from 1931 to 1933. Highway capacity, as measured by depreciated investment, stopped rising at a rate which would permit highway traffic to grow as it should grow. Roads became congested. Hardening of traffic arteries appeared. When many roads were carrying capacity traffic, an increase in demand for traffic in normal times could move only by displacing existing traffic.

Chart No. 2 was prepared for me by the Bureau of Public Roads using Public Roads' data on investment in highways and on traffic. It is drawn as an index of inadequacy. If it is turned upside down, it becomes an index of adequacy. This chart shows that roads became more adequate from 1921 to 1930, that is, we built more capacity in 1921 to 1930 than we added to our traffic. So the roads were better and better able to handle traffic up until about 1932. But from then on adequacy dropped. Of course, the roads were able to handle the traffic during the war years because we held traffic down. At the end of the war, the roads were freed again and traffic was allowed to grow. The chart shows what happened. Adequacy, on the basis of 1939–40 equals 100, dropped to 61 in 1955. We haven't been building roads fast enough to keep up with traffic. That is why in part it takes you so long to get from your house to your work.

The next chart, No. 3, was also prepared by the Bureau of Public Roads. It shows annual expenditures on highways per vehicle mile traveled. This was determined using 1947 and 1949 construction dollars, calculated by the Department of Commerce. What was done was to divide the number of dollars spent each year, in constant terms as calculated by Commerce, by the number of vehicle miles as estimated by the Bureau of Public Roads. If we look at the figures for the beginning of the twenties we spent almost 1.2 cents for each mile traveled. In 1958 money, that would be about 1.9 cents. We spent this down through 1929 for each mile traveled. But during the early years of the Hoover regime expenditures on highways were increased. We sometimes forget that public and highway expenditures rose in 1930. They were higher in 1931 and in 1932 than they were in 1929. They continued to rise more than traffic during these years. We fixed up our roads fairly well through 1932, as you may remember from the index of adequacy or of inadequacy which we just saw. But in 1933 we checked our spending on roads. Outlays went down to something like six-tenths of a cent a mile or thereabouts by 1935. Then appropriations were increased again and public roads construction was revived. Expenditures rose to about nine-tenths of a cent per mile. Then they went down and with the war, to something like 0.2 to 0.3 cents. By 1955 we were back up to something like 0.6 and now they are something less than 0.7 compared to 1.2 cents in constant dollars in the 1920's. In spite of all we spent last year, we are still spending less per vehicle mile than we spent even in 1933 and far less than we spent back in 1925–29.

Today's program seems big. You've been told many times it's a big program. But in relation to the size of the country and in relation to the volume of traffic, it isn't a big program. It's six-tenths as big a program as it was 20 years ago. We forget how big we are, we forget that this is a growing country, a country growing ¾ percent per year. If the country grows this fast, obviously its expenditures for utilities must grow to keep abreast. We don't get excited when the A.T. & T. issues another big bond issue and spends more money for lines or switchboards. We don't get excited when the Potomac Electric Power, or your local utility, spends more money to increase its capacity for generating electricity. The only time we worry about spending to improve public utilities is when we talk about something like public roads. Payment for this utility comes out of the public exchequer instead of the private pocketbook. You men won't sell your limestone to the road program unless the money is available to build this program which I hope you won't call a big program, but more or less a normal program. Nothing comes without some effort and it won't take an awful lot of effort on your part to get the appropriations through, I am sure, for this normal highway program.

If economy is to grow 3½ percent per year, highway traffic will have to grow roughly 5 percent per year for the next decade. The heavy dotted line on top on the last chart, No. 4, indicates what traffic might have been had we continued to build highways and had we avoided the recession. The heavier dotted line on the right suggests what traffic may be if we continue to build adequate highways now. The rate of growth which may be necessary for economy growing at 3½ percent to 4 percent a year would yield a traffic volume of about a trillion, two hundred billion miles by 1970.

I'm throwing this in because pretty soon we will have to learn to talk in terms of trillions. By 1970 a high employment volume of business, in 1958 dollars, would be something like $750 million. But by 1985, maybe, it will be something like $1 trillion. Now, most of us hope to be alive in 1980, so we will have to learn to talk in terms of trillions. We are approaching an era in which, in the highway field, we will have to talk in terms of trillions earlier than we do in the terms of the national economy. But we won't have a national economy of $750 billion by 1970 unless we have highways which will permit traffic growth of a billion vehicle-miles and probably 1.2 billion by 1970. Those who would suggest that we hold back on highway expenditures are actually then suggesting that we should restrict the rate of growth of the economy. That would mean that we would not need highways to transport goods which the unemployed are not producing. If we permit the economy to grow and the unemployment to remain relatively low, we must provide the capacity to move the goods our higher rate of economy will create.

A calculation of the capacity required for the sort of traffic I have been discussing, suggests that something over $8 billion per year would be needed for construction between now and 1965. About another $4 billion might be needed for maintenance, debt service, police costs, and so on. This $8 billion estimate may be compared with a construction outlay of approximately $5,350,000,000, as estimated by the Department of Commerce for last year. This would suggest that during the next decade the average should be increased about 50 percent. The estimated outlay for 1959 is about $6 billion, or an increase of over 10 percent. For the decade 1966 to 1975, construction expenditures needed may approach $11 billion. That's double last year's expenditure. This would suggest your sales then may be double what they are now.

Once we have provided adequate highways, the capacity needed may grow but little more than the economy as a whole—approximately 4 percent per year. In the meantime, let's not create unemployment in order to avoid the expense of creating highways.

INTERNATIONAL WAR ON DISEASE CHALLENGE TO U.S. LEADERSHIP

Mr. NEUBERGER. Mr. President, few battles can be waged with gains for all participants assured: an exception is the fight against disease.

Today the United States has a dramatic opportunity to assume international leadership in the struggle to decrease human suffering. Our great resources of skill and technology have enabled us to perform modern medical miracles within this country. Sharing of these gains—and assimilation of the gains made by those of other nations—will free for useful endeavor millions of persons fated to live their lives as cripples or doomed to a premature death because of cures that now lie beyond medical understanding.

From 1937 through 1955 the death rate in the United States was reduced by 18 percent. In the 10-year period 1945 and 1955 alone, the rate declined 12 percent.

In the 17 years between 1937 and 1954, the life expectancy of U.S. citizens increased almost 10 years; 4.4 years were added in the period between 1944 and 1954 alone.

MORE THAN 3 MILLION LIVES SAVED

The 18 percent decline in the death rate represents a saving of over 3 million lives. If the 1937 death rate had prevailed from 1937 through 1955, this many more people would have died.

These statistics, compiled by the National Health Education Committee, Inc., from data available through the National Office of Vital Statistics, reveal the magnitude of medical research progress in the United States and the rewards in terms of human lives.

Estimates of the relief of nonfatal but crippling diseases in the United States indicate similar massive steps forward. Eighty percent of all epileptics now lead normal lives due to neurological research. Salk vaccine has drastically reduced the incidence of paralytic polio. Because of the discovery of certain antibiotics, a number of blinding eye diseases have virtually disappeared in the United States.

RESEARCH BENEFITS WORLDWIDE

Benefits of research have spread to other countries. Due to antibiotics, within 3 years the incidence of yaws in Haiti was reduced from 1 in 6 of the populace to 1 in 3,000—at a cost of 30 cents per capita. In some parts of the world two-thirds of the people have trachoma; the antibiotic aureomycin can provide dramatic improvement within a few days. From 1942 to 1949, Greece reduced the sickness rate from malaria to one-fortieth of the 1942 rate through use of DDT control measures.

These statistics indicate the value of medical research. In dry, dispassionate

terms, they show achievements won and argue for further effort.

Our scientists have made great progress in discovering the cause and cure of many illnesses. I have been proud to play a small part in this forward movement through our successful efforts, under the leadership of the distinguished senior Senator from Alabama, Senator LISTER HILL, to secure increased appropriations for the National Institutes of Health, and other federally sponsored research activities. We have instituted public health programs which aid in implementing in other countries the knowledge gained by research. But we have not yet taken the ultimate step—inauguration of a worldwide war against disease.

HERBERT LEHMAN DESCRIBES CHALLENGE

Mr. President, recently a respected and eminent former Member of this body, Senator Herbert H. Lehman, delivered an address before the American Social Hygiene Association in New York City which vividly describes the challenge to the United States. I should like to read a portion of that speech to the Senate today. Senator Herbert Lehman said:

I would like to see the day, and soon, when the largest single item in our national research budget would be for study of the ways and means of saving rather than of destroying life.

Our Government does make appropriations for medical research, mostly through the National Institutes of Health. These appropriations are still far from enough. But the chief bottleneck, the principal shortage today is not of money but of trained research scientists and technicians.

There is a similar shortage in most countries where research is going on.

Yet at the same time, there is a great duplication of research effort, as between our country and others. The world supply of its most precious scientific resources—brains and skills—is being wastefully expended.

The exchange of medical research information between our country and other countries is tragically inadequate.

I have heard it said that if all the existing bits and pieces of information bearing on cancer to be found in the various laboratories of the world could be pooled, sifted and correlated, a major breakthrough with regard to this disease would be virtually assured.

Mr. President, I ask unanimous consent that the portion of Senator Lehman's address dealing with international cooperation in medical research be included in the RECORD at this point in my remarks.

There being no objection, the extract was ordered to be printed in the RECORD, as follows:

EXCERPTS FROM AN ADDRESS BY THE HONORABLE HERBERT H. LEHMAN BEFORE THE AMERICAN SOCIAL HYGIENE ASSOCIATION

Let me present a specific program which could, I think, arouse the enthusiastic support of the American people and strike a deeply responsive note throughout the world. I suggest it as a path to peace. I refer to the desirability of an international cooperative attack on the problem of disease and disability—those common enemies of all mankind which recognize neither national boundaries nor national interests, but constitute, along with the threat of war, the chief menaces to the human race.

What a thrill would go through the ranks of mankind if our Government sent out a clarion call for an international crusade against these age-old enemies, and pledged the resources necessary to help organize such a crusade.

Of course, this alone would not solve the complex problems of our world relationships; nor dare we turn our back upon the efforts of Soviet communism to undermine the world's forces of freedom and spread its power throughout the earth. But I am convinced that in the breakneck race we are now running against the Soviet Union on a predominantly military course, it matters increasingly less to a growing number of the common people of mankind whether the Soviet Union or the United States is ahead; they feel that humanity is falling behind.

And so I suggest that we try to change the focus of the world's attention from some of the differences which divide us to some of the problems which unite us. Surely one of them is the problem of disease and disability.

Proposals pointing in this direction have already been made in the Congress, and, I am sure, elsewhere. President Eisenhower has made passing reference to it, and his brother, Dr. Milton Eisenhower, spoke of it before the World Health Assembly in Minneapolis early this summer.

I am told that the administration in Washington is even now giving consideration to an expansion of our Government's activities in international health cooperation. I do not know in what magnitude.

I take this occasion to urge that the various proposals pointing in the directions I have mentioned be given the widest possible public discussion with a view to their most comprehensive possible implementation.

I utter a sober warning that these undertakings must not be publicly presented as merely new propaganda weapons in the cold war. If so, they will fail in their purpose. They must be presented as a new departure in policy, part of an entirely different approach to the problem of peace and understanding in the world. But beyond that, the program of international cooperation in the war against disease must be viewed as valid for its own sake. It is.

* * * * *

I would like to see the day and soon, when the largest single item in our national research budget would be for study of tne ways and means of saving rather than of destroying life.

Our Government does make appropriations for medical research, mostly through the National Institutes of Health. These appropriations are still far from enough. But the chief bottleneck, the principal shortage today is not of money but of trained research scientists and technicians.

There is a similar shortage in most countries where research is going on.

Yet at the same time, there is a great duplication of research effort, as between our country and others. The world supply of its most precious scientific resources—brains and skills—is being wastefully expended.

The exchange of medical research information between our country and other countries is tragically inadequate.

I have heard it said that if all the existing bits and pieces of information bearing on cancer to be found in the various laboratories of the world could be pooled, sifted and correlated, a major breakthrough with regard to this disease would be virtually assured.

For these and other reasons, leading medical scientists believe that the greatest single need in the field of research today is international cooperation and coordination in the training of skilled research workers, in the exchange of information, and, of course, in the actual conduct of research.

An international program is called for.

There is already in existence international machinery which could be utilized to help carry out such a program.

I mean the World Health Organization. This body has already worked miracles in helping to control such diseases as malaria and tuberculosis in many parts of the world.

It operates on a miniscule budget, $13½ million annually, about half the budget of the New York City Health Department. Thus it has never been able to concern itself with basic medical research. Yet it could well function at the center of the international research program I have been discussing.

Our Government must greatly increase its financial contributions to the WHO to permit this organization to utilize its full potential in the world war against disease and disability.

But the need is not just for bigger appropriations. We need a comprehensive plan, and a governmental mechanism in the United States to help enlist and mobilize the scientific personnel and resources of our country for the great undertaking I have sketched.

A comprehensive proposal to meet percisely this need has been presented by Senator LISTER HILL, who is the Senate's leading and most effective fighter for medical research and for public welfare measures generally.

Senator HILL's plan would authorize an annual appropriation of $50 million to effectuate the purposes I have described—to mobilize the health resources of America, and to stimulate their mobilization abroad—for a world crusade against disease and disability.

I do not have the time today to discuss the details of the Hill proposal. But I commend this measure to the sympathetic consideration of this organization and of every individual present here today.

I hope that Senator HILL's bill will be enacted by the next Congress. But as with all such proposals, this can only happen if public interest groups such as yours, and the public at large, mobilize their support behind this program.

I can think of no more stirring cause than this, and none more truly worthwhile. This project embraces the most primary concern of human beings. It can evoke a world enthusiasm based on the ancient and universal respect for the healer, who can make the blind see and the lame walk.

Undertakings of this sort hold the only promise I can see for the world to emerge from the present age of confusion and brink of catastrophe.

Being basically an optimist, I have great faith in the resources and indestructibility of the human spirit. I believe—because I must believe it—that far from being at the beginning of an age of darkness, we are actually near its end, and that a true renaissance of the free spirit of mankind shortly awaits us.

As part of this renaissance, I believe there will be a revival and renewal of the spirit of humanitarianism.

I believe that America will help lead the way in this historic development.

I have faith and I have hope. But the progress which we impatiently await will be made only if all of us join to help bring it about.

Mr. NEUBERGER. Mr. President, despite significant victories in the field of medical research, tremendous challenges remain. Eighty-eight million Americans now living will die of heart diseases unless new treatments and cures are found. About 26 million will die from cancer. As former Senator Lehman points out, the key to the cause of cancer may now lie in a laboratory test tube in Japan, Poland, or Brazil. But this magnificent achievement might be delayed for years because scientists in

other nations—who might realize the implications of this information due to their own studies—lack the necessary means of communication to obtain these findings. The magnitude of the problem is indicated by the fact that many scientific investigators find it less expensive and time-consuming to conduct laboratory experiments anew than to search for previously reported data—even though such data are known to exist.

Mr. President, the outstanding political leader in the field of public health is the senior Senator from Alabama [Mr. HILL]. His effective leadership in the Senate has been a major element in the significant appropriation increases which we have been able to secure for the vital work of the National Institutes of Health. The Senator from Alabama [Mr. HILL] has recognized the moral responsibiilty of the United States to launch an international crusade against disease by introduction of Senate Joint Resolution 41, a bill to establish the domestic machinery which will facilitate the international cooperation in medical research. Enactment of this resolution would further signify to the world, the United States desire for cooperation, not conflict. It would help prepare the way for an International Medical Year in which scientists, doctors, and technicians of all countries could combine to launch a global battle against disease. I am proud to be a cosponsor of this proposal, on which Senate hearings are now being held. I hope that it will receive speedy consideration by Congress.

REPORT LISTS ADVANTAGES FOR UNITED STATES

In the 85th Congress, the Senate passed Senate Concurrent Resolution 99 urging the President to initiate action leading to U.S. participation in a world Health and Medical Research Year. This declaration of support by the Senate should receive the urgent consideration of the administration. I ask unanimous consent that part of the cogent Senate report on that resolution—which was prepared by the distinguished Senator from Minnesota [Mr. HUMPHREY], who has so vigorously and effectively supported the International Medical Year concept in this country and abroad—be printed in the RECORD at this point.

There being no objection, the excerpt from the report was ordered to be printed in the RECORD, as follows:

PURPOSE

Major health and medical progress has been achieved within recent years throughout the world, thanks to scientific discovery and other efforts. However, widespread disease and disability still beset the world, including particularly the underdeveloped areas.

The goal of these resolutions is, therefore, to encourage the acceleration and broadening of mankind's battle against its afflictions. One possible medium which would be studied by means of this resolution would be international participation in a Health and Medical Research Year, which might be comparable in some respects to the current successful International Geophysical Year.

The President of the United States would be invited to extend, principally through the World Health Organization, an invitation to the nations of the world to designate representatives to meet and discuss the feasibility of such a Health and Medical Research Year, which might, if approved, occur at some indefinite time in the future. In addition, alternative methods would initially be explored, looking toward intensified international cooperation in the field of health.

BACKGROUND

In January of 1958, in his state of the Union message, President Eisenhower conveyed a recommendation for "works of peace," including an offer for a pooling of efforts with the Soviet Union "against the diseases that are the common enemy of all mortals—such as cancer and heart disease."

At the Eleventh World Health Assembly, held in Minneapolis in May–June 1958, a United States offer of $300,000 was accepted for the purpose of exploring expanded health research efforts.

The Executive Board of the World Health Organization will be directing this study, one of the possible phases of which might be the question of a Health and Medical Research Year, as contemplated under these resolutions.

ADVANTAGES TO THE UNITED STATES

The United States has a long and honored record of advancing and exchanging scientific knowledge, among other ways, through the means of specially designed international scientific years. By means of the present resolutions, our Government would be maintaining the initiative in the forum of world opinion in advancing constructive programs for the alleviation of the health problems of mankind.

Experience under the International Geophysical Year demonstrates that there are impressive advantages in a universally designated period of intensified research and cooperation. Public recognition is heightened, governments are encouraged to optimum efforts, and barriers to the flow of scientific information tend to be relaxed.

Disease, of course, recognizes no national boundary line. Illness exacts a grim toll on all mankind—directly and indirectly.

No country is immune from the ravages of such scourges as heart disease, cancer, arthritis, rheumatic diseases, and neurological disorders, to name but a few common afflictions.

The findings from expanded research findings which might be stimulated by means of these resolutions would become available for the benefit of the population of the United States, as well as for all other peoples.

Coping with disease involves the complex processes of discovery, diagnosis, treatment, and rehabilitation—to all of which tasks scientists, physicians, and other health workers of all nations can fruitfully contribute.

Mr. NEUBERGER. Mr. President, on February 3, 1959, the Senate approved a resolution presented by the Senator from Minnesota which will permit the Committee on Government Operations to continue its study of international activities of the executive branch in the field of medical research. This study has already yielded valuable information. During the coming year publication of further findings will provide guidelines for necessary congressional and executive action as we seek to insure fullest efficiency and coordination in international research efforts.

NEED DICTATES INTERNATIONAL CRUSADE

Mr. President, the war against disease is not an abstract principle for me. In August I underwent surgery for cancer. Only a few weeks ago I ended precautionary cobalt radiation treatments. Medical research saved my life. Millions of persons live useful and productive lives today because of the efforts of dedicated researchers who successfully searched out the cause of death and disability—"those common enemies of all mankind which recognize neither national boundaries nor national interest, but constitute, along with the threat of war, the chief menaces to the human race."

Herbert H. Lehman said:

What a thrill would go through the ranks of mankind if our Government sent out a clarion call for an international crusade against these age-old enemies, and pledged the resources necessary to help organize such a crusade.

I can think of no more stirring cause than this, and none more truly worthwhile. This project embraces the most primary concern of human beings. It can evoke world enthusiasm based on the ancient and universal respect for the healer, who can make the blind see and the lame walk.

It is my hope that our Government will heed these words from a wise counselor and a great humanitarian.

Before I conclude, Mr. President, I wish to say I am pleased to observe present in the Chamber with us the distinguished senior Senator from Minnesota [Mr. HUMPHREY] who has been very persistent and effective as an advocate of international progress in the field of medicine. Today all too few studies and findings with respect to medical research are translated into other languages so that they can be shared by people in all countries. In addition, there are many backward nations which have great scientists and brilliant minds but lack the financial means to use the physical resources such as drugs and various elements in those countries, so that they can make the medical findings which would be possible if the programs could be supported financially.

I am pleased that the Senator from Minnesota has been present during the delivery of my address, so that he can share in what I have had to say and so that I can acclaim his leadership in this important field.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. NEUBERGER. I am happy to yield.

Mr. HUMPHREY. I wish to thank the distinguished Senator from Oregon for his very kind and gracious remarks.

One of the most thrilling experiences of my life took place last year in November or December, when under the terms of the Senate resolution to which the Senator from Oregon has referred, the resolution to look into medical research as conducted by the executive branch of the Government, I visited some nine nations to study the hospitals, laboratories, and pharmaceutical establishments in the field of health and medical research. It was an experience, I will say to the Senator from Oregon, that will live in my memory from now on.

I recall, for example, being in the Radium Institute in Paris, in the presence of a very great doctor, who is in the United States at this moment, Dr. Latterjet, an excellent scientist who

headed the Radium Institute. While I was there the seven Yugoslavs who were the victims of a nuclear plant explosion were brought in for treatment, and we were able to observe the importance of more progress in the field of what we might call radioactive medicine or medical treatment and medical research in the field of radioactivity. We know very little about that.

Other doctors to whom I talked were keenly concerned in the problems of air pollution.

I visited the children's hospital in Paris, where Dr. Minkowsky, an eminent specialist in children's diseases, took me through all the laboratories and all the experimental wards to show me what was going on, particularly with respect to the care of children born prematurely.

These were a few of my experiences, and I had some others at Oslo and Stockholm and the great Karolinska Institute in Finland, and the World Health Center in Geneva.

In Moscow we visited the Soviet Academy of Sciences and the great Cancer Institute, where we visited with the top specialists in the field of cancer research and cancer treatment. Dr. Blocheim is one of the leading specialists in Russia, and has been the same in the United States, under the American Cancer Institute.

I want to say to the Senator that his support of this great endeavor currently being sponsored by the Senator from Alabama [Mr. HILL] and others—the Senator from Oregon is a cosponsor—will be of inestimable value, because the Senator speaks not only with the mind of a great legislator but with a heart which is filled with experience in this field of medicine and knowledge of what medical research can provide for us.

I am happy to associate myself with the remarks of the Senator from Oregon, and I am very appreciative of the Senator's very generous comments relating to my activities.

Mr. NEUBERGER. I thank the Senator from Minnesota, who should not belittle or deprecate his own role, because it is a very important role. I have often thought, particularly since my own serious illness, how much disease and health problems are the levelers which unite all mankind. We may disagree on ideologies, economic systems, politics, military problems, international borders or international frontiers, but all mankind—living in the United States, in the Soviet Union, in the British Empire, in France, in Italy, or in Turkey—is heir to the same ills.

I am sure the hearts of mankind everywhere have been stirred by the heroic fight for life of our Secretary of State, John Foster Dulles. I feel certain, whether people agree or disagree with his policies in the international field, they pray and hope for his recovery, and they are stirred by the valor and bravery with which he is facing his illness.

I should like to say further that it is my hope that when we pass the joint resolution of the Senator from Alabama [Mr. HILL], of which the Senator from Minnesota [Mr. HUMPHREY] and I are cosponsors, to further medical research internationally, perhaps we can dedicate the passage of that measure to the ultimate recovery of our distinguished Secretary of State.

Mr. President, I ask unanimous consent that there appear at the conclusion of these remarks an article which I prepared for the Progressive magazine, and which appeared in the October 1958 issue of that publication, together with editorials from the Eugene Register-Guard, the Arizona Star, and the New York Times endorsing an International Medical Year.

There being no objection, the article and editorials were ordered to be printed in the RECORD, as follows:

[From the Progressive, October 1958]

NEXT THE INTERNATIONAL MEDICAL YEAR

(By RICHARD L. NEUBERGER)

"The groundwork of all happiness is health."—Leigh Hunt, 1821.

I have a proposal which I believe might stir all mankind. We have just concluded the International Geophysical Year, during which the nations of the world spent some 18 months studying the earth and its environment. This ranged from outer space to caves and crevasses, from Antarctica to the steaming jungles of the Amazon and Congo. New mountains of ore were discovered, to say nothing of 40 percent more ice than anybody thought existed in the polar regions.

Now, what of an International Medical Year, to be held beginning early in 1961, under the auspices of the newly inaugurated President of the United States? This would afford time to prepare for the undertaking.

Such a project could mobilize all the world's skills, knowledge, and facilities for an all-out onslaught against heart disease, against the grim series of malignant diseases known as cancer, against malaria, against the blinding glaucoma which plagues the Orient, and against all the other sinister maladies that kill and torment members of the human race.

An International Medical Research and Health Year was proposed by Adlai E. Stevenson in an eloquent commencement address to the students of Michigan State University last June. The vast potential significance of this idea was brought home to me recently when I read the letter of a young American doctor, Thomas A. Dooley, treating natives in the swamps of Vietnam. He wrote that the effect of tender medical care on these forsaken people could be "Christlike in power and simplicity." The idea occurred to me again when I noticed that, during both 1956 and 1957, not more than 1 percent of our foreign-aid funds were used for health measures. Yet what could have a more favorable and enduring impact on our friends overseas than clinics to reduce the tragic rate of infant mortality, to cope with malaria, to eliminate the bacteria-nurtured diseases which snuff out so many young lives in Asia and Africa before even the age of 35 is reached?

Nor would an IMY—meaning International Medical Year—be without immense potential benefits to America itself. Despite our vaunted standard of living, the male residents of the United States have a shorter life expectancy than the males of no fewer than seven other countries—Holland, Great Britain, New Zealand, Israel, Norway, Sweden, and Denmark. And, although Soviet medical education is quite a bit less thorough than ours, Russia today is producing four times as many doctors annually as we do: about 25,000 as compared with 6,000. Russia has 164 doctors for each 100,000 people as contrasted with our 130 per each 100,000. And we in the United States cannot afford to ignore the increasing number of deaths in this country each year from cancer, climbing steadily from 211,000 in 1950 to 250,000 in 1957.

Furthermore, I believe the political climate is right in the United States for such a proposal as IMY. In a world racked by war and rumors of war, hopeful tidings often escape public notice. This is particularly true in the realm of politics, where Cassandra-like wailing can become an occupational disease.

Yet, I would confidently declare that one of the truly auspicious events of our era is the ever-increasing support of research on the frontiers of medical science by the U.S. Government. Indeed, it is little short of miraculous that Congress has been able to achieve this goal during a period when the executive branch of Government is headed by a President whose budget actually had discouraged such a program.

Perhaps this overwhelming challenge helps to explain my answer when people ask for my opinion of the outstanding legislative feats with which I have been associated. They expect me to enumerate spectacular bills such as statehood for Alaska, repeal of the Federal freight tax, or funds for the 1-million-kilowatt John Day Dam on the Columbia River. Instead, I reply:

"The vast increase in appropriations for medical research generally and cancer research in particular."

The efforts of the Government in this category center at the National Institutes of Health, in the green Maryland countryside near Bethesda. Research is carried on here by some of the Nation's most eminent medical scientists. I rejoice that some of us recently were able to secure congressional approval of adequate salaries for these gifted men and women. In addition, the National Institutes provide substantial grants to medical schools, clinics, private laboratories, hospitals, and other places throughout the 48 States where promising avenues of medical exploration have been opened.

Here is how Federal funds for the various separate divisions of the NIH have been progressively expanded in the 4 fiscal years since I came to the Senate:

	1955 *Million*	1959 *Million*
Mental health	$14.1	$52.4
Heart	16.6	45.6
Cancer	21.7	75.2
Dental health	1.9	7.4
Arthritis	8.2	31.2
Allergy, etc	6.1	24.0
Neurology and blindness	7.6	29.4

Shamefully enough, the budgets of the Eisenhower administration literally, on occasion, have recommended reductions in appropriations for the National Cancer Institute. But Senators who had seen such illustrious colleagues as Vandenberg, Taft, McMahon, and Neely die lingeringly of cancer, would not hold still for this kind of economy. They rallied behind the Nation's premier political figure in the field of public health, Senator LISTER HILL, of Alabama, to make available for research into cancer, heart disease, and blindness at least a fraction of what we invest in armaments and other weapons of destruction.

This reveals why Senator HILL is my first choice to be American chairman of IMY. Few people outside the inner citadel of medical science are such symbols of concern for health as this southern liberal, who has served in Congress since 1923 and whose grandfather and father before him were eminent physicians. The author of the Hill-Burton Hospital Act and other medical legislation comes by his interest as a matter of rightful legacy. His father, Dr. Luther L. Hill, was the first American surgeon to perform a successful suture of the human heart.

He had studied in London under the great British scientist, Sir Joseph Lister, and this is how Dr. Hill's son received his name.

LISTER HILL works successfully with other people, for a humorous and kindly disposition affirms the sincerity of his solicitude for human suffering. He has rallied bipartisan support for his pioneering efforts in health legislation from such responsible Republicans as Senator MARGARET CHASE SMITH, of Maine. Another effective lieutenant is Mrs. Mary Lasker, the beautiful and wealthy founder of the National Health Education Committee, whose presence in Washington is almost invariable when Senator HILL and some of the rest of us are fighting for adequate funds to support the National Institutes of Health.

These citizens—and many others—could give vitality to America's participation in an International Medical Year. And IMY, originating in the United States, might help to instill in Americans a renewed appreciation for the wonders of medical research. I remember a day in the Senate, some months ago, when some of the lack of this appreciation was vividly impressed upon me.

I had recently passed the great Senate caucus room where a hearing was under way of the Senate Rackets Committee. The huge marble hall was crowded. At least two dozen reporters thronged the press tables. The klieg lights of television flooded the place. Radio microphones were placed at strategic intervals to catch every word. Some wretched racketeer from a strife-ridden labor union was on the witness stand, testifying reluctantly to his thefts from the union membership.

My wife and I had as our guests two nurses from the fine teaching hospital at the University of Oregon Medical School. We thought they would be interested in attending a hearing before Senator LISTER HILL'S subcommittee on National Cancer Institute appropriations, in the basement of the Capitol Building. The witnesses were two of America's foremost doctors, Sidney Farber, of the Children's Cancer Research Foundation, and Isador Ravdin, of the American College of Surgeons and University of Pennsylvania. Quietly, they talked of a possible breakthrough employing chemotherapy as a method of treating cancer, and of the fact that viruses might be the etiological agent for cancer in human beings. They described the direction which cancer research ought to follow during the years directly ahead.

In that room, besides four or five of us from the Senate, were our two Oregon nurse guests and Mrs. Mary Lasker and a few of her personal friends. There was not one newspaper reporter, not one TV camera, no microphones, no flash bulletins, no communication to the public from the green felt table where Drs. Ravdin and Farber were somberly testifying.

I thought of the past panoply of communication which has been brought to bear on a labor racketeer's testimony upstairs. And I thought, too, of the 250,000 Americans who had died agonizingly of cancer in 1957, and of the hundreds of helpless child patients under Dr. Farber's care for leukemia, the deadly cancer of the blood. It seemed to me, in this moment, that an International Medical Year, centering in our own country where skills exist so abundantly in the realm of medicine, might help to achieve many purposes. One of these could be a greater talent for separating the things of lasting value from those of only transitory importance.

[From the Eugene (Oreg.) Register-Guard, Dec. 21, 1958]

NOW AN INTERNATIONAL MEDICAL YEAR?

The International Geophysical Year, which lasted 18 months, ends December 31. Now the proposal is made by Senator RICHARD L. NEUBERGER that another year be proclaimed. He calls for an International Medical Year to begin in 1961. The idea of stimulating medical research is appealing. But it pays, also, to examine the nature of such years. What may they accomplish that might not be accomplished otherwise—or that might take much longer?

The Geophysical Year was a profitable one. Among the worthwhile scientific achievements were the lofting of the first and succeeding sputniks (and those were remarkable scientific feats regardless of their political ramifications), extensive navigation under the polar ice, discovery of a new mountain range on the Pacific floor, new ideas about the real character of the Antarctic continent, and many discoveries about weather. Some of these discoveries undoubtedly would have been made even if there had been no IGY.

Where the IGY did help was in focusing public attention on fields that often fail to make headlines. It is likely that some money was pried loose for geophysical research. Some of this money might not have been forthcoming had not the year been proclaimed. In this respect the IGY was a promotional scheme, not greatly different from cheese week, book week, fire prevention week, education week, newspaper week, and a hundred other weeks that are more or less celebrated annually.

The IGY has been a success because it had the widespread support of the world's scientists, the only men who could make it work. Before an International Medical Year, or IMY, could be organized, we should have to be assured of the support of the medical research people and of many of the practicing physicians. And they're skittish about promotions. It's one thing for a scientist to take active part in a program conceived by scientists. It is quite another to expect that a scientist will take part in a program that had its genesis in the mind of a political figure, even one so genuinely sympathetic to medical research as Senator NEUBERGER.

But it might be worth trying anyhow. As the Senator says, we in America should be enthusiastic about it. He points out that American men have a shorter life expectancy than men living in Holland, Great Britain, New Zealand, Israel, Norway, Sweden, or Denmark. This is so, despite the high standard of living that we brag about. And a mobilization of medical skills in an all-out assault on such diseases as cancer, heart disease, and mental illness would be made more feasible if the promotional force of an IMY were present to pry out the money such projects need. Supplies must be bought. Scientists must be freed of bread-and-butter jobs so that they can spend their time in research of a type that gives no assurance of money profit. New scientists must be trained. Hospitals and schools must be established and supported.

This newspaper, without using such a term for it, has long believed that the IMY approach is the right one. It has seemed wiser to work on the general problem of human health and fitness, concentrating as experts felt wise, than to spin our wheels by multiple appeals for specific illnesses, some of which are relatively minor in the whole medical picture. The Senator's idea, while it may have some bugs, appears to be worth serious consideration.

[From the Arizona Daily Star, Tucson, Ariz., Nov. 17, 1958]

AN INTERNATIONAL MEDICAL YEAR

Senator RICHARD L. NEUBERGER, a narrow escapee from death by cancer, came up with an idea during his convalescence which he believes might stir all mankind. It is for an International Medical Year to start early in 1961, in the same pattern as the vastly successful International Geophysical Year now in its closing weeks.

In his proposal, NEUBERGER points out that "despite our vaunted standard of living, the male residents of the United States have a shorter life expectancy than the males of no fewer than seven other countries—Holland, Great Britain, New Zealand, Israel, Norway, Sweden, and Denmark."

He points out that setting the IMY for 1961 would provide time to prepare for the undertaking. He adds:

"Such a project could mobilize all the world's skills, knowledge, and facilities for an all-out onslaught against heart disease, against the grim series of malignant diseases known as cancer, against malaria, against the blinding glaucoma which plagues the Orient, and against all other sinister maladies that kill and torment members of the human race."

It should be remembered that some of the great medicines of today have been known in other parts of the world for centuries, and that an IMY a generation ago might have effected the simple exchange of information which would have saved, for example, hundreds of thousands of hypertensives from eye hemorrhages, breakages of blood vessels elsewhere including in the kidneys and the brain, suffering and death. Mahatma Gandhi was chewing snake root daily for many years before doctors in the United States even knew it existed.

Research designed to whip some of the great killers has proceeded to the place where perhaps an International Medical Year might bring the climactic victory.

[From the New York Times, Dec. 8, 1958]

FOR A WORLD HEALTH YEAR

What may in the long run prove to be one of the most important actions of the present session of the General Assembly was taken last Friday. By a unanimous vote the Assembly invited the World Health Organization to carry out plans for the observation of an International Health and Medical Research Year, preferably in 1961.

The basis for this renewed effort would be primarily national, just as the World Health Organization works through regional and national groups with no attempt to supplant them. But the great aim is a better coordination of effort in some fields where international operation is imperative.

First of these, obviously, is the spread of existing knowledge in the field of fighting epidemic and endemic disease. The accomplishments of the World Health Organization in its first 10 years in the campaign against such scourges as malaria, tuberculosis, and yaws have been spectacular. An internationally supported health year should make it possible greatly to increase and accelerate these campaigns.

Of equal importance is a projected program for the coordination of research in these fields in both prevention and treatment. This is the point at which international cooperation is essential and at which immediate results can be obtained. Legislation to place the United States in the forefront of such a program will come up in our next Congress and it would be a logical part of this worldwide effort.

By far the largest possibility in this planning, however, is the opportunity to focus worldwide attention on the problems and how they can be solved. We still need to bring closer together the obscure village and the great laboratory. We still need to take to every part of the world the electrifying knowledge that if only we have the will and the imagination, these great battles can be won.

Mr. NEUBERGER. Mr. President, I yield the floor.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Miller, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session,

The PRESIDING OFFICER (Mr. DODD in the chair) laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

NEW INTERNATIONAL WHEAT AGREEMENT

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an article from the New York Times of March 10, announcing a new international wheat agreement as approved by the United Nations Conference of Exporters and Importers, be inserted in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, the article may be printed as requested.

(See exhibit 1.)

Mr. HUMPHREY. This announced agreement is the culmination of some six weeks of hard and serious work by fifty nations in Geneva, Switzerland. I am pleased to note that it is expected that many more nations than were included in past agreements are expected to agree to this new pact. Among the expected new signatories are Great Britain, as an importer, and Italy and Mexico, joining the six major exporters—Canada, the United States, Australia, Argentina, Sweden, and France.

This international agreement on wheat is but one more example of the fine and constructive work which is being done through the medium of the United Nations. Although the headlines most often reflect crises and tragedy, it is well for us to keep a proper perspective and to realize that greater cooperation between nations is being made.

In the work of the United Nations lies the great hope for a just and lasting peace, and a world in which mankind may live in freedom and dignity and enjoy a decent standard of living.

EXHIBIT 1

[From the New York Times, Mar. 10, 1959]

NEW INTERNATIONAL WHEAT PACT DRAFTED BY U.N. BODY IN GENEVA

GENEVA, March 9.—A new international wheat agreement was approved here today by the United Nations Conference of Exporters and Importers. The Conference of 50 nations has been meeting in secret here for 6 weeks. The Conference will hold its last formal meeting tomorrow morning. Conference sources said that many more countries than previously would adhere to the new agreement. This would replace the existing agreement at the end of July.

The agreement establishes quotas and prices among its signatories.

Among the new signatories would be Britain, as an importer, and Italy and Mexico, joining the six major exporters—Canada, the United States, Australia, Argentina, Sweden, and France.

The special working group that has been discussing the problem of maximum and minimum prices submitted its report today to the main Conference. The approval of this report was the Conference's last main task.

Conference sources said that the minimum price of $1.50 Canadian ($1.54) a bushel remained unchanged but there had been a slight reduction of the maximum price of $2 Canadian ($2.06) a bushel.

The main difference between the old and new agreements is that the new arrangement is based on consented percentages, while the old one was based on guaranteed quantities.

An annex to the agreement lays down the percentages of normal wheat transactions that importers will cover from exporters.

BRITISH APPROVAL SEEN

LONDON, March 9.—A spokesman for the Government said today there was every chance the Geneva Wheat Conference would end in a new international wheat agreement to which Britain could adhere.

Joseph Godber, parliamentary secretary to the Ministry of Agriculture, told this to the House of Commons in reply to a question.

VISIT TO THE UNITED STATES BY PRESIDENT JOSE MARIA LEMUS OF EL SALVADOR

Mr. HUMPHREY. Mr. President, this week we in the United States are honored by having as a guest the distinguished President of El Salvador, Jose Maria Lemus.

President Lemus has been engaged in a most commendable program to raise the standard of living of the people of his fine democratic country. Under his leadership, programs have been undertaken to improve in particular rural housing, sanitation and education.

The people of El Salvador have reason to be proud of their country which is one of the most highly cultivated in the whole of Latin America. To President Lemus we extend a glad welcome and assurances to him and his people of our friendship.

I ask unanimous consent, Mr. President, that an editorial from the New York Times of March 9, 1959, entitled "Visitor from El Salvador" be inserted at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VISITOR FROM EL SALVADOR

The visit of President José Maria Lemus of El Salvador to the United States has some especially pleasant aspects. It gives us a chance to show that the head of the smallest nation in the Western Hemisphere is just as welcome as if he were president of one of the largest.

El Salvador is a democracy, politically quiet and financially sound, although hard hit by the fall in coffee prices. President Lemus said in San Salvador that he was coming here solely for the purpose of cementing the friendly relations between our two countries and not for a loan or a handout.

This is certainly true, but it does not mean that the United States should fail to encourage the ambitious Campesino program which President Lemus is trying to put into effect. The one socially bad feature of Salvadoran life is the enormous disparity between the few wealthy families and the great mass of the people, who are very poor. The ruling class, to give it credit, has a social conscience. El Salvador is more than 90 percent mestizo, of mixed Spanish and Indian blood. The Government program aims primarily at rural housing, sanitation and education.

It is a long time since a Central American statesman came to the United States, and this, too, is a special reason to welcome President Lemus today.

FORTHCOMING WORLD YOUTH FESTIVAL IN VIENNA, AUSTRIA

Mr. HUMPHREY. Mr. President, on August 24, 1957, I commented in the Senate about the Moscow World Youth Festival and the role that American youth played in it. This summer, a world youth festival will be held again, this time in Vienna, Austria. I would like to bring to the attention of the American people the significance of this gathering and the challenge which it presents.

This carnival-like meeting will be the seventh in a series of mass propaganda events sponsored since World War II by two of the most active and formidable Communist international front groups—the World Federation of Democratic Youth and the International Union of Students. The festivals are highly organized and controlled events which aim to provide a glorified picture of Soviet society and of Russian foreign policy, and conversely a distorted view of what Western society stands for. These gatherings also serve as an effective means of bolstering the prestige of the two sponsoring Communist-front groups, and thus strengthen their full-time program, pursued relentlessly in all areas of the globe, to win the allegiance of young people to the Soviet cause.

The representative and democratically elected student and youth groups throughout the free world, having learned through bitter experience of the nature of these festivals and their organizers, have determined to have no official connection whatsoever with the Vienna gathering. They fully realize the degree to which any type of official or representative recognition will be skillfully exploited to add to the prestige of the festival in the eyes of young people throughout the world. It is significant that all representative student and youth groups in Austria have vigorously protested and are opposed to the policy of their government in permitting the festival to be held for the first time in a non-Communist nation. Similar groups in this country, such as the U.S. National Student Association and the Young Adult Council, are avoiding all official connection with the festival.

But the fact cannot be overlooked that some 20,000 young people from all over the globe will be at the Vienna meeting. Many of these participants will be open-minded individuals who will be eager for, and can profit from, rational discussion and a genuine exchange of ideas. A large number, particularly those from Asia, Africa and Latin America, harbor a distorted view of America and of the American people because of their limited and often inaccurate knowledge of us, and I may add, because of the effec-

tiveness of Communist propaganda. Unless positive action is undertaken by informed young Americans, not only will an opportunity be lost for rectifying such misleading attitudes, but the environment of the festival and the nature of its activities will insure that such misconceptions become confirmed and more deeply etched.

Many Senators will recall that in a speech about the Moscow Festival several years ago, I commented on certain young Americans who had entered into extended public debate on disarmament and the Hungarian situation with Russians in Red Square. Although they realized that the festival was an instrument of Communist propaganda, these young people also saw the unusual and dramatic opportunity offered for presenting an honest picture of our society and point of view, and for rebutting Soviet propaganda.

The effectiveness of their courageous actions showed that we have little to fear from the participation in such festivals of informed, intelligent, and articulate young Americans who, in their individual capacity, are able to speak out in a candid, rational and persuasive manner. Unfortunately, this group of dedicated and patriotic Americans constituted only a handful of people at the Moscow Festival.

I differentiate between individual participation and any type of official participation by representative established student or young people's groups. As I have indicated in my remarks, the established young people's groups of our country are not associating themselves with this festival. They are keeping their record clean; but they are also aware of the challenge which the Communist-sponsored festival poses to free men and women everywhere.

The Vienna Festival now provides us with a challenge and an opportunity which must not be permitted to slip by—that of mingling freely and of exchanging ideas frankly with young people from all over the globe. The Moscow Festival provided Americans with the chance to make an impact on the indigenous population; the Vienna Festival, because of the freer atmosphere of the non-Communist host country, offers the opportunity of making significant contact with individuals from the vast uncommitted areas. I should add, on the other hand, that this opportunity can be lost, or even worse, turned to disaster unless careful thought and preparation is given to the manner in which young Americans should participate in the festival.

First of all, such participation should be by individuals in their personal capacity, making face-to-face contact. Past experience has demonstrated that participation in a representative capacity by persons active in non-Communist organizations, in academic institutions, or, indeed, in respected groups of any kind, is used for propaganda purposes by the festival sponsors and the worldwide Communist apparatus. To promote understanding, one need not appear in Vienna as a representative; nor is it essential to participate in all the official events of the festival. Real understanding will flow from informal, unplanned, personal conversations and contacts among those at the festival, and such contacts in large measure will take place in coffeehouses and cafes, and wherever else young people gather to ask questions and to discuss the problems which trouble them. Americans in Vienna will encounter no difficulty in breaking the ice. Young people from other nations feel too deep a curiosity and concern about this Nation for any American to escape without many opportunities to exchange ideas and make friends.

Secondly, Americans at Vienna must be well informed about the character of the festival and its organizers. That is why I am making this address today, namely, that it may be a part of the RECORD of the Senate, and that young people in colleges and universities who might be interested in the Vienna Festival will at least have some idea of what it is all about and how they might guard themselves from any unfortunate participation under auspices which could be anything but helpful to them. They must be aware of the manner in which the festival will operate, and of the ways in which attempts will be made to exploit their presence and statements. They must fully understand that they are in the midst of the most heavily financed and the ranking propaganda show in the Soviet arsenal, and that pitfalls abound.

I am entering into the RECORD the comments of one of the participants at Moscow which, I think, tells a great deal about the nature of these events. Unfortunately, most Americans who have attended previous festivals have been uninformed, or even misinformed, about what they were becoming involved in.

In other words, I am trying to put up a warning sign and am trying to advise these fine young men and women as to some of the problems and pitfalls they might encounter. Because I believe that young Americans should be courageous and not be fearful, and because I believe they should join the issues and be willing to debate these points with young men and women from other parts of the world, I should like to say these words of encouragement to them on the one hand, and some words of prudent warning on the other.

Some of the organizers of the so-called American delegations have presented an incomplete and misleading picture of the festivals, and have thereby often served the purposes of Communist propaganda.

Third, and most important, Americans who decide to attend the festival must be well informed about all aspects of American society, and about our foreign and domestic policies. Queries concerning our educational system, our labor and social welfare programs, or our system of free enterprise, including our cooperatives and public ownership, and individual initiative, cannot be answered satisfactorily by vague generalizations. Neither can the widespread and genuine concern about racial discrimination, military pacts, disarmament, and nuclear testing be met constructively without a deep understanding of both the fundamental principles and facts which underlie our policies. Nothing constitutes a greater obstacle to improving international understanding among individuals than the lack of relevant information—the failure to have at one's fingertips a sound and penetrating command of the facts. International understanding is not promoted merely by recourse to well-intentioned platitudes and sentimentalism.

Young Americans who are thoroughly informed on the matters which I have mentioned—and there will be many others—can make a positive contribution. However, unless they take the trouble and time to acquire such information, it would be better if they did not attend the gathering in Vienna. An exhibition of good faith, love, and understanding is not enough. I am confident that the young Americans who will attend any of the meetings will want to be prepared to engage in discussion with anyone who may be interested. I make this address today after consultation with a number of the fine young Americans who have encouraged me to speak out in the Senate so that their fellow students throughout the land will at least get some feeling of what is to be offered and what they will be confronted with at Vienna. For Americans, this festival cannot be viewed as just another opportunity to have a good time.

Assistance is available for those young Americans who wish to respond realistically and with determination to the challenge at Vienna. Several days ago, I learned that a number of young Americans experienced in international youth and student affairs, including some of those very people who performed so admirable a service at the Moscow Festival, have formed an organization to be known as the Independent Service for Information on the Vienna Youth Festival. Located in Cambridge, Mass., at 1430 Massachusetts Avenue, the Independent Service, with the cooperation of large numbers of national organizations, has undertaken to prepare the materials which are required to provide American participants in the Vienna meeting with an informed understanding of the festivals and of American policies and problems. The service plans to provide those Americans who have an interest in the festival, and who may wish to attend the meeting in their individual capacity, with a good deal of the essential background material.

I believe our Government owes a debt of gratitude to this voluntary organization of American students who are eager to help prepare fellow students who may wish to visit the festival for this important mission.

I am personally acquainted with some of the organizers of the Independent Service and believe them to be highly motivated and competent. It is my strong recommendation that all young Americans who are interested in learning more about the festival, or who are contemplating attending the gathering while traveling in Europe, contact the service for further information and assistance.

Mr. President, I ask unanimous consent to insert in the RECORD a statement published by the Independent Service describing its objectives and program,

and excerpts from an article by Mr. George Abrams entitled "Talking With Russians" which appeared in the New Republic of October 14, 1957, and which tells a good deal about the character and activities of the Moscow Youth Festival.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EXHIBIT 1

INDEPENDENT SERVICE FOR INFORMATION ON THE VIENNA YOUTH FESTIVAL

WHY AN INFORMATION SERVICE?

The service has been organized for the purpose of providing American young people with objective data regarding the Communist-sponsored Seventh World Youth Festival to be held in Vienna next summer (July 26–August 4). In the past, knowledge of the nature and purpose of the festivals has been limited largely to information derived from a flood of misleading literature with which the Communist organizers have deluged American college campuses and youth organizations. Consequently, a number of Americans have attended past festivals without possessing a full understanding of these events and of the consequences flowing from participation. Furthermore, they have sometimes lacked the information necessary both to lessen the exploitation of their presence and their actions for propaganda purposes, and to correct the misconceptions and distortions of American society which have characterized such gatherings:

WHAT ARE THE WORLD YOUTH FESTIVALS?

Next summer's festival is the latest in a series of mass youth events organized since World War II by two leading Communist international youth fronts: The World Federation of Democratic Youth (WFDY) and the International Union of Students (IUS). Long discredited in the eyes of representative national student and youth bodies throughout the world, these front groups have used the festival as a principal weapon in their continuing propaganda program. Their activities are designed to further the objectives of Soviet policy and to gain adherents to the Soviet cause from among young people, particularly those in the underdeveloped areas.

This strategic aim is furthered by a variety of techniques employed at the festivals. These include utilizing the emotional environment of mass gatherings and promoting the uncritical acceptance of ambiguous and propagandistic slogans, such as the "solidarity of youth," "peace and friendship," "the horrors of nuclear war," etc. Likewise, the festival organizers have shown themselves capable of skillfully exploiting the views of uninformed participants and of asserting misleading claims as to the representative nature of individuals in attendance. By conducting a highly developed and centrally controlled program of activities, the organizers aim to present a selective and flattering view of Soviet cultural achievements and policies.

The festival's objective is to implant an impression of the strength and rectitude of of the Soviet cause in the minds of the participants and those millions throughout the world to whom news of festival activities is communicated before, during, and after each gathering. Its organizers attempt to demonstrate that the Soviet system is superior morally, politically, economically, and culturally; and that world tensions are the product solely of the machinations of Western powers. In addition the festivals serve to further the pretension of the two sponsoring Communist-front groups that they are internationally representative and nonpartisan in character. This in turn strengthens the prestige of their local affiliates.

The open propaganda aspect of the festivals has been toned down from the days of the Stalin era when explicit anti-Western sentiment was a primary feature. However, it is clear that the shift in tone at more recent festivals is no more than a change in format.

Judging from past experience, both the International Preparatory Committee (IPC), which has the immediate administrative responsibility for organizing the festival, and U.S. Festival Committee, which has been stimulated in this country by the IPC for the purpose of recruiting an American delegation, will shortly begin to distribute vast quantities of literature to American campuses and youth organizations. Material already circulated indicates that the festival will be depicted as a neutral and nonpolitical affair designed to further international fellowship and understanding by bringing together the youth of all countries in a spirit of good will. The organizers will attempt to imply that the 17,000 individuals they hope to attract to Vienna are representative leaders covering all areas of the world and every shade of political opinion in it.

A misleading and highly incomplete picture will be given of what goes on at a festival and of the motivations of its promoters. It may be regarded as certain that the festival promoters will not shed any light on such interesting questions as where the $100 million spent on the 1957 Moscow festival really came from or the true nature and background of the IUS and WFDY.

The holding of the forthcoming festival in Vienna marks the first time that it will take place outside the Soviet bloc. Austrian Chancellor Raab has compared his government's policy in permitting the festival to be held in Vienna with the action of neutral Sweden in allowing a meeting of the World Peace Congress, a well-known international Communist front. Raab displayed a marked lack of enthusiasm when he stated that "fortunately, on occasions such as this, the Austrians show themselves sufficiently disciplined, capable of ignoring events they don't appreciate."

SHOULD ONE PARTICIPATE?

In a representative capacity

Each of the festivals has raised the question of participation for youth and student organizations throughout the world. In general, representative groups in the non-Communist countries have declined to send delegates because they felt that participation would be utilized to lend official prestige to a propaganda show, and thus would buttress the claims of the festival organizers to the universal representative character of the meeting. This strengthens not only the effectiveness of the festival but also the day-to-day activities of WFDY and the IUS.

This policy of nonparticipation has been adopted by U.S. student and youth groups such as the U.S. National Student Association and the Young Adult Council. Similar positions toward the festival have been taken by representative student and youth groups in many other countries. Of particular importance is the fact that the Austrian national union of students and the Austrian federation of youth groups both have strongly protested the festival being held in their country and have called on their counterpart groups in other parts of the world to enforce a boycott of representative organizations against the event.

The information service supports such a policy and urges that no American attend the festival in any representative or official capacity, even as the spokesman of a college or local community organization.

In an individual capacity

The information service expects that there are many intelligent and patriotic Americans who will wish to attend the Vienna meeting in an individual and nonrepresentative capacity which would not lend the event any official prestige. Most will probably be interested in observing the various events and in making personal contact and exchanging views with the large number of young people from many areas of the world who will be present.

The organizers of the information service believe that such participation can be valuable only if the individuals attending are fully informed as to the nature and purpose of such a meeting so as to lessen the propaganda use of their presence and actions. The service further thinks that American participants should be prepared for the great interest and curiosity, both friendly and hostile, which will be expressed regarding our Nation and its policies. They should be equipped to effectively present a democratic viewpoint, dispel particular misconceptions of American society, and thus promote understanding with the participants drawn from over the globe.

Such well-informed individual participation requires considerable preparation. The problems confronting the world today and the aspects of American life in which young people overseas are most interested are complex. Similarly, objective material regarding the world youth festival is difficult to obtain. It is the purpose of the information service to facilitate the gathering together and distribution of such information.

HOW CAN THE INFORMATION HELP YOU?

The service is prepared to answer inquiries regarding the Vienna festival and to provide current information both to those who desire a greater understanding of such meetings and to those who may be seriously considering attending the festival.

Present plans call for the preparation of documented studies on the history and operation of past festivals and the character of their sponsors. Preparations of the Vienna gathering and the activities of its organizers will be continually analyzed and periodically reported.

In addition, the service will provide background data on U.S. and world affairs and indications on what may be expected in Vienna. Information on transportation and accommodations as well as other practical data as to means of participation in the festival will also be made available.

WHO ARE THE ORGANIZERS?

The Independent Service for Information on the Vienna Youth Festival has been organized by a number of students and recent university graduates in the Boston area. Most have had personal experience in national and international youth and student affairs, and several have had the opportunity of observing past festivals in operation. Many have held elected positions in representative U.S. student and youth groups, and some now hold elective campus posts. They have been joined in their work by interested young Americans in various parts of the country who recognize the important role played by young adults in world affairs today.

The service is now establishing contact with a large number of national youth and student organizations including educational, political, religious, academic, and social service groups. Among these groups are the Council on Student Travel, National Young Democrats, National Young Republicans, U.S. National Student Association, World University Service, and the Young Adult Council. Liaison has developed with a number of these groups who plan to utilize the facilities provided by the information service.

Attempts are being made to raise funds for the operations of the service, and some support has already been received from public spirited citizens in the Boston area. Further financial assistance from those in-

terested in furthering our activities would be welcomed.

WHAT SHOULD YOU DO?

If you have any questions concerning the Vienna Youth Festival or desire further information about it, please communicate with the service at its Cambridge offices. We will be pleased to place you on our mailing lists to receive items appropriate to your interest.

EXHIBIT 2

The attempt of the Russian Government to use the Youth Festival for propaganda turned out to be far more subtle than we had first anticipated. Past youth festivals had been very carefully calculated propaganda efforts against the West—and the United States in particular. In 1947 and 1949, the theme was antifascism; in 1951 and 1953 the festival passed resolutions condemning "United States aggression and germ warfare in Korea"; in 1955 at Warsaw, the pitch was peaceful coexistence. Peaceful coexistence was again the main theme of the Youth Festival this year. But resolutions were incidental to demonstrations of peace and friendship. Everywhere the delegates went thousands of Russians greeted them with flowers and gifts and apparently genuine affection.

It became obvious to us that the Russian Government was directing its greatest effort toward the African and colonial countries, and the Arab nations. For instance, many of the large Russian stores had set up display windows. The clothing dummies were always mixed white and Negro and carefully arranged in each window. Dummies of black-skinned children were used to display the best of Soviet youth wearing apparel, and display windows for the most expensive women's clothes all had at least one Negro dummy. One of the most spectacular displays in Moscow was of a giant magic carpet about 30 feet above one of Moscow's largest squares. On the magic carpet were three model children, arm in arm: a Negro child, a Caucasian child, and a child representing the yellow race.

The dark-skinned and the Arab delegates to the festival seemed to be given special treatment by the Russian crowds and officials. These delegates were deluged with flowers and gifts, and were carefully shepherded to numerous meetings along with other supposedly exploited people. Although every delegation was given the red-carpet treatment, the colonials found themselves living in somewhat better conditions. Instead of five to a room (in the American and British hostels), the Indians and Africans and Arabs were put in rooms with two or three people. Instead of cafeteria-type, self-service meals, the Russians gave the delegates of the uncommitted countries their own dining halls and waiters and candlelight service. The rooms of each of these delegations were equipped with telephones.

Most of the Indian delegates to whom I spoke saw through this preferential treatment. A good many of them laughed and joked over the whole thing and explained that I too could be better treated if I would only give up my American citizenship and become an Indian or an African. But undoubtedly all the Soviet efforts along this line were not in vain. It is pretty hard to forget the almost hysterical screaming of the Syrian and Egyptian delegations every time the opportunity came to praise Russia and the Russian leaders. Or the way the Arab delegates prostrated themselves before Khrushchev and the Presidium on the day of the opening ceremonies. The chant of "Syria and Russia, friendship forever," echoed throughout Moscow wherever the Syrian delegation went.

* * * * *

In many respects I was impressed with the careful, methodical planning and general organization of the Youth Festival activities. Thirty thousand young people from all over the world and all speaking different languages poured into Moscow. One hundred thousand youths were brought to Moscow from all parts of the Soviet Union. All of these people had to be housed, fed, transported around the city. Although there were a number of mixups and sometimes complete confusion, by and large, the Russians were able to run the whole production smoothly.

It might be worthwhile to note that the Russians were able to find top-rate interpreters for each language spoken by the festival delegates. Not one, but several. I asked some of the Russians whether it was difficult to find interpreters for some of the dialects and lesser known languages. The answer was no. "We make sure that we have enough people studying all the different languages to provide for our language needs whenever such things as the Youth Festival come up." "But suppose you have no students who want to study a particular dialect?" I asked. "We find them," came back the answer.

The food problem at the festival must have been immense. The Russians provided from three to five main courses for each meal. One course was always served for vegetarians. Arabs received food in line with their national eating habits; Chinese food was available, and so on down the line.

The problem of equitably providing tickets for the cultural performances during the festival was gigantic. Thirty thousand foreign youths and 100,000 young Russians were in Moscow all clamoring to be entertained. Thirty, forty or fifty theaters would be in operation in one night, and somehow each would be filled to capacity with festival delegates. Mistakes were made in the ticket allocations, but the big surprise was the apparent ease with which this difficult problem was handled.

Sometimes, however, the Soviet technical and organization competence fell down completely. The most serious example of this from the Russian point of view was the carefully ballyhooed evening demonstration on Hiroshima Day. The Russians were quite obviously planning to make their big propaganda push of the festival. "American mass murder" was one term being bandied about as the big rally drew near.

But the rally was a complete failure. The Russians made several crucial mistakes in its staging. For some reason they decided to make it a rally of only youth delegates to the festival. Cordons of police were set up to keep the Russian people out. This was a festival rally, they explained. The sudden shift from 10 days of howling masses of people to the comparatively few festival delegates put a real damper on festivities.

The total cost of the festival to the Russian Government has been estimated at anywhere from $20 million to $200 million. The most reliable figure seems to be somewhat in the neighborhood of $125 million. The bulk of this money went into building construction, housing facilities, and food transportation, and entertainment. From all accounts in the Russian press since the Youth Festival, it seems pretty apparent that the Russian Government is having a good many qualms as to whether the money was well spent or not. Russian youth leaders have had to issue statements telling the young people of Russia to throw off the subversive ideas spread at the festival by non-Communist delegates, to ignore the lies spread by certain youth delegates, and to join together once again in their full support of the Communist Party and the Soviet leaders. Hitherto taboo subjects have found their way into the Soviet press, such as the defection of Howard Fast from the Communist Party and the contents of the United Nations Report on Hungary.

VISIT TO THE SENATE BY HON. HENRY L. J. MAY, MEMBER OF PARLIAMENT OF NEW ZEALAND

Mr. SPARKMAN. Mr. President, we have with us on the floor of the Senate a very distinguished visitor. At this time I present to the Senate Hon. Henry L. J. May, a Member of the Parliament of New Zealand. Mr. May is the chief government whip in the Parliament of New Zealand. He is chairman of the Parliament's local bills committee, and also a member of the Committee on External Affairs, which corresponds to our Foreign Relations Committee.

It is a pleasure to have Mr. May with us, and I am delighted to present him to the Senate at this time. [Applause, Senators rising.]

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks a statement prepared in the Office of International Labor Affairs of the Department of Labor containing a brief biography of our distinguished visitor.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

UNITED STATES DEPARTMENT OF LABOR,
OFFICE OF INTERNATIONAL LABOR AFFAIRS,
Washington, D.C.

Mr. Henry L. J. May is visiting the United States as a participant in the foreign leader program of the International Educational Exchange Service of the Department of State. The Office of International Labor Affairs of the Department of Labor has been assigned responsibility for his program.

Mr. May is a Labor Party Member of Parliament, and has been for approximately 5 years. He is a member of the National Executive for the New Zealand Labor Party. Mr. May is president of the Wellington, Nelson, Westland, and Marlborough local bodies, other laborers, and related trades industrial union of workers. He has been a borough councilor and a member of a river and valley power board. He has been associated with the New Zealand railroads for approximately 18 years. Mr. May has also been very active in sports and belongs to a number of sporting clubs, such as rifle shooting, football, and tennis. He is a member of the National Geographic Society. Mr. May is chief government whip, chairman of the Parliament's local bills committee, and a member of the Committee on External Affairs. He has acted as chairman of some of the most important committees of the New Zealand labor conferences.

Mr. May is keenly interested in studying various aspects of U.S. Federal, State, and municipal government. He is particularly interested in all aspects of the political scene; for example, the methods used for running for office, and the organization and methods of Congress, especially the administration, functions, and authority of congressional committees. Because of his long association with administration of his borough, he would like to see as much as possible of American practices in traffic control, laws and codes, public transport, housing administration, soil conservation, irrigation, and fire department organization. As a member of Parliament representing the interests of his constituents and an industrial and manufacturing area that is growing fast, he would like to learn about something of union attitudes toward automation, the meatpacking industry, methods of attracting industry, and the peaceful uses of atomic energy. He would like to visit one or two automated plants.

As a framework to his particular purposes, Mr. May is generally interested in the recreational, cultural, social, political, and economic aspects of the United States.

Mr. HUMPHREY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. HARTKE in the chair). Without objection, it is so ordered.

EXTENSION OF THE UNIVERSAL MILITARY TRAINING AND SERVICE ACT

The Senate resumed the consideration of the bill (H.R. 2260) to extend until July 1, 1963, the induction provisions of the Universal Military Training and Service Act; the provisions of the act of August 3, 1950, suspending personnel strengths of the Armed Forces; and the Dependents Assistance Act of 1950.

Mr. RUSSELL. Mr. President, the bill now before the Senate, H.R. 2260, involves a 4-year extension of five separate authorities, all of which relate to the maintenance of the strength and health of the Armed Forces of the United States. I should like to discuss each one of the five authorities briefly; then I shall be glad to yield for questions concerning the bill.

REGULAR DRAFT

The first and perhaps the most important objective of the bill is to extend the authority to induct persons into the Armed Forces. Unless extended this authority would expire on July 1 of this year. The pending bill contemplates a 4-year extension, until July 1, 1963.

Under the Universal Military Training and Service Act young men must register with their local boards at the age of 18, although they are not liable for induction until they reach the age of 18½. After registration these young men are classified by their local boards. Unless they are eligible for the various deferments and exemptions authorized under the basic law, the young men are classified I–A. Persons classified I–A are called in a sequence that results in the induction principally of nonfathers between the ages of 19 and 26. Draft calls presently are relatively low. Approximately 115,000 men will be inducted during the current fiscal year, and over the next 4 fiscal years annual inductions are estimated to average 90,000. The current average age at induction is about 22½, and over the next 4 years this average age probably will increase to 23.

Under existing conditions only the Army requires inductees, but the existence of the draft machinery operates as a powerful inducement to enlistments in the other Armed Forces.

More than 1,200,000 young men will reach the age of 18½ during each of the next 4 years. This fact coupled with the relatively low rate of inductions has caused some observers to believe that the manpower pool is excessive and that many young men are reaching the age of 26 without having performed military service. A comprehensive study conducted by the Department of Defense and participated in by other Federal agencies having manpower responsibilities tends to counter such an impression. The results of this study, which are discussed in the committee report, show that only a negligible number of qualified nonfathers have avoided military service or are likely to avoid military service by 1963.

Although this result may seem paradoxical, it is understandable when one analyzes the manpower supply in any particular age group. It must be remembered that, in addition to the approximately 100,000 inductions, about 400,000 other young men enlist in one or another of the Armed Forces. Another large chunk of a year group is made up of fathers. Still another explanation is the high rate of rejection for failure to meet mental and physical qualifications. The current rejection rate for an age group as a whole is about 33 percent. Since many members of an age group voluntarily enter service, the rejection rate for the effective manpower pool is approximately 45 percent of all registrants.

Before giving the committee justification for extending the draft authority, I should like to discuss the other authorities included in the bill.

SELECTIVE CALLS FOR PHYSICIANS AND DENTISTS

Despite some special inducements for physicians and dentists, the Department of Defense has been unable to recruit enough Regular doctors and dentists to meet the needs of the Armed Forces. For this reason, it is necessary to provide for the temporary service of a sufficient number of doctors and dentists to bridge the gap between the numbers of Regulars and the requirements of the Department.

Persons deferred under the Universal Military Training and Service Act remain liable for induction until they reach the age of 35. Since most physicians and dentists are deferred to continue their professional education, they incur a liability for induction until age 35.

Originally there was no authority to select persons for induction on the basis of their professional abilities or skills. When world conditions required the Government to summon increasing numbers of men to the colors, they could not be called from their homes and placed in the Armed Forces without being afforded adequate medical and dental care. The necessity for that care required that unusual steps be taken.

To permit such selective induction without also inducting unneeded persons, a 1957 act authorized the President to levy special calls for medical and dental officers and allied specialists. This law also provided authority for ordering physicians and dentists who were members of Reserve components to active duty for 24 months if they had not already served on active duty for at least 1 year.

The combination of authority for selective induction of physicians and dentists and the authority for ordering Reserve physicians and dentists to active duty has caused this special authority to operate by indirection. No inductions have been made under this authority because the physicians and dentists who are subject to it have accepted Reserve commissions and have been ordered to active duty as needed. The pending bill contemplates a 4-year extension of this special authority to induct physicians and dentists and to order Reserve physicians and dentists to active duty for 24 months.

Despite the fact that the strengths of the Regular medical and dental corps have increased in each of the three military departments, about 50 percent of all physicians and about 60 percent of all dentists on active duty on June 30, 1959, are noncareer officers. If this special authority is permitted to expire, it will unquestionably reduce to unacceptable levels the number of physicians and dentists on active duty.

DEPENDENTS ASSISTANCE ACT

Another feature of the bill is a proposed 4-year extension of the Dependents Assistance Act.

This act was approved in 1950, and had as its purpose the authorization of dependency allowances that were necessary under the peacetime structure of the Armed Forces.

The peacetime policy of the Armed Forces would not involve acceptance by persons with dependents of enlistments in the lower three pay grades and a part of the fourth. Since persons with dependents were not enlisted in these lower pay grades, there was no authorization to pay a quarters allowance to them. The partial mobilization, following hostilities in Korea, required the utilization on active duty of members of the lower pay grades, even though they had dependents. Consequently, the Congress in 1950 prescribed a system of quarters allowances for all enlisted grades. These allowances are graduated according to grade, and they are somewhat more liberal than the allowances provided under the permanent law, even for the persons who are entitled to quarters allowances under the permanent provisions of the Career Compensation Act. At a time when it is important to emphasize voluntary enlistments, it obviously is necessary to continue provisions for dependency allowances for all of the enlisted grades.

SUSPENSION OF STRENGTH LIMITATIONS

Another of the authorities contained in House bill 2260 would continue in effect a suspension of ceilings on the authorized personnel strength of the Armed Forces.

The permanent authorization of the Armed Forces total somewhat more than 2 millions persons, but less than the active duty strength of the Armed Forces today or at any time since 1950. These ceilings have been suspended since 1950; and I am sure that the necessity for continuing the suspension is apparent to everyone who has any familiarity with the conditions which exist today.

The Air Force furnishes a good illustration of the necessity for continuing

suspension of these ceilings. The permanent personnel authorization of the Air Force is 502,000. It is estimated that its strength on June 30 of this year will be about 850,000. Failure to continue this suspension would result in a loss of almost 350,000 members of the Air Force. Of course, Mr. President, such a condition as that is unthinkable.

For the period that the permanent limitations are suspended, a secondary ceiling of 5 million persons on the total personnel of the Armed Forces comes into play. This secondary limitation will be effective during the period of suspension of the permanent limitations involved in this bill. Of course, in the light of the present strength of our Military Establishment, that limitation is not likely to come into effect.

SPECIAL PAY FOR PHYSICIANS, DENTISTS, AND VETERINARIANS

The committee has amended the bill by adding to it a legislative proposal by the Department of Defense that continues eligibility for special pay by physicians, dentists, and veterinarians entering on active duty after July 1, 1959.

In an attempt to procure more physicians and dentists, and to make military medical compensation more competitive with civilian incomes by persons with similar experience, there has been in effect for several years a system of special pay for physicians, dentists, and veterinarians. The amount of this special pay is graduated in accordance with the length of service. Medical and dental officers with less than 2 years of active duty as such officers are eligible for special pay of $100 a month. Those with more than 2, but less than 6, years of service are eligible for $150. Those with more than 6, but less than 10, years of such service are eligible for $200 a month. Those with more than 10 years may receive $250 a month. Veterinarians are eligible for $10 a month in special pay, irrespective of their length of service.

Physicians, dentists, and veterinarians already on active duty, or entering on active duty before July 1, 1959, would continue to receive this special pay, even if this amendment were not adopted. The amendment is offered to permit those officers in these categories who enter on active duty between July 1, 1959, and July 1, 1963, to be eligible for these special payments in the same manner and amount that officers already on active duty are now eligible.

JUSTIFICATION FOR THE BILL

Mr. President, in 1948 we could not raise the strength of the Armed Forces to 2 million men without having a selective service or draft law in operation. Today, the active duty strength of the Armed Forces is more than 2,500,000. In today's troubled world we simply cannot risk a reduction in this strength that unquestionably would result if the authority to induct were not extended.

Of course, there is nothing sacrosanct about the 4-year period of extension. However, the last two extensions of this authority have been for 4 years; and I regret to say that I see nothing that would support a hope that we may dispense with the draft within the next 4 years. Since this is true, Mr. President, I believe that a shorter extension would only offer a false hope to some young men, and perhaps it would cause them to plan unrealistically for their future.

The committee has had some earnest suggestions from church groups that the draft should be stopped. While conceding their good faith, I confess that I am unable to understand their reasoning. The Communists admittedly are atheistic. In my opinion, failure to extend the draft would make this country most vulnerable to the onslaught of atheistic communism. Until the Communists demonstrate some of the same religious characteristics that we are urged to show by those who would suppress and stop the operation of the draft, I think that failure to extend the draft would tend to suppress a religious outlook, instead of strengthening such an outlook.

Nor have I been impressed by the argument that uncertainties about when a young man will enter the service are contributing to confusion of and delinquencies by our youth. Whatever the defects of the present system may be, and I would be the first to concede that there are defects in the system—it certainly offers a wide choice to the young men vulnerable for the draft. There are more than 30 ways in which a young man may discharge his military obligations to his country. There is a wide variety of choice of branch of service, as well as a choice as to whether the person will enlist in the Regular forces or in the Reserve forces, and also as to the length of his total service.

For young persons who desire to complete college before discharging their military obligations, this opportunity exists, since the average age of induction is now about 22½. For those who desire to discharge their obligation before attending college, this opportunity also exists. These persons may volunteer for induction, or they may enter one of the 6-month training programs. For those who are seriously disturbed about the uncertainty, I would suggest that they consider the wide variety of choices available to all young men who desire to discharge their military obligation to their country.

I also should like to disabuse some persons of an impression that military service is in some way degrading or that it tends to militarize our youth. The many millions of veterans in our society today completely refute these contentions. Anyone who has any apprehension that men who have served in the military forces are likely to produce a military dictatorship in this country have only to talk to those completing their military duties to find that, instead of giving him any such impression as that, he will find they are more devoted than ever to the idea of civilian control of our Military Establishment.

Mr. President, I would urge the responsible community, church, and civic leaders to emphasize the opportunity and privilege of participating in the defense of this country, instead of harping on the inconvenience and disadvantages of military service. This country cannot survive in today's troubled world without determination and a willingness on the part of our people to make some sacrifice. I believe there is need for a renewed awareness that military service is necessary. Mr. President, I believe that in today's world, when all that we have and hold dear is threatened, there should be a feeling of pride in being able to render military service, instead of considering it as something to be avoided as if it were a disease or a plague.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield to the Senator from Massachusetts.

Mr. SALTONSTALL. As the senior member of the Armed Services Committee on this side of the aisle, I want to join with the chairman of the committee in supporting the position of the committee in extending the Draft Act or the Selective Service Act for 4 years.

The committee has recommended that the bill be passed, with no amendments or changes in the present law, for 4 years. In other words, the committee has recommended the continuation of the Selective Service Act for 4 years.

The committee has recommended the continuation for 4 years of the provisions relating to doctors, dentists, and veterinarians, with increased salaries.

The committee has recommended the continuation for 4 years of the provision relating to dependents.

The committee has eliminated for 4 years the ceilings which may be placed on the size of the Armed Forces.

As the chairman of the committee has so well pointed out, we need the benefits and the provisions of this act in order to maintain the strength of our armed services. Many volunteers are obtained for service in our Armed Forces, but we must not deceive ourselves into believing that the Armed Forces would obtain all those volunteers if there were not in effect the provisions of the Selective Service Act.

Undoubtedly there will be questions asked of the chairman of the committee as to why the committee did not adopt a particular amendment or amendments which had been recommended. The difficulty with amending the Selective Service Act, as I see it, is that we could not tell what the effect would be if an amendment of the law were adopted, and that if the committee adopted one amendment, it might only be fair to adopt several more.

The committee decided that, as long as the act had been administered in a fairly satisfactory manner, it should be continued. Of course, the administration of the act has not been entirely satisfactory, because no compulsory law of that kind will ever be administered in an entirely satisfactory manner. We believed that there was involved a question of administration of the act rather than a need for a change in the law.

As General Hershey pointed out in his testimony, in his work as head of the Selective Service System there have been many administrative changes made since the original Selective Service Act was put into operation. Those changes have affected very considerably the responsibilities of the young men

who have gone into the military service, the time they would spend in the service, and many other matters. As General Hershey stated to the committee, if conditions change again, as they have changed from time to time, the law is sufficiently flexible so changes can be made in an administrative way.

I would say the chairman of the committee has stated accurately the general opinion among the committee members that the act should be extended for 4 years rather than 2 years, because there will be no change in conditions that we can foresee which would allow us to eliminate the law at the end of 2 years. So it was thought wiser to extend the law for 4 years rather than 2 years.

As the senior member of the committee on this side of the aisle, I join with the chairman of the committee in recommending and hoping that the Senate will pass the bill without amendment. In my opinion, that will be the fairest way to pass the bill and the fairest way that an act of this character can be administered. Any law which is compulsory as regards young men cannot, of course, be entirely fair to all of them, and it is not fair to all. However, it is the best we can do in the way of legislation, so long as a Selective Service Act is required.

I am happy to join the Senator from Georgia for the second time, since he and I have been working on the committee, in urging that the law be extended.

Mr. RUSSELL. I thank the distinguished Senator from Massachusetts, who is the ranking Republican member of the Armed Services Committee, and who, in those unfortunate periods when the Republican Party was in the majority, served as chairman of the committee.

Mr. SALTONSTALL. At that time the Senator from Massachusetts was ably assisted by the Senator from Georgia.

Mr. RUSSELL. I am always glad to help the Senator from Massachusetts. If there has ever been any partisanship in this committee in either administration, I have not seen it.

Mr. ELLENDER. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield to the Senator from Louisiana.

Mr. ELLENDER. As the Senator from Massachusetts has just stated, the pending measure contains no substantive change in the act which is now in effect, and no amendments to the act, as such, were considered by the committee.

Mr. RUSSELL. The committee considered some amendments.

Mr. ELLENDER. I am sure the distinguished Senator from Georgia will remember that prior to his committee's consideration of the measure I spoke to him, as chairman of the Armed Services Committee, in an effort to have him accept an amendment fixing the strength of the Army at not less than 900,000 men, which would retain the Army at its current strength and would not necessitate the closing of any Army installation.

Mr. RUSSELL. Yes. The distinguished Senator from Louisiana did discuss that matter with me. He of course knows that the Senate had adopted a provision for 900,000 men in the Appropriations Act for the current fiscal year, and that there had been a difference of opinion between the legislative and the executive branch as to what the size of the Army should be. There had never before been substantive legislation fixing a definite floor on the strength of an armed force.

Mr. ELLENDER. As I recall, the distinguished Senator stated to me at the time of the discussion that that had never been done in the past, and he did not believe it was practical to amend the act at this time in order to fix a floor for the number of men in the Army. Therefore, upon learning of Senator RUSSELL's position on this matter, I saw no future in pursuing this tack.

Mr. RUSSELL. The Senator has quoted me almost verbatim. I made that statement. I still think it would be unfortunate and an unwise thing to undertake to do so in the legislation now being considered. We are having enough difficulty at present in holding the Army at its present strength, without endangering the proposal by inviting a veto. The Army can still further shrink below its present size.

Mr. ELLENDER. As the Senator stated, this cntire problem was discussed before the Senate Committee on Appropriations last year, and the Committee on Appropriations went on record as stating that in its opinion, a 900,000-man Army, at least, was necessary for the protection of the country. Pursuant to that viewpoint, we provided sufficient funds to maintain a 900,000-man Army.

Mr. RUSSELL. The distinguished Senator from Louisiana is one of the senior members of the Committee on Appropriations, and one of the most active members of that committee. The Senator has correctly stated that the committee last year approved appropriations for an Army of 900,000 men. The Senate, as I recall, confirmed that act without any substantial discussion. The appropriations for an Army of 900,000 men were actually made.

Mr. ELLENDER. As a matter of fact, I believe the Senator will recall that the distinguished Senator from South Carolina presented an amendment to the bill to fix the Army at 900,000 men and the Senate subsequently adopted this amendment unanimously. However, when the matter was taken to conference, the House refused to accept the mandatory Army limit placed in the bill by the Senate.

Mr. RUSSELL. The Senator is correct. The size of the Military Establishment in this country historically has been fixed in the appropriation bills rather than in other legislation. When the Armed Services Committee considers personnel strengths it usually establishes an authorization or a ceiling, which is based upon the testimony in the hearings before the committee. However, as between one man and the ceiling, whatever it may be, the number is fixed by the Committee on Appropriations. The Senator from South Carolina did offer such an amendment, which would have placed language in the law that the Active Army should be not less than 900,000, and the Senate approved the amendment.

Mr. ELLENDER. The Senator is correct.

Mr. RUSSELL. However, when the bill went to conference, the other body was adamant in opposition to the amendment. It so happens I was one of the conferees on the bill, and the House refused to accept the amendment, so the Senate was compelled to yield on that very wise provision.

However, the Senate did not abandon the position completely, because the committee on conference did state that the Army strength should be 900,000. It was the position of the other body that the matter had been handled historically in the conference report. Strong language was placed in the conference report, but that clear intent has been disregarded.

Mr. ELLENDER. I agree with the Senator and would like to point out that, specifically, the will of Congress has been disregarded by the President.

Does the Senator know of any manner in which now or in the near future we could present a measure which would compel the President, at least, to recognize that the Congress has something to say and to do about fixing a minimum size for the Army? Certainly, considering all the information which was presented for the RECORD yesterday by the distinguished majority leader and by others, there is an indication to me that under the Constitution the Congress has the power to raise and support armies. Considering the facts brought before us by the Joint Chiefs of Staff, it strikes me that a powerful case has been made for a larger Army than has been ordered by the President. Yet we are confronted with this direct opposition to the wishes of Congress from the President. I wonder if the distinguished Senator will comment on this.

Mr. RUSSELL. I, of course, realize how keenly the Senator from Louisiana feels that the Army should be maintained at not less than 900,000 men, because I have heard him discuss the matter in the committee, as well as in the conferences he has held with me in my capacity as chairman of the Senate Committee on Armed Services.

The Senator, of course, knows this is not a new issue. There have been questions between the Congress and the executive branch of the Government for more than a century—for almost a century and a half—with respect to the appropriations which have been made by the Congress, when the Executive has not thought it wise or prudent to make the expenditures. Very frankly, I know of no recourse which the legislative branch of the Government has in such a situation as that, unless the situation is so bad that the Congress feels it is justified in resorting to the impeachment powers which are conferred on the legislative branch in the Constitution of the United States. Otherwise, we have no powers that would compel the President of the United States to spend any appropriations made for the Armed Forces.

Mr. HOLLAND and Mr. LONG addressed the Chair.

Mr. RUSSELL. Of course, we realize impeachment is manifestly impossible. There is a difference now between Congress and the executive branch. I do not question the good faith of the Executive. I know the Congress is acting in good faith.

This is not a new question. Other Senators in other days have sought to devise ways and means to require an Executive to carry out the intent of Congress as to the expenditure of funds. So far as I am advised, none of them have ever succeeded.

Mr. ELLENDER. I am aware of what has happened in the past, I will say to my good friend from Georgia.

Mr. RUSSELL. If the President is willing to take the responsibility before the people of the country for refusing to spend the funds, it does not seem that much can be done.

Mr. ELLENDER. As I have stated, I am aware of that, and that is why I discussed with my good friend from Georgia the possibility of getting something done by the Armed Services Committee which would compel the President to maintain an Army of 900,000 men.

Mr. RUSSELL. If we provided the money, action still would not be required, I will say. That would not strengthen what the Congress did last year.

Mr. ELLENDER. I understand.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield to the Senator from Florida.

Mr. HOLLAND. I was reassured by the statement of the distinguished Senator that no substantial change has been recommended in the existing law. Do I correctly understand that the provisions of the existing law provide that the Governors of the respective States shall name the Directors of Selective Service in their States and shall name the members of the local draft boards; and that those provisions are to continue?

Mr. RUSSELL. Of course, the Senator from Florida well knows that under the law the President appoints the State Directors on the recommendation of the Governors. The President appoints the local boards but on the recommendation of the Governors. That has been the case since the first Selective Service Act was passed, I believe in 1939. That system will be carried over in the extension, if the Congress sees fit to extend the law.

Mr. HOLLAND. I think that is a very important part of the law, and I am sure the chairman of the committee agrees.

Mr. RUSSELL. I could not agree more. There have been injustices in regard to certain individual draft boards, but there has been a feeling on the part of all the young men in this Nation that their cases have been considered by neighbors in the community. I think that has had a beneficial effect. It is one of the things which dramatizes the difference between selective service as applied in a democracy such as ours and as applied in a military system such as obtained in Prussia, or in Germany. The question of passing upon deferments is taken to the grass roots, and the many human elements enter into the question of when and how the military service is to be rendered. It is one of those things which cause me to believe there is no need to be worried about Prussianization or militarization of this country so long as we keep the program so close to the people.

Mr. HOLLAND. Mr. President, will the Senator yield further?

Mr. RUSSELL. I yield.

Mr. HOLLAND. I could not agree more heartily with the distinguished Senator than upon the last statement. I think the details which we have just discussed help to give the earmarks of democracy to selective service in a way which could not be accomplished otherwise.

I have one more question to ask the Senator on that subject. Will the discretionary powers of the local boards be affected or diminished in any way by the proposed extension?

Mr. RUSSELL. They are not touched at all by the proposed extension. Frankly, they very largely grew out of regulations under the law, rather than the law itself. This bill in no wise affects the present powers or discretion of the local boards. There is some variety in the application of the law. Some boards do not hesitate to draft young men who are married. Others give them deferment under the regulations. The discretionary powers represent an intangible, related to the community rather than to the hard and fast letter of the regulations.

Mr. HOLLAND. I thank the distinguished Senator. Speaking for one Senator—and I think I speak the sentiments of a great many others—I am happy that the responsibility in this vastly important matter in our Republic rests in hands so capable and so patriotic as those of the distinguished Senator from Georgia, who speaks for Senators on this side of the aisle, and the distinguished Senator from Massachusetts [Mr. SALTONSTALL] who speaks for Senators on the other side of the aisle. We know with what complete patriotism these questions are handled. We compliment those two distinguished Senators, as well as every other member of the Committee on Armed Services.

Mr. RUSSELL. Mr. President, I thank the distinguished Senator from Florida. I would not like to have this occasion pass without saying that the committee is very fortunate in the caliber of its staff. It is not a large staff, but it is very able and efficient.

Mr. LONG. Mr. President, will the Senator yield for a question?

Mr. RUSSELL. I am glad to yield to the Senator from Louisiana.

Mr. LONG. First, let me join other Senators in paying my respects to the distinguished chairman of the committee. There is no person in Government service for whom I have greater admiration and respect.

I should like to ask the Senator a question on the subject of deferment and exemptions. Is it the opinion of the Senator from Georgia that it might be desirable to have a committee of Congress, or perhaps a joint committee, enter into some study of this subject during the next 2 or 3 years, to see if there is some way by which we can bring about more of an organized pattern to insure that every young man performs some useful service, rather than having large numbers of qualified men escape service.

Mr. RUSSELL. Let me say to the Senator that the idea that a large number of qualified men escape service is not well founded. The President has raised the mental standards. Testimony before the committee was to the effect that not more than 1 in 10 qualified young men in this country have avoided military service. About 45 percent are not qualified, either for physical reasons or because their aptitude is not adequate to qualify them. However, about 9 out of 10 of those who are qualified have rendered military service to the country.

There have been inequities, and we have conducted a number of studies. The Senator from Louisiana is a former member of the committee. He was a very active and useful member of the committee. He will recall that a commission was appointed to deal with this subject. When it was first established it was presided over by former Senator Wadsworth, of New York, who was an expert in that field. Later General Sarnoff was Chairman of the Commission. It held lengthy hearings and filed a large number of reports and recommendations dealing with this subject.

Many commissions have studied this field. Of course, we have improved the machinery. It is much better than it was in the early stages. We learned as we went along.

We also discussed in the committee the desirability of having a subcommittee that would consider this question very closely, as well as the question of utilization of military manpower. It is always a difficult problem to determine the best utilization of the manpower we now have.

Mr. LONG. One point which occurs to the junior Senator from Louisiana is the fact that the people of this Nation are weak in the understanding of foreign languages. The Armed Forces have a good language school. However, I noticed, in visiting Russia, that that nation exempts certain young men from service in the armed forces in order to permit them to go to language schools. They concentrate on the study of languages, to the extent that large numbers of their people are trained to speak foreign languages very fluently. It seems to me that that is one area in which this Nation is not laying the proper stress.

Mr. RUSSELL. Let me say to the Senator that I hold the same opinion. However, at the present time the armed services have a better record with respect to teaching attachés the languages of other countries than has the State Department.

One can go to almost any country, including Finland, Russia, Sweden, and other countries which have difficult languages, and find that the Army attachés speak the various languages fluently, because they are given very rigid indoctrination in the language for 6 or 8 months. They may not be as fluent as

they might be, but they understand the language, and they can make themselves understood. I think the armed services are improving in that respect much faster than is the State Department.

Mr. LONG. The Senator is entirely correct. But, to offset some of the glaring weaknesses in the State Department, it seems to me that if the armed services could train a considerable number of their members to speak foreign languages, there would be a wider reservoir from which the State Department might draw subsequently.

Mr. RUSSELL. I agree entirely. As a member of the Board of Visitors to various service academies, I have discussed that subject. There has been great improvement in the language courses available in the service schools, and in the schools operated by the services. If I were as well satisfied with the progress we are making in all other branches of the military service as I am with the teaching of languages to the men who are to serve as military attachés overseas, I would be much more optimistic. I believe the improvement has been most spectacular in the past 5 years.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield.

Mr. SALTONSTALL. With relation to the State Department, the Senator from Montana [Mr. MANSFIELD] and I have joined for several years in trying to stimulate a greater degree of language study in the Foreign Service Institute of the State Department.

With relation to the armed services, I agree with what the chairman has said. In the service academies as much time is now devoted to the humanities as it is possible to give, when we consider all the science studies which must be pursued.

With relation to the men brought into the armed services, I believe I am correct in saying—although I am not sure of the accuracy of the statement—that there are opportunities for language studies in almost any place where a man may be situated, if he wishes to pursue such studies. It is on a voluntary basis.

The armed services are making an excellent record. The State Department can do better. As a member of the Foreign Relations Committee, I express the hope that the Senator from Louisiana will support the bill of the Senator from Montana and myself.

Mr. LONG. It does seem to me that, in the national interest, something must be done toward providing better qualifications generally in the language field for our Foreign Service. Perhaps it might be well to consider at some time in the future means by which it would be possible to work out some kind of deferment or even exemption for those who are attempting to qualify themselves for the Foreign Service, so that we may have available persons in the diplomatic service, who, with their knowledge of foreign languages, will help avert war, if that is possible—and to help win it if we must fight it.

It seems to me that some kind of deferment or even exemption should be provided for persons who are willing to develop a knowledge of foreign languages.

Mr. RUSSELL. It is possible to do that under existing law. It is possible under existing law to give a deferment. A very liberal system of deferment is available for students in colleges who wish to study foreign languages, as well as many other courses, as long as they maintain certain grades and do a certain amount of work in those fields.

The Senator is undoubtedly correct that this is one of our great weaknesses in our battle to win the minds and hearts of men. The Russians have a tremendous advantage over us in that regard. He and I have traveled in Russia, and no doubt he has been amazed by the number of people in Russia, many of whom have never traveled outside their little home communities, who can speak a foreign language.

Mr. LONG. It is worse than amazing; it is distressing.

Mr. RUSSELL. It is certainly very impressive on the visitor. Russian children must study a foreign language, and must begin the study of a foreign language in what is the equivalent of our second, third, and fourth grades. That is when they must begin their study of a foreign language.

When I was in Russia, I was told that before World War II, the German language had been the favorite foreign language. Now, since the war, and since the expansion of their language courses, English has become the most popular language study in the Russian schools.

The Russians not only train people in a particular language, but also in the various dialects of a language. There is no place in the world, regardless of what its language or the dialect of the language may be, into which the Russians cannot send a qualified person who is capable of speaking that language and dialect, so that he can converse with those people. That is giving the Russians a tremendous advantage over our country. That situation certainly should be corrected, and I thoroughly agree with the Senator from Louisiana.

Mr. LONG. I thank the Senator. I should now like to ask a question or two along the line of the questions asked by my senior colleague from Louisiana. I should like to ask first a question relating to the proposed cutback in the military strength, which, I believe, would amount to about 30,000 in the Army and about 20,000 in the Marine Corps.

Mr. RUSSELL. About 25,000 in the Marine Corps and 30,000 in the Army. That is what is proposed to be done at the moment, but I understand that consideration has been given to a larger cut.

Mr. LONG. Do I understand that under the proposed Army cutback, the Army would lose one full division? I understand that at the present time we have two divisions in the Far East and about five divisions in Europe. I also understand that we have divisions which are now training in this country, and that those divisions will rotate with the divisions in foreign areas when trained. However, I understand that that leaves only about two trained divisions in the United States as of now. I should like to know if that is also the understanding of the Senator from Georgia.

Mr. RUSSELL. There will be one less division in the U.S. Army when the reduction is effectuated. I understand that the division will be taken from what is called the STRAC, the strategic reserve of the Army, which has been composed of four divisions. It would be reduced by one division if the reduction is made.

Mr. LONG. So far as I am able to determine, my impression at the moment is that if we look at the Reserves in this country which would be available to go to an area of disturbance, we would have only two or three divisions in this country which could be sent, let us say, to Europe, if trouble should break out there, or to Asia, or wherever trouble might arise, based upon our present reserves. Is that in accord with the Senator's understanding?

Mr. RUSSELL. I doubt that in this country we have more than two divisions which are fully trained and equipped and ready to go at the present time. A third division is somewhat less ready.

Mr. LONG. That is, in this country.

Mr. RUSSELL. There may be another one. There are other divisions, but they are largely training cadres. I know of no divisions as such other than the two the Senator has in mind that would be ready to go.

Mr. LONG. The point I have in mind is that the proposed cutback in the Army strength may well mean, if it is made, a reduction of 30 or 50 percent of the actual available reserves which could be shifted to wherever trouble may arise.

Mr. RUSSELL. From within this country; yes.

Mr. LONG. That is my impression.

Mr. RUSSELL. At least 25 percent, I will say.

Mr. LONG. That is a very serious reduction in our ready reserve, which must back up our forces in position in the event trouble breaks out.

Mr. RUSSELL. The Senator well knows that Congress has consistently refused to put all of its congressional eggs into the massive retaliation basket or in the Strategic Air Command. We have supported the Strategic Air Command at a strength greater than requested in the budget. At the same time we have been apprehensive about the danger of a war less than total war breaking out. Such a development would require considerable ground forces. All I can do is try to imagine what a potential enemy would do, and I try to consider what I would do if I were in his place.

Mr. LONG. I am sure the Senator shares my hope that the United States will not find itself in such a position that our only recourse will be to engage in an all-out thermonuclear war. In other words, if we run into trouble in Berlin or in the Middle East or in Korea, I would hope that we would not find ourselves in the position where our only course would be to engage in thermonuclear warfare.

Mr. RUSSELL. I would certainly hope so. I will give another illustration of what I have in mind. If the Russians

were to pull back 25 miles from around Berlin, and the East German forces were to undertake to blockade all the means of ingress and egress to and from Berlin, I do not know exactly how we could use nuclear weapons to resolve that difficulty. Would we attack the East Germans or would we attack the Russians, who had pulled back and had disengaged?

Somehow we would have to get into Berlin to feed the people or to rescue them or to relieve them. The principal way we could do that would be with our Army on the ground. I do not believe that nuclear superiority would function under that assumed situation any more than it did in Korea.

Mr. LONG. The Secretary of Defense appeared on a television program over the weekend, and he laid great stress on the fact that if trouble broke out in the world, we could rely on our allies, and that with their divisions, plus our divisions, we would have a considerable force in the area.

Mr. RUSSELL. Did the Secretary of Defense suggest how long it would take France to get its army out of Algeria?

Mr. LONG. No; he did not dwell on that point at the time. However, if this Nation is to make a reduction of a full division in its Armed Forces, I wonder what the effect would be on the French, the West Germans, the Belgians, the Dutch, the English, and our other allies, who are in the affected area, and how we can expect them to maintain their forces in readiness.

Mr. RUSSELL. The Senator has not mentioned what distresses me even more than that, and that is the effect it would have on the men in the Kremlin, particularly as to whether they will believe we are serious in our talk at a time when we are reducing our military forces. That is what concerns me most of all.

Mr. LONG. That very much concerns the junior Senator from Louisiana also. I wish to explore a matter of congressional policy with the Senator from Georgia. I doubt that he need look at the manual to answer this question. I am referring to article I, section 8, of the Constitution, which provides that Congress shall have the power to lay taxes, and so forth. I skip to the provision: "To raise and support armies, but no appropriation of money to that use shall be for a longer term than 2 years; to provide and maintain a Navy." My interpretation of that constitutional provision is that Congress shall have the power to raise and support an Army and Navy in addition to its power over the purse strings, because in the beginning of the section reference is made to laying taxes to provide for the common defense. I wonder whether the Senator from Georgia interprets that section the way I do, namely, that it means that it is both the duty and the responsibility of Congress to raise and support an Army and a Navy.

Mr. RUSSELL. In my opinion there is no question that that is the responsibility of Congress. It is my belief that when the Founding Fathers were writing the Constitution, they intended to entrust to Congress the responsibility of determining the size of the Military Establishment. In the division of powers, they gave to the President of the United States the power of the Commander in Chief over whatever Army and Navy Congress raised. They divded the powers in that fashion, so that the Commander in Chief would not have complete control over the size of the Armed Forces, because they were opposed to a military regime in this country and to the complete seizure of power by one man.

I interpret the Constitution just as it is written. That Congress has the power to maintain a Military Establishment, to provide for it, and to provide for the means to establish the size of it. But it has not always worked out that way.

Mr. LONG. The last Congress appropriated money, and the committee report contained language indicating that the purpose of the money was to maintain a 900,000-man Army. I heard the Secretary of Defense explain his view of that matter on the television program on Sunday. He said he regarded it as a mere invitation to the Executive to provide more defense than the Executive cared to provide, in the event the Executive was so disposed.

It seems to me that if Congress should write into some particular bill—an appropriate one, I would hope—language requiring the Executive to maintain a certain sized Army or Navy, since Congress clearly has the duty to raise and support an Army and a Navy, I should imagine the Executive would perhaps recognize that it was more than an invitation, but was an actual matter of law which he was obliged to carry out.

Mr. RUSSELL. I should hope so; but there is nothing I know of anywhere which would require him to do so, unless he wanted to do it.

Mr. LONG. We cannot require the Executive to abide by a law, although he can be impeached. I hope the Senator will agree that it would be desirable, first, to try a legislative proposition to maintain the strength of the Army and the Marine Corps rather than seeking to impeach the President.

Mr. RUSSELL. Oh, yes. Of course, the Senate cannot originate the impeachment. Even if the Senate were unanimous in believing that the President should be impeached, we could not initiate the action. The body on the other side of the Capitol would have to sit as a grand jury and prepare the indictment of impeachment.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield.

Mr. MANSFIELD. I wish to aline myself with the statements made by the distinguished Senators from Louisiana relative to the intent of Congress, when that intent is made clearly known through the necessary language in appropriation bills. The impounding of funds by the executive branch is applicable both to Republican and Democratic administrations, because we all remember that before the Korean war, Congress voted for a 70-group Air Force. Then the President, Mr. Truman, and Secretary of Defense Louis Johnson impounded the extra funds above those needed for a 48-group Air Force.

We know that 4 years ago, when the distinguished Senator from Missouri [Mr. SYMINGTON] offered an amendment, which was agreed to, raising the appropriations for the Marine Corps by $40 million, that money was impounded by the present administration, and the then Secretary of Defense, Mr. Wilson, tried to spend that money in other ways, until the distinguished Senator from Georgia, the chairman of the Committee on Armed Services, got wind of it and called Mr. Wilson before the committee. Since the administration did not plan to use the money for the Marine Corps, I think the money reverted to the general Treasury; did it not?

Mr. RUSSELL. A part of it did.

Mr. MANSFIELD. The latest example is what Congress did last year in stating specifically that the National Guard should be maintained at a strength of, I believe, not to exceed 300,000.

Mr. RUSSELL. It was 400,000 in the National Guard and 300,000 in the Reserves.

Mr. MANSFIELD. The Army Reserves were to be maintained at 300,000; the Marine Corps at 200,000; and the Army at 900,000.

How is it that the intent of Congress, which I thought was clearly spelled out in those four categories was carried out only in the fields covering the Army, the National Guard, and the Army Reserves, but not in the fields of the Marine Corps and the Army itself?

Mr. RUSSELL. In the case of the National Guard and the Reserves, the appropriation bill itself provided language that the numbers should be not less than those indicated by the Senator from Montana; whereas in the case of the Regular Army and the Marine Corps the money for the larger force was appropriated and the congressional intent was expressed in the committee report. That was the justification given by the Department of Defense for differentiating between the items.

Mr. MANSFIELD. Am I correct in stating that it is the intention of the Department of Defense this year, again, to request that the strength levels of the Army, the National Guard, and the Army Reserves be cut?

Mr. RUSSELL. The budget for fiscal year 1960 contemplates reducing the strength of the Army Reserves and the National Guard. The reduced strength of the Active Army and the Marine Corps would be continued.

Mr. MANSFIELD. Is this one way in which we can circumvent the impounding power of the executive branch of the Government: namely, to write into the appropriation bills, as was done for this fiscal year in the case of the Army, the National Guard, and the Army Reserves, identical provisions for the Marine Corps and the Army?

Mr. RUSSELL. We can try, I may say to the Senator from Montana, but it still will not compel the President of the United States to spend the money if he decides he will not spend it. In this instance, the Department of Defense undertook to draw a distinction between the

forms of congressional action; but heretofore the numbers both of the Army Reserves and the National Guard, and of the Army and Marine Corps, as well, were determined by the amount of the appropriation for each organization. In this case, the Senate made a determination in the case of all four. We provided in the bill for an Army of 900,000; for 200,000 marines; for 400,00 in the National Guard; and for 3,000 in the Army Reserves.

When the bill went to conference, the other body refused absolutely to accept our proposal so far as the regular establishment was concerned, because they said the intent had always been carried in the committee report.

In order to get a bill, the Senate finally receded from its provision and placed the figure in the report. But we appropriated money for 900,000 in the Regular Army and 200,000 in the Marine Corps, just as we did for the 400,000 in the National Guard and the 300,000 in the Army Reserves. But the Department of Defense saw fit to draw a distinction between them.

Of course, this year, if Congress in its wisdom considers this desirable, we can state in the appropriation bill the numbers for the Army, the Marine Corps, the National Guard, and the Reserves. We can say that each of these branches shall be maintained at a certain number or at not less than a certain number, and see then if the Department of Defense will accept the figures when they are set forth in the text of the bill any better than it did when the figures were contained in the committee report.

Mr. MANSFIELD. Evidently the administration has its wind up on the matter of reducing forces. They did not put the Marine Corps and the Army cuts into effect at the time of the Lebanon crisis, did they?

Mr. RUSSELL. They had already announced them, but they delayed putting the cuts into effect when the Lebanon crisis arose.

Mr. MANSFIELD. They did not do so at the time the crisis arose affecting the islands off the shore of the mainland of China last September and October, did they?

Mr. RUSSELL. They have not done so completely as yet.

Mr. MANSFIELD. But they are planning to make cuts just before the deadline on Berlin, May 27.

Mr. RUSSELL. They are reducing to the levels they desire.

Mr. MANSFIELD. Did I understand the Senator from Georgia to say or indicate that in addition to the cuts in the Marine Corps and the Army, which are now going into effect, and which I think certainly are open to question, further cuts in these two outfits are in the offing?

Mr. RUSSELL. There has been no direct statement or request in the budget for any lower numbers. But at the time it was first decided to reduce the size of the Army by 30,000 in fiscal 1959, other studies were conducted looking to a still further reduction in fiscal 1960.

Although Congress appropriated funds for the full 900,000-member Army in fiscal 1959, the Department has not yet reached the level of 870,000 which it sought for fiscal 1959, and no further reduction below 870,000 has been planned for 1960. So there has been no further reduction for 1960. But what I intended to say was that studies looking to even greater reductions than those being sought at the present time have been conducted. I do not say the decisions have been reached, but studies looking to even greater reductions have been conducted.

Mr. MANSFIELD. But it is not true that orders have been issued to reduce the Marine Corps to 175,000 men and the Army to 850,000 men by June 30 of this year?

Mr. RUSSELL. That is correct.

Mr. MANSFIELD. That means that, roughly, the total reduction will amount to 55,000, because I believe the marines are now approximately 185,000 in number.

Mr. RUSSELL. And the Army is around 900,000 at the present time. So the reduction by means of such orders will not be quite that large, because some reductions have been achieved by chips and whitstones, by not replacing losses.

Mr. MANSFIELD. Well, let us assume that the cut in the case of the Army would amount to 45,000 trained men. We realize that the Government has made a large investment in their training. We are discussing the Draft Act. How many men are drafted over the period of 1 year? Would the number be 110,000?

Mr. RUSSELL. Between 100,000 and 120,000. Of course, that number will be reduced to approximately 90,000 in 1961.

Mr. MANSFIELD. Yes. But it seems to me that what we are doing is making it mandatory that by June 30 of this year at least 40,000 well-trained men, in whose training the Government has invested a great deal of money, will leave the Army and the Marine Corps.

Mr. RUSSELL. Reductions to that extent will be made. Of course, in any event there would have been a turnover, and some of them would have left the services. But undoubtedly there would then be that many less trained men in the military services.

Mr. MANSFIELD. And the Government, in this year of "the balanced budget," will suffer a subsequent loss, because the replacements which will have to be made will be made of new men who will have to be trained accordingly.

Mr. RUSSELL. I cannot subscribe completely to that statement, because if the terms of service of 40,000 men have expired, that many men will be separated from the service, if they wish to be. But we would have 40,000 men to take their places, and thus we would incur the cost of training the 40,000 men who would replace the 40,000 who had been separated from the services.

But undoubtedly the total overall strength will be 40,000 men less on July 1, as the Senator from Montana has indicated. In fact, it will be nearer 50,000 men less.

Mr. MANSFIELD. At that time we shall have 14 divisions, I believe. Will all of them be combat ready?

Mr. RUSSELL. Oh, no; some of them will be training divisions.

Mr. MANSFIELD. How many divisions will the Soviets have?

Mr. RUSSELL. We attribute approximately 175 divisions to the Soviet Union. However, I wish to say that the matter is not as simple as it would appear to be. Different countries have divisions of different sizes. In some countries, a division is 7,000 or 8,000 men; in other countries, a division is 12,000 or 14,000 men. But of course the Soviet Union divisions have overwhelming strength in ground forces, including tanks. Worst of all, our country, which has the greatest industrial establishment on earth, has not modernized its divisions properly. The Soviet ground forces are equipped with better weapons than our forces have today. Our forces have a great amount of obsolescent and obsolete equipment. That is one of the most alarming aspects of this entire situation—namely, the fact that we have not kept up with technological advances, in terms of supplying our men and our military forces with the very latest weapons.

Mr. MANSFIELD. How does the United States compare with the Soviet Union, in the case of submarines?

Mr. RUSSELL. Of course, the Soviets have three or four times as many submarines as the United States has. Our estimates attribute more than 400 submarines to the Soviet Union; and the United States has slightly more than 100.

Mr. MANSFIELD. How does the United States stand vis-a-vis the Soviet Union in the field of naval power, exclusive of submarines?

Mr. RUSSELL. I think the United States has a far stronger navy, exclusive of submarines, than the Soviet Union has. Since the end of World War II, the Soviets have built quite a few fast 10,000-ton cruisers, and they have some other modern ships. But in overall naval strength, there is no question in my mind that our Navy is far superior to the Soviet Navy. Of course, the carrier strength of the U.S. Navy gives us a great advantage. So far as we know, the Soviets have no aircraft carriers.

Mr. MANSFIELD. How does the United States compare with the Soviet Union, generally speaking, in the air?

Mr. RUSSELL. I can give the distinguished Senator from Montana my opinion, which is based on the hearings we have from time to time. I believe the Soviet Union has more airplanes than the United States has; but I think the United States has a much superior operating personnel, as compared to that of the Soviet Union; and I believe that our best planes, although very few in number, are better than the best of the Soviet planes.

Mr. MANSFIELD. Would the Senator from Georgia say that the relationship would constitute a standoff?

Mr. RUSSELL. Leaving out the area of missiles, and talking about the operational planes, I would say the United States is superior to the Soviet Union. I do not believe the Soviet long-range bomber command is anywhere near comparable to our Strategic Air Command.

Mr. MANSFIELD. I note that there is public information to the effect that at the present time, in the field of missile power, the United States has no ICBM's, and neither does the Soviet Union; that in the field of IRBM's, the United States has 10, and supposedly the Soviet Union has somewhere between 500 and 1,000. Those figures, which come from the public prints, indicate that the United States is in a very delicate position; and certainly that position is made more delicate by the approaching deadline of May 27, June 27, July 27, or next autumn, depending on whatever date Mr. Khrushchev wishes to use.

I am very much disturbed over the fact that our Army is being reduced in size. I am extremely disturbed over the fact that the Marine Corps, the only one of our services which has a floor under its strength, will not have enough men, under this year's budget, despite the expressed intent of Congress, to maintain three combat divisions and three air wings. I am sure the Senator from Georgia recognizes that situation, and also recognizes the consequent danger we are in.

Mr. RUSSELL. I have discussed it here on the floor and wherever else I could make myself heard. Whenever I have been invited to attend councils where the highest Government officials were present, I have expressed my unwillingness to see our Military Establishment weakened in any respect, in view of the situation which obtains today in the world.

Mr. MANSFIELD. I thank the Senator from Georgia.

Mr. LAUSCHE. Mr. President, will the Senator from Georgia yield to me?

The PRESIDING OFFICER (Mr. Moss in the chair). Does the Senator from Georgia yield to the Senator from Ohio?

Mr. RUSSELL. I yield.

Mr. LAUSCHE. When I came to the floor, the Senator from Georgia stated, so I understood, that objections had been made by means of letters, and probably also by witnesses, to the extension of this law.

Mr. RUSSELL. Yes.

Mr. LAUSCHE. With respect to the opposition voiced to this measure, I take it that the committee intends to develop in our military forces a personnel strength which at least will in some way be able to cope with the threats that are facing us today.

Mr. RUSSELL. Certainly we want to have the means of providing all the military strength which will be authorized by the Congress and approved by the executive branch of the Government. But certainly we could not do that without the enactment of this bill, because, in the first place, on July 1, in the absence of the enactment of this bill, the ceilings on all the armed forces would be just above 2 million men. So there would have to be a reduction of all above the 2 million men on the 1st of July; and 325,000 of those would come out of the Air Force.

Mr. LAUSCHE. If that were done, the number of personnel would be reduced from the present figure of how much to a new figure of how much?

Mr. RUSSELL. The overall number of 2½ million would be reduced to slightly more than 2 million.

Mr. LAUSCHE. In other words, there would be a reduction of 500,000; is that correct?

Mr. RUSSELL. That is correct.

Mr. LAUSCHE. Am I correct in my understanding that the primary purpose of the committee members, in their consideration of this bill, was to preserve to the maximum degree the security of our country?

Mr. RUSSELL. If it were not necessary to preserve the security of the United States, in my opinion, and, I will say, in the unanimous opinion of the committee, this bill would not be before the Senate today, because no one is enthusiastic about any compulsion in the matter of military service in this land of ours, unless all that we hold dear is threatened.

Mr. LAUSCHE. I understand that normally the wish and the desire of the committee would be to eliminate, insofar as possible, this universal draft law.

Mr. RUSSELL. Indeed, whenever the public safety would permit. we would like to see the compulsory element of it eliminated. There are members of the committee—including myself—who at times have believed in a system of universal military training. But I must say that the changes in weapons systems now have caused me to modify my feelings and views in that regard.

So far as the draft act is concerned, it is designed to enable this country to meet the emergencies of this hour and the threats of the cold war with the Soviet Union, in which we have been engaged over the past 12 or 14 years.

The draft ended at the conclusion of World War II, but in 1948, when the cold war began, we could not get into the armed services the number of men we needed, and we had to revive selective service. The act has been in effect since 1948.

Mr. LAUSCHE. Would it be fair to interpret the mental attitude of the committee in this way? The committee is saying to the people of Ohio and the people of the Nation that, if it were possible, the committee would have gladly recommended a reduction in the number of persons needed to serve in the military forces; but, in the face of the threat facing us, the recommendations of the committee are an absolute minimum of the needs of the military services of the country?

Mr. RUSSELL. The position of the committee is that unless we have the manpower that this authority will provide, the security of the country and the freedom of its citizens will be gravely imperiled. It is the position of the committee that this authority to provide the manpower is necessary in order that the security of the country and the freedom of its people may survive.

Mr. LAUSCHE. The questions I am about to ask may be somewhat personal, but I should like to ask the Senator from Georgia how long he has been a member of the Armed Services Committee.

Mr. RUSSELL. When I came to the Senate there were two committees relating to the armed services, the Committee on Naval Affairs and the Committee on Military Affairs. I became a member of the Committee on Naval Affairs in January 1933. I have been a member of the Committee on Armed Services and its predecessors for over 26 years.

Mr. LAUSCHE. Based on that experience of 26 years of service on those committees, the Senator from Georgia recommends, does he not, to the Members of the Senate and to the people of the country that, for the security of the country, the draft law which is now in effect should be extended?

Mr. RUSSELL. I do, unqualifiedly and unhesitatingly. In 1948, when the draft law was not in operation, we could not raise the 2 million men needed. There is no way to get the manpower to meet the present crisis without having the existing machinery of the Selective Service Act in effect.

Mr. LAUSCHE. Was the recommendation of the committee unanimous?

Mr. RUSSELL. It was as to the extension of the authority to induct. One or two members of the committee thought the act should not be continued for more than 2 years, but the committee was unanimous in recommending that the act be continued.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. RUSSELL. I yield to the Senator from Colorado.

Mr. ALLOTT. I should like to preface my questions by saying that a reading of the report and the recommendations of the committee leads me to the same conclusion the committee has reached. I think an extension of the draft law is a necessity which cannot be avoided. However, I should like to ask the Senator a few questions.

Last fall, when I was in my own State, I talked personally with thousands of young men, and to several hundred groups. One question constantly recurred. These young men had the attitude that they did not seek to avoid military service. However, they repeatedly came up with the thought that if they were drafted, they would go into the military service for 2 years. Perhaps some young men do not object to being drafted, which is all right, but the group I am talking about would rather enlist than go into the service through the Selective Service program.

They pointed out that if they enlisted, they would have to enlist for a 3-year or a 4-year period.

I notice, on page 4 of the report of the committee, under subsection (2), it reads:

> Volunteers under the age 26, in the sequence of their volunteering for induction.

In other words, these young men would volunteer to the draft board, and they would still go through selective service. Is my understanding correct?

Mr. RUSSELL. That is correct.

Mr. ALLOTT. Has the committee given any consideration or has it had any reason or cause to give consideration to the situation of young men who do not seek to avoid service, and yet, by volunteering their services, are subjected

to a 1- or 2-year period of longer training and service than those who are inducted under the Selective Service Act?

Mr. RUSSELL. If they serve more than 2 years, it means they have elected to go into the Navy or the Air Force. They can go into the Army for a 2-year period of service at the present time.

Mr. ALLOTT. Perhaps most of the young men to whom I talked wanted to go into the Navy or Air Force.

Mr. RUSSELL. If the young men choose to go into the Air Force, they will have to weigh whether they want to serve 4 years in the Air Force rather than 2 years in the Army. Many of them do. There is no trouble in obtaining volunteers in the Air Force. Some young men may prefer to serve 3 years in the Navy rather than 2 years in the Army. There are still others who get 6 months' training and then participate actively in the Reserve, in which they must perform 48 Reserve drills and 2 weeks of active duty for training annually. There are many different ways of performing military service. If the young man choose to go into the Air Force, they have to pay the price of serving 4 years.

Mr. ALLOTT. Has the committee discussed this particular question?

Mr. RUSSELL. We have discussed this question for hours. Without attempting to make a disparagement as between the different branches of the service, I point out that there is required a greater degree of skill in the Air Force than is required in some of the other branches of the service. If a man were going into the Air Force, and were required to serve only 2 years, by the time he would be trained, he would then be lost to the service. In the infantry, if a young man is a strong boy, with good reflexes, and can carry a gun and learn how to use it, he can be trained in 4 months, and the Army will still obtain 20 months' service from him, even though he has to serve only 2 years.

More highly developed skills required in certain branches of the Army—in electronics, for example—that are just as demanding as are skills in the Air Force; but these positions should be filled by career personnel.

I must say there has been an increasing tendency—although I understand it, I deplore it—for young men to try to get out of having to march and sweat it out with a rifle on their shoulders. Some young men are willing to serve for a longer time in order to avoid having to do it. However, it must be pointed out that the foot soldier is an extremely important member of the armed services, and we must have him. In the last analysis, the man who has won every war from the time man carried sharp sticks to the day of modern weapons has been the foot soldier.

Mr. ALLOTT. Has the Senator's own experience prompted his allegiance to the foot soldier?

Mr. RUSSELL. I was in the Navy.

Mr. ALLOTT. I may say for the young men, in whom I have a great deal of faith, that in the Air Force——

Mr. RUSSELL. The Air Force has no problem in obtaining enlistments. It sometimes has more applicants than it can absorb. The Navy has more applicants than it can absorb. That is not where the difficulty is. The Army is the only branch which has to use the draft to fill its needs.

Mr. ALLOTT. The problem arises in filling the needs of the Army. Is that correct?

Mr. RUSSELL. That is right. It is the only branch which today has to use the selective service to obtain its needed personnel.

Mr. ALLOTT. The reasons for the longer service with respect to the volunteers are, first, the greater amount of technical training required and, secondly, perhaps, the committee feeling that if a man is to have a right to select his branch of service then he should be willing to spend a longer period in service. Is that stating the matter fairly?

Mr. RUSSELL. That feeling undoubtedly enters into it. It has been completely justified by the facts, as stated.

Mr. ALLOTT. I should like to ask one other question on a subject which to me appears to be very shocking. On page 5 of the report, in the paragraph the third from the bottom of the page, it is stated:

> The current rejection rate for an age group as a whole is about 33 percent. Since many members of an age group voluntarily enter service, the rejection rate for the effective manpower pool is approximately 45 percent.

Mr. RUSSELL. Yes. That is a tremendously high percentage. I think I stated earlier that the services have raised mental qualifications since the end of World War II. A much higher degree of mental competence is required now.

To be perfectly frank about the matter, if we became involved in an all-out war we would have to lower the standards, and more young men would be available. We have heard a great deal of discussion over the past few weeks about the strength of our Armed Forces. The services want the strongest bodies and, above all, the most efficient minds they can get in those bodies, to make up for the disparity in numbers as between the men in service in our country and those in service in the Soviet Union.

Mr. ALLOTT. Then this percentage could not necessarily be interpreted in the same light with the inductions prior to World War II?

Mr. RUSSELL. Oh, no.

Mr. ALLOTT. Or inductions prior to the Korean War, because of the raising of the physical and mental standards.

Mr. RUSSELL. That is correct. This does not reflect any depreciation in the mental and physical qualities of our young manhood, but reflects instead an increase in standards.

Mr. ALLOTT. What this really means is that the services have set a goal of a certain number of men. In order to attain what is desired, the services have turned down approximately 45 percent.

Mr. RUSSELL. I think that is a fair statement.

Mr. ALLOTT. The services require certain standards.

Mr. RUSSELL. I think that is a fair statement. I was very reluctant to approve those higher qualifications, because in a sense they were a limitation on the equal distribution of services.

Mr. ALLOTT. Of the burden of service.

Mr. RUSSELL. Of the burden of military service. The Secretary of Defense, the Secretary of the Army, and all the ranking generals in the Army, were most insistent that since there was a reduction in personnel in the Army there was a requirement for the higher standards. The Army has been reduced from about 1½ million to 900,000 men, and in the light of that reduction these military men felt it was imperative that they have persons with higher mental capacity, because they could train those men much easier, and those men could do many more things and absorb training in a much shorter period of time.

In addition, this program has greatly mitigated the disciplinary problems of the Army. I first would not accept the relationship of the disciplinary problems to the somewhat lower intelligence quotients, but since we have authorized the President to raise the mental standards the Army has closed two of its disciplinary barracks. There has been that much reduction in the disciplinary problems of the Army.

Mr. ALLOTT. That is wonderful news. I think this is an area to which we have to pay some attention.

Mr. RUSSELL. I can assure the Senator it has been a matter of great concern to the members of the committee.

Mr. ALLOTT. I am sure it has been. In this respect what we are really doing is not having a selective service in one sense; we are putting the burden of service only upon those who have the highest physical qualifications and the highest mental qualifications.

Mr. RUSSELL. I must confess there is a great measure of justification for the Senator's statement.

The distinguished Senator from South Dakota [Mr. CASE] will bear witness to the fact that for two sessions I held up the proposed legislation to increase the standards because it looked to me as though it would be unfair to the young men who were more intelligent and stronger.

After all, standards are all a matter of degree. We had standards before. It was all a matter of degree as to how high we should raise the standards.

Our need for a strong military force was so great that I finally capitulated. We passed the bill last year. I must admit the program has produced results far beyond anything I anticipated at the time.

Mr. CASE of South Dakota. Mr. President, will the Senator yield to me and permit an interruption at this time?

Mr. RUSSELL. I am glad to yield to the Senator from South Dakota, if the Senator from Colorado does not object.

Mr. CASE of South Dakota. I think the correct thing to say is that the program has increased the selectivity and reduced the universality.

Mr. RUSSELL. That is correct.

Mr. CASE of South Dakota. We used to talk in terms of universal military

service, and now the emphasis is upon selectivity. The changing of the standards has entirely shifted the burden of responsibility.

Mr. RUSSELL. A number of things have contributed to that effect. The weapons of war have become more complex in the last 20 years. I think the complexity has increased in the last 20 years more than in the two centuries before that. Weapons are so complex today that I have almost despaired of being able to observe an ordinary military outfit operate one of the missile batteries. It requires a very high degree of training and a very considerable basic education simply to get the count-down handled exactly as it should be.

That is one reason I have not been too much frightened by the claims of Russian missile superiority. If the Russians have the missiles operational everywhere, they must be sadly depleting the faculties of their educational institutions. It takes almost a team of college professors to operate one of those missile batteries. If the Russians have the missiles operational everywhere, they have had to use many highly competent persons.

Mr. ALLOTT. I appreciate very much the answers the Senator has given. I knew perhaps all of these things had been considered by the committee, but I think it is worthwhile to point out, as the Senator from South Dakota has indicated, that the emphasis has been changed, probably of necessity, from a selective service system of universality to a selective service system of selectivity.

Mr. RUSSELL. The standards have been changed from time to time. They were changed drastically from 1940, when we passed the first bill, to 1942.

Mr. ALLOTT. The Senator is correct.

Mr. RUSSELL. In 1940 the standards were about as high as they are today, but by 1942 if a man could walk, the services carried him off, gave him a gun, and put him in the armed services. We needed 14 million men. This has never been a universal program.

Mr. ALLOTT. I realize that.

Mr. RUSSELL. There has always been a degree of selectivity.

Mr. ALLOTT. I realize there has never been a time when the Army or the military forces were in that category completely.

I thank the Senator for answering my questions.

Mr. KEATING. Mr. President, will the Senator yield so that I may ask a question?

Mr. RUSSELL. I shall be glad to undertake to answer the Senator's questions.

Mr. KEATING. Would it be fair to say that in the committee the only substantial dispute regarding the bill was with relation to the length of time the draft should be extended?

Mr. RUSSELL. As a practical matter, I will say to the distinguished Senator from New York, no motion was made to change the 4-year provision. The committee was unanimous in agreement that it was necessary to extend the authority to induct. One or two members of the committee expressed the wish that the law might be extended for 2 years instead of 4 years, but after full discussion there was no formal vote on that suggestion.

Mr. KEATING. Of course, it is my intention to support the extension of the draft law. I have been debating in my own mind, although my knowledge is much less extensive than the knowledge of members of the committee, whether the extension should be for 2 or 4 years.

Is it not a fact that if it were extended for 4 years, and the world situation should change, and the need for the draft should become less apparent during that period, the Congress at any time could end it, even if it were extended for 4 years?

Mr. RUSSELL. Not only could the Congress end it, but the executive branch of the Government, if it did not need the men, could declare the draft inoperable at any time. Congress would not have to be in session. There could be a cessation of the draft at any time, if men were not needed in the Armed Forces. As pointed out by Assistant Secretary of Defense Finucane, who is in charge of manpower, it is a great clarification to the young men of the country to know that the draft will be in operation for 4 years. This will prevent them from building up false hopes and making their plans for the future based on the illusion that the draft may end, when we really do not see any hope of its ending.

Mr. KEATING. I think there is much merit in that position.

Mr. CASE of South Dakota. Mr. President, in connection with the point which the Senator from New York raised, there was a feeling on the part of several members of the committee that the draft was not operating perfectly, that there was some room for improvement, that the reserve liability was unequal, and that the values for dollars expended might be increased with longer terms of enlistment, rather than a period of 2 years.

I would not want the Senator from New York to think that the only question considered was whether the extension should be for 2 years or 4 years. In that connection, let me say that I intend to to speak on some of these points, and also to discuss 2 amendments which were discussed within the committee. I shall offer one of them.

One of the amendments had to do with simplifying and clarifying the period and conditions of liability, both as to active duty service and as to the Reserve.

The second amendment had to do with the possible creation of a manpower commission for studying the manpower needs currently and making such recommendations as its studies might lead it to make.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. CASE of South Dakota. I yield.

Mr. KEATING. Does not the Senator from South Dakota share my feeling, which is apparently the feeling of the Senator from Georgia, that it would be wise to extend the draft for 4 years, because of the fact that either the Defense Department or the Congress could act at any time, if it should be found that it was not needed?

Is it not better, at this crucial time, to err, if we err at all, on the side of too long an extension, rather than on the side of an extension which is not long enough?

Mr. CASE of South Dakota. Two or three arguments were made for the 4-year extension. The first was that the last time the draft was extended, it was extended for 4 years.

The second argument was that the 4-year extension would perhaps provide a great show of determination for our allies, even recognizing the fact that one of them, England, has indicated that she intends to discontinue conscript service in a year or two.

The argument which was cited as being most persuasive was that the 4-year extension would give to the young men who would be affected a certain sense of definiteness, and they would have the knowledge that the draft would be extended that much longer. All those arguments were mentioned as reasons for an extension of 4 years rather than 2.

Mr. BARTLETT. Mr. President, it has been a great privilege for me as a freshman Member of the Senate and as a newcomer to the Armed Services Committee, to work under the leadership of the distinguished Senator from Georgia, in the preparation of the legislation now proposed. I have been impressed by the unanimity of opinion among my colleagues on the committee regarding the necessity for extending the draft. Surely it is apparent that at the present hour there is no alternative to such an extension.

At the same time, Mr. President, I would be remiss in my obligations and in my responsibility as a Member of the Senate to promote the national security, if I did not rise now to voice certain doubts which I feel concerning the draft program.

Chiefly, my doubts are whether our present manpower policies are giving this country true security in the missile age—or the illusion of security only. Therefore, it is my hope that Senators will consider on a continuing basis our manpower policies so that if workable alternatives to the draft exist we will know that they exist, and will put them to work for the safety of America.

If the answer to our manpower need is universal military training, we must find this out and adopt some plan of universal service at once.

If it be a professional Military Establishment, increased in size and equipment, we should know that, too.

Perhaps there is a solution which would utilize in the fullest degree in the service of their country the talents and energies of thousands of young men not fit for, or not needed in, the Military Establishment.

If the answer is found to be the current selective service, that system should be continued. But in that event, it is the duty of Congress to look into the practicability of some of the improvements which suggest themselves.

One reason given by witnesses who appeared before the commitee for an extension of the draft for 4 years is that

failure to extend it for that period of time would dishearten our allies. I am troubled by the implication, if it be a fact, that our alliance is so tenuous as to require us to maintain a static military manpower policy that may not be best calculated to shore up the security of the United States of America.

That there must an extension now of selective service, should be or ought to be obvious. My personal preference after hearing much of the testimony given by the committee would have been for a 2-year instead of a 4-year extension. It was and is my thought that an extension for this shorter period would point up the necessity for proceeding with an overall study of military manpower utilization and our manpower needs. However, I realize that I am of the newest of the new, having entered the Senate and having gained a place on the Armed Services Committee only in January of this year. I have yielded to the accumulated experience and wisdom of my elders in service on the committee and I voted to report the 4-year extension and I shall vote for it on the floor. Notwithstanding, I believe I have a duty to perform in calling to the attention of the Senate my views relating to an imperative need for an honest-to-goodness, down-to-earth study of this big and vital subject. I cannot believe that the shorter extension would have frightened our allies. Indeed, is it not altogether likely that they will be far more concerned with the announced reductions which are to be made in our existing military organization? That is almost surely to be of grave concern to them as it is to me and to so many other Americans.

There must be on our part no hint of weakness or fear. The Russians must see in us a determined unity with which we face whatever may befall. But, in the face of so grave a military danger, it would be folly and negligent not to examine the manpower situation thoroughly in the light of current facts.

I raise these questions today because they suggest serious problems which, unattended, could undermine our security. Now I am no military strategist, but the overall impact of these questions seems to me to indicate an urgent need for a frank and full study by a congressional panel or an independent commission. I reserve the privilege of submitting at a later date a formal proposal for such a study.

The more I consider the question, the more advisable it seems to me to have the study carried out by a subcommittee of the Senate Armed Services Committee, rather than an independent group not associated with the Senate.

During such an inquiry, no slightest delay for complexity would impede the continuation of the present system. And if the present system is found to be adequate, or no better alternative has been worked out, there need be no change and no delay in the implementation of the draft.

Let us think of the changes in the military situation which have occurred since the last time the draft was examined by the Congress—changes in warfare perhaps more extensive than those that occurred in all the centuries of human history—sputniks and luniks and intercontinental missiles and missile-bearing submarine fleets; and sooon man to be sent into the heavens, too. Can it be sensible to assume that in the midst of so vast a redoing, manpower procurement policies alone must remain static, unimproved, even unquestioned?

Surely it is now clear how directly our international posture is affected by our manpower policies. It is no slight to these policies nor on the men who have carried them out so faithfully. To suggest that these policies, too, need periodic reexamination. Perhaps the study for which I speak today would find that we need a larger Army and that the best way to get it is a larger draft call. This, too, the American people must know and, knowing, would gladly accept.

Indeed, we must know how our Reserve program is standing up under the new strains and needs, how our pentomic divisions are faring—how nearly ready we are, in short, for any type of onslaught. If we are anything less than ready, the degree of difference may be the measure of our demise. If anything is plain, it is that the situation is just that ominous.

In 1941, in the face of a grave military threat from abroad, at a time when the nature of warfare more certainly justified a draft program than does the nature of warfare in the missile age, and when the totalitarian threat was no less immediate, one vote in the House of Representatives saved the draft. That vote may well have been the margin of our survival in the dark days of 1942. Statesmanship in the House of Representatives in 1941 saved America. Statesmanship in the 86th Congress by Members of the U.S. Senate may again save America in the face of the grave military threat from abroad. That statesmanship requires us not merely to enact a draft extension, but also to commit ourselves to a careful reappraisal of our present manpower policies. In the context of new weapons, old answers are not adequate. Complex new weapons demand complex new skills and we ignore these demands at the peril of our existence.

Even if we have adequate missiles in our arsenals and adequate pentomic divisions on the charts, well-trained, highly motivated men remain the lifeblood of the whole structure. Missiles do not fire themselves. Atomic artillery do not maintain themselves. Technology does not advance or explain itself. Is it really inconceivable that the draft—so necessary to meet our manpower needs in 1940—may no longer be adequate to the needs of 1960?

It is in this spirit, Mr. President, that I now raise for the consideration of my colleagues in the months to come what I submit may well be life-and-death questions.

First. Is conscription a permanent feature of U.S. defense policy, according to present military plans?

Second. If conscription is likely to continue indefinitely, are major efforts being made now by the Defense Department to improve the Selective Service System to eliminate such inequities and inefficiencies as may currently be a part of it?

Third. If conscription is not to continue indefinitely, what plans are being made now by the Defense Department to lessen our dependency on and eventually to eliminate conscription?

Fourth. Might now such a study of manpower policies have value in ascertaining such facts as our overall manpower requirements; the most effective way to retain trained men in service for longer periods of time; possible nonmilitary uses of men of draft age; the possibility of reducing the number of men constantly involved in training soldiers who do not intend to stay in the armed services, and so forth?

Fifth. Can men be trained in (a) 6 months, (b) 2 years to operate the more complex weapons of modern warfare?

Sixth. Is this training of much value to the Nation if men are separated soon after they become proficient in the use of such weapons?

Seventh. How many draftees receive continuing combat training after their initial 8 or 16 weeks?

Eighth. Are we training an adequate number of men to fight limited nonnuclear wars in which mass armies are engaged?

Ninth. If draftees are not trained to operate the complex instruments of modern warfare, can we risk using them in combat situations, even if nuclear weapons are not immediately involved?

Tenth. In a limited war in which nuclear weapons are used, would a mass army untrained in nuclear warfare be adequate to our needs?

Eleventh. In an all-out war decided by a nuclear exchange between the United States and the Soviet Union, would a large army or large reserve force, especially a reserve force derived from the 6-month program, be of great value to the United States?

Twelfth. In short, is the training received by 2-year draftees adequate for any kind of war, be it total, limited nonnuclear, or limited nuclear?

Thirteenth. Is it possible that the manpower needs produced by new weapons cannot be met adequately without a substantial increase in the number of men who stay in the service for a minimum of 4 years?

Fourteenth. Is the training that men are getting in the 6-month program or in the 10-week Air Force training program adequate for any kind of war?

Fifteenth. If the 6-month training program is not adequate to prepare men for combat and other military assignments, should the program be continued?

Sixteenth. If the 6-month training program is adequate, should we not put it on a universal basis, and couple it with incentives designed to keep the requisite number of men in the Armed Forces for minimum periods of 4 years?

Seventeenth. How effectively are the (a) 6-month, (b) 2-year selectees being integrated into Active Reserve units?

Eighteenth. Might an adequate Reserve program provide an acceptable substitute for a large standing army, a large

percentage of whose personnel are not prepared for nuclear combat?

Nineteenth. Is it not possible that the arbitrary limitation imposed on the size of our Armed Forces by budgetary considerations has handicapped international negotiations looking toward disarmament?

Twentieth. Is it not possible that actually a larger standing Army could be maintained at less cost by an improved incentive system?

Twenty-first. In fact, regardless of size, might not the replacement of conscription with a system of incentives designed to attract and keep a competent and motivated professional armed force save money and produce a better nuclear-age defense system?

Twenty-second. But if the size of the Army is to be limited, might it not be wise to speed the replacement of soldiers by civilians in noncombat positions?

Twenty-third. Could not many such noncombatant jobs be filled more economically and more efficiently by civilians?

Twenty-fourth. In the long run, might it not be wise to employ civilians even in certain technical positions, if some way cannot be devised to retain service personnel for considerable periods of time after their training has been completed?

Twenty-fifth. Does not the fact that almost three-quarters of all enlistees leave the service after their first hitch seriously limit the value of conscription in filling the manpower needs of the service?

Twenty-sixth. Might not the $14,000-per-man cost of training and maintaining draftees, 96 percent of whom leave the Army after their 2 years, and of training the one-hitch enlistees, be adequate to provide the kinds of salaries and benefits necessary to maintain an adequate professional force?

Twenty-seventh. Is part of the problem of attracting and keeping bright technicians in the Armed Forces derived from the fact that personnel are subject to certain conditions left over from an earlier military tradition which do not comport with the type of mental and technical initiative now required of military personnel?

Twenty-eighth. Is a system under which some men serve their country involuntarily up to 8 years while others do not serve at all the fairest that can be devised?

Twenty-ninth. Is a system which continually occupies a large percentage of our military personnel in the basic training of transient recruits the most efficient use of manpower that can be devised?

Thirtieth. Is such a system an adequate alternative to a combat-ready fighting force with a low turnover and a high proficiency in the use of modern weapons?

Thirty-first. Does the confidence of our allies in American leadership require us to maintain a manpower policy that may no longer be adequate to our own security?

Mr. GRUENING. Mr. President, will my colleague yield?

Mr. BARTLETT. I yield to my colleague from Alaska.

Mr. GRUENING. I wish to commend my colleague highly for his very thoughtful and comprehensive analysis of this question. It shows how well he has taken advantage of his relatively brief membership on the Committee on Armed Services. What he has presented to the Senate is a wonderful blueprint for study by the commitee during the coming years.

Needless to say, like my colleague from Alaska, I feel in duty bound to support the bill which, after extensive hearings, has the recommendation and the stamp of approval of the Committee on Armed Services, headed by a Senator who, more than any other Member of the Senate, is experienced in this extremely important field. I was privileged a few weeks ago to attend a testimonial banquet in honor of Senator RUSSELL. I felt privileged to be there and to join with the large group of military and civilians in approval of the citation and the testimonial which was given to him for his magnificent contribution to national defense.

Certainly at this time there is need for the expert opinion by which the rest of us who are necessarily less familiar with this subject have to be guided; and I may say that we in Alaska have been peculiarly sensitive to the needs of national defense. We have lived through a period when there were no defense plans for that area.

I recall that 24 years ago testifying before a Military Affairs Committee of the House, the late great Billy Mitchell emphasized that the importance of Alaska strategically was something we could not afford to overlook. He said at that time: "He who holds Alaska holds the world." His wisdom on that subject was as much disregarded as was his wisdom concerning the importance of aircraft in war.

I have lived through the years when the sole efforts to get defenses for Alaska were confined to Alaskans. I recall how Senator BARTLETT'S predecessor as Delegate from Alaska, in the House, Anthony J. Dimond, strove for years to get some defense measures for Alaska enacted. I recall his prophecies both on the floor of the House and in the committee that the Japanese would attack Alaska without warning. I have in my possession a letter written to him as late as 1937, by Gen. Malin Craig, who was then Chief of Staff of the Army, after Delegate Dimond had urged the establishment of an Air Force and Army post in Alaska, in which General Craig replied, that the idea was fantastic; that Alaska was so remote from any possible theaters of conflict that the idea of spending any money for defense there was ridiculous.

I recall that away back in 1904 the Navy sought to establish a naval base in the outer Aleutian Islands, on the Island of Kiska. Year after year the Navy Department presented a request for an appropriation so that that island could be fortified. But the navy which first occupied the Island of Kiska was not Uncle Sam's navy, but the navy of the Mikado. In consequence of the lack of understanding of Alaska's strategic importance and the consequent failure to provide for its defense, Alaska was the only part of America invaded and for a time held by the enemy.

I could continue almost indefinitely to give examples of how sensitive and how keenly aware we are of the importance of national defense and of Alaska's role in national defense. We Alaskans believe that an important part of Alaska's destiny is to serve as a bulwark of defense for the continent. I shall vote for this measure though with substantial doubts. I think my colleague is to be greatly commended for raising in categorical form as questions, some of the doubts which some of us have.

I myself would have preferred a 2-year extension. I listened to some of the arguments against that modification. I noted particularly the comment made by the distinguished senior Senator from Massachusetts [Mr. SALTONSTALL]. I am sorry he is not in the Chamber now. He said that one reason why he did not favor a 2-year extension, but rather favored a 4-year extension, is that there would be no appreciable change in the situation during those 4 years. I assume he meant by that that there would be no appreciable change in our relations with the totalitarian power which now menaces the freedom and peace of the world.

But I call his attention to the fact that there may be one very fundamental change in 1960, namely, a change in the Executive power of the Nation. Therefore, I think the time may come, even though we shall have extended the act for 4 years, when we will want to revise this law together with our other defense measures, as was so ably discussed and criticized in the Senate yesterday, and to take a new look at our needs for national defense and the strengthening of our national security.

Mr. RUSSELL. Mr. President, will the Senator yield?

Mr. BARTLETT. I yield.

Mr. RUSSELL. I wish, first, to express to the distinguished junior Senator from Alaska [Mr. GRUENING] my appreciation for his very complimentary references to me.

I am delighted to have the distinguished senior Senator from Alaska [Mr. BARTLETT] as a member of the Committee on Armed Services. I particularly appreciate the fact that he brought an inquiring mind with him to the committee. At times we have dealt with these problems for so long that we have become somewhat set in our views and our opinions. So it is always well to have someone asking new questions and generating new thoughts in the committee.

I have been so much impressed by the capacity of the senior Senator from Alaska to serve on the Committee on Armed Services that I regard it as being of vital importance that he has been assigned to the Subcommittee on Military Preparedness, where he will have a great many opportunities to exercise this sense of questioning which is in his mind, and to undertake to get answers from the military authorities and the civilian officials of the country who are charged with the responsibility in this area.

I am glad he has asked the questions he has propounded. I think I could answer some of them, but I shall not undertake to do so now. I do not know

that I could answer all of them to his satisfaction, but I certainly welcome him on the committee and appreciate the fact that he has fallen right into the work. I know he will make many valuable contributions to our national defense and to eliminating some of the admitted inequities in our present system of service.

Mr. BARTLETT. Mr. President, I know of no one anywhere who is more capable of answering my questions than is my able chairman. I join with my colleague from Alaska in praising the effective work for his Nation which the distinguished Senator from Georgia has performed throughout the years. I thought only this afternoon that it was rather remarkable that he stood here and answered, without reference to a book, a note, or a piece of paper, the many technical questions which were put to him during the consideration of the bill. It was really a remarkable demonstration, one which few persons anywhere could have accomplished. We owe him much, and we recognize the fact, with pleasure and with pride.

Mr. RUSSELL. I thank the Senator from Alaska.

Mr. JOHNSON of Texas. Mr. President, will the Senator from Alaska yield?

Mr. BARTLETT. I yield.

Mr. JOHNSON of Texas. I have listened with great pleasure and pride to the very able statement made by the distinguished senior Senator from Alaska [Mr. BARTLETT]. I was privileged to know him when he served as a Delegate from Alaska in the other body. I am very happy that he sought membership on the Committee on Armed Services, where I have served ever since I entered the Senate.

I think the contribution which the senior Senator from Alaska has already made, in the thorough way in which he covered the subject and the diligent manner in which he attended the committee hearings, is something which will please all Members of the Senate. All of us who are members of the Committee on Armed Services are very fortunate to have the privilege of serving under the chairmanship of the distinguished senior Senator from Georgia [Mr. RUSSELL]. I do not think I have ever known a greater legislator, a man of more ability, or a wiser or better man. So when the senior Senator from Alaska sought membership on the Committee on Armed Services, I thought then that he would have an opportunity to render the type of service which he has demonstrated today he is capable of rendering.

I had a chance to visit his State in the early days of World War II, in 1942, and I was greatly impressed with the loyalty, the patriotism, and the dedication of the people who live in Alaska.

Mr. President, nothing has given me more pleasure than to observe the competence, the teamwork, and the patriotism of the two Senators who work side by side in representing the largest State in the Union.

Mr. BARTLETT. I am grateful to the distinguished majority leader. It is a privilege to serve under two such great leaders as the Senator from Texas and the Senator from Georgia.

Mr. NEUBERGER. Mr. President, will the Senator yield?

Mr. BARTLETT. I yield.

Mr. NEUBERGER. I wish to associate myself with the remarks made by the distinguished senior Senator from Alaska. I do not have the benefit of membership on the Committee on Armed Services, and I am not so familiar with this very difficult and delicate issue as he is. However, I share with him the view that the extension of the act should have been for 2 years only. I also have in common with him the opinion that there should be a very detailed, extensive thorough, and painstaking review of our military manpower policies, particularly with respect to the draft.

Mr. President, I believe both suggestions which have been made by Delegate BARTLETT should be considered by the leadership. I should have said "Senator BARTLETT." I have known him affectionately and personally as Delegate BARTLETT for so long that I am afraid I have gotten into the habit of addressing him as "Delegate."

Mr. BARTLETT. I am used to it; I like it.

Mr. NEUBERGER. It is a very illustrious title.

I think both of the proposals made by the Senator from Alaska should be considered not only by the chairman and other members of the Committee on Armed Services, but also by the leadership of both the Senate and the House.

I think few Members of the Senate are as familiar with the policies of our Armed Services, as a result of long experience, as are the two Senators from Alaska. I had the privilege and the experience of serving in the Army in Alaska and the Yukon during World War II. At that time the junior Senator from Alaska [Mr. GRUENING] was the Governor of Alaska; and the senior Senator from Alaska Mr. [BARTLETT] was, part of the time, Secretary of the Territory of Alaska, and then he succeeded the very eminent Anthony J. Dimond as the Delegate from Alaska. It was while they were the civilian officials in charge of the Territorial government of Alaska that, if I am not mistaken, Alaska became the only portion of the North American continent under the sovereignty of the United States to be invaded in well over a century of American history.

Mr. BARTLETT. The Senator from Oregon is correct.

Mr. NEUBERGER. So, for example, they have had experience with military policies which were not wise—because, if I am not mistaken, at the beginning of World War II, during which Alaska was invaded by the forces of Imperial Japan, the only guns in Alaska pointed toward our good ally, Canada, which fought side by side with us during that war. Furthermore, if I am not mistaken, at the beginning of World War II the only artillery in Alaska was at Chilkoot Barracks; and the guns were pointed, not toward Imperial Japan, which invaded Alaska, but toward the little border post of the Royal Canadian Mounted Police near Pleasant Camp, British Columbia, if I am not mistaken.

Mr. BARTLETT. The accuracy of the Senator's memory cannot be challenged and is greater, I am sure, than the accuracy of the guns he mentions.

Mr. NEUBERGER. I suppose the assumption was that in World War II our enemy would be Canada, rather than Japan.

So it is obvious that correct forecasts have not always come from the Pentagon or its predecessor.

I should like to mention one thing about the policies in connection with our military services that has disturbed me: I believe that many times we repeat mistakes which previously have been made in the course of our history. I remember that when I was in high school, the statement was made again and again, by many persons, "In the next war, both capital and men will be drafted; and no one will become a millionaire at the cost of blood, sacrifice, and suffering." If I heard that said once, I heard it said a hundred times. It was repeated on the Fourth of July, in conventions of the American Legion, conventions of the Veterans of Foreign Wars, and in other conventions, and here in the Congress, and generally throughout the country.

But let us consider the situation which exists today: The Congress is considering an extension of the draft law. I will vote with some reluctance for that measure, as will the two able Senators from Alaska. But 2 weeks ago there appeared in the business section of the New York Times a very interesting article which pointed out that on the New York Stock Exchange many of the leading stocks were those of companies which were making missiles, jet plane fuels, electronic equipment for the Armed Forces, and all the other military items that our boys will have to use, perhaps in mortal combat. These stocks have had record rises.

Today we are spending annually on armaments more than we spent each year during the Korean war. Yet the excess-profits tax on the manufacturers of armaments, which was invoked during the Korean war, has been suspended.

Last week I introduced four tax bills. One was to restore the excess-profits tax. If we are going to vote for a 4-year extension of the draft, with all that this implies for the young men of this country, then I think the Senate and the House of Representatives—although of course such legislation must originate in the House of Representatives—certainly should study the imposition of some ceiling on the profits of those who will manufacture the jet planes, the tanks, the nuclear submarines, and the nuclear aircraft carriers in which some of our boys may unfortunately lose their lives or be maimed.

Recently, I noticed that the workhorse airplane of World War II—the B–17 Flying Fortress—was stated as costing $188,000. The jet planes which have replaced it in the bombing field today cost approximately $7 million. Just compare $7 million with $188,000. The largest submarines we had in World War II cost approximately $8 million or $10 million, whereas the nuclear-powered *Nautilus* cost approximately $65 million.

If I am not mistaken—and I speak entirely from memory—the great aircraft carrier *Lexington*, of World War II, cost approximately $90 million. We have on the drawingboards at this time aircraft carriers which will cost between $350 million and $400 million.

The other day I saw a statement by one of our leading military officials—and again I speak from memory—that a jet fighter plane costs the Government more than if it were made entirely from solid silver, at the prevailing market price of silver.

So I say that if we vote for an extension of the draft of the young men of the United States, certainly we should consider placing some ceiling on the profits of the manufacturers and industries who are making the weapons of war.

There has been a great deal of oratory about this matter, but there has been relatively little action in connection with it. I recognize that the distinguished chairman [Mr. RUSSELL] and the other members of the Armed Services Committee cannot do anything directly about it, any more than the rest of us can, because this subject comes within the jurisdiction of the Finance Committee and the Ways and Means Committee of the House of Representatives.

But I call the matter to the attention of the Senate because I believe it involves a moral issue of great proportions. It also involves an economic issue, because today the bulk of the $77 billion budget, which is so controversial, goes for military weapons and military hardware of one kind or another. Under these circumstances, I believe we should restore the excess-profits tax on the manufacturers of the weapons of war. It certainly would help our taxpayers.

I wish to thank my good friend, the Senator from Alaska, for bearing with me and for being so sympathetic and indulgent with his time.

Mr. President, I ask unanimous consent that a brief statement I have prepared on my views on the draft—which I am happy to say are similar to those of the Senator from Alaska—and an editorial entitled "A Look at the Draft," which was published on February 4 in the Washington Post, be printed at this point in the RECORD.

There being no objection, the statement and the editorial were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR NEUBERGER

Critics of the draft have contended that it—

1. Creates a cloud of uncertainty which hangs over the heads of young men 18½ through 26 years of age, prohibiting them, in many cases, from making firm vocational, educational or matrimonial plans.

2. Causes inequities as between young men eligible for selective service. It is pointed out that there are approximately 2,200,000 1A's in the pool now and that about 1,200,000 youths reach the minimum draft age annually. In 1960, this figure is expected to reach 1,300,000. By 1965, it is predicted that it will be nearly 2 million. Some 660,000 persons enter the services each year; 180,000 are inductees. The St. Louis Post-Dispatch noted recently: "Thus, chances are excellent the vast majority of the class that attains military age will not see service. This is not fair to those who are drafted or who volunteer."

3. Fails to provide the services with the type of personnel they require—persons with an aptitude for special training and who intend to make a career of the military—but instead encourages manpower waste, lowers troop morale, reduces leadership quality, and fosters complacency about the system.

I am not a member of the Senate Armed Services Committee and do not have the background of service with that group which would enable me to assess confidently the validity of these claims. However, I have observed that many persons with a professional competence to analyze these questions have attested to the need to explore in depth our present military manpower policies. I believe that such an investigation would be highly beneficial. Although I intend to vote for the extension of the draft, because I believe that it would not be wise to repeal this law at such a crucial time in the affairs of our country unless a substitute is provided, I wish to state that I will support legislation which would establish a detailed and comprehensive study of military personnel procurement policies and alternatives to the draft; and if such a group should find that basic alterations are necessary or desirable, I will then urge their enactment.

[From the Washington Post, Feb. 4, 1959]

A LOOK AT THE DRAFT

Before Congress automatically adopts a long-term extension of the military conscription law, it ought to take a careful and critical look at the way in which the draft has been operating. When draft calls take only a small fraction of the total number of eligible young men and the great majority avoid military service, a very serious question of fairness arises. John Graham notes in a study for the Fund for the Republic that "because of either disability or fatherhood, more than 60 percent of all nonprior servicemen" were being deferred in early 1957 and "there is no reason to believe the picture has changed since then, or will change in the future."

Actually, the Army is the only one of the military services using the draft. It calls approximately 8,000 a month, of whom fewer than 7,000 are inducted for the 2-year period. Some 90,000 young men each year take advantage of the plan for 6 months of active training and 5½ years of Reserve or National Guard service; and of course there are many thousands of others who volunteer for service in the Army, Navy, Air Force, and Marines. All in all, however, the burdens and obligations are distributed very unequally among the 1.2 million young men who come of military age each year. Some have their education, career, or family plans disrupted while many others make no national sacrifice at all.

The House Armed Services Committee has reported a simple 4-year extension of the draft beyond June 30. There is something to be said for using such means to avoid harangue over new plans for additional deferments and special-interest concessions. But there is a great deal more to be said, in our opinion, for the approach of Representative WOLF, of Iowa. Mr. WOLF's bill would provide for a 2-year draft extension, but a concurrent resolution would require an intensive study by a joint congressional committee of military manpower procedures and alternative methods of meeting the needs.

This newspaper has long supported both the draft and the concept of national service. It does not share the views of those who feel that the country's youth is being stereotyped or "prussianized"; indeed, it believes that most young men benefit in one way or another from their military service. But it recognizes also that there is now no chance of fulfillment of the universal military training plan which Congress approved 8 years ago. With the changing character of war, UMT probably has been outmoded; moreover, it would be extremely costly.

Now, the Army makes some compelling arguments, in which it is supported by the other services, that a draft law is necessary on the books whether or not it is fully utilized. A recent study shows that the Air Force and Navy benefit notably in the caliber of their volunteer enlistees because of the draft; and the Army obtains higher quality men than might otherwise be the case.

Furthermore, the contention that there will be no more Koreas is highly dubious. It is impossible to predict the exact needs of limited war. If the Reserves and National Guard are worth anything, their requirements cannot be overlooked. The assertion that higher rates of pay for the lower ranks would attract an all-volunteer force rather begs the question of national obligation. Does the United States really want to abandon the concept that each young man owes some service to his countrymen? What would be the effect of higher pay scales in the countries where American forces are stationed abroad? And what would be the result in NATO, which is having trouble maintaining its strength, of an American decision to end the draft?

Plainly such questions demand thoughtful consideration, and we think there is strong reason for Congress to extend the draft temporarily. But the country also needs to determine whether the draft is the best way of meeting the problem—and whether, alternatively, if there is value in the concept of national service, it ought to be expanded beyond military conscription to include an oversea technical service corps, a scientific corps, a civil defense corps, a conservation corps and the like. It is a delusion to think that there is an easy or even a wholly satisfactory answer. Surely, however, while Congress is attending to the immediate need, it ought to provide for conscientious, unemotional examination of the possibility of some less wasteful and more equitable method than mere indefinite reliance upon the draft.

Mr. BARTLETT. Mr. President, I thank the Senator from Oregon for his helpful contributions to the debate; and I commend him for his wise observations.

ORDER OF BUSINESS

Mr. CASE of South Dakota obtained the floor.

Mr. BUTLER. Mr. President——

Mr. CASE of South Dakota. Mr. President, I desire to yield to the Senator from Maryland, for as long a time as he may need, without losing my right to the floor.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senator from South Dakota may be recognized immediately following the statement of the Senator from Maryland [Mr. BUTLER].

Mr. BUTLER. Mr. President, I believe we should run the Senate one way or the other. If we are going to have a list of Senators to be recognized, we ought to abide by that list. If we are not going to have a list, Senators ought to be recognized as they address the Chair. I tried to be recognized for a half hour. I was not recognized. Then I was put on the list. Then the Chair did not use the list. The Senate should be run one way or the other.

Mr. JOHNSON of Texas. Mr. President, I renew my request.

The PRESIDING OFFICER. Is there objection? The Chair hears none. Without objection, it is so ordered. The Senator from Maryland is recognized and may proceed.

APPEASEMENT

Mr. BUTLER. Mr. President, today we are reminded of one of the most disgraceful acts of appeasement in contemporary history. Some 20 years ago a tall, angular man in a bowler hat, carrying the familiar umbrella, returned to England from Munich proclaiming "peace in our time." Shortly thereafter the world erupted into World War II and the black umbrella became a universal symbol of submission to a power-crazed former corporal in the German Army who sought to Prussianize the earth.

The grave question we must face in this the year 1959 is: "Will history repeat itself?" Prime Minister Macmillan has just returned from conferences in Moscow with Nikita Khrushchev. And, although he was subject to snubs and insults from the Soviet chief of state, it would appear that, through fear, he is now preaching "disengagement" and "flexibility" in the solution of the Berlin problem. He is currently trying to sell this appeasement line to De Gaulle, and when he comes to the United States next week it is clear that he will try to get the President of the United States to buy it.

Now, Mr. President, please do not misunderstand me. I believe Mr. Macmillan is completely sincere in his endeavor to lessen the tensions which prevail between East and West on the subject of Berlin. But I also think it is vitally important that the initiative, so far as any negotiations are concerned, remain with this Nation. I respectfully submit that we must not make the same mistake a Briton by the name of Neville Chamberlain made two decades ago. The Berlin situation, if mishandled, could touch off the most hideous war in the history of civilization. It could, indeed, prove to be the end of civilization as we know it.

To prevent such a holocaust we must stand fast. To retreat on Berlin would be just as disastrous as was the retreat from Munich. Our President has called for no surrender, and it behooves every Senator, every Representative, and every American citizen, to aline himself squarely behind him and back his stated position. He has left the door open for peaceful solution of the powder-laden Berlin issue, but he has stoutly refused to be browbeaten into submission to the ruthless Communists. The President's position is the right position. He will negotiate, but he will not surrender. He will not forsake principle in the face of saber-rattling and veiled threats. He will steadfastly respect the commitments made in good faith by this Nation. To do otherwise would be to sell the entire free world out to international communism.

Mr. Macmillan has arrogated to himself the right to speak, not only for Great Britain, but for these United States, and France, and the West German Republic, and all other countries allied with us to stem the Red tide. I do not believe that a man who has indicated his willingness to make concession after concession at the conference table is representative of either our point of view or the viewpoints of our other friends. The American people have every right to resent being spoken for by a man from another land. American taxpayers, after all, have been carrying that part of the world on their backs for some time.

It is only logical—yes, it is in the best interests of world peace—that Dwight David Eisenhower be recognized as the chief spokesman for the West. When the time comes to sit down and negotiate with the Russians, there will be no room for doubt as to where he stands. There is no such word as "retreat" in his vocabulary, and it is fortunate for the Western World that this is so.

Let us in the Congress, then, give him the unqualified support he richly deserves not only as President, but also as the world's most outstanding military leader. Let us resist with all our might suggestions, from whatever source, that smack of appeasement. Let us not be deceived by the innocuous words "disengagement" and "flexibility," for actually their definition is retreat. Indeed, Senators, retreat can spell disaster.

ACHIEVEMENTS OF COLORADO BLUE CROSS

Mr. ALLOTT. Mr. President, I believe that the people throughout this country will be interested in the progress of Colorado's pioneering effort to establish a medical care program for our public assistance beneficiaries. The administration of this excellent plan has already attracted nationwide attention from health and welfare agencies. Our State welfare department utilized the Blue Cross administrative facilities and their participating hospital agreements to implement the plan.

I feel that their record is one which will interest my colleagues. I ask unanimous consent that the 21st annual report of the executive vice president, Thomas Tierney, be reprinted in the RECORD at this point, together with a letter from Mr. Tierney, so that Senators may more easily study it.

There being no objection, the report and letter were ordered to be printed in the RECORD, as follows:

TWENTY-FIRST ANNUAL REPORT OF THE EXECUTIVE VICE PRESIDENT, COLORADO HOSPITAL SERVICE

The year 1958, which marked the 20th anniversary of the founding of the Colorado Blue Cross plan, was a year of significant plan progress and achievement. It is a privilege to report that progress and achievement to the people of the State of Colorado.

Continued public acceptance and approval of the Blue Cross philosophy of prepayment was evidenced by the increase of our membership to embrace a total of 616,715 residents of the State. Continued service to our 84 participating hospitals was apparent in our total payment of $15,125,263 for hospital services—an increase of almost $2½ million over the payments made in 1957.

From the standpoint of the staff, the outstanding event of the year was the occupation of our new office building. Despite the expansion of our services, and the additional personnel required in the administration of the State's medical care plan for pensioners and the Federal Government's hospital benefit program for servicemen's dependents, the increased efficiency afforded by the new building made it possible for us to reduce our operating expense ratio to 4.7 percent of income; so that 95.3 percent of every dollar we received was returned to our members in the form of hospital payments or in additions to minimum required reserves for future hospitalization. The building is, in a very true sense, a tribute to the subscribing public, to the voluntary hospital system, and to the members of the medical profession who, through mutual cooperation and effort, have found in Blue Cross and its companion plan, Blue Shield, a reasonable and realistic method of financing the health requirements of the community.

It seems to have become a vogue in recent months to level criticism at the voluntary hospital system of America. While an objective analysis of the various articles which have appeared during the last year indicates that the alleged complaints have little relationship to the basic health care provided in modern hospitals, still the publication of such articles continues. Those of us who are privileged to work closely with the hospitals and with their administrative personnel know the complexities of modern hospital administration. Hospitals today are tremendous health centers to which sick persons go to secure all of the benefits of modern medical science, and from which they emerge restored to sound health and a productive role in the community. The costs are high, but the life-saving and health-restoring services are worth every cent involved. It seems only appropriate that we salute the hospitals whose services our members utilize, for their constant effort to make every facility which modern medical science devises available to all of the people at a price which they can afford.

To the hospitals of Colorado we pledge our continued support, and to the people of Colorado we pledge our continued effort to render an ever-expanding service.

Respectfully submitted.

THOMAS M. TIERNEY.

COLORADO BLUE CROSS,
COLORADO HOSPITAL SERVICE,
Denver, Colo., February 25, 1959.

Senator GORDON L. ALLOTT,
Senate Office Building,
Washington, D.C.

DEAR GORDON: For the past several years, it has been my pleasure to furnish you each year with a copy of our current annual report. You will find the report of our 1958 operations enclosed. Without question, the most significant development in the field of health care financing, not only locally but nationally, during the past year was the inaugural of Colorado's old-age pension medical care program. It has already attracted nationwide attention, and will undoubtedly be watched with great interest by health and welfare agencies throughout the country. We are very proud of the fact that the State welfare department saw fit to utilize our administrative facilities and our participating hospital agreements in the implementation of the plan and I think the record, to date, amply supports the wisdom of their judgment.

During the year 1958, we paid out the total sum of $3,804,970.84 to the hospitals of Colorado for the care of 16,652 hospitalized pensioners. The total cost of our administration

of this hospital care program was approximately eight-tenths of 1 percent of the total hospital expense involved, and even this minimum expense was virtually erased entirely by our being able to refund to the State welfare department its proportional share of the adjustment amounts derived from our routine semiannual audits of the participating hospitals operating costs. Certainly Colorado has led the Nation in developing at least a partial solution to the ever-growing problem of providing basic health care for the constantly increasing number of old persons.

Over 700,000 persons in our State, including the old-age pensioners and the servicemen's dependents for whom we administer the Government's Medicare plan, now enjoy the benefits of Blue Cross membership. I suppose it is true that few businesses in the State have as many people directly interested in their operations as we do. Let me assure you that we are very vitally aware of the tremendous responsibility that such widespread public acceptance entails. If there is ever any occasion when you might have a question with regard to our organiaztion or its administration, it will be a privilege for me to provide the answers for you.

Very truly yours,

THOMAS M. TIERNEY,
Executive Director.

AGITATION OF ANTI-U.S. RIOTS

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the body of the RECORD an article entitled "Red Student Agitators Seen Fomenting Anti-U.S. Riots," written by David Lawrence, and published in the New York Herald Tribune of March 4, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RED STUDENT AGITATORS SEEN FOMENTING ANTI-U.S. RIOTS

(By David Lawrence)

WASHINGTON, March 3.—And now it's trouble in Bolivia. Yesterday it was in Cuba, and before that in other Latin-American countries where hostility against the United States was artificially intensified by the Communists.

Unfortunately, maneuvers of the Communists in the cold war are usually poohpoohed by too many people in this country, despite bold propaganda operations that are obviously planned with care. When the anti-Nixon incidents occurred on the Vice President's tour of South America, it was conceded, of course, that an antagonism such as was manifested against the United States could readily have been brought into the open without the slightest stimulus by the Communists. But this was no reason to ignore the impetus given anti-American sentiment there or anywhere else in the world by the Communists.

It so happens that this week an article reporting an alleged remark by a minor American official was published in a magazine reaching Bolivia from the United States. The idea that a chance comment in a magazine, circulating a relatively small number of copies in that country, could produce a riot against the U.S. Embassy and cause the evacuation of its personnel is too fantastic to believe. Only an organized conspiracy by those malcontents with a desire to focus international attention on relations between the United States and an important South American country could have brought about the tragic episode.

CITES DEMANDS BY PANAMA

The other day in Congress, Representative DANIEL J. FLOOD, Democrat, of Pennsylvania, declared that Communist influence is back of some of the demands being made by the Government of Panama for an extension of its territorial waters which would adversely affect American rights in the Canal Zone. He said:

"Those in charge of the Communist movement in Latin America, and especially in the Caribbean area, have undoubtedly focused their conspiratorial activities on the Panama Canal with the purpose of causing destruction of amicable relations between the United States and Panama, with complete liquidation of United States control over the Canal itself."

Nor is Communist activity confined to any one part of the globe. It is noticeable just now in Africa, where fuel is being added to the flames of nationalism. It is operative also in the Far East. A few days ago a United Press International dispatch dated Manila said:

"The Foreign Office warned yesterday it has received reports pointing to growing infiltration by Communists among the Philippine student population.

"Foreign Secretary Serrano conveyed the warning to Representative Lenardo Perez, chairman of the house committee on anti-Filipino activities, and told him to put his committee on alert."

REDS AMONG STUDENTS

The pattern of student infiltration is worldwide. In Latin America, in particular, many of the anti-American demonstrations have originated in the colleges. To plant young leaders who will use any provocation to work up passionate outbursts is a relatively easy device. It has been revealed in Cuba in the so-called youth movement. While the top officials there vehemently deny that the Communists have anything to do with the Fidel Castro regime, it is an open secret in Havana that the Communists are busy causing mischief wherever they can in the little Republic which is struggling to recover from the ill effects of the Batista dictatorship.

In the Middle East the Communist plotters have been more successful than anywhere else. Everyone who has watched the situation in Egypt is aware that the Communists have played an active part there in anti-Western demonstrations. The Nasser government, which at first welcomed such supporters, now is troubled by them. Iraq is an example of a successful conquest by the Communists of a country which until recently was one of America's stanchest friends.

Despite the denunciations of anything that even remotely resembles an intervention in their own domestic affairs, the Soviets are spending hundreds of millions of dollars fomenting internal trouble inside many of the countries sympathetic with the West.

In the United States, the effects of some of the insidious operations by Communists are more and more noticeable. Having won many a big battle in the courts through the aid of legal technicalities, the Communists have continued to plant their propaganda in important places and among groups which are gullible and naive, thus enlarging the scope of the Soviet propaganda drive.

Sooner or later the American people will come to realize that the Communists are succeeding in their infiltration of many countries and are dangerously impairing the relations between the United States and peoples in different parts of the world who normally would be very friendly to the people of this country. It's a significant type of fighting in what has been misnamed the cold war.

RURAL ELECTRIFICATION SUBSIDIES

Mr. BUSH. Mr. President, I ask unanimous consent to have printed at this point in the RECORD an article entitled "Rural Electrification Subsidies," which was published in the March 1959, First National City Bank monthly letter on business and economic conditions.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RURAL ELECTRIFICATION SUBSIDIES

The controversy over President Eisenhower's plan to help balance the budget by eliminating the Federal interest rate subsidy to borrowers from the Rural Electrification Administration (REA) provides a compelling illustration of how hard it is to withdraw Federal assistance once people have become used to it. The President's proposal, made in his January budget message, was simply that "the present statutory interest rate of 2 percent for loans made by the Rural Electrification Administration be replaced by a rate which will cover the current cost to the Treasury of equivalent-term borrowing and other reasonable costs." The Treasury, which provides the funds which the REA lends, has recently been paying up to 4 percent to sell its securities.

The President's proposal immediately drew fire and in a speech before the National Rural Electric Cooperative Association, whose members borrow from the REA, he gave assurances that "this recommendation would not raise interest rates * * * on outstanding REA loans" and that it was not intended to be harmful in any way to rural electric cooperatives. Nevertheless, the association adopted resolutions asking Congress to protect the 2 percent rate on REA loans and calling for still more Government aid.

Congressional leaders gave warm support to the association's position. A New York Herald Tribune dispatch reported that Senate Majority Leader LYNDON JOHNSON urged the Members to "fight with beer bottles" if necessary to keep their advantages. Speaker of the House SAM RAYBURN said flatly: "If 2 percent interest is a subsidy, then I am for a subsidy for that." Explaining his stand, he added, "why not a little subsidy for the millions who, until a few years ago, were the underprivileged?"

The answer to Speaker RAYBURN's question was given by the President in his speech to the Rural Electric Cooperative Association. He pointed out that Government benefit programs are designed to insure that no group of citizens is unfairly handicapped. Once the handicap is overcome, justification for Federal assistance is no longer there.

THE REA'S ACCOMPLISHMENTS

The fact is that the Rural Electrification Administration has done its work so well that the underprivileged it was designed to serve are underprivileged no longer. The REA was set up in 1935 in the midst of the great depression to put up money for local cooperatives to finance rural electrification. At the time only 10.9 percent of the 6.8 million farms in the United States were receiving central-station electric service.

Today, 24 years later and after the provision of $3.8 billion, REA electrification loans and a vast expansion of service by private utilities, most of the rural electrification job has been done. More than 95 percent of U.S. farms now have central electric service.

Recentaly REA has been enlarging on its original purpose of financing the distribution of power to rural consumers. Thus, loans to finance distribution and consumer facilities accounted for no more than 65 percent of the $242 million REA electric loan total in fiscal '58. Financing generators for cooperatives, once rejected as a last resort by REA in favor of encouraging the purchase of private power, and construction of transmission lines took $86 million in fiscal 1958.

With the growing emphasis on generating and transmisison facilities has come a tendency of REA borrowers to compete with existing privately owned utilities for industrial and commercial customers. In the past 5 years the commercial and industrial business of all REA cooperatives has doubled. Three out of four new customers are nonfarm.

Meanwhile, under a 1949 congressional authorization, the REA has taken on the additional task of financing rural telephone service and through June 30, 1948, had made available $478 million for this purpose.

Borrowings of the cooperatives regularly exceed repayments so that their financing has involved a continuing drain on the Treasury. The President would make available, in his fiscal 1960 budget proposals, $268 million to increase loans to the electric cooperatives and $104 million for new telephone loans, as well as $9.6 million for REA administrative expenses. But, as stated earlier, he believes that the rate of interest paid should measure up to the Government's own cost of borrowing. Though the administration has recommended tightening up on tax treatment of cooperatives, the rural electric cooperatives do not at present contribute significantly to Federal tax revenues. Financing their needs represents a part of the staggering burden of farm subsidies.

Meanwhile, the rural electric cooperatives have become sizable businesses. As early as 1946, REA Administrator Claude Wickard cited as the most important development of the year the fact that REA borrowers have become well-established, stable, mature business enterprises:

"Locally owned and locally operated cooperative groups—which numbered 918 of the 996 REA borrowers as the year ended—exemplify the ability and determination of America's farm people to solve their own problems. Many of these cooperatives are the largest business enterprises in their communities."

The biggest growth has occurred in the postwar period. Net worth of REA electric borrowers increased sevenfold from 1947 to 1957, from $63.6 million to $436.9 million. Although more recent figures have not yet been published, their net worth is undoubtedly higher today. In comparison, the net worth of privately owned electric utility companies doubled.

It is hard to deny the President's conclusion that we have reached a point where REA is no longer an infant enterprise.

BREAKING FAITH?

A question of integrity was raised by Senator JOHN KENNEDY when he assured the resentatives of the rural electric cooperatives that Congress would not go back on our word by raising the 2 percent interest rate on REA loans. It is always desirable to have emphasis on integrity in public as well as private affairs. The fact is that, in the original Rural Electrification Act of 1936, the intent of Congress was that "all such loans * * * shall bear interest at a rate equal to the average rate of interest payable by the United States of America on its obligations, having a maturity of 10 or more years."

The tendency of beneficiaries of Government benefits to perpetuate their favored status is what creates suspicion of new Government programs, however meritorious. They tend to go on and on, and cost more and more, as long as the taxpayer will stand for it. The President has set out the proper approach: "Ideally, in a federally sponsored and financed undertaking, it should be possible for the Government to step progressively aside as they reach the stage of self-sufficiency which enables them to move forward under their own sound management, ownership and financing."

The President's objective in curbing subsidies and balancing the budget is to avoid breaking faith with the American people in the most fundamental sense. As he put it to the Rural Electric Cooperative Association:

"Shall Government live within its means, shall our citizens, in a prosperous time, meet the cost of the service they desire of their Government?

"Or is it to be our established policy to follow the ruinous route of free republics of the ages past, the route of deficit financing, of inflation, of taxes ever rising, until all initiative and self-reliant enterprise are destroyed?"

EXTENSION OF THE UNIVERSAL MILITARY TRAINING AND SERVICE ACT

The Senate resumed the consideration of the bill (H.R. 2260) to extend until July 1, 1963, the induction provisions of the Universal Military Training and Service Act; the provisions of the act of August 3, 1950, suspending personnel strengths of the Armed Forces; and the Dependents' Assistance Act of 1950.

Mr. CASE of South Dakota. Mr. President——

The PRESIDING OFFICER. The Senator from South Dakota.

Mr. CASE of South Dakota. I wonder if it will be agreeable to the majority leader to have the committee amendment acted on at this time.

Mr. JOHNSON of Texas. Yes.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment to add a new section, on page 2, beginning in line 11.

The amendment was agreed to.

Mr. CASE of South Dakota. Mr. President, are there any further committee amendments? If not, I desire to offer an amendment.

The PRESIDING OFFICER. The only other amendment of the committee to be acted on is the amendment of the title.

The bill is open to further amendment.

Mr. CASE of South Dakota. Mr. President, copies of my amendment have been placed on every desk. I ask unanimous consent that the reading of the amendment be dispensed with and that it be printed in the RECORD at this point.

The PRESIDING OFFICER. Is there objection?

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

Add at the end of the bill the following new section:

"COMMISSION ON MILITARY MANPOWER

"SEC. — (a) There is hereby established a Commission to be known as the 'Commission on Military Manpower' (hereinafter in this section referred to as the 'Commission') whose function it shall be to carry out the provisions of subsection (f) of this section.

"(b) The Commission shall be composed of seven members who shall be appointed by the President within 60 days after the effective date of this Act. Four members of the Commission shall be appointed from civilian life and three from personnel of the Armed Forces serving on active duty. The President shall designate one of the members of the Commission appointed from civilian life as Chairman.

"(c) Any vacancy in the Commission shall not affect its powers, but shall be filled in the same manner in which the original appointment was made. Four members of the Commission shall constitute a quorum.

"(d) (1) Each member of the Commission who is not otherwise in the service of the Government of the United States shall receive $50 per diem when engaged in the performance of duties vested in the Commission plus reimbursement for travel, subsistence, and other necessary expenses incurred by him in the performance of such duties.

"(2) Each member of the Commission who is an officer or employee of the United States shall receive no additional compensation for his services as a member of the Commission, but he shall be reimbursed for travel, subsistence, and other necessary expenses incurred by him in the performance of the duties vested in the Commission.

"(e) The Commission is authorized to appoint and fix the compensation, without regard to the civil service laws and the Classification Act of 1949, as amended, of such personnel as it deems necessary to carry out its duties.

"(f) It shall be the function of the Commission to make a comprehensive study and investigation of—

"(1) the operation of the Universal Military Training and Service Act, the Reserve programs, and the programs of procurement of military personnel by the Armed Forces;

"(2) means and methods of improving utilization and assignment of personnel of the Armed Forces; and

"(3) alternatives to the system of induction of civilians for military training and service as a method of maintaining the required strength of the Armed Forces.

"(g) The Commission is authorized to secure directly from any department, agency, or independent establishment of the Government information, statistics, data, suggestions, and other matter for the purposes of this section; and each such department, agency, or independent establishment is authorized and directed to furnish any of the foregoing matter directly to the Commission upon request of the Chairman of the Commission.

"(h) The Commission may from time to time report to the President and shall, not later than January 31, 1961, submit to the President for transmittal to the Congress the results of its study and investigation together with such recommendations as it deems advisable. The Commission shall thereafter from time to time make such further reports and recommendations as it deems advisable. The Commission shall cease to exist on July 1, 1963.

"(i) Expenditures of the Commission shall be defrayed out of funds appropriated to the Executive Office of the President."

Mr. CASE of South Dakota. Mr. President, I ask for the yeas and nays on my amendment.

The yeas and nays were ordered.

Mr. MORTON. Mr. President, will the Senator yield for the purpose of my suggesting the absence of a quorum, with the understanding that the Senator will not lose his right to the floor?

Mr. CASE of South Dakota. I will yield with that understanding.

Mr. MORTON. Mr. President, I ask unanimous consent that the Senator from South Dakota may yield to me for the purpose of suggesting the absence of a quorum, and that the Senator may not lose his right to the floor thereby.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Kentucky? The Chair hears none, and it is so ordered.

Mr. MORTON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceed to call the roll.

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. MUSKIE in the chair.) Without objection, it is so ordered.

Mr. CASE of South Dakota. Mr. President, the bill pending before the Senate deals with the lives of some 10 million men who are at present registrants under the Selective Service Act, and, prospectively, in the 4 years ahead, for which the act would be extended, would deal with another 4 million young men.

In addition, it deals with the life of the Nation, which is to be secured by the implementation of the act in our Military Establishment.

That the draft should be extended under the present world circumstances seems beyond practical dispute or debate. The act now on the statute books will expire the 1st of July 1959. I have heard no particular argument—within the committee, at least—proposing that it not be extended. There was some difference of opinion as to whether the extension should be for 2 years or 4 years, but the major question discussed within the committee, in our executive hearings, had to do with the operation of the draft.

It is my personal feeling that the operation of the draft law could be improved, that a better use could be made of our manpower, and that a fairer administration could be obtained. It is for those reasons that I have offered the amendment which is now pending.

My amendment would create a Presidential commission, to be paid for out of the funds of the President, for a study of our manpower needs and problems and the administration of the Selective Service Act.

The amendment provides as follows:

(f) It shall be the function of the Commission to make a comprehensive study and investigation of—

(1) the operation of the Universal Military Training and Service Act, the Reserve programs, and the programs of procurement of military personnel by the Armed Forces;

(2) means and methods of improving utilization and assignment of personnel of the Armed Forces; and

(3) alternatives to the system of induction of civilians for military training and service as a method of maintaining the required strength of the Armed Forces.

The Commission would consist of seven members, to be appointed by the President within 60 days after the effective date of the act. Four members would be appointed from civilian life, and three from personnel of the Armed Forces serving on active duty.

Also, there are the usual provisions with regard to the employment of stenographic help and clerical assistants.

It is difficult for me to understand why anyone should hesitate to support this kind of proposal. I do not claim originality for it. The language I have submitted actually was drafted at the request of the distinguished Senator from Massachusetts [Mr. SALTONSTALL]. I have changed it only in one particular, I believe, namely, to give the Commission the power to report from time to time to the President, along with the requirement in the original draft that a final report be submitted by a specified date. The senior Senator from Massachusetts knows that I am offering the amendment, and I am doing so with his assent in that respect. Because of the consideration of the 2-year and 4-year angle, I believe, he decided, not to offer the amendment in committee, although he did present it there for discussion.

In consideration of the urgency of the amendment, I invite the attention of Members of the Senate to comments which have been made during the consideration of this subject in the other body and during the hearings before our committee.

When the House of Representatives voted the extension of the Draft Act, Mr. John T. Norris, staff reporter for the Washington Post and Times Herald, carried this paragraph in his report on the action:

There was some support within the Pentagon before its submission to Congress for changes in the draft law because the manpower pool is steadily mounting, but administration chiefs and congressional leaders decided a simple extension of the law was preferable to opening up the complex law to legislative changes that might prove more troublesome than present defects.

In the face of it, if it was recognized that there were defects in the operation of the present draft law, who should have the responsibility of trying to amend it or improve it? If we are to extend it for 4 years, what is the logic of saying that we will not consider improving it because the changes might prove more troublesome than present defects, unless we make some effort to determine how and in what manner the law might be improved?

I recognize that there has been some argument of urgency in connection with the extension of the act. It is true that the act does not expire until the 1st of July. However, the great powers of the world today are considering their strength in an important crisis. There is value in the logic that at this particular time we should make sure that we have the strength we might need. It is good logic to say that we want to reassure our allies in this present world crisis, that we are standing in a firm position, and that we propose to be in a position to carry out whatever decision may be made.

That logic, however, has led to this situation: A bill for the extension of the draft was considered in the House committee for only a very short time, reported to the House, and there passed after 1 or 2 days' consideration.

In the Senate we have the situation that we held 3 days of hearings last week. Yesterday the bill was presented before the committee in executive session for markup. At the time I understood that it would not be brought to the floor of the Senate before Wednesday. Today we learn by the radio and the press that, because of the Legislative Calendar, it was decided to bring up the bill today.

Obviously, under those conditions, Members of the Senate have not had an opportunity really to review the printed hearings, which became available only today, the day the bill was brought to the floor of the Senate. Reporters, the press, columnists, and the people of the country generally have had no opportunity to learn that the Senate Committee on Armed Services had reported the bill, and react in time to suggest to Members of the Senate whatever opinions they may have before the bill comes before the Senate for final consideration.

It seems to me that all those arguments point to the fact that, if there are defects, if there are imperfections in the present law, or in its administration or operation, we should guarantee that there will be an opportunity for study of the operation of the act, and that recommendations will be brought to the attention of the President and the Congress. That is what the pending amendment proposes.

I find the following in Time magazine for January 26, 1959:

The most valid criticism of the draft as now operated is that it is inequitable. Of the Nation's 2,200,000 physically fit men in the 18½-to-26-year-old bracket, only 120,000 get grabbed by the draft each year. Thousands of others volunteer, but the fact is that in the skimpy-quota peacetime era it requires little imagination to think up a reason to be deferred, e.g., as a student, a farmer, a scientist, or a hardship case. Thousands of 17- and 18-year-olds exercise their alternative right of fulfilling military obligations with 6 months of active duty and 7½ years of weekly drill and summer camp in the Reserves or National Guard.

If we stop to think about it, the very fact that a national news magazine can print such a statement as "the most valid criticism of the draft as now operated is that it is inequitable," raises the question as to what argument can be presented against trying to remove some of the inequities, in a bill which deals with the lives of more than 10 million young men? In the very critical age period between the ages of 19 and 26, or 18½ and 35, depending upon how one looks at the period of liability, what would be more proper than that we should attempt to remove the inequities?

The Washington Post and Times Herald, in its February 4 issue said:

Plainly such questions demand thoughtful consideration, and we think there is strong reason for Congress to extend the draft temporarily. But the country also needs to determine whether the draft is the best way of meeting the problem—and whether, alternatively, if there is value in the concept of national service, it ought to be expanded beyond military conscription to include an oversea technical service corps, a scientific corps, a civil defense corps, a conservation corps, and the like. It is a delusion to think that there is an easy or even a wholly satisfactory answer. Surely, however, while Congress is attending to the immediate need, it ought to provide for conscientious, unemotional examination of the possibility of some less wasteful and more equitable method than mere indefinite reliance upon the draft.

Again, Mr. President, I ask the question: If an editor of a nationally read newspaper can make such a proposal,

surely Congress ought to provide for a conscientious, unemotional examination of a possibly less wasteful and more equitable method than mere indefinite reliance on the draft as it is presently constituted.

The proposal I make would make sure that such an unemotional and objective study would be made of the problem, and the Commission appointed would be directed to present its recommendations and reports to Congress.

Mr. MORTON. Mr. President, will the Senator yield?

Mr. CASE of South Dakota. I yield.

Mr. MORTON. The Senator has been a Member of Congress, either in the House or in the Senate, for some time. Is it not true that every time we are considering an extension of the draft act we are in a period of crisis?

Mr. CASE of South Dakota. That is true. It seems that the one produces the other, or the one occasions the other. I do not know which it is. We generally act under the compulsion of a critical situation.

Mr. MORTON. I realize that we must make some improvements. I realize, also, that we have made improvements in the past when the law was extended. As the Senator has so ably stated, certain defects are contained in the present act. I agree with the Senator that Congress should correct those inequities. It seems clear that Congress will not do that at this time; that it will not take the time to take such action now.

Therefore I believe the amendment offered by the distinguished Senator from South Dakota is an excellent amendment. If a group will objectively study the problem, I feel sure that a more equitable plan can be devised than the present one.

I agree we must extend the act. However, I believe also that it could be extended in a way so that we would not upset the lives of so many young people and the lives of so many young families. At the present time the draft act is a kind of Damocles sword hanging over the heads of many young men.

The Danes have a universal military training system. However, I understand that Denmark uses a system under which the option is left to the young man as to when he will perform his service. The young man knows he must serve. He is given the freedom of deciding whether he will serve before he goes to college or after he goes to college, before he gets married or after he gets married, before he goes to law school or after he goes to law school. He can plan his life, and the choice rests with him, even though he knows he must serve. There is no sword of Damocles hanging over his head.

I understand that the system works fairly well. I understand that Denmark gets the right number of men in the various age groups into its armed services. Of course, I do not know whether it would work effectively in this country. However, it seems to me that we could work out a more equitable way of getting the manpower we need. I admit that we need a draft, and that volunteers will not take care of the situation. I repeat, I believe that we should devise a system which will not upset the lives of so many young men and the family life of so many young people. For that reason I believe the approach the Senator from South Dakota is taking is a good one.

It is clear that we should set up a commission to study the problem and that then Congress should set up a system of drafting manpower which will not completely disrupt the lives of so many of our people. I commend the Senator, and I intend to support him.

Mr. CASE of South Dakota. I appreciate the statement of the Senator from Kentucky. The Senator has put his finger on what we seek to do. It is to provide a way in which someone can unemotionally and in good time study the problem and come up with a better way of taking care of the situation.

With regard to the observation he has made about the inequity of the service, I should like to call his attention to the fact that at the end of fiscal year 1958, June 30, 1958, there were 9 million registrants under 26 years of age.

Of that 9 million, about 4¼ million were in service or in the Active Reserve service or had obligated service. The remaining 4,750,000 were still without training. Many of the 4¾ million who were without training, or 2.93 million, were nonfathers. Therefore only 3 million of the 9 million registrants under 26 years of age, as of June 30, 1958, were nonfathers and were not sharing the burden of responsibility of universal service.

It seems to me that the point the Senator has made about the system used by the Danes is a good one. Under it everyone makes the same contribution, and the individual can fit the responsibility into his own plans for life. It is certainly something that should be considered by the Commission, if one is set up.

That the authorities who testified before the committee recognized the inequities is evidenced by the fact that the chairman of the committee, the distinguished Senator from Georgia [Mr. RUSSELL], in his questioning of General Harrison, made this statement:

> So there are a great many inequities in the program. I think it is beyond the power of mortal man to eliminate all the inequities in a program of this magnitude, but it certainly is incumbent on us to do as much as we can to see that this responsibility for the defense of the United States is distributed as widely as possible and is evenly imposed as we can on the young manhood of this Nation.

I see the distinguished Senator from Georgia nodding his head. I am sure he believes that inequities should be eliminated to the extent it is humanly possible to do so.

The Senate and the country have heard about the Cordiner report. Mr. Ralph Cordiner, who headed that committee of study for 18 months, dealt with pay and matters of that sort related to the armed services, and he made the statement that we devoted 25 percent of all military effort to training men who do not stay in the service. He was concerned with the waste under the present system.

At another point he said that he had found antagonism and bitterness over the draft and that men were checking off the days until they got out of the service.

Another aspect of the problem was suggested by Dr. Howard A. Meyerhoff, executive director of the Scientific Manpower Commission. In his statement he told the committee that his organization was a private organization founded in 1953 by the major scientific groups of the Nation. The work of the Scientific Manpower Commission had been recognized many times for the great contribution it had made in the study of the need for agricultural scientists, astronomers, biologists, chemists, earth scientists, mathematicians, physicists, and phychologists practicing in the clinical and experimental fields.

Dr. Meyerhoff testified before our committee last week. He said that the power granted to the Selective Service System to induct the young men must be extended. He also stated:

> We further believe a 4-year extension is to be preferred over a 2-year extension. We do urge, however, that H.R. 2260 be amended so as to broaden the powers of the Selective Service System and to enable it, by statutory provision, to select men with critically needed skills for assignment to civilian activities that are essential to the national welfare and security.

Then he continued in some detail by supporting his recommendation that the system be given authority for the assignment of personnel to essential selective activities.

At the time the committee was considering the bill, I attempted to design a program which would equalize the service somewhat and would clarify the responsibility of the young men who register. I wrapped that up in an amendment, on which we did not have an opportunity to get opinions from the Department of Defense in any detail. However, it was suggested that the amendment be referred to the Secretary of Defense for comment.

Mr. President, I ask unanimous consent that that amendment, which I had tentatively drafted, be printed at this point in the RECORD.

There being no objection, the amendment was ordered to be printed in the RECORD, as follows:

> SEC. 5. Notwithstanding any other provision of law, a person may be inducted into an armed force (other than as a physician, dentist, or allied specialist), or enlisted into an armed force, after the date of enactment of this act and before July 1, 1963, only under one of the following programs which the Secretary of Defense is hereby authorized to provide:
>
> (1) A critically skilled person may be enlisted for 10 years, the first 3 months of which shall be served on active duty for training and the remaining 9¾ years shall be served in the Standby Reserve.
>
> (2) A person may be enlisted for 7 years, the first 6 months of which shall be served on active duty for training and the remaining 6½ years shall be served by satisfactory participation in the Ready Reserve.
>
> (3) A person may be inducted for 5 years, the first 2 years of which shall be served on active duty, the next 2 years shall be served by satisfactory participation in the Ready Reserve, and the last year shall be served in the Standby Reserve.

(4) A person may be enlisted for 5 years, the first 3 years of which shall be served on active duty, the next 1 year shall be served by satisfactory participation in the Ready Reserve, and the last year shall be served in the Standby Reserve.

(5) A person may be enlisted for 4 or more years of active duty and if he so serves for 4 or more years, he has no additional obligation to serve.

Mr. CASE of South Dakota. Mr. President, the amendment sought to establish a fair relationship between the active duty time and the Ready Reserve liability and the Standby Reserve liability for the registrants under the act. At present, I think the chairman said, there are 30 different ways in which a young man might discharge his responsibility under the present act. Those ways are confusing and overlapping.

The period of liability varies, depending on whether one takes 6 months of active duty training before he is 18½ years of age, or takes it after he is 18½. The liability varies from service to service. It may be that there should be some distinction among the different services. But it has seemed to me that it would improve the situation if there were certainty, definiteness, and a clear statement of the responsibility, so that a young man might choose with his eyes open, so to speak.

The particular proposal embodied in the amendment which I am not now offering, but which I have had printed in the RECORD, so that it might be studied, would create a class A, in which one might enlist for 3 months of active duty and then go into the Standy Reserve for the balance of the 10-year period, during which he would be available for assignment in a number of employments in the scientific or technological field.

Class B would be the group which would take 6 months of active duty and then go into the Ready Reserve for 6½ years. This is comparable to the program which the National Guard now has, but makes the period 7 years total rather than 8.

Class C would embrace a 2-year enlistment or a 2-year induction with a Ready Reserve liability of 2 years following the 2 years of active duty, and 1 year of standby, but would give assurance that at the end of 5 years, under those circumstances, the liability would have been discharged or liquidated.

Class D would provide for a 3-year enlistment with 1 year of Ready Reserve liability and 1 year of standby following that. That would reduce the Ready Reserve liability by 1 year, but it would get for the Government 1 additional year of active duty.

It should be pointed out that this is important because the first 5 or 6 months of service goes into training. Under a 2-year enlistment or 2 years of active duty, a man gets only 18 months of actual active duty. With a 3-year enlistment, he gets 29 or 30 months of actual active duty. The Defense Department estimated that a 3-year enlistee costs a total of $17,474. Estimating 29 months of effective service, his average cost for an effective month is $603. Whereas a 2-year inductee provides only 17 months of effective service, his average cost for an effective month being $706. In other words, the 2-year inductee costs more than $100 a month more for his actual service than does the 3-year enlistee. That means it costs something more than $3,000 more to obtain the same period of effective service.

The amendment on that point would also provide that if one served 4 years of active duty, he would have no reserve liability either in the Standby or the Ready Reserve.

I hope that Senators who are interested in the total problem will note the amendment as it appears in the RECORD and will compare it with the present service.

For that purpose, Mr. President, I ask unanimous consent that a table which was prepared by a staff member of the committee, I believe, and dated February 6, 1959, showing methods of fulfilling the military obligation, be printed at this point in the RECORD.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Methods of fulfilling the military obligation

Major programs now in use	Age	Minimum active duty	Ready Reserve participation [1]	Total military service [2]
Selective service (voluntary or involuntary induction).	18½ to 25 years	2 years	2 years	6 years.
	26 to 35 years	do	None	2 years.
Enlistment in active forces:				
Army	17 to 34 years	3 years	1 year	6 years.
Navy	17 to 31 years	4 years	do	Do.
Air Force	17 to 34 years	do	do	Do.
Marine Corps	17 to 28 years	3 years	2 years	Do.
Coast Guard	17 to 5 years	do	do	Do.
6 months' active-duty-for-training program:				
Army National Guard and Army Reserve.	17 to 18½ years	6 months	3 years	8 years.
	18½ to 25 years	do	5½ years	6 years.
	26 to 35 years	do	2½ years	3 years.
Air National Guard and Air Force Reserve.	17 to 18½ years	do	7½ years	8 years.
	18½ to 25 years	do	5½ years	6 years.
Marine Corps	17 to 18½ years	do	4½ years	8 years.
	18½ to 25 years	do	5½ years	6 years.
Coast Guard	17 to 18½ years	do	7½ years	8 years.
	18½ to 21 years	do	5½ years	6 years.
Other Ready Reserve enlistment programs:				
Air National Guard	17 to 18½ years	11 weeks	Until age 28	Until age 28.
	18½ to 25 years	do	5 years, 41 weeks	6 years.
	26 to 35 years	do	2 years, 41 weeks	3 years.
Army Reserve	17 to 25 years	2 years	2 years	6 years.
Naval Reserve	17 to 31 years	do	3 years	Do.
Marine Corps Reserve	17 to 25 years	do	do	Do.

[1] Participation in Ready Reserve training is mandatory for members of the Army's Reserve components at the present time. The other services encourage voluntary participation on the part of members who have served 2 or more years on active duty. Members who do not participate may be retained in the Ready Reserve for the full military obligation if needed.

[2] Those personnel 26 years of age or older at time of enlistment do not incur a military service obligation under the provisions of the Universal Military Training and Service Act, as amended, but do obligate themselves to serve for the period of time set forth in the enlistment contract.

Mr. CASE of South Dakota. Mr. President, just at a glance, anyone can see how much more complex and confusing, and possibly discriminatory, the present plan is as compared with the more simplified plan.

I ask unanimous consent, also, that a statement which I have prepared on the operation of the Reserve Forces Act under administrative decisions may be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR CASE OF SOUTH DAKOTA

Because of some administrative decisions since enactment of the Reserve Forces Act of 1955, I believe it is possible that an inequitable situation has developed in connection with the length of Active Reserve participation required by persons in various categories of service. Certainly, there is a degree of indefiniteness about the Reserve participation and I suspect that it might be desirable to legislate more particularity into the Reserve program.

One of the objectives of the committee has been the creation of a trained Reserve composed largely of persons who have not fought in a war or served long periods on active duty. This objective was accentuated by the inequities of recalling veterans for duty after Korea because there simply were no other trained people to call.

The Reserve Forces Act of 1955, which initiated the 6-month training program, offered the opportunity to create a Reserve of this type. When the committee approved that act, it was our understanding that the inductees who served 2 years on active duty would participate actively in the Reserve for 3 years and then have 1 additional year of vulnerability in the Standby Reserve, for a total obligation of 6 years. The persons who voluntarily entered the 6-month training program before reaching the age of 18½ were to participate actively in the Reserve for 7½ years. This longer Reserve participation period was in exchange for their shorter period of active duty for training.

A Selective Service ruling that any person participating satisfactorily in a Reserve unit would not be inducted, had the effect of opening the 6-month training program to persons over the age of 18½. To make a distinction between persons who entered the 6-month training program before they were draft liable, the Department of Defense adjusted the period of active participation required. Inductees had their period of active duty participation reduced to 2 years. Persons who entered the 6-month training program before reaching the age of 18½ had their period of Active Reserve participation reduced to 3 years. Persons who entered the 6-month training program after reaching the age of 18½ were required to participate actively in the Reserve for 5½ years.

After the 6-month training program was opened to persons over the age of 18½, the number of young men deciding to enter this program was substantial. The Department of Defense did not accept enlistments in the 6-month training program up to the full potential of the program. The fact that the

6-month training program has not been utilized to the maximum raises some questions about the fairness of requiring Active Reserve participation by the relatively few persons who are inducted into the Armed Forces.

This situation, coupled with the administrative adjustments of the period of Reserve participation, has introduced an element of uncertainty into the Reserve problem.

For this reason, I have prepared a draft bill that I had thought I might offer as an amendment to this bill. Because the several provisions of law bearing on this problem are somewhat complex and interrelated, I have decided to seek the views of the Department on my proposal before pressing for its adoption.

I am aware that the authority for the 6-month training program for persons under the age of 18½ will expire this year and that a bill to extend it is liable to be considered. Before the committee acts on this bill, I hope that we may have an opportunity to consider carefully the equities of the several Reserve and active service programs, and that we may be able to introduce a greater degree of certainty to them so that the young men who must make the choice can do so on a more informed basis.

Mr. CASE of South Dakota. Mr. President, I could have read the statement, but in the interest of saving the time of the Senate this afternoon I have placed it in the RECORD. I may say, frankly, that it is impressive because of the confused state of mind in which it leaves one after he has read it. As a result of administrative decisions, the operation of the present law is very uneven.

During the past year, I point out, when the change was made in qualifications, some 79,000 men were discharged from active duty because of the raising of the mental requirements. It is true that one or two disciplinary barracks have been closed because of the higher quality, mentally, of the men who are now being taken into the service. But it must be obvious that that represents a shifting of the burden of liability for service. Not all of the 79,000 men who were dropped would have gone into disciplinary barracks; in fact, they were not in disciplinary barracks when they were released. They were doing the chores to which they were assigned. But when we get to the point that half the men who are registrants can look forward to not being called, it must be obvious that many men who are qualified do not share the burden equally with those who actually are called.

A Defense Department official—I think it was Mr. Finucane—testified that by the time they reach the age of 26, 9 out of 10 of those considered fit will have served in some capacity, but that situation will change in the next year by reason of the greater number of men who are coming on. It will be about 8 out of 10 of those who are regarded as fit under the new standards. Under the present rejection standards more than half the men have no prospect of being called. They will be eliminated by the increased standards.

It seems to me there are at least six ways in which the present law is defective. First, it is inequitable in its call. Second, it is inequitable in the reserve liability. Third, there is a failure to insure the meeting of the needs for scientific and technological talent. Fourth, there is a failure to get the most active duty service for the dollars spent, which could be had if there were longer periods of voluntary enlistment. Fifth, there is a waste in manpower by the use of men for jobs for which they are not employing their best talents. Sixth, there is an economic and social loss in the life of the individual himself.

I certainly agree with the statement of the chairman of the committee earlier this afternoon that it becomes an easy excuse to say that there is some moral delinquency or delinquency of youth which is perhaps charged to the operation of the draft law, but which ought not to be so charged. At the same time, I think that in some individual lives there may be created a recklessness in attitude because of the feeling: "Oh, well; I am going to be drafted shortly anyway." I think there may be a delay in making plans. There may be a delay in accepting jobs. Certainly there are young men today who cannot get jobs because when they go to a prospective employer, he asks them, "Where do you stand under the draft?" If a man is unable to give a firm answer the employer—particularly the employer of a small number of persons—cannot afford to take the liability of restoring a man to his job after he returns from the service, if he is to be taken away at just about the time he has learned his job. That is certainly an economic loss.

There is an effect upon the young man himself. While I would not charge, nor do I believe, that juvenile delinquency is primarily attributable to the draft law, I think that in the lives of some young men the attitude of recklessness or the devil-may-care attitude is created, which results in a lower moral standard or a lesser determination to accomplish something than would be the case if he felt he could plan his own life.

It is because there are at least those six areas in which there is an inequity or a loss to the Nation or a loss to the individual or a loss to society that I feel someone should be studying the manpower problem, taking a look at it prior to the time when the time arrives for renewal of the law on the floor of Congress. A commission should be created, as suggested in the pending amendment, which would report from time to time to the President, and ultimately present to the President its specific recommendations for improvement.

Let us not delude ourselves into believing that the country is unaware of the need for improvement of the Draft Act. There is a sort of hopelessness, a sort of feeling, "Well, there is nothing that I, individually, can do about it." I know that is expressed in some of the letters I receive. But other Members of the Senate must receive, as I do, letters which implore us to do something about this matter, letters which indicate that the people feel that we have a responsibility in connection with it.

Recognition that the act is not perfect at the present time was given even in the testimony of Lieutenant General Hershey, the Director of Selective Service. In the course of his prepared statement he said:

I feel uneasy over our manpower situation.

Mr. President, these statements by General Hershey were made in the course of the formal, prepared statement he presented to our committee. They were not made in response to questions. Instead, they were made in the course of his formal statement to the committee.

He also said:

Millions of our young men have been told they have little, if anything, to contribute to their Nation's defense—because of physical or mental conditions. Others, fewer in number, while deferred in the national interest, are not fitting themselves to meet the day when their lives and the Nation's survival may be at stake.

We are not doing all we should do in preparation against possible nuclear attack. Our training for civil defense lags. Our reserves must be made ready. Our need to do things in preparation is great. Many of them we are not doing.

Much needs to be done, but many are doing nothing. We cannot afford to waste our manpower. There are services vital to survival which do not require a man to wear a uniform. It will add immensely to our chances for survival if we find a way to induce our citizens to give those services, especially those who for various reasons cannot now make their contribution within the military forces.

Mr. President, I do not know how anyone could make a statement which I would endorse more than that one by General Hershey, nor could I offer a statement which would be better evidence of the need for a manpower study commission.

It seems to me that such a study by the proposed manpower commission is the least we can provide for. If we do not have the time that is needed—if we must consider a bill at hearings, one week, and must mark up the bill the next week, and the next day must bring up the bill on the floor of the Senate, before Members of the Senate who are not members of the committee can familiarize themselves with the testimony taken at the hearings—then the least we can do is establish a study commission on manpower, which will be charged with the responsibility of studying the operations of the act and the provisions of existing laws, and then coming forward with recommendations for the improvement of our handling of the most precious resource we have—namely, the young men of our country, upon whom we depend in time of crisis.

Mr. President, I yield the floor.

Mr. MONRONEY. Mr. President, I intend to vote for the bill to extend the draft, without any weakening amendments.

I believe that today our military posture is so weak, and the determination of the administration to put money savings ahead of adequate defense is so strong, that at this time the Congress must demonstrate very definitely how it feels in rgard to the manpower problem. With each succeeding day the clock ticks off the minutes and brings nearer the end of the "count down" on meeting the Berlin crisis.

It is gratifying to be able to present a united front in our refusal to abandon West Berlin. I am sure that our allies are heartened by the unanimous voice of the leaders of Congress over our determination not to sacrifice this island of freedom to the Communists of East Berlin or of Moscow.

This month is the 20th anniversary of Hitler's repudiation of the agreement reached with Chamberlain at Munich. Hitler violated it and abrogated it in March 1939. No one in this country wants another Munich.

While we must be willing to negotiate at the foreign ministers level, or even at the summit, experience dictates that in dealing with the Communists, as in dealing with Hitler, the effectiveness of such talks depends, not on the strength of our arguments, but on the strength of our armaments.

It is far, far later than we think in preparing for this crisis. Precious weeks have been wasted, and millions of words have been spoken about our good intentions and our right to stay in Berlin under our treaties with the Russians. But intentions or treaty rights are not enough.

On Sunday, I listened with great interest to the "Meet the Press" program in which Defense Secretary McElroy was interviewed by an able panel of newspapermen. If the opinions voiced by the distinguished Secretary represent the thinking of this administration—the President, the Chiefs of Staff, and the civilian heads of the Department of Defense—then we are pursuing a policy of complacency that will weaken dangerously our hand in any negotiations, whether at the summit or elsewhere.

I was particularly surprised and disappointed to hear Secretary McElroy minimize the importance of having an adequate airlift instantly available, should an emergency result as Russia turns over to the East German Communist Government control of access to West Berlin.

If I correctly understood the plain import of his statement, then our present policy is to rely primarily upon the capabilities of the Strategic Air Command to deliver a hydrogen bomb as our answer to any resistance we might meet on the road to Berlin.

Mr. SYMINGTON. Mr. President, will the Senator from Oklahoma yield to me?

The PRESIDING OFFICER (Mr. MUSKIE in the chair). Does the Senator from Oklahoma yield to the Senator from Missouri?

Mr. MONRONEY. I yield to my distinguished colleague, the Senator from Missouri, who long has advocated an adequate airlift, and for months has been the champion of that effort.

Mr. SYMINGTON. I thank my able colleague from Oklahoma. As is known by all Members of the Senate, he is the authority in this body on civil aviation.

I am very much interested in his reference to the program of last Sunday, in which the Secretary of Defense participated. My impression was that, in effect, the Secretary enunciated a reversal, and a return to the theory of massive retaliation, which was originated in January 1954, and later, to the best of my knowledge, was abandoned. Am I correct in my impression? Did the distinguished Senator from Oklahoma receive a similar impression?

Mr. MONRONEY. Yes; I was frightened and surprised to hear the Secretary of Defense imply that an end has come to our previous policy of trying, of attempting to confine any conflict to a limited war, and to use only conventional forces, if necessary, so as to make sure that world war III would not be triggered off. I believe such a change in policy to be very dangerous, indeed; and I thank my colleague, who apparently received the same impression that I did from the Secretary's interview. The clear implication was that the Secretary of Defense virtually rules out the concept of a limited conflict and the possible use of conventional forces, should the access road to Berlin be closed. Certainly that is the strong impression that I received.

As Mr. Reston, of the New York Times, so ably pointed out, that represents a reversal of our time-honored policy of trying to keep all conflicts in the limited war category and to use conventional forces, rather than all-out hydrogen warfare, with its catastrophic results. The only sane policy for the United States to follow is to prevent, rather than trigger, such a conflict.

I am alarmed by the growing evidence of the administration's neglect of our conventional ground forces, discussed so ably yesterday by the Senator from Mississippi [Mr. STENNIS]. I submit that not only do we lack adequate forces to meet local emergencies, but we are not developing the airlift capability required to insure that we can rapidly and efficiently apply conventional forces at points of danger.

That is why the distinguished Senator from Missouri [Mr. SYMINGTON], formerly the Secretary of the Air Force, not only has spoken eloquently, but also succeeded in having $140 million added to the appropriations made last year—as a result of his recognition of this very grave deficiency in our airlift capabilities.

A flagrant example of the failure to appreciate the importance of our military airlift potential is the postponement of the tactical airlift exercises—which were to be conducted jointly by the Military Air Transport Service and the Army, this month—due to lack of operational and maintenance funds in the MATS budget.

Now I yield to my distinguished colleague from Missouri.

Mr. SYMINGTON. Mr. President, thanks to the very able chairman of the Armed Services Committee [Mr. RUSSELL], who happens to be present on the floor, and the able chairman of the Preparedness Investigating Subcommittee, the majority leader, we did put in the last appropriation bill an item for $140 million for airlift. That was done after extensive hearings, which my friend from Georgia will remember.

This administration, despite the possibility that something might happen, as has happened now with regard to Berlin, not only did not spend one cent of that money, but, at least up until a few days ago, had no plans for spending it. I am sure that is what the distinguished Senator from Oklahoma has reference to.

Mr. MONRONEY. I have. I think it is a shame that we have not developed a more adequate airlift with which to deliver forces at points of emergency. That aspect of defense has been completely disregarded, despite the determination of the very distinguished chairman of the Armed Services Committee and the distinguished Senator from Missouri. Now, in view of the neglect to spend the $140 million to make plans to buy the airplanes we need, the cancellation of the exercise to test the airlift capability which was scheduled for March seems to me to be reaching a new low in defense planning.

This exercise was to test the combat capabilities of the Military Air Transport Service to reach a simulated area of combat with men and supplies at the earliest possible moment. The exercise also was to include the calling up without notice of the planes and crews of regularly scheduled airlines and other nonscheduled carriers to supplement the MATS airlift on a reserve basis.

I do not believe that MATS ever has had a chance to engage in such pretraining for its combat mission. I further doubt that MATS will be able to handle efficiently, on a D-day basis, the vast number of movements required without the practice provided by such tactical exercises.

The Air Reserve fleet, composed of dozens of planes listed by airlines, and their crews, has never undergone such exercises to determine whether they could be assembled and placed on the job under simulated mobilization conditions.

This exercise is as essential to training the MATS organization as it is for the Marine Corps to train in amphibious landings, or for the infantry to engage in war games.

The current cancellation also bears out my feeling that the genuine mission of MATS, and its combat capabilities, has been subordinated to the job of running the world's largest airline to the neglect of its combat readiness. Actual training, under simulated emergency conditions, is necessary if MATS is to be ready for the herculean task that would be thrust upon it if a limited war should break out in some distant part of the world.

When I asked questions as to what it would cost, I was told it would run as high as $1 million. I pointed out that the planes are available, as are the crews and the pilots, in the MATS fleet. I pointed out everything is available except the scheduling of the exercises. I was told MATS could not afford it because it would require MATS airplanes to be in the air 8 hours a day, and they could not afford the cost out of the gasoline, maintenance, and operating funds which MATS has.

I expect we shall go along and be satisfied with an airlift that has never been tried under simulated combat conditions or that has never been tried so far as

supplying necessary equipment to support our troops as would be necessary if they had to be deployed in a trouble spot somewhere in the world.

It is my earnest hope that we can maintain conventional forces, and the airlift to deliver them, to provide an alternative both to doing nothing and to a hydrogen war. That is our choice today—to have nothing or to have a hydrogen bomb war—and I do not think America wants to make that choice.

America's airlift potential might be the determining force in peaceful settlement of the Berlin dispute. Yet we weaken our hand in the cold war for lack of the extra $1 million which would have been required for extra gasoline, maintenance, and other operating costs.

The dominating position occupied by Khrushchev does not arise from the strength of any moral position, nor from any treaty rights. It arises from Russia's apparent superiority both in the field of intercontinental ballistic missiles and of intermediate range ballistic missiles, and from their superiority in conventional ground forces in readiness.

For budgetary reasons we have taken a second place in the first category of weapons, and for manpower and budgetary reasons, a second place in conventional forces. Thus, we might be forced to a conference with the Communists at the real summit and the United States and free world in the valley.

We must not reduce our bargaining power further by continuing dangerous cuts in our military strength. By these economy moves, we run the risk of costs of millions of lives and hundreds of billions of dollars should our weakness lead to the outbreak of world war III.

The memory is too keen today of Munich and its disastrous results in accelerating, rather than preventing World War II, for us to follow the Chamberlain route and put a balanced budget ahead of balanced defense forces.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield to my distinguished colleague.

Mr. SYMINGTON. I think the Senator from Oklahoma has made a great contribution in this important field. The Secretary of Defense, as I understood him, said that the Joint Chiefs of Staff felt that the airlift we now have is adequate. I look forward to questioning members of the Joint Chiefs of Staff on that subject, as I do not believe that conclusion is accurate. Certainly, all the members of the Joint Chiefs of Staff do not think the airlift we now have available is adequate.

I should like to ask the Senator from Oklahoma if it is not possible that one of the reasons why the Secretary of Defense was forced to fall back to the theory of massive retaliation, as he did in last Sunday's telecast, was that he knows that our Army is neither mobile nor modernized. By "mobile" I mean capable of being moved by air, with their combat equipment and their support. In effect, the Secretary is now admitting that the only thing we are probably in a position to do, if the Russians push their aggression with regard to Berlin, would be to have a nuclear war. Is that what the Senator understood?

Mr. MONRONEY. That is exactly what I understood. The Secretary could not—and I was ashamed for him—tell Mr. Reston the number of divisions which would be available to NATO. If the Secretary of Defense does not know the number of divisions available to the free world, somebody ought to be doing night work and studying his lessons. If the Secretary of Defense does not know the small number of planes we have available for an airlift, somebody ought to be studying his lessons at night. If the Secretary does not know that the MATS organization has never been trained to move troops and equipment under emergency conditions, somebody ought to be studying at night and doing his lessons. America is in a distressing posture. We would go into a meeting in an even lower posture, whether it be a meeting of the foreign ministers or a meeting with Mr. Khrushchev, if we went to that meeting and had to look at two guns pointed at us, one being a deficiency in the missile field—which the Senator from Missouri has pointed out again and again—and the other gun being Russia's superiority in ground troops, with the capacity to have them in readiness.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield to my distinguished colleague.

Mr. SYMINGTON. Mr. President, a few weeks ago the Chief of Naval Operations, Admiral Burke, made a talk in which he said that in all probability the next war would not be a nuclear war. The President of the United States went out of his way later on to single out that talk for praise. At least by implication, it would appear that he was agreeing with the statement of the Chief of Naval Operations, Admiral Burke, that the next war in all probability would not be nuclear war.

Last Sunday the Secretary of Defense implied that if there were a war in all probability it would be a nuclear war.

I should like to ask my friend from Oklahoma, who has had more experience in the House of Representatives and the Senate of the United States than most, does he think the American people have a right, as they approach these problems from the standpoint of "We will not give an inch" to at least be clear as to whether this administration believes we should have a nuclear war in case we have to live up to our commitments or believes we should not have a nuclear war in case we have to live up to our commitments?

Does the Senator agree that we should not have conflicting statements particularly on such vital matters emanating from high civilian and military authorities of the Government?

Mr. MONRONEY. It seems to me instead of confusing our opponents, the Communists, we are confusing ourselves. It depends upon which paper we read whether we are going to be ready and prepared for the beginning of world war III—for the beginning of the awful and catastrophic type of world war III we have historically sought to prevent and, in the event of hostilities, have sought to limit.

I think the only implication we can take from the statement of the Secretary of Defense is that we are putting our loaded six-shooter on the table, when there is an argument about whether deuces were wild or were not wild on the last hand.

I certainly feel that this is no time to be creating an aura of uncertainty. The President in his press conference opposed the cries on the floor of the Senate for even a slight mobilization of our Reserves and for a discontinuance of the reduction of the Marine Corps, about which the able Senator from Missouri has spoken, as being saber rattling. I would rather rattle Marine Corps sabers than do atomic muscle flexing such as was done on the program by the distinguished Secretary of Defense. Which is the more dangerous? Is it more dangerous to call up a few Marines Reserves and to stop decimating those we have, or to have the Secretary of Defense so clearly imply—as I thought he did, and as I believe everyone who heard him to whom I have talked felt he did—that our reliance is on nuclear weapons if it becomes necessary to keep open the road to Berlin.

Mr. SYMINGTON. Mr. President, I concur with the distinguished Senator from Oklahoma and congratulate him for the clarity and soundness of the position he has taken this afternoon. Not too long ago one of the finest generals of the Army stated that we did not have half enough airlift capacity to handle a single local or limited defense action abroad. The general has now been retired from the Army. It is obvious that if we do not have half enough capacity to handle one problem in one place it would be relatively difficult to handle two or three problems in two or three places. Such a situation may well be what we shall soon face.

Mr. MONRONEY. And which the Secretary of Defense only Sunday said was a possibility we might face.

Mr. SYMINGTON. The Senator is correct.

I hope the able Senator from Oklahoma, who has been such a champion of military airlift, as well as a champion of an adequate civilian airlift, will continue to present this problem to the American people. In my opinion we are as short of airlift as we are of any other vitally needed defense equipment.

Mr. MONRONEY. I thank my distinguished colleague. I appreciate his leadership in this field as he has so ably demonstrated it in his support of the appropriation which was frozen.

Incidentally, while the armed services secured the $140 million for airlift, it is said that we cannot afford to spend the money. We can afford, however, three $5 million 707 jet planes which can be "plushed up" and used one for the President, one for the Secretary of State, and one in reserve.

Mr. CHAVEZ. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield to the Senator from New Mexico.

Mr. SYMINGTON. Mr. President, if the Senator will yield to me I should like to state it was the committee under the chairmanship of the distinguished senior Senator from New Mexico which took the action to which I have referred. Thanks to the leadership of the Senator from New Mexico, the committee approved the $140 million for the airlift. I was a junior member of that committee. Though the action had the full approval of the committee, not one cent of the money was expended. I believe that is a correct statement.

Mr. CHAVEZ. That is the point I wanted to make. Someone is at fault, but surely it is not the Congress of the United States. The committee was not the only group to take that action. There was a unanimous judgment of the committee, and the Senate of the United States provided the airlift, which was supposed to be necessary.

Of course, all we can do is make the money available. We cannot make the administration spend the money, and it did not.

I feel that the Senator from Oklahoma is making a very great contribution. The best point is the fact that Congress itself has never been reluctant to proceed.

Mr. MONRONEY. The Congress is charged under the Constitution with the duty of raising armies and supporting them. That job has been done with the help of the Subcommittee on Defense Appropriations, under the chairmanship of the distinguished Senator from New Mexico. Yet there is a production line at Long Beach, Calif., manufacturing the most modern cargo planes which our military people have today, operating on a half-time basis. The crisis in Berlin is not approaching us on a half-time basis; it is coming with the speed of sound. No one in the Pentagon, apparently, recognizes the present danger or is taking steps to meet it.

Mr. CHAVEZ. I should like to go a little further than the Senator is going in the present discussion. The Congress tried to provide, as was necessary, support for the National Guard. All the previous wars have been fought by men from the National Guard, from all the States of the country, and by men from the Reserves. So far as the Pentagon is concerned, those forces would be cut down, notwithstanding the fact that Congress provided enough money in the appropriation bill to take care of 400,000 National Guardsmen, whom the services are now trying to cut down to 370,000. The same is true with respect to the Reserve forces.

This not only affects missiles and airlift, but it affects the National Guard and the Reserves, which mean so much to the defense of our country, to our security, and the security of the individual States.

Mr. MONRONEY. I appreciate very much what the distinguished chairman of the subcommittee has said. I only wish there were some way the Congress could make known the feeling which I believe is almost unanimous on both sides of the aisle, that this administration must wake up; that it is later than we think; that America's danger is present, and upon us.

The best way to meet the problem is by beginning to at least get our muscles in a state of activity, so that we will have a position from which to bargain at the summit or at the foreign ministers' conference, instead of occupying a position of abject weakness.

Mr. LONG. Mr. President, will the Senator yield?

Mr. MONRONEY. I yield to my distinguished friend from Louisiana.

Mr. LONG. In line with the argument the Senator is making, I wonder if the Senator agrees we should seek to avoid having to be constantly threatening to engage in a thermonuclear war. Such a war is likely to be a war of complete extermination of both sides. For us to go along reducing our conventional strength, leaving ourselves in the position where we may have to resort to desperate means, constantly putting ourselves at a greater and greater disadvantage, may cause an aggressor to feel we are only bluffing. When we talk about engaging in the ultimate war of extermination between two nations, any person should be and would be extremely reluctant to take such a step as that, and that is true of the Soviet Union as well as of this country.

Mr. MONRONEY. Anyone who does that may be called upon to put up or shut up at some place in the discussion.

Mr. LONG. Yes.

Mr. MONRONEY. I do not believe that a religious country such as America, with the background of never having fired the first shot in a war, is going to be the first country to release the horror of the catastrophic deaths of tens of millions of people to keep the road open to Berlin. I should like to see us maintain a capacity to keep the road open to Berlin with conventional weapons and with an airlift, if necessary, because I would back up West Berlin. However, we fence ourselves in a corner from which there is no escape, when the Secretary of Defense talks about the overwhelming manpower superiority of the Sino-Russian group and admits our only weapon which might equal them is thermonuclear warfare.

Certainly Russia is not going to ignore the ability to put several divisions of good, well-equipped and well-prepared troops in the field, or to airlift other troops, equipped and ready to fight, in a Berlin emergency.

We do not have to go to the catastrophic route which would insure the outbreak of hydrogen world war III, but we have put more emphasis on a balanced budget than we have on a balanced national defense. Before it is too late, almost daily on the floor of the Senate I think we must call attention to the failures which we are experiencing, to keep this Nation strong enough to sit down with Khrushchev on a basis approaching equality, and bargain for the kind of open avenue to Berlin which will maintain treaty rights and the moral and ethical right we have to keep our troops there.

Mr. LONG. The Senator heard the President's state of the Union message, as I did. I gathered that the logic of that message related to limited wars, and that the President was suggesting that we should try, if possible, to limit the size of any war which might break out. I hope he did not have in mind that the only way to limit it would be by our losing.

Mr. MONRONEY. Or by another Munich. This month is the 20th anniversary of Munich. We know from experience that when Chamberlain went to Munich, Hitler had the vision. He had an air corps. He had in being a tank corps, and Mr. Chamberlain and his umbrella made what he hoped would be "peace in our time." That was on September 30, 1938. Yet 6 months later, on March 15, Hitler completely abrogated the treaty of Munich and began his march.

We know that conferences are not won by weakness, and that no matter how great the diplomatic ability of our negotiators, when the chips are down, the question which is decisive is, "How many divisions have we? Can we get them there ready to fight at the point of attack?" I do not wish to rely, as the Secretary of Defense apparently does, on only one weapon, namely, the hydrogen bomb and the Strategic Air Command.

Mr. LONG. Is it not usually the case, in conferences between two contending sides as far apart as communism and capitalism happen to be, the side which wins the conference is the side which has the most power when it goes into the conference?

Mr. MONRONEY. I agree completely with my distinguished colleague.

Mr. President, I yield the floor.

THE PRESIDENT'S PLAN FOR LIMITATION OF OIL IMPORTS

Mr. CARLSON. Mr. President, I call the attention of the Senate to the program announced by the President for limitation on the importation of petroleum and its products into the United States.

I read from a press dispatch which has recently been written:

President Eisenhower today ordered mandatory controls on imports of crude, unfinished, and finished oil products.

The new order replaces a system of voluntary import controls which expires at midnight. Domestic producers complained the voluntary program failed and forced them to cut back their own production.

Capt. Matthew V. Carson, who will administer the new program, said it provides that, starting tomorrow, no crude or unfinished oils may be imported into the United States unless by authorization of the Secretary of Interior.

Effective April 1, he said, no finished products, including residual oil used for burning, may be imported except by Government authorization.

Carson said finished products such as gasoline and jet fuel will be limited to 1957 levels. The program should substantially decrease the amount of oil and oil products imported into this country in the past.

The order was issued after the New York Stock Exchange had closed for the day.

The President said the great majority in the oil industry had cooperated with the Government in the voluntary quota system.

But some importers, he said, had made it necessary to apply mandatory controls.

"The new program," Eisenhower said, "is designed to insure a stable, healthy industry in the United States capable of exploring for and developing new hemisphere reserves to replace those being depleted."

The President said national security requirements made it necessary to adopt the controls. A surplus of oil, he said, has disrupted free world markets and would have spread to the United States except for the cutbacks in domestic production.

"Voluntary controls have been and a mandatory control will be flexibly administered with the twin aims of sharing our large and growing market on an equitable basis with other producing areas and avoiding disruption of normal patterns of international trade," Eisenhower said.

Carson said he did not believe the new program, of itself, would force price increases to motorists and consumers of fuel oil.

Eisenhower instructed the civil and defense mobilizer Leo Hoegh to advise him if price increases occur while the program is in effect and whether such increases are necessary to protect national security.

The new program announced by the President is the result of much study by the President's Cabinet Committee and has been concurred in by the President. I sincerely hope that it will work.

I hope that the industry and all concerned will make every effort to insure the successs of the President's program. Certainly that will be my purpose.

If this program does not work, I believe the Congress itself must assume the responsibility to pass legislation that, by law, will limit total petroleum imports to the 1954 ratio between such imports and domestic production.

This program is in response to the authority and direction of the Congress on this subject first passed as an amendment to the extension of the Trade Agreements Act of 1955. This act was further amended in the extension of 1958.

The Congress passed these two laws in lieu of proposals that were being made to the Congress for a more definite and specific restriction on these imports. I supported each of these proposals with the hope that, although they were not as specific as I had proposed, the solution to this problem could be accomplished through administrative effort.

I have been disappointed that the voluntary program established by the President did not accomplish this purpose. In fact, despite administration efforts, imports continued to increase under this system instead of decrease. As a matter of fact, currently imports are at an all-time high level.

At the time the first of the amendments attempting to establish this method was passed by the Congress in 1955, total imports were then in the neighborhood of 1¼ million barrels. Currently, total imports are more than 2 million barrels a day.

After a long and earnest study by the President's Cabinet Committee, resulting in a report in 1955, that Committee said imports in excess of their relationship to production that existed in 1954 would be harmful to the security of this country. Currently, imports are far in excess of this relationship.

Past experience has shown the voluntary approach is not effective. Thus, it is encouraging that the President has made the program mandatory and included refined products.

It is being reported that there is great consternation in our Western Hemisphere neighbors over establishment of this program. It is argued that such a program would have seriously damaging effects on the petroleum industries of Canada and Venezuela and as a result bring about reduced revenues to these countries.

I would like to point out that the current program does not determine where a company may purchase its foreign crude. If a company which has been importing oil from the Middle East would decide to shift its source of supply to Canada or Venezuela, there would be nothing in the program to forbid him to do so.

During the past year, however, the trend has been in the opposite direction, not because of any program instigated by the United States, but because economic advantage dictated that the cheaper Eastern Hemisphere crudes be substituted for previous purchases of Canadian and Venezuelan oil.

In 1957 importing companies brought into the United States 151,000 barrels daily of crude oil from Canada. During the last few months, however, these imports have declined to around 65,000 barrels daily. This reduction in the amount of oil imported from Canada has a direct relationship to the price paid for Canadian oil and that imported from the Middle and Far East.

This preference for foreign crude oil other than from Canada is even more pronounced when you consider that in 1957 imports into the west coast from Canada totaled 95,000 barrels daily. In 1958, this total dropped to 25,000 barrels daily despite the fact the Government's crude oil allocation for companies in that area normally importing from Canada was more than 75,000 barrels daily. In the last quarter of 1958 imports from Canada into the west coast totaled only 11,000 barrels daily, more than 65,000 barrels daily below the allocation. This decline took place despite the fact two of the importing companies have pipelines from Canada to their refinery gates.

Correspondingly, imports of crude oil from Venezuela were 531,000 barrels daily in 1957 and 433,000 in 1958. Whereas such imports from the Eastern Hemisphere increased from 304,000 in 1957 to 407,000 barrels daily in 1958. During the last 2 years, imports of refined products have steadily increased from all foreign sources.

The domestic industry has very greatly deteriorated—in direct relationship to the increase in these excessive imports—until today the ability of the domestic producer to drill needed wells has been greatly restricted and the number of wells drilled has, during this period, been greatly reduced. The trend has been fewer and fewer wells each year at a time when our demand is increasing. In Kansas, alone, in 1958, 700 fewer wells were drilled than in 1954.

Mr. President, again I state I sincerely hope the program will work.

Mr. LONG. Mr. President, will the Senator yield?

Mr. CARLSON. I yield.

Mr. LONG. Mr. President, can the Senator inform me how the present mandatory plan will compare, in the volume of the importation, with the 1954 ratio?

Mr. CARLSON. I regret to state that I cannot answer the Senator's question exactly. However, if I understand correctly, it goes back, according to the statement, to the 1954 level, with some exceptions.

Mr. LONG. As I understand, it would permit, according to the Senator's statement, a level of jet fuel and gasoline in line with the 1957 import quotas.

Mr. CARLSON. Finished products and jet fuels would be on the 1957 basis, but crude would go back to the 1954 level.

Mr. LONG. Ever since the plan to control imports was put into effect, as the Senator knows, the plan did not control finished products, and there were tremendous increases in the importation of finished products from that date forward. I wonder how the overall ratio would compare with the 1954 situation, and what percent the new mandatory plan would control.

Mr. CARLSON. I should like to read the first sentence of the press release:

President Eisenhower today ordered mandatory controls on imports of crude, unfinished, and finished oil products.

Knowing the junior Senator from Louisiana and his interest in this subject, having served with him on the Committee on Finance, I can state that he and I are in accord on this matter. I certainly hope that the new program will take care of the problem.

Mr. LONG. I hope it is in line with what Congress has recommended and with what the President's Cabinet Committee has recommended.

Mr. CARLSON. I agree. He and I have discussed this subject both in committee and on the floor of the Senate.

Mr. LONG. I commend the Senator for his statement.

Mr. YARBOROUGH. Mr. President, will the Senator yield?

Mr. CARLSON. I yield.

Mr. YARBOROUGH. I appreciate the statement made by the distinguished Senator from Kansas. The administration has taken the right step in ordering mandatory controls. Many of us from States where the production of oil is a major industry have seen that industry decline and tens of thousands of people thrown out of employment by the flood of foreign oil importations. At first the administration put into effect some voluntary controls, which I believe was in the middle of 1957. As the distinguished Senator from Kansas has said, the voluntary import program did not work, because some oil companies did not voluntarily go along with the restrictions on their imports.

Does the Senator from Kansas have the figures showing how the imports will be limited?

Mr. CARLSON. No; I regret to state that I have just picked this statement off the ticker. Therefore I have no actual knowledge as to distribution of the

quotas. However, as has been stated in the colloquy with the Senator from Louisiana, I sincerely hope it will take care not only of the crude and finished and unfinished products, but that we will get back to somewhere near the 1954 basis.

Mr. YARBOROUGH. I do not know of any person in an oil-producing State who wishes to cut off entirely the importation of oil, and thereby eliminate our trade with other nations. However, the importation of petroleum and petroleum products has gone forward at such an accelerated rate in the past 3 or 4 years, that the petroleum industry, particularly the independent producers, who have created the competitive situation in this country which permits American motorists to buy gasoline at 30 cents a gallon, whereas in Italy the motorist must pay 75 cents a gallon—and this in spite of the fact that the refineries are near the sources of supply in the Middle East—have been seriously injured by the flood of oil imports.

I wish to commend the administration for ordering mandatory controls. However, unless the mandatory controls are followed by restrictions on the domestic market, there will still be need to impose mandatory controls on the amount received from foreign producers; and as a cosponsor of the O'Mahoney bill I would urge the enactment of that bill to permit Congress to declare the degree of mandatory controls, unless the Executive order is enforced. Therefore, I believe it is still incumbent to pass a law to provide mandatory controls. Nevertheless the step the administration has taken is a step in the right direction, and is a step which many of us have long advocated. Therefore I commend the administration for taking this step. I hope the effect will be not to stop all foreign trade, but to cut the situation back to about to where it was 2 or 3 years ago before the tremendous flood of oil came into this country.

Mr. CARLSON. I thoroughly agree with the statement made by the distinguished Senator from Texas. Personally I have always favored voluntary controls. I have always hoped that they would work. In view of the fact that apparently we must have mandatory controls, I hope that the mandatory controls will be effective, particularly for this reason, namely, that they can be changed under Executive order. If Congress acts, on the other hand—and it may well have to act in the matter—a change is more difficult to bring about. For that reason I hope we can have the cooperation of the oil companies with the Executive order.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. CARLSON. I yield.

Mr. ALLOTT. I wish to commend the Senator from Kansas for his statement on the proposed legislation, and to commend the President for acting in this situation.

This is a situation which all of us who live in oil-producing States know has been getting worse with the passing months. It is unfortunate that a comparatively few oil companies have thwarted the voluntary oil importation program, including that of finished products.

I believe the most significant statement in my opinion, and the one that I should like to underscore, if I may, with respect to this program, is the fact that during this period new exploration for oil and new wells drilled have dropped fantastically in the last 3 or 4 years. That situation is applicable not alone to the oil industry, but also to the mineral industry in general. The development of known reserves of minerals, and the searching out of mineral reserves and the finding of new reserves of minerals have fallen off, primarily because of the rather sick condition of our mineral industry in general. The same thing applies to the oil industry. I particularly underscore and applaud what the Senator has said with respect to the fact that the effect of all of this has not been just to make it hard on our independent oil companies to compete, and has made it hard on the whole oil industry, but that it has also served to stop exploration for new reserves in this country, which, in my opinion, is one of the worst effects it could possibly have.

Mr. CARLSON. I compliment the Senator from Colorado for the statement he has made. He is familiar with our problem in the Midwest, and we in the Midwest know how much the importation of oil has affected drilling, which is important not only for the future of the Nation but for our national defense as well. The Senator from Colorado has always taken a very active interest in this problem, and I commend him for it.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield?

Mr. CARLSON. I yield.

Mr. BYRD of West Virginia. I commend the distinguished Senator from Kansas upon the excellent statement he has made. I should like to ask him if the Presidential order imposing mandatory quotas applies to the imports of residual oil.

Mr. CARLSON. I read from the release, which is all I have to speak from:

> Effective April 1, no finished products, including residual oil used for burning, may be imported except by Government authorization.

That is all I have on the subject.

Mr. BYRD of West Virginia. I thank the Senator from Kansas.

Mr. GORE. Mr. President, will the Senator from Kansas yield?

Mr. CARLSON. I yield.

Mr. GORE. The distinguished junior Senator from Kansas has called to the attention of the Senate an important action by the President of the United States. I do not wish at the moment to express any view with respect to this action except to call to the attention of the Senator from Kansas the fact that the foreign tax credit operates as a subsidy to the processing and importation of oil from foreign sources. This tax loophole, this tax favoritism, is a subject to which Congress should give immediate attention. Not only does it affect oil; it affects the operations of many of our corporations in the foreign field.

The able Senator from Kansas and I serve on the Committee on Finance together. He and I together have learned of tax returns which show that some corporations have been making millions of dollars a year in foreign operations, but are paying not a single dollar to the United States Government in taxes. I hope this disclosure will serve to call attention to the unjustified treatment of profits earned in foreign countries.

Mr. CARLSON. The distinguished junior Senator from Tennessee has brought up a subject which has received considerable discussion in the Committee on Finance. I assure him it will have more. The Senator from Tennessee is entitled to much credit for pursuing this matter diligently, not only in the committee but outside the committee. I commend him for it.

Mr. YARBOROUGH. Mr. President, will the Senator from Kansas yield?

Mr. CARLSON. I yield.

Mr. YARBOROUGH. I again commend the distinguished junior Senator from Kansas for his original report and for his comment on the situation, which is brought to the attention of the Senate again by the distinguished junior Senator from Tennessee.

We know the nature of the arrangement worked out in Saudi Arabia between the Arabian-American Oil Co. and the Government of Saudi Arabia. The company pays no royalties, but is taxed at the rate of 50 percent of its production. That 50 percent, by arrangement with the U.S. Government, is credited on the income tax in the United States. So although ordinary corporations in the United States pay a 52-percent tax on income; while domestic independent oil producers in the United States pay a 52-percent tax on their income; the tax on the income paid to the United States by Aramco is 2 percent.

We sent our Navy and Air Force to that region to protect the investment of Aramco, but their taxpayment to the U.S. Government, if anything, is not in excess of 2 percent. Is that not correct?

Mr. CARLSON. The Senator from Texas has well expressed the situation. I assure him it will receive greater consideration in the committee.

Mr. YARBOROUGH. Therein lies a great injustice. It works to the detriment of the small, independent companies in the United States. The companies producing oil in foreign countries are not paying their fair share of taxes to the United States. They are paying virtually no taxes to this country. It is an unfair condition. I hope Congress will remedy it before the end of the session.

Mr. McGEE. Mr. President, will the Senator from Kansas yield?

Mr. CARLSON. I yield.

Mr. McGEE. I should like to join with those who have complimented the Senator from Kansas on his contribution to the solution of a problem which is important to many portions of our land and, I think, to the Nation as a whole.

In my State of Wyoming, where oil provides us with our largest single income, it is also critical in the State's economy. In the matter of the last 3 or 4 days, I have just learned, from a quick swing around the State, and can report first hand, if any more reporting is needed, that the independent producers in particular are suffering because of what has been the policy of the Government up to this time. We hope we can pursue this effort, because of what is suggested by implication in the mandatory policy outlined by the administration.

We compliment the Senator from Kansas for his presentation, and the administration for its stand on the problem.

I call attention to that which the Senator from Kansas knows even better than I; namely, that when the chips are down, as we say, we cannot, on the floor of the Senate, suddenly announce that we must have more oil, when we are cut off from our overseas supply of oil. Oil is brought in only after many years of exploration. For that reason, we must plan ahead.

We stress again the importance of projecting a farseeing policy which will not find us wanting or cut short in days of a more critical nature which may face us 2, 5, or 10 years from now.

I wish to associate myself with this meritorious action today.

Mr. CARLSON. The Senator from Wyoming has very well described the situation which prevails in all the oil-producing States. In the interest of the welfare of the Nation and from the standpoint of its defense and economy it is important that we have a program which will permit continued exploration for oil.

EXTENSION OF THE UNIVERSAL MILITARY TRAINING AND SERVICE ACT

Mr. MORSE. Mr. President, I should like to ask the distinguished senior Senator from Georgia [Mr. RUSSELL] what is the parliamentary plan of the leadership for tonight?

Mr. RUSSELL. I regret to advise the distinguished Senator from Oregon that I have not discussed it with the leadership. Earlier in the day it was suggested by the leadership that it was hoped to conclude action on this bill today and to make the Hawaiian statehood bill the unfinished business. Whether that is still the plan of the leadership, I am not advised.

The Senator from Oregon can suggest the absence of a quorum, get the majority leader to the floor, confer with him and the leader of the minority, and perhaps obtain a more definitive statement of the aims and purposes of the leadership. I have not consulted with the leadership concerning how long it is planned to have the Senate remain in session this evening.

I apprehended, when I saw the podium placed over the desk of the Senator from Oregon, that it might take some little time longer to conclude action on the bill than I had hoped. I say that without disparaging the quality of the Senator's remarks, which are always erudite and informative.

Mr. MORSE. I should be glad to accommodate the Senator from Georgia and have him listen to my speech tomorrow.

Mr. DIRKSEN. Mr. President, will the Senator from Oregon yield?

Mr. MORSE. I yield.

Mr. DIRKSEN. I think I can say with some authority that it was hoped to finish action on the draft bill today and to make the Hawaiian statehood bill the next order of business for tomorrow. The order to have the Senate convene at 10 o'clock tomorrow has already been agreed to.

Let me respectfully ask the distinguished Senator from Oregon whether he anticipates speaking at considerable length.

Mr. MORSE. Well, the word "considerable" is a very flexible one. I shall speak at some length.

Mr. DIRKSEN. Let me ask, with all proper deference, whether the Senator from Oregon will speak for more than 1 hour?

Mr. MORSE. At the present time I expect to speak for an hour, and I do not know how much longer. That will depend on what develops during that time.

Mr. DIRKSEN. Would the Senator's remarks possibly last 2 hours?

Mr. MORSE. The best judgment I can give the Senator from Illinois is that my remarks will take at least 1 hour. But I want the Senator from Illinois to understand that I am not making any commitments or giving any assurances.

Mr. DIRKSEN. I do not want commitments or assurances; but I thought that, for the convenience of all Members, it might be well to have the Senator from Oregon state what he anticipates.

Mr. MORSE. That is why I said that, only for the convenience of the Members—since it is now 6 p.m.—the leadership might wish to have the action on the bill concluded tomorrow.

Mr. DIRKSEN. Will the Senator from Oregon yield, without losing the floor, in order that I may suggest the absence of a quorum—in the hope that we can take a moment to dispose of this question?

Mr. MORSE. Only for future reference, because I have no expectation of participating in debate of that kind. But in order to avoid the establishment of a precedent which might be cited in the future, I should like to obtain a parliamentary ruling on the question of whether, if I yield at this point, what I have said thus far will count as one speech by me on the bill?

The PRESIDING OFFICER (Mr. MUSKIE in the chair). That might be prevented by the giving of unanimous consent that it not be counted as one speech.

Mr. MORSE. I understand that the Senator from Illinois will ask unanimous consent that I not lose my right to the floor if I yield for the suggestion of the absence of a quorum.

Let me make it perfectly clear that I do not intend to engage in a prolonged debate on this subject. But, Mr. President, in my 15 years in the Senate I have never had as heavy a heart as I have when I speak tonight.

So far as I am concerned, it makes no whit or bit of difference to me how many Senators remain to listen to my remarks, because I shall be speaking for the RECORD. But, as the leadership knows, I always try to accommodate my colleagues, particularly when the hour is late.

Unless there is some reason why the bill must be voted on tonight, then, for the accommodation of my colleagues, I suggest that I make my speech tonight, and that the vote on the bill be taken tomorrow. I am always willing to enter into such an understanding.

But before any vote on the bill is taken, I wish to state, for the RECORD, some of the facets of the subject matter. I propose to raise them in the course of my speech tonight, as a member of the Foreign Relations Committee of the Senate, because I believe the RECORD should show perfectly clearly that, at least, these points were raised before the vote on the bill was taken.

Mr. DIRKSEN. Mr. President, at this point will the Senator from Oregon yield?

Mr. MORSE. I yield.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the distinguished Senator from Oregon may be permitted to let a quorum call intervene, and that he will not thereby lose the floor, and that such remarks as he has made and the fact that he has been recognized by the Chair will not constitute recognition for the purpose of one speech, under the Senate rule.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. DIRKSEN. Then, Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JOHNSON of Texas. Mr. President——

The PRESIDING OFFICER. Does the Senator from Oregon yield to the Senator from Texas?

Mr. MORSE. I yield, provided I do not lose the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. JOHNSON of Texas. Mr. President, I am informed that the Senator from Oregon [Mr. MORSE] desires to speak on the pending amendment. The yeas and nays have been ordered on the question of agreeing to this amendment. The Senate will also take a yea-and-nay vote on the question of the passage of the bill.

I am informed that the Senator from Oregon [Mr. MORSE] will speak at some length.

Therefore, in view of the fact that there has already been entered an order for the Senate to convene at 10 a. m. tomorrow, I believe I should announce,

for the information of the Senate, that we do not expect to have any yea-and-nay votes taken this evening. We expect to have the Senate vote as early as possible tomorrow on the amendment of the Senator from South Dakota [Mr. CASE], and then to proceed with the further consideration of the bill.

Mr. MORSE. Mr. President, I shall proceed when there is order.

The PRESIDING OFFICER. The Senate will be in order.

COMPARABLE ISSUES DEBATED IN 1948

Mr. MORSE. Mr. President, as I said a few minutes ago, I speak with a heavier heart tonight than at any other time when I have risen on this floor for a discussion of any subject matter in my 15 years of service in the Senate.

In 1948 we also had before the Senate a bill for the extension of the draft. I shall not take the time of the Senate to read all the excerpts from a series of three speeches which I made in 1948 in that debate.

The Senator from Kentucky [Mr. COOPER] is present. I remember very well that I was sitting on his side of the aisle at that time. We discussed some of the same issues that I intend to raise in this debate in 1959, which present an interesting comparison, and also show, sadly enough, how little we have progressed in the field of this subject matter since 1948.

At that time, as a member of the Armed Services Committee, I offered a series of amendments. The RECORD shows that in connection with the subject matter of some of those amendments, we reached some compromise positions here on the floor. The chairman of the Armed Services Committee, as the RECORD shows, was kind enough to express his gratitude and appreciation for my position and the help I sought to render in respect to some of the 1948 problems.

In order to save time from any lengthy reference now by way of quotations from the 1948 RECORD, I ask unanimous consent that there may be published as a part of this speech certain excerpts from the debate in 1948 on the issue of extending the draft at that time.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MORSE. Mr. President, it is a rather fitting background to the speech that I shall make tonight to take the Senate back to the RECORD of June 9, 1948, in the course of which speech I said:

I desire to say at the outset, Mr. President, that I hope I have made clear that I think a draft is necessary in order to meet an emergency in international affairs which I believe exists at the present time. Unless I were convinced that a serious emergency exists, I know of nothing that could possibly persuade me to vote for a draft in peacetime. I said a few moments ago in colloquy with the Senator from Maryland that I believe the draft bill should be put into effect now and that we should not wait for any future declaration of the President for putting it into effect, because after spending the weeks that those of us in the Armed Services Committee spent, both in public hearings and in executive conferences, with men high in our Government, including both civilian and military officials of our Government, I reached the conclusion—and it was very difficult for me to reach it, for I would like wishfully to think that there is no real danger of war—that there is actually a great danger of war. If I did not think there was a great danger of war at the present time I would not vote for any draft bill.

I am inclined to think a great many millions of American people are enjoying a false sense of security in America tonight, because I am one who honestly believes that our defenses are so weak today that our national security demands their strengthening as rapidly as we can possibly strengthen them. Why do I say that, Mr. President? I say that because in my judgment the record of Soviet Russia since V–J Day is clearly a record of noncooperation with the United Nations in the interests of promoting world peace.

Furthermore, I think the record of Soviet Russia certainly raises the presumption that she does not have friendly intentions toward the United States. Therefore, it is my opinion that unless we proceed to make ourselves sufficiently strong to protect our national security and enforce the peace, if necessary, we may wake up in the not-too-distant future to discover that Russia is taking aggressive acts toward us that will force upon us a state of war.

On the other hand, Mr. President, I am convinced that if the American people will unite behind a program for the strengthening of our national security to the point that we can defend the peace, that will greatly alter Russia's attitude and policies in the field of international relations.

Therefore, I lay that down as the major premise of this speech. I reiterate it in this sentence: I am supporting a draft in peacetime because I am convinced that a strengthening of our national security is necessary in order to make perfectly clear to Russia that we shall remain united in a determination to resist any aggressive attitude or policies or acts on her part toward disrupting world peace.

The second premise to which I wish to move in this argument is that I am also cognizant of the fact that an emergency never remains in a status quo condition. Human events and international events do not stand still. I think we must face the fact most solemnly tonight that we are either going in the next 2 or 3 years to solve most of the problems that are endangering the peace of the world today or by the end of that time we shall find ourselves much nearer to war than we are even tonight.

I digress from the quotation to say that not long after that we were in the Korean war.

To continue from my speech of June 9, 1948:

I shall put that in a different way, because unless that viewpoint of mine is understood, it is impossible to understand my position on the pending bill or on the amendment. I restate it this way: I do not think that human events or international relations ever stand still. We are moving in the direction of something. We are going to move in the direction of something during the next 2 or 3 years so far as international relations are concerned, and that something is going to be either more peaceful relations with Soviet Russia or more warlike relations with Soviet Russia.

I do not take, and have never taken, the position that the full responsibility for working in the direction of peace at the present time rests upon Soviet Russia. I think we also have a great responsibility. I think it is too easy for us to see ourselves as we like to think we are, and it is too easy to see the Russians as we imagine them to be. I believe there are many things we must do in international conferences, in our relations with Russia, which we have been inclined stubbornly to resist in some of our international conferences with Russia. I think we must get over the idea of giving to the American people the impression that we are completely right and Russia is completely wrong on all matters.

I am convinced that the record is perfectly clear that the overwhelming responsibility for the strained relations existing between those two great powers has been Russia's noncooperation in the United Nations and in international conferences in Europe. We have only to look to her negative attitude and the constant use of the veto to establish my point.

I think it is also clear that there is considerable evidence available to us at this time that was not available as short a time as 120 days ago. That is not a long time. The Russian leaders finally started to understand that they could push our country just so far until we would finally say, "that is as far as we shall go." I think Russia is beginning to read the stop signs which we have placed on the highway of international relations. I think one of those stop signs which has had a very persuasive and convincing effect upon the Russian leaders is the action we have already taken in the Congress of the United States in connection with national security. I believe Russia discovered that we meant business, so far as defending ourselves and strengthening ourselves so that we could defend the peace, when we voted appropriations for a great increase in the Air Force.

I think Russia read another stop sign when it learned we intended to vote the necessary appropriations for Navy improvement.

I think Russia read another stop sign, Mr. President, when it realized we were going to pass in this session of Congress substantial military manpower legislation.

I believe, Mr. President—and this is the third premise I want to lay down—that Russia will thoroughly understand that a draft bill passed at this session of Congress, with a provision in it that it will not be continued after 2 years, without affirmative action of the Congress, and that we shall not take men for more than 18 months, if my amendment should be adopted, will be a strong indication that we intend to remain united in support of an adequate national defense program, but at the same time, to frame a law and pass it in a form which also shows that we are working for peace and not for war.

That is why, Mr. President, I fought yesterday as hard as I did for the adoption of an amendment which would require affirmative action on the part of Congress after 2 years. I said in the course of my speech in support of that amendment that I felt a 2-year provision instead of a 5-year provision would serve clear notice not only on Russia, but on our friends in freedom-loving countries, that we do not have any intention to build up over a 5-year period or a longer period a powerful military machine, with the danger that once it is put into operation it may follow the course which military machines have so frequently followed in the course of history, of ultimately leading countries into war because of the power of the military machine itself. I said, in the course of my speech in support of that amendment, that in the United States we need to guard against the development of a military psychology. We need to recognize always that there is a clear line of distinction between preparedness to protect the national security of the Nation and preparedness to conduct a war. I want to repeat that, Mr. President, because that sentence, too, sheds a great deal of light on my thinking about our Military Establishment. There is a great difference between developing military preparedness necessary to protect the national security of the

country and developing a military preparedness program for war.

I think we must constantly recognize that our self-assurance that our ideals and objectives are peaceful is not always shared by peoples in other countries. We have only to go to other countries to hear disturbing and alarming discussions with reference to American imperialism and American military plans and objectives. We can travel in parts of Europe today and find people who are convinced that it is only a matter of time before they will be caught in the middle of a war between Russia and the United States. Although we know we seek only peace, that is not agreed to and accepted as a fact by a great many people, who are not in the satellite countries, but are in countries which are still free and friendly to the United States.

What I am trying to point out in this part of my remarks is that we have a duty, it seems to me, in the interest of peace, to develop a draft law which will strike that happy balance, giving to us the manpower protection we need to protect the national security and prepare us to defend ourselves in case of aggressive attack, and the type of manpower legislation which might create the impression, and would be inclined to create it, that our endeavor is not an endeavor to prepare for peace, but to prepare for war. There is quite a difference.

Mr. President, that was June 9, 1948. Those words are as applicable today.

In an analysis of some of the things which have and have not happened since 1948, there will be found at least part of the explanation as to why the world tonight is alarmed about the possibility of war.

There were other statements in the debate of 1948, which, under the agreement I have already obtained, Mr. President, I shall put in the RECORD later. I shall discuss them in the light of some of the things which have transpired in the last few weeks in the Congress, through the briefings we have received in the Committee on Foreign Relations of the Senate. They give me great cause for concern as to whether America's policies will avoid war.

Now is the time to analyze America's policies, irrespective of the tempo of public opinion and disregarding the propaganda of America's Military Establishment, because on the shoulders of 98 Members of this body and on the shoulders of the Members of the House of Representatives, I believe, rests the greatest power for peace in our country and possibly in the world.

DEFENSE NEEDS REQUIRE CAREFUL STUDY, NOT HASTE

But it calls for reflection by Congress. It calls for an insistence upon the adoption of a "stop, look, and examine" attitude on the part of the Members of Congress.

I think we have a bill before us tonight which calls for much more examination by the Members of the Senate before they vote than has been given to it up until this hour.

As this draft extension bill has proceeded rapidly through the legislative mill, I have regretfully come to the conclusion that once again we are being confronted with the ultimatum-type legislation. We are being told that we must pass a 4-year extension of the draft because the Berlin crisis threatens, and the Congress must not show any signs of retreating in the face of force.

Yet, in extending the draft for 4 more years without change or correction of its critical inequities because of a crisis which threatens us momentarily, the Congress is, in effect, being stampeded. We are expected to write something into law for 4 more years because of conditions which prevail at the moment, and may or may not prevail for the next 3 months.

I find little in the hearing record placed upon our desks to justify the bill in its present form as an essential long-run component of America's national defense. In the House hearings the Assistant Secretary of Defense for Manpower Personnel and Reserve, Mr. Finucane, was asked why the 4-year period was requested, rather than a shorter one of perhaps 2 years. He replied:

I think your question is a good one, sir. Historically, the draft has, in the wisdom of Congress, been extended for 4 years; and we would like, simply for conformity's sake, to carry on with the habits of the past.

I have come to expect that mental attitude from those in the Pentagon Building. But it should not prevail in the Senate. I am not interested in the extension of any legislation at any time for conformity's sake. Legislation should be extended on its merits, or it should not be extended at all.

We had this issue before us in 1948. Before concluding, I shall offer two amendments to the bill. The first leaves no question in regard to the termination date.

I now send to the desk the first amendment, and ask that it be printed and lie on the table, and be made available to Senators tomorrow. It is an amendment to House bill 2260, in line 6 on page 1, to strike out "1963" and insert "1961."

The PRESIDING OFFICER. The amendment will be printed and lie on the table.

Mr. MORSE. The purpose of the amendment is to tie down with certainty the duty of the Congress to reexamine the draft law in 1961. I fought this fight in 1948, when the Senate approved my amendment reducing the extension to 2 years. I am satisfied that in the years ahead, as we look back over the record in support of a 2-year extension and a 2-year extension only, history will justify the recommendation I make tonight.

We have no stronger evidence than the record of the House Armed Services Committee from which it recommended a 4-year extension of the draft, with no review required by the Congress before 1963.

INDICATIONS ARE THAT DRAFT IS OBSOLETE

In my judgment, we are being asked to take a legislative course of action which is not in the best interests of peace nor in the best interests of the security of my country, nor in the best interests of the millions of young men who will be brought under an obsolete system of military manpower.

I am at a loss to understand why we have a proposal for a 4-year extension of the draft, when even the printed record shows that the spokesman for the Pentagon, when asked why a 4-year extension was being requested, rather than a 2-year extension, replied:

I think your question is a good one, sir. Historically the draft has, in the wisdom of Congress, been extended for 4 years; and we would like, simply for conformity's sake, to carry on with the habits of the past.

That reason is not good enough for the senior Senator from Oregon, and I do not think it is good enough for the American people. We should do a better job of representing the American people and legislating for them than that kind of reasoning would premise.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. MORSE. I yield to the Senator from Minnesota.

Mr. HUMPHREY. Does the Senator's proposal also include a manpower study commission during the 2-year period? I know that the proposal of the Senator from South Dakota [Mr. CASE] relates to that subject; and the Senator from Alaska [Mr. BARTLETT] addressed himself to the same subject matter. It had been my intention to suggest such a proposal. I have in my folder a draft of a proposed amendment. I am deeply moved by the evidence before the committee. I read the record of the hearings before the Senate committee, as well as the record of the hearings in the other body. There were extensive hearings in the House of Representatives.

I have been concerned over the use of manpower by the military, and by what are considered to be the inequities of the system, as well as the inadequacies of the system in terms of manpower utilization.

I believe, if I am correctly interpreting the purpose of the Senator from Oregon, that what he is recommending is that the draft be extended for 2 years, and that during that period of time there be a critical and constructive reexamination of the manpower policy relating to our national security. Is that correct?

Mr. MORSE. The Senator is absolutely correct. That leads me to a subject which I did not intend to discuss at this time. I shall refer to it only briefly now, and discuss it later in my speech in greater detail.

My second amendment is an amendmen to the Case substitute. The Senator from South Dakota has just offered a modifying amendment to his amendment, which in my judgment makes the amendment better, but not good enough. I shall offer an amendment—and I will put it in proper form to send to the desk later—to eliminate entirely from section (b) of the amendment of the Senator from South Dakota, which calls for the creation of a Commission on Military Manpower, and provides that certain members—six, I believe—are to be appointed from civilian life and confirmed by the Senate, the provision that one member shall be appointed from the Armed Forces in active military duty.

For reasons which shall be expressed in some detail later in this speech, I am opposed to the appointment of a

single member of the Commission on Military Manpower from those in active military duty. The job of those at the Pentagon Building is to carry out the policies of the Government, not to create them.

CIVIL CONTROL OF MILITARY AND FOREIGN POLICY SHOULD BE MAINTAINED

As I shall show in greater detail later, I am greatly concerned about the degree to which, in this democracy, we are turning over policymaking to those in the Pentagon Building. Such a trend must be stopped, in my judgment, in the interest of self-government.

It must be stopped in the interest of preserving democratic procedures and processes. It must be stopped if we are to keep faith with the spirit and intent of the Constitution of the United States in regard to the place of the active military in the operation of this Government. I am very fearful that we are much further down the road toward undue military influence in operating the Government than is good or safe for democracy.

I will not support the extension until at least I have done my best to eliminate military policymaking from the organization of any manpower commission, because a manpower commission will use the Pentagon and its personnel for information and witnesses. They should not be given a vote in determining the policy of this Government while they are actively engaged in the military. I am not going to do it even to the extent of one member.

The Senator from South Dakota has greatly improved his proposal by changing it so that of the seven members of the Commission, only one will be an active military official. My amendment would eliminate that one, for reasons which I shall discuss later in my speech.

Mr. HUMPHREY. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. HUMPHREY. I have listened to much of the presentation of the able Senator from South Dakota [Mr. CASE]. I feel that the suggestion he is making, that is, the theme and the purpose of his Commission, is surely very creditable and desirable, and something that we should put into effect. As the Senator from Oregon has so well pointed out, the basic manpower policy relating to our national security, which goes deeper than merely the military, is something which ought to be decided by civilian authorities of the Government. In the instance of the Commission, it seems to me that at least the Commission ought to have full civilian orientation.

The Senator's amendment for a 2-year extension surely should be understood as being designed to provide adequate manpower for our defense. I would not want the RECORD in any way to indicate that the limitation of 2 years would in any way weaken our military strength. In fact, I believe that the Senator from Oregon and the Senator from Minnesota both agree that the military at the present time is inadequate to the responsibilities our Nation faces.

I regret that yesterday I was not on the floor of the Senate to associate myself with the remarks of some of our distinguished colleagues on the importance of having adequate plans for the forces in our Military Establishment, and the importance of the administration keeping the Army, the Navy, the Marine Corps, and the Air Force up to the strength authorized by Congress.

On the one hand, Congress lays down what it believes to be policies which are required for the defense of the Nation—and that is the prerogative of the Congress under the Constitution—and on the other hand, the President, acting through the Bureau of the Budget, cuts the military forces, even though Congress has determined, after extensive hearings, what the size of such forces must be for the national security.

I, for one, protest that kind of false economy, that kind of rationalization, that kind of economics in connection with our national security, and that kind of putting the so-called threat of inflation ahead of the threat of the power of the Communist military and economic machine.

It is deplorable and indefensible. I do not wish my remarks today, in support of the thesis and proposal of the Senator from Oregon, to be interpreted as anything but a desire basically to strengthen our manpower policies, rather than to weaken them.

Mr. MORSE. Mr. President, I thank the Senator from Minnesota for his constructive contribution to my discussion of the matter. The Senator from Minnesota knows me well enough to know that I completely share his point of view that whatever we do on the military manpower issue should be done with the objective in mind of strengthening the security of our country, not weakening it.

Let me say to the Senator from Minnesota that the proposed amendments I am offering are offered on the basis of my very deep conviction that my amendments will give us a stronger security than we would have if we were to pass a bill which did not require a reexamination and affirmative action at the end of 2 years, and instead perpetuates an inadequate system for 4 more years.

When I get to that section of my speech I intend to say something about the proposals of the Senator from South Dakota [Mr. CASE]. In view of what the Senator from Minnesota has said about the comments of the Senator from South Dakota earlier this afternoon, I wish to say that I believe the Senator from South Dakota has made a great contribution on a high level of statesmanship in the debate on military manpower in his remarks today.

The proposal of the Senator from South Dakota for a Commission on Military Manpower has an objective which ought to receive the enthusiastic support of Congress. We may differ—as I have expressed my difference— on some procedural details for the establishment and the operation of the Commission, but I do not see how we can think of not adopting some such program, perfected, if we can perfect it, as recommended by the Senator from South Dakota.

In my judgment, the Senator's proposal ought to set a termination date for the draft and require reaffirmation by Congress at the end of that termination date of 2 years.

On page 2 of his proposal the Senator from South Dakota states:

(h) The Commission may from time to time report to the President and shall, not later than January 31, 1961, submit to the President for transmittal to the Congress the results of its study and investigation together with such recommendations as it deems advisable. The Commission shall thereafter from time to time make such further reports and recommendations as it deems advisable. The Commission shall cease to exist on July 1, 1963.

AMENDMENT FOR 2-YEAR EXTENSION

It may be said with some merit that obviously that language implies that on January 31, 1961, Congress will have before it at least the subject matter of the report which will make it easy for it to proceed to reexamine the draft. However, I much prefer that we get specific language into proposed legislation which automatically ends the draft, as the amendment I have sent to the desk would do, in modification of the bill before us, and then decide, at the end of that 2 years, what kind of manpower program we ought to have, taking into account the report of the Commission which the amendment of the Senator from South Dakota would create.

Mr. CASE of South Dakota. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. CASE of South Dakota. First of all, I should like to say that I appreciate the comments which the Senator from Oregon and the Senator from Minnesota have made with respect to the purpose of my amendment. What bothered me about the consideration of the extension of the draft, both in the House and in the Senate, was that it seemed to me it was being moved forward without as much time as I should like to have seen devoted to the study of the subject in committee, and without allowing reaction time, so to speak, for the country to realize that this matter was being considered and presumably would be disposed of. Therefore I felt it was important to say something about the imperfections of the Draft Act in its operation and administration, with the view of at least getting an opportunity for the Senate to register an opinion that there ought to be an improvement and that we ought not merely affirm the need for improvement and the existence of errors or inequities in the administration, without taking some step toward correcting them.

Personally I have no objection to having the entire Commission a civilian Commission. The draft of the amendment originally, as I said, came from another member of the Committee on Armed Services, and in his form he proposed a Commission to consist of four civilian members and three military members from the Pentagon. In deference to the idea that he had in mind, and in the hope that perhaps it might develop a little more support, I felt that changing the composition of the Commission to six civilian to one military would be much better than a relationship of 4 to 3.

So far as I personally am concerned, I would prefer to see it an entirely civilian commission; and as to that portion of the amendment suggested by the Senator from Oregon, I would support it. However, I think in view of my discussion with some other Senators on the floor, I should leave the amendment as I now have it modified—6 to 1.

While I am on my feet, I should like to say also that I listened with interest to the first part of the Senator's discussion this evening, when he reviewed some of the things he said in 1948 concerning the wisdom of our taking a new look at the developing strength, the developing military intelligence, and the attitude of the Russians generally. I think we would have been wise had we heeded that advice at that time. I do think that some of our problems today are an outgrowth of our failure to recognize a development which was taking place in Russia—educational development, scientific development, and industrial development. Had we properly educated ourselves or recognized, perhaps, what was there for us to see at that time, some of our problems today would be small.

Mr. MORSE. I thank the Senator from South Dakota.

Mr. McNAMARA. Mr. President, will the Senator yield for a question?

Mr. MORSE. I yield.

Mr. McNAMARA. I should like to ask either the Senator from Oregon or the Senator from South Dakota: Did the Committee on Armed Services consider this proposal, and did they vote on it? The Senate has a unanimous report from the committee. I should like to know from the Senator from South Dakota if his proposal was considered and voted on by the committee.

Mr. CASE of South Dakota. The matter was discussed within the committee. There were more than two members of the committee—perhaps 3 or 4 members, at least—who by discussion indicated some support for the idea. But the amendment was not put to a formal vote. It was not formally presented for a record vote or for a yea-and-nay vote in the committee. I think the discussion indicated that it would not carry, and the person who brought up the matter decided not to present it formally in the committee for a vote.

Mr. McNAMARA. I think that was unfortunate, because there is a good chance that it might have been adopted had it been presented in the light in which it is now presented in the Senate. I for one certainly hope the chairman of the committee, the Senator from Georgia [Mr. RUSSELL] will consider accepting the amendment.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. COOPER. The distinguished Senator from South Dakota [Mr. CASE] and the distinguished Senator from Oregon [Mr. MORSE] are rendering a service to the Senate and to the country in developing the subject of the continuation of the draft. I remember, in 1948, at about this time of the day, hearing the able Senator from Oregon speak eloquently upon this subject. On that evening he expressed his concern that the Senate was coming to believe it inevitable that the draft should be continued.

I remember that I spoke that evening against an indeterminate draft period, saying that the draft was not a part of the American tradition. As I remember tonight, I voted with the Senator from Oregon to limit the extension of the draft to 2 years.

Today we are in a much more difficult world situation, but whatever my vote will be—and it must be for extension—the considerations which these two able Senators have brought before the Senate and the country this evening are important, for they bear on our total foreign policy. Whatever may be the outcome of the vote, whatever may be the gravity of our situation in the world today, I am glad that the Senators are rendering this service to our country.

Mr. MORSE. I remember very well the great contribution which the Senator from Kentucky made to the debate in 1948. I appreciated then, as always, his support on an issue which I felt was not fully understood within the Senate, and, therefore, at the moment was not very popular.

The Senator from Kentucky did support me in the position I took in 1948. I think our debate was helpful in many ways which do not show on the surface in connection with the military manpower policies of this country.

I quite agree with the implications in the statement of the Senator from Kentucky that when a question such as this one is raised, which is all mixed up with feelings about national security and the threat of Russia, it is very easy to be misunderstood. Therefore, his words of commendation for raising the issue tonight are very much appreciated by me.

The Senator from Kentucky is one of the fair-minded Members of this body, before whom I always feel I will get a hearing on the merits. He and I may end in complete disagreement on the merits; but I always feel that when the Senator from Kentucky listens, I am talking to an open mind which is perfectly willing to give fair consideration to the point of view I wish to express.

I am not sure but what we have already just about reached the point in our country where it is almost impossible to get reasoned judgment on the part of many of our people on an issue which is so pregnant with deep psychological reaction, namely, the matter of national security in relation to Russia. I shall say something about that general problem later, because these things are all intertwined.

The fact is that we have on the floor of the Senate tonight not only an armed service problem but a foreign policy problem, as well. We cannot separate the work of the Committee on Armed Services and the work of the Committee on Foreign Relations on at least 95 percent of the subject matters with which those two committees deal.

That is why now, as a member of the Committee on Foreign Relations, with my background of experience as a member of the Committee on Armed Services for a good many years, I want to try to focus attention on what I think are some of the interrelationships. Even in our era we can follow a course of action which will result in our winning a horrible war and losing our destiny. That is why I do not favor quick action on any of these subjects.

Returning to the bill, because of the crisis atmosphere in which the bill is being considered, it is proposed to freeze for 4 years a totally inadequate defense manpower situation.

Every careful study of national defense about which I know—at least, those we have been permitted to know about—has stressed the inadequacy of the present selective service program in furnishing the manpower which will be needed by our country over the next several decades.

The kind of manpower which we need is that which is highly skilled and trained in the complex instruments of modern warfare, and which is best furnished by career servicemen. The truth of the matter is that the draft has been a military manpower expediency crutch on which the country has been leaning for too long a time.

The cry is raised one must vote for this bill or be universally condemned as being soft on communism. I am surprised at the editorial slant of many of America's newspapers in the last several days.

STRONG DEFENSE NOT ACHIEVED BY DRAFT

Mr. President, it has reached the point where a Senator who disagrees with the policies recommended by the administration in the field of defense or in the field of foreign policy must expect to be hit with the charge that he must be soft on communism.

But the fact is that those of us who are asking for the most penetrating, critical analysis of the policies of the Government in respect to our armed services and our defense problems and our foreign relations are doing so because we want our country to be strong enough at all times to meet the Russian threat, and to be able to do so by means of a course of conduct which will strengthen the peace, and will not necessarily bring on a war.

I am very fearful that many of the policies of my Government do not at this time strengthen the chances of peace, but that, instead, they increase the danger of war. That is why I speak out.

Mr. President, I challenge the contention that those of us who raise questions about extension of the draft are soft on communism, because I do not think the needs for the national defense are being adequately served at all by the draft.

There is nothing wrong with those who are drafted; but there is a great deal wrong with a system which brings them into the military service at the lowest possible level, usually without regard to their skills, gives them the elements of military training—but not the kind of proficiency in modern warfare that the Nation really needs its Armed Forces to have—and at the end of 2 years returns them to civilian life, from which they have lost 2 valuable years, without even

making provision for their education and training following that service.

From the point of view of the young men who are involved, I think it is a sheer scandal to continue to draft men into the armed services without providing them with education and training benefits when they leave.

But from the point of view of the country and its long-range defense needs, I see in the bill, as it is now before us, provisions for a 4-year extension of a system which we shall rely on only at our peril, inasmuch as the bill makes it impossible to obtain, during those 4 years, a manpower program which will assure the Nation strong, well-trained Armed Forces capable of protecting the Nation and its interests over a period of many years, and probably decades, of Communist threat and menace.

What I want for our country's armed services is skill and expertise. But under the draft, such skill is not provided, because the drafted men serve for only 2 years. The proposed extension of the draft is, of course, a penny-pinching way of providing for the national defense. The military forces thus obtained can be obtained more cheaply than it is possible to obtain well-trained career forces of equal numbers.

It is no reflection on the young men we are discussing to point out that they could give the country better service as career soldiers than they can as drafted soldiers, to whom military service is but a duty to be performed and gotten out of the way as quickly as possible and as easily as possible.

The obsolescence of the draft should cause us to stop, look, and investigate, and to ask whether this is the time—at this hour of new emergencies arising on the international horizon—for us to do no more than extend the status quo, or to face up to the military manpower needs of the country, and to proceed with a proper program and the funds it requires, so as to obtain the skilled military personnel we shall need if we are to meet the continuous threat from Russia on the military front.

I think the story we find is a pitiful one, when we make a case study of the men drafted, and see what is done under the draft with the potential skills of those who are in our Military Establishment.

If we were to translate those losses into dollars—and, of course, they are subject to some evaluation from the standpoint of financial value and financial loss—I am satisfied that we would find that with each year's operation of the draft, we waste hundreds of millions of dollars in terms of lost personnel services in relation to the potential competency of those who are drafted. In many, many cases—in fact, in tens of thousands of them—the manpower drafted is not used where it should be used.

This criticism has been before us for years. It will be found in the 1948 debates. But the record of the Pentagon since 1948 is one of gross failure to bring about the reforms which should be made in respect to this problem.

We remember that in the 1956 campaign, a few of us discussed the need for a great revision of the country's draft policy. Adlai Stevenson discussed it. I discussed it many, many times in the course of my campaign—as did other candidates in 1956. Of course, it was supposed to be impolitic, but I asked, "So, what?"

THE STATUS QUO IS NOT SUFFICIENT

It is a matter of vital concern to the people of the country and to the national welfare. But here we are in 1959; and what we have before us now is, to all intents and purposes, a proposal to continue the same errors—not a proposal that augurs well for any reform in our military manpower policy, but a proposal to continue the status quo.

A great paradox is to be found in the argument that we must do this because we must show Russia that we mean business. I have no doubt that the Russian leaders probably know better than most of the people in our country the shortcomings and inefficiencies and deficiencies of the American draft system. I am satisfied that if the draft is extended, tomorrow, for 4 years, no concern will be caused in Russia. Extension of our draft is not going to put Russia in any greater jeopardy than she is now, and I think Russia knows that perfectly well.

If we really want the Russian leaders to raise their eyebrows about America's military defense program let us proceed with a military manpower program, not with a draft, but one that will build up a skilled, career American military service of able technicians, well trained, on a career basis, for the development of our country's defenses. That is essential, because in the field of science those defenses are ever changing.

That kind of career military personnel would make some impression on the Russian leaders.

RECOMMENDATIONS BY EXPERTS SHOULD BE IMPLEMENTED

All this talk in the debate as to how important this draft bill is, from the standpoint of Russia, is highly fallacious. I think it is, for the most part, a discussion that will lull the American people into a false sense of security. I do not think the 4-year extension of the draft is going to give the American people the security to which they are entitled; but the correction of our military manpower policies, which have been recommended now for some years by various experts who have gone into it, is the line of approach which I recommend to the Congress.

"Oh," it will be said, "Mr. Senator, why do you go along with any extension of the draft, then?" I would not if we had the manpower proposal before us that we ought to have before us, and which ought to have been prepared by now. I think the Commission called for by the Senator from South Dakota ought to have been established by now. Then we would be passing, tomorrow, on a military manpower bill that would really come to grips with the needs of this country's defenses so far as military manpower is concerned.

But certainly, Mr. President, I do not think we ought to extend the draft beyond the 2-year period. Instead, I believe we should use the next 2 years to revamp our military manpower program, as called for in the amendment of the Senator from South Dakota [Mr. CASE], and put the recommendations into effect even before the end of the 2-year period, if possible.

Mr. President, under authority previously granted, at this point in my remarks I ask that there be printed a portion of my argument which appeared in the CONGRESSIONAL RECORD, volume 94, part 6, page 7325. This is a summary statement of my position on my amendment at tha ttime to limit to 2 years the extension of the draft legislation.

Mr. MORSE. Mr. President, I desire to summarize my position on the amendment by briefly answering the major arguments used against my amendment this afternoon. They were rather interesting arguments, but if I were trying a case I would say most respectfully that most of them would fall under the objection of being irrelevant, immaterial, and inconsequential.

One of the arguments made earlier in the debate this afternoon was that 2 years from now might find us at the end of the session with such a congested calendar that we could not give careful consideration to the question of whether or not we should continue the draft. I think that is not a very sound argument, because I do not know how a bill could receive any more careful consideration or go through a longer hearing, or receive more hours of attention from committee members than we have given to this bill. I answer the argument that we may not have time 2 years hence to consider this problem, Mr. President, by offering a record of the Armed Services Committee over weeks and weeks of hearings on this bill in this crowded session of Congress as my exhibit A in complete rebuttal of that argument. We can take judicial notice that this issue will always receive thorough attention by Congress.

Second, I am privileged to say, because several Senators have said to me in the cloakroom they are inclined to go along with the committee report, that a good many members of the Armed Services Committee, of which I also am a member, have reconsidered very carefully the provision of the bill for a 5-year draft and have decided to vote for my amendment. I am privileged to say that at least five of us on the Armed Services Committee intended to vote for my amendment for a 2-year period instead of a 5-year period. I say that because I want the Members of this body to know that there has been a considerable amount of rethinking about the provision within the Armed Services Committee, and there is not on this provision, as there is on most sections of the bill, a unanimous report of the Armed Services Committee.

* * * * *

I want to see the obligation and responsibility placed upon the Congress to review at the end of 2 years the policy now being adopted, and at that time decide whether or not we want to continue the draft. I think it will be found that after 2 years our reserves will have been built up, and that we shall have done a pretty good job of educating the American people to an understanding of the need for supporting an adequate Military Establishment.

* * * * *

The last point is, my amendment is in line with action already taken by the House. The House voted a 2-year provision. I think, Mr. President, we should follow in this instance the action taken by the House, and adopt my amendment.

* * * * *

Following this statement of my position there appears in the CONGRESSIONAL RECORD, volume 94, part 6, page 7326, the rollcall votes by which the Senate adopted my amendment limiting the extension of the draft to 2 years. It reads as follows:

The PRESIDING OFFICER. The question recurs on agreeing to the amendment offered by the Senator from Oregon. The yeas and nays having been ordered, the clerk will call the roll.

The Chief Clerk called the roll.

Mr. WHERRY. I announce that the Senator from Connecticut [Mr. Baldwin], the Senator from Ohio [Mr. Bricker], the Senator from South Dakota [Mr. Bushfield], the Senator from Indiana [Mr. Jenner], and the Senator from Maine [Mr. White] are necessarily absent. If present and voting, the Senator from Connecticut [Mr. Baldwin] would vote "nay."

The Senator from New Hampshire [Mr. Tobey] is absent on official business.

The Senator from New Hampshire [Mr. BRIDGES] is detained on official business. If present and voting, the Senator from New Hampshire would vote "nay."

Mr. LUCAS. I announce that the Senator from Kentucky [Mr. Barkley], the Senator from Texas [Mr. Connally], and the Senator from Idaho [Mr. Taylor] are absent on public business.

The Senator from New Mexico [Mr. Hatch] and the Senator from Washington [Mr. MAGNUSON] are absent by leave of the Senate.

The Senator from California [Mr. Downey], the Senator from Nevada [Mr. McCarran], the Senator from Oklahoma [Mr. Thomas], and the Senator from New York [Mr. Wagner] are necessarily absent.

If present and voting, the Senator from Kentucky [Mr. Barkley] and the Senator from New Mexico [Mr. Hatch] would vote "nay."

The result was announced—yeas 47, nays 33, as follows:

YEAS—47

Aiken	Ives	Pepper
Brooks	Johnson, Colo.	Revercomb
Buck	Johnston, S.C.	Robertson, Va.
Butler	Kem	Russell
Byrd	Kilgore	Sparkman
Capehart	Langer	Stewart
Chavez	McCarthy	Taft
Cooper	McClellan	Thomas, Utah
Dworshak	Malone	Umstead
Eastland	Maybank	Watkins
Ferguson	Millikin	Wherry
Flanders	Moore	Wiley
Fulbright	Morse	Williams
George	Murray	Wilson
Hill	O'Conor	Young
Hoey	O'Daniel	

NAYS—33

Ball	Hawkes	Martin
Brewster	Hayden	Myers
Cain	Hickenlooper	O'Mahoney
Capper	Holland	Reed
Cordon	Knowland	Robertson, Wyo.
Donnell	Lodge	Saltonstall
Eaton	Lucas	Smith
Ellender	McFarland	Stennis
Feazel	McGrath	Thye
Green	McKellar	Tydings
Gurney	McMahon	Vandenberg

NOT VOTING—16

Baldwin	Downey	Thomas, Okla.
Barkley	Hatch	Tobey
Bricker	Jenner	Wagner
Bridges	McCarran	White
Bushfield	Magnuson	
Connally	Taylor	

So Mr. MORSE'S amendment lettered "G" was agreed to.

To continue, Mr. President, in the CONGRESSIONAL RECORD, volume 94, part 6, page 7568, there appears the following exchange:

Mr. MORSE. I want to make one statement in connection with the remarks of the Senator from Maryland, because I know his devotion to accuracy. I think the comment he made concerning the reduction of the life of the bill by my amendment yesterday, from a 5-year to a 2-year basis, with the right of Congress at the end of the 2 years to vote to continue the draft if it was considered that an emergency existed at that time, seems to give the impression that the majority of the Armed Services Committee was against that amendment. The record is perfectly clear that 7 of the 13 members of the Armed Services Committee voted for the 2-year amendment.

Mr. TYDINGS. In the House?

Mr. MORSE. No; in the Senate yesterday afternoon. A majority of the members of the committee, after thinking over the matter, decided to support the amendment.

Mr. TYDINGS. I find the Senator from Oregon is correct in that statement. I had assumed before the Senator from Oregon corrected me that such was not the case. I find I was in error.

Mr. MORSE. I have talked also to those men, and they have told me that after thinking the whole thing through, with the right of the Congress to continue the draft after 2 years they thought the amendment was a good amendment. They represent a majority of the Armed Services Committee. The fact remains that a majority of the Armed Services Committee voted for the amendment.

To conclude the excerpts from the 1948 RECORD, Mr. President, I cite now, in part, my remarks which may be found in the CONGRESSIONAL RECORD, volume 94, part 6, pages 7579–7580, as follows:

I desire to say at the outset, Mr. President, that I hope I have made clear that I think a draft is necessary in order to meet an emergency in international affairs which I believe exists at the present time. Unless I were convinced that a serious emergency exists, I know of nothing that could possibly persuade me to vote for a draft in peacetime. I said a few moments ago in colloquy with the Senator from Maryland that I believe the draft bill should be put into effect now and that we should not wait for any future declaration of the President for putting it into effect, because after spending the weeks that those of us in the Armed Services Committee spent, both in public hearings and in executive conferences, with men high in our Government, including both civilian and military officials of our Government, I reached the conclusion—and it was very difficult for me to reach it, for I would like wishfully to think that there is no real danger of war—that there is in actually a great danger of war. If I did not think there was a great danger of war at the present time I would not vote for any draft bill.

I am inclined to think a great many millions of American people are "enjoying" a false sense of security in America tonight, because I am one who honestly believes that our defenses are so weak today that our national security demands their strengthening as rapidly as we can possibly strengthen them. Why do I say that, Mr. President? I say that because in my judgment the record of Soviet Russia since V–J Day is clearly a record of noncooperation with the United Nations in the interests of promoting world peace.

Furthermore, I think the record of Soviet Russia certainly raises the presumption that she does not have friendly intentions toward the United States. Therefore, it is my opinion that unless we proceed to make ourselves sufficiently strong to protect our national security and enforce the peace, if necessary, we may wake up in the not-too-distant future to discover that Russia is taking aggressive acts toward us that will force upon us a state of war.

On the other hand, Mr. President, I am convinced that if the American people will unite behind a program for the strengthening of our national security to the point that we can defend the peace, that will greatly alter Russia's attitude and policies in the field of international relations.

Therefore, I lay that down as the major premise of this speech. I reiterate it in this sentence: I am supporting a draft in peacetime because I am convinced that a strengthening of our national security is necessary in order to make perfectly clear to Russia that we shall remain united in a determination to resist any aggressive attitude or policies or acts on her part toward disrupting world peace.

The second premise to which I wish to move in this argument is that I am also cognizant of the fact that an emergency never remains in a status quo condition. Human events and international events do not stand still. I think we must face the fact most solemnly tonight that we are either going in the next 2 or 3 years to solve most of the problems that are endangering the peace of the world today or by the end of that time we shall find ourselves much nearer to war than we are even tonight.

I shall put that in a different way, because unless that viewpoint of mine is understood, it is impossible to understand my position on the pending bill or on the amendment. I restate it this way: I do not think that human events or international relations ever stand still. We are moving in the direction of something. We are going to move in the direction of something during the next 2 or 3 years so far as international relations are concerned, and that something is going to be either more peaceful relations with Soviet Russia or more warlike relations with Soviet Russia.

I do not take, and have never taken, the position that the full responsibility for working in the direction of peace at the present time rests upon Soviet Russia. I think we also have a great responsibility. I think it is too easy for us to see ourselves as we like to think we are, and it is too easy to see the Russians as we imagine them to be. I believe there are many things we must do in international conferences, in our relations with Russia, which we have been inclined stubbornly to resist in some of our international conferences with Russia. I think we must get over the idea of giving to the American people the impression that we are completely right and Russia is completely wrong on all matters.

I am convinced that the record is perfectly clear that the overwhelming responsibility for the strained relations existing between those two great powers has been Russia's noncooperation in the United Nations and in international conferences in Europe. We have only to look to her negative attitude and the constant use of the veto to establish my point.

I think it is also clear that there is considerable evidence available to us at this time that was not available as short a time as 120 days ago. That is not a long time. The Russian leaders finally started to understand that they could push our country just so far until we would finally say, "That is as far as we shall go." I think Russia is begining to read the stop signs which we have placed on the highway of international relations. I think one of those stop signs which has had a very persuasive and convincing effect upon the Russian leaders is the action we have already taken in the Congress of the United States in connection with national security. I believe Russia discovered that we meant business, so far as defending ourselves and strengthening ourselves so that we could defend the peace, when we voted appropriations for a great increase in the Air Force.

I think Russia read another stop sign when it learned we intended to vote the

necessary appropriations for Navy improvement.

I think Russia read another stop sign, Mr. President, when it realized we were going to pass in this session of Congress substantial military manpower legislation.

I believe, Mr. President—and this is the third premise I want to lay down—that Russia will thoroughly understand that a draft bill passed at this session of Congress, with a provision in it that it will not be continued after 2 years, without affirmative action of the Congress, and that we shall not take men for more than 18 months, if my amendment should be adopted, will be a strong indication that we intend to remain united in support of an adequate national-defense program, but at the same time, to frame a law and pass it in a form which also shows that we are working for peace and not for war.

That is why, Mr. President, I fought yesterday as hard as I did for the adoption of an amendment which would require affirmative action on the part of Congress after 2 years. I said in the course of my speech in support of that amendment that I felt a 2-year provision instead of a 5-year provision would serve clear notice not only on Russia, but on our friends in freedom-loving countries, that we do not have any intention to build up over a 5-year period or a longer period a powerful military machine, with the danger that once it is put into operation it may follow the course which military machines have so frequently followed in the course of history, of ultimately leading countries into war because of the power of the military machine itself. I said, in the course of my speech in support of that amendment, that in the United States we need to guard against the development of a military psychology. We need to recognize always that there is a clear line of distinction between preparedness to protect the national security of the Nation and preparedness to conduct a war. I want to repeat that, Mr. President, because that sentence, too, sheds a great deal of light on my thinking about our Military Establishment. There is a great difference between developing military preparedness necessary to protect the national security of the country and developing a military preparedness program for war.

I think we must constantly recognize that our self-assurance that our ideals and objectives are peaceful is not always shared by peoples in other countries. We have only to go to other countries to hear disturbing and alarming discussions with reference to American imperialism and American military plans and objectives. We can travel in parts of Europe today and find people who are convinced that it is only a matter of time before they will be caught in the middle of a war between Russia and the United States. Although we know we seek only peace, that is not agreed to and accepted as a fact by a great many people, who are not in the satellite countries, but are in countries which are still free and friendly to the United States.

What I am trying to point out in this part of my remarks is that we have a duty, it seems to me, in the interest of peace, to develop a draft law which will strike that happy balance, giving to us the manpower protection we need to protect the national security and prepare us to defend ourselves in case of aggressive attack, and the type of manpower legislation which might create the impression, and would be inclined to create it, that our endeavor is not an endeavor to prepare for peace, but to prepare for war. There is quite a difference.

With the precedent of 1948 as my background, Mr. President, I shall urge tomorrow the adoption of my similar amendment this year to limit to 2 years the extension of the draft.

Mr. President, I now send to the desk another amendment, amending section (b) of the amendment of the Senator from South Dakota to H.R. 2260, and ask to have it printed and available to the Senate tomorrow. I will say to the gentlemen at the desk, that if it needs any perfecting, it will be understood that I shall do so when I close my speech.

The PRESIDING OFFICER. Does the Senator from Oregon wish to offer his amendment?

Mr. MORSE. I do not want it called up; I want it printed and at the desk, ready to be called up tomorrow.

The PRESIDING OFFICER. The amendment of the Senator from Oregon to the amendment of the Senator from South Dakota, as modified will be received, printed, and lie on the desk.

CONGRESS LOSING ITS EXCLUSIVE WARMAKING POWER

Mr. MORSE. Now, Mr. President, I want to discuss this problem in relation to a broader facet, because I do not see how we can come to grips tomorrow with a military manpower piece of legislation and not give some thought to the relationship of it and our other defenses to present trends in American foreign policy.

Every Member of the Senate knows, but it ought to be restated and emphasized for the RECORD, that article I, section 8 of the Constitution of the United States provides the powers of Congress, and one of them is that Congress shall have the power to declare war. I am afraid, however, Mr. President, there is a great danger that that section of the Constitution may become a dead letter.

As I listen to witnesses from the Pentagon Building and witnesses from the State Department before the Foreign Relations Committee, I am filled more and more with the fearful thought that we have already reached the point in our history where there is a lack of full appreciation of the meaning of that section of article I, section 8, of the Constitution—that it is the Congress which has the power to declare war.

I am very fearful that there are forces of subterfuge at work in America today in regard to article I, section 8, of the Constitution. I am fearful that there is not a full appreciation, either at the Pentagon Building or in the State Department, or the White House, of the meaning and full implications of article I, section 8, of the Constitution—that the Congress shall have power to declare war.

That language becomes empty, Mr. President, if officials in the Pentagon Building and the State Department follow policies under which we shall wake up, some second, to discover we are at war, and that the Government comes to Congress only to ask Congress to make it official.

It has been said among my colleagues that war is inevitable. They have not said it for the RECORD yet, but I have heard colleagues take the position, as recently as this morning, that we are not entitled to know what the policies of the Pentagon Building and the State Department are in respect to the Berlin crisis.

Yet, those policies mean the difference between war and peace, and those policies can determine whether or not we will be at war at any given moment.

So long as I am in this body, I do not intend to remain silent when I believe any section of the Constitution is being defeated by subterfuge on the part of any executive agency of this Government. When I sit in the Foreign Relations Committee and listen to some of the testimony given in recent weeks by high officials of both the Pentagon Building and the State Department, I find it impossible to escape the conclusion that the American people ought to know. And the American people are not being told. But they will be the ones who will be dying by the millions if we get into a war through an administration's back door rather than as a result of open debate on the facts prevailing at the time consideration is given to a resolution for a declaration of war.

Of course, not one of us would fail to vote for a declaration of war after any horrendous act of aggression had been committed against us. We all know that.

But this is a different world from even the world of 1917. This is a different world from even the world of Pearl Harbor. We are now living in a time when one miscalculation by the generals at the Pentagon Building or by the State Department might place us in a war situation, so far as acts are concerned, and I think we have just about reached the point tonight where we are suffering from the bankruptcy of the massive retaliation policy of the Secretary of State.

Last Thursday in a speech in the Senate I said that no one could pray more sincerely than I for the recovery of the Secretary of State from his illness, because I wish no misfortune to any man. But, Mr. President, I am as much opposed to the policies of the Secretary of State in the field of foreign relations as I have ever been, and we are being treated now in the Berlin crisis to a part of the inevitable cost of that course of action. Time and time again his policies have been American unilateral policies. Those policies on the part of the United States time and time again have been policies circumventing the United Nations, and they have been policies, on on some occasions, as I think history will show, outside the framework of international law.

WHOLE WORLD HAS A STAKE IN BERLIN

They have been policies which have alienated millions and millions of people throughout Asia and Africa, some of whom are beginning to make known their views.

Those people, too, have rights in Berlin. They do not have treaty rights, Mr. President, but they have rights to peace. They have rights to live, which the course of action which Russia and the Western Powers follow may very well take away from them.

I say to the leadership of India and the leadership of the free nations of Asia and Africa tonight, "Make your voices heard before it is too late. Raise your voices, and quickly, because the danger is that the leaders of the Western Powers and of Russia may take a course of

action in the next few weeks which history will record as the most immoral chapter in the history of mankind."

I weigh my words solemnly tonight, Mr. President. A nuclear war cannot be justified by my country or by Russia. It is immoral, and it cannot be squared with the Almighty's wishes. After all, the greatest allegiance we owe is to God, and the generals in the Pentagon Building of the United States have no right to follow an ungodlike course of action.

When I listened to an American general sit in a committee room and tell me and the other members of the committee that we should be more cynical about Russia, that we should recognize that it is impossible to negotiate, and that we must face up to the fact that sooner or later we shall probably have to drop everything we have—meaning, of course, our nuclear weapons—I was aghast. I replied to him, "If we follow that philosophy and that course of action, then the only group ahead in this great struggle will be the archeologists 1,000 years from today when they dig up the ruins of the sorry record we made in 1959."

Of course, I am for making clear to Russia, Mr. President, that we do not intend to be intimidated by her threats. I am for making clear to Russia that if she makes an attack upon us in connection with the Berlin crisis, we shall meet force with force. Although we have some shortcomings in our defenses, I want to say, in support of the generals at the Pentagon Building, that I think we are in a military posture where Russia is not going to win a war of any type, conventional or nuclear.

Of course, we will not win in one sense, either Mr. President, as I indicated the other day, when we are through with all the destruction, and when we shall have let loose the awful nuclear destruction in storage today, the resulting radiation will irreparably damage human life and animal life in a large part of the world—undoubtedly practically all of Russia, all of Europe, probably all of the United States and Canada and at least the north tier to the south of us, and part of Asia—for several thousand years.

NUCLEAR WAR IS A MORAL ISSUE

That raises the moral issue. That raises the question of the rights of the peoples of Asia and Africa. Those people are not involved in the dropping of those bombs, Mr. President.

They have a right to insist, I submit, that Russia and the Western Powers proceed now with a course of action which will reduce the danger of letting that terrible radiation loose on the face of this earth, which radiation will linger on, so the scientists say, for several thousand years doing damage to all forms of animal and plant life.

I do not know of any time when all of mankind was ever confronted with a moral issue of such proportions. So it raises, from a philosophical standpoint, the issue of sovereignty. Oh, how easy it is in our country for people to wrap our great flag around them or wave it to tatters, in a great, superpatriotic appeal about sovereignty. We had better recognize, before it is too late, that there is really a greater sovereignty. I would call it the sovereignty involved in the reign of peace. Mankind has reached the point of scientific development where each individual owes it to society to follow a course of action that leads to peace, and not to war.

What is the position our Government takes today? Who knows? However, I think it is fair to say that the best we know is that we are going to play it by ear. We are going to consult with other Western Powers. We are going to be willing to negotiate; and we are going to give them the works if necessary.

The first atomic bomb that Russia or the United States, or any of the Western Powers drops will for centuries alienate the friendship of those who survive in Asia and Africa. That is why I say to the leaders of the nations not involved in Berlin, "Raise your voices now. Now is the time for you to speak out to the Western Powers and to Russia. Now is the time for you to make clear to the Western Powers and to Russia that they have no moral right to follow the policies they are already following in regard to Berlin."

In my judgment the Western Powers and Russia have no right to treat the Berlin crisis as their problem. It has become the problem of mankind. It has become the problem of all civilization.

UNITED STATES SHOULD HAVE PROGRAM FOR PEACE THROUGH UNITED NATIONS

When we speak with high officials in the State Department and respectfully ask, "What about the United Nations?" what reply do we receive? "Eventually we may get to the United Nations." My question is, "If eventually, why not now? Why not now?"

I think we have seen enough to know that the policy of brinkmanship is too dangerous when we wait upon the maneuverings between the Western Powers and Russia, because I believe that both Russia and the Western Powers are following a policy of brinkmanship; and it is slippery, dangerous business.

Incident after incident may occur. We cannot have this kind of jockeying; we cannot have this maneuvering for position; we cannot have armed forces in the air maneuvering as they are now maneuvering, without the danger of falling into the possible catastrophe which I heard the Prime Minister of India, Mr. Nehru, speak about in December 1957, in New Delhi, India, at the Parliamentary Conference of the Commonwealth Nations, when he pointed out, in a memorable speech, that one of those bombs may go off either by design, by reason of disobedience of orders, or by accident. But once one goes off, there will be no time to find the answer to the question "Why?" The nuclear war will be on, and Russia and the Western Powers for all of history will be convicted by their own mutual acts—inexcusable immorality and crime against mankind.

Neither the United States nor Russia can under any circumstances justify the dropping of an atomic bomb, in view of the nuclear power now in storage under the control of Russia and the United States. No moral nation can justify it; and our people are both moral and deeply religious.

I say to the State Department that underneath this great crisis is a deep spiritual issue. It is an issue involving our faith and spiritual values. No man-made misbehavior, demonstrated through the official acts of any nation, can justify, on moral grounds, letting loose on the face of this globe nuclear radiation which for several thousand years would visit upon mankind the horrendous consequences about which I have spoken.

There is the spiritual problem. I know the kind of rebuttal to expect. But it will be a rebuttal of rationalization. It will be a rebuttal of moral escapism. It will not be a rebuttal that one can take into the confessional of his own conscience and, in the presence of his God, offer as either an excuse or an explanation for such an immoral course of conduct.

I apply this thesis to what is a great danger in my country tonight—that we have within this Government men who, I believe, think that a preventive war is unavoidable.

I do not propose to give such military officials any policymaking power. That is one of the reasons that I shall offer an amendment to the amendment of the Senator from South Dakota [Mr. CASE], to make any manpower commission 100 percent civilian. We must make clear to the American military, in the weeks of crisis immediately ahead, that this Government is to be controlled by civilian policies, not by military policies.

We must insist, in my judgment, that we be told more of the facts, if the military have any facts, in regard to what their plans may be in respect to meeting the Berlin crisis.

I suggest that a much more moral course of action than the one we are now taking would be one in which my Government would issue a call to the leaders of the world to put into operation immediately the procedures of the United Nations. We have a great opportunity to demonstrate to the millions in Asia and Africa who doubt our protestations of peace that we are now ready to submit the whole case to the United Nations. The procedures are available in the United Nations.

When officials of the State Department tell me that at some time in the future they may consider a step which takes into consideration the procedures of the United Nations, my answer is, "That is not good enough for my country."

Now is the time to use the procedures of the United Nations. It is said, "You must go through the procedural steps of the Security Council." Yes; that is correct. Let us go ahead and do it. We might be surprised, although I do not think so. However, let us get that behind us.

Let us get Russia into the position where she throws her veto on the Security Council. That will be of great value in the formulation of world opinion. Assuming that she does—and I believe in all probability she will, judging by the past record of Russia

walking out on her moral obligations time and time again as a member of the Security Council—we shall then have available the General Assembly and the peaceful procedures which the sections of the charter provide in relation to the workings of the General Assembly.

I believe that the best forum for the discussion of the Berlin crisis is not behind the closed doors of secret diplomacies, but out in the General Assembly of the United Nations, where other peoples from other countries have an opportunity to speak for peace in support of their rights.

INTERNATIONAL COURT SHOULD TRY BERLIN CASE

Then we have the judicial processes of the United Nations. When we are told by the State Department that international law supports our decision, they are right; it does. That is all the more reason, Mr. President, why we should use the judicial processes of the United Nations to pass judgment on such agreements, and proclaim to the world who it is that is violating the agreements in respect to Berlin.

Of course, Mr. President, when we stand before the bar of justice as a litigant or as a party advocate, we are in a somewhat different position than we are when we go into a closed-door session of international secret diplomacy and engage in an attempt to obtain from our opponent on the other side of the table an agreement affecting the entire world, without the rest of the world having a voice in the agreement which is worked out.

I believe that era of international negotiations has just about come to an end. The time when powerful nations—in this instance, to use an example involving the Berlin crisis, Russia, Great Britain, United States, France, and Germany—think they can get into a negotiation situation and enter into some kind of understanding which will affect millions of people who are not parties to that understanding, or, failing to reach such an agreemnet, breakdown in those negotiations and lead the world into nuclear war, is long past, and that idea has already been repudiated in history.

The world certainly is one in relation to the issue of war and peace, and no two nations can any longer fight unto themselves alone; nor will they.

FOREIGN POLICY PROGRAM FOR AMERICA

Therefore, I believe we should make clear that we do not propose to be intimidated by Russia. I also believe that we should make clear that we intend to lay this problem immediately before the United Nations for exercise of its procedures. We ought to make clear that we would welcome support for that approach from other nations. I am sorry that I think it is true—and it is true—that there are leaders in other nations who will remain reticent, who will hold back, and who will not make their views known so long as the United States and our Western Allies and Russia talk about trying to negotiate some understanding of the Berlin crisis.

But I think they would welcome an indication on the part of the Western Powers that their services for peace through the operation of their rights in the General Assembly of the United Nations would be appreciated.

My views on this subject can be summarized by saying that I believe the State Department has put the cart before the horse, so to speak, in regard to the approach it is making to the Berlin crisis. We are putting the last extremity, first, when the steps we ought to be taking now are United Nations steps.

Here we are illustrating once more that this great organization, which was chartered by its signatories to do what it could to prevent war and promote peace, is not being given primary consideration.

The appeal should be made to it now. It should not be kept in the background until the situation becomes so bad that no organization could save the peace. Then there would be those who would say, "You see, any association of nations for promoting peace is a mistake. No association can prevent war. It cannot prevent war." It is true that it cannot if the powers proceed with a course of action which will get us into war, in reality, through the back door before an appeal can be made to have the United Nations use its procedures, reach decisions, and place restrictions upon the wrongdoers.

FOUR-YEAR DRAFT EXTENSION OFFERS ONLY FALSE SECURITY

One more word, and I shall be through. What does this subject have to do with the draft bill? A great deal. I think the draft bill itself is being offered really as a part of a mistaken policy on the part of our country that war can be prevented by seeming to take warlike steps. But war will be prevented only when we carry out the great teaching of Arthur Vandenberg, who used to plead on the floor of the Senate for the establishment of an international system whereby the rule of law would settle our disputes.

I say frankly that up to this hour, my conclusion in regard to the attitude of both those in the Pentagon Building and those in the State Department is that they give only lipservice to the idea of settling international disputes which threaten the peace by the application of a rule of law, because the State Department cannot point to a single instance in which the peace of the world has been threatened, and in which it has proposed and urged that the dispute be submitted to the judicial process of the United Nations for a binding determination for or against us, or even an advisory opinion.

That is one of the reasons why the leaders of the Asian and African nations to which I have referred tell us quite bluntly, and into our teeth, when we meet with them, that there is much difference between our record as a nation in the field of following the rule of law and our record in professing it.

Oh, Mr. President, if we followed such a course of action as I have suggested, who knows what system might be developed through the application of the rules of reason to Berlin?

I do not intend to discuss on this occasion, but shall on another, the national psychological problems which are involved in such a crisis as this; the face-saving problems; the necessity for compromise; the part that a request for time and the adoption of a program based upon the passage of time plays in the ultimate settlement of international disputes.

All those practicalities exist, Mr. President, but I also know that when we get issues out into the open for public disclosure through a body which has jurisdiction, and when rules of reason can be applied to them, the chances of a settlement leading to peace are greatly improved.

So I offer as a hope, perhaps, that such an approach as I have suggested may eventually lead, for example, to the formation of a United Nations trusteeship—any other descriptive term may be used—for the administration of a tinderbox spot of the world, such as Berlin. We have missed too many great opportunities in our country in recent years to apply such a principle. That is why in 1955, together with former Senator Herbert Lehman, of New York, I made a plea for the application of such a program to Formosa. We had an opportunity then to propose the proper procedure for the administration of Formosa, with the United States undertaking the caretaker duty of defense until such time as the United Nations found it possible to dispense with the trusteeship, whether it required 25, 50, 75, or even 100 years. I think we missed a great opportunity there, as we have in other parts of the world.

There has been such an accumulation of mistakes of that nature that now we may be confronted with our last opportunity to make a plea to the leaders of the nations of the world for the adoption of United Nations jurisdiction over all the countries involved in the Berlin crisis concerning their respective interests in Berlin.

But if we do not follow that course of action, and if what I consider to be the present mistaken policies of the State Department or the Pentagon continue, then I pray, at least, that we shall have heard the last of any talk in our country against the leaders of Russia and of the Western Powers getting together directly and personally with their foreign ministers to try to settle the dispute.

The other nations of the world are entitled at least to that privilege. The other nations of the world have certain rights of peace, to which I have alluded. To the head of state of my country and of any other Western Power and of Russia, I say that not a single one of them, alone or collectively, has the moral right to fail to sit down together in a meeting with their foreign ministers. I do not care whether it be called a summit conference or whatever else it may be termed. But they had better get together rather than waste precious time with international diplomatic maneuvering while all mankind is poised on the brink of a precipice from which, if it falls, most of civilization will fall with it.

Many of the thoughts which I have expressed in my speech tonight are inherent in any intelligent consideration of

the kind of military manpower bill which the Senate will pass tomorrow, because such legislation will be inseparably entwined, so far as its implications and effects are concerned, in the foreign policy of my country for the next few years.

Mr. CASE of South Dakota. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. CASE of South Dakota. Although there are some points in the speech of the distinguished Senator from Oregon with which I might find myself in disagreement in some respects, I think the Senator has made a very outstanding contribution to the current debate upon the foreign policy of the United States and upon the debate, which is worldwide, on the subject of the future of civilization—certainly the future of peace in our time.

I regret that there was not a larger attendance at this time of the day to hear what the Senator from Oregon said. With his indulgence, and the indulgence of the employees of the Senate, who have patiently waited until this hour. I should like to make a few observations concerning some of the things which the Senator from Oregon has said.

Mr. MORSE. I will yield the floor, so that the Senator from South Dakota may proceed in his own way. I thank the Senator for listening to me until the end of my speech. As he knows, I never ask for agreement. It is not agreement that I ask, but that the American leaders and the American people, before it is too late, think about the problems which are involved, and about what I think is the greatest threat to my country which we have ever faced. This is how serious I think the situation is.

Mr. CASE of South Dakota. Mr. President, first, in commenting on the direct issue presented by the Senator from Oregon, I wish to state that I am glad he raised the moral issue, for I, for one, agree completely with him that a moral issue is involved in the questions confronting the United States, Great Britain, France, Russia, and the other nations of the world.

I am also glad the Senator from Oregon pointed out that nations other than the so-called Big Four have a stake in the decisions made with respect to Berlin. I hope that those who are in a position to do so will convey to the leaders of those nations, such as India, Pakistan, Indonesia, and the countries of Africa, the point the Senator from Oregon has expressed tonight, namely, that they, too, have a stake in these issues and have a right to express their interests to the countries which are perhaps directly involved in the initial decisions made.

I believe a moral issue is presented, inasmuch as the world might be thrown into a nuclear war. I have that feeling not merely with respect to the Berlin crisis; I had the same feeling with respect to the Quemoy crisis of a few months ago. To me, it came as a distinct shock when I heard representatives of the Defense Establishment say that, under certain circumstances, the thing to do, if the shelling of Quemoy continued, would be to go all out in a nuclear war; that a conventional war would be merely a war of attrition which we might win or we might not win or, at least, we might not win decisively. Personally, I was shocked to hear the suggestion that the only thing to do at the outset would be to go into a nuclear war.

I do not know on what authority those whom I heard make that statement were speaking, or whether they were expressing only their own opinions. But, to me, it was unthinkable that we should unleash a nuclear war over Quemoy or over whatever Quemoy might represent in its relationship to Formosa, for I, too, agree that our country could never escape the moral judgment of this generation if our country were the first to use nuclear weapons at the present time, whether over Quemoy or over Berlin.

So I hope the moral implications of such a decision are kept in mind by whoever makes the decision in this instance.

Second, I wish to say this with respect to the leadership of Mr. Dulles: I am familiar with the statements the Senator from Oregon has made on prior occasions with respect to the policies followed by Mr. Dulles and those followed by the President of the United States in conducting our foreign policy. I wish to say that it should be to the everlasting credit of Dwight D. Eisenhower and John Foster Dulles that they took the position they did in the Suez crisis. I felt that those two gentlemen, as the leaders of our country responsible for our foreign policy, said, as it had never before been said, that the rule that territory taken by aggression should not be recognized should apply to our friends, as well as to those who have not been our friends. I think that is one of the landmarks in the development of international policy by justice and fair play.

Mr. MORSE. Mr. President, will the Senator from South Dakota yield?

The PRESIDING OFFICER (Mr. McCARTHY in the chair). Does the Senator from South Dakota yield to the Senator from Oregon?

Mr. CASE of South Dakota. I yield.

Mr. MORSE. I want the Senator from South Dakota to know that I completely supported the position the President and the Secretary of State took on the Suez crisis. We remember that at that time they also pointed out to the then belligerents that they were acting outside their responsibilities in relation to the United Nations. I thought that position was unassailable. I only wish they had taken the same position in regard to some matters in which the United States was directly interested.

Mr. CASE of South Dakota. Mr. President, I have the feeling that when the long story of man's attempt to establish in international relations the rule of law and the principles of justice is written, our policy in regard to the Suez crisis will be hailed as one of the great steps forward, and something from which future leaders can take encouragement.

Third, I wish to mention the policy of the President of our country. I am glad that Dwight D. Eisenhower, rather than some other persons I might mention, is President of the United States, if chances of using nuclear weapons are involved in some of the decisions that are made.

Personally, I am convinced that he has shown more restraint that some others might have shown, or more than some others might use or show in future situations.

With regard to the Formosa resolution, I shared to some extent the feeling that we should have written into that resolution a more positive reliance upon the procedures of the United Nations. However, I recall that the night when we voted on the Formosa resolution, I stated that one reason why I would vote for the resolution was the letter the President had written, in which he stated that he would use the processes of the United Nations so far as possible in that connection.

Next I wish to mention the Berlin situation. I shall do so only briefly.

The able Senator from Oregon has made an interesting suggestion tonight, although not necessarily a new one; namely, that the procedures of the United Nations be applied to the Berlin problem. But certainly he has presented that matter in a more forceful way than I have heretofore heard it presented. By what I am about to say, I would not detract one iota from his presentation.

The Berlin situation cannot be considered entirely apart from the historic background in which it was created. The quadripartite administration of Germany, following World War II—the plan under which the land of Germany was divided into four zones, and the capital city of Berlin divided into four sectors, with one zone assigned, respectively to Great Britain, France, Russia, and the United States, and one section of the city similarly assigned—cannot be wholly ignored; nor can the modification of that quadripartite agreement—namely, when Britain, France, and the United States decided to proceed with the recognition of West Germany, even though at that time Soviet Russia was not ready to enter into a peace treaty with East Germany—or the step toward solution taken with the abandonment of occupation by the Four Powers be wholly ignored.

However, after we made our unilateral decision—unilateral insofar as the West was concerned—Russia then made her decision to create the puppet government in East Germany. At that time we could hardly protest too much on that score, because we had already recognized the West German Government.

I may have an imperfect recollection in regard to the next phases of those matters—namely, the questions which in both instances were left undecided. Among those, my memory suggests that the status of Berlin, as such, was left undecided; and the unification of Germany or any method for its unification was left for future determination; and the question of how, and in what manner, communication between the West and the Western sectors of Berlin might be preserved was left for future determination.

Because a solution of the present Berlin problem hinges upon finding some answers to those questions which were unresolved at the time when West Germany and East Germany were established, it seems to me only natural that the State Department should initially seek to arrive at answers to those questions among the powers which, following World War II, were parties to the original Four-Power handling of the German question.

So I trust that the Senator from Oregon will not be too impatient if the first and initial exploration of a solution of the problem is sought among the Four Powers, rather than through a procedure of the United Nations. The problem was started within the Four-Power agreement, and it would be natural that the first solution should be sought there.

Reverting to the general theme of the major part of the remarks of the Senator from Oregon tonight, I wish to express a hope. It is that when the Prime Minister of Great Britain, Mr. Macmillan, comes to this country, the attitude, the climate of opinion in the United States will be receptive, and not hypercritical. I express the hope that when the Prime Minister comes here and gives us the benefit of his recent trip to Russia, we shall not take umbrage at the fact that a leader of another great power should have taken the initiative in making an exploratory trip to Russia.

I personally hope when he comes he can bring to the people with whom he will confer some information which has not appeared in the front pages or has not been publicly discussed, and that will indicate the avenues through which agreement and solution of the problems confronting the world at this time may be reached.

If it is not carrying the deep sentiment which I felt was expressed in reference to the moral issues involved too far, I should like, in connection with my reference to Mr. Macmillan, to recall that on an occasion in the history of England when people were disposed to think that the answers to problems should be found in politics and great navies, a poet philosopher of England wrote some words which, it seems to me, the world might well read today. I read them now. It was in the "Recessional" that Rudyard Kipling wrote:

God of our fathers, known of old—
Lord of our far-flung battle line—
Beneath whose awful hand we hold
Dominion over palm and pine—
Lord God of Hosts, be with us yet,
Lest we forget—lest we forget!

The tumult and the shouting dies—
The Captains and the Kings depart—
Still stands Thine ancient sacrifice,
An humble and a contrite heart.
Lord God of Hosts, be with us yet,
Lest we forget—lest we forget!

Then this stanza, Mr. President:

Far-called our navies melt away—
On dune and headland sinks the fire—
Lo, all our pomp of yesterday
Is one with Nineveh and Tyre!
Judge of the nations, spare us yet,
Lest we forget—lest we forget!

To all who may hear or read in these days discussions about massive retaliation and power politics, I recommend this stanza:

If, drunk with sight of power, we loose
Wild tongues that have not Thee in awe—
Such boastings as the Gentiles use,
Or lesser breeds without the Law—
Lord God of Hosts, be with us yet,
Lest we forget—lest we forget!

To those of us who may occasionally be a bit self-righteous and think that the only wisdom and the only concern of the world and of humanity rests with the so-called Christian nations, I read the final stanza:

For heathen heart that puts her trust
In reeking tube and iron shard—
All valiant dust that builds on dust,
And guarding calls not Thee to guard
For frantic boast and foolish word,
Thy Mercy on Thy People, Lord!

Mr. MORSE. Mr. President, I say to the Senator from South Dakota that if my remarks did no more than elicit from him the contribution he has made to the RECORD tonight, I shall be well repaid for the speech I have made. Such disagreement as I may have with the Senator from South Dakota in regard to the Berlin situation I think can be stated very simply as follows:

I am well aware of the fact that the misunderstandings or differences which have arisen among Russia, France, Great Britain, and the United States, and now Western Germany, grow out of the agreements which the powers entered into. Of course, it is understandable that an attempt should be made to resolve the disagreements which have arisen over the agreements. My point is that I think the parties have already reached the point where the rights of other nations now must be recognized and where other nations should intervene.

That is the reason for my suggestion that Russia, the United States, Great Britain, France, and West Germany should present their case now, on the basis of any agreements they can reach, to the only tribunal which, in my judgment, exists for the settlement of this dispute in the interest of peace, namely, the United Nations. Raising this question with the United Nations now would not prevent the leaders of Russia, Great Britain, France, West Germany, and the United States from reaching any new agreement they can.

Many of us have seen party litigants over a boundary dispute almost reach the point of carrying guns, unable to reach any agreement even with the aid of counsel, but in the judicial atmosphere of a courtroom, where they must appeal to the rule of reason and present evidence to support their case, we have often seen them reach a settlement. If the United Nations were to make it clear that it proposed to exercise jurisdiction, it might provide the greatest enhancement to the prospect of the party litigants themselves reaching agreement over the Berlin crisis.

Mr. President, I appreciate very much the fine contribution which the Senator from South Dakota has made. No greater reference in literature could be found than his reference to Kipling and to the rich philosophy entailed in that beautiful piece of poetry.

During the delivery of Mr. MORSE's speech:

Mr. MORSE. Mr. President, I should like to extend a courtesy to the Senator from South Dakota and have him take the floor at this time, without my losing it, so he can modify his amendment, with the understanding that his statement will either follow or precede my statement in the RECORD.

The PRESIDING CFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent, notwithstanding the fact that the yeas and and nays have been ordered on my amendment, that my amendment may be modified in this respect:

In subparagraph (b), after the first word, "President," insert "by and with the advice and consent of the Senate."

Then, in the same paragraph, to change "four" members to "six" members, and change the figure "3" to "1."

The effect of that modification is to make sure that six members of the Commission shall be appointed from civilian life, and only one from the Armed Forces, and that all seven members shall be subject to Senate confirmation.

The PRESIDING OFFICER. Is there objection? Without objection, the modification will be made, and the amendment, as modified, will be printed.

Mr. CASE of South Dakota. Mr. President, I make that request at this time in order that my amendment, when printed tonight, may appear on the desks of Senators in its modified form.

I also ask unanimous consent that these remarks follow the colloquy with the Senator from Oregon.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROMOTION OF MINING AND DEVELOPMENT RESEARCH FOR BERYL, CHROMITE, AND COLUMBIUM-TANTALUM FROM DOMESTIC MINES — ADDITIONAL COSPONSORS OF THE BILL

Mr. MORSE. Mr. President, I ask unanimous consent that the name of the Senator from California [Mr. ENGLE] may be added as an additional cosponsor to the bill (S. 1245) to promote mining and development research for beryl, chromite, and columbium-tantalum from domestic mines, introduced by me on March 2, 1959, the next time the bill is printed.

The PRESIDING OFFICER. Without objection, it is so ordered.

RECESS TO TOMORROW AT 10 O'CLOCK A.M.

Mr. MORSE. Mr. President, in accordance with the order previously entered, I move that the Senate stand in recess until 10 o'clock tomorrow morning.

The motion was agreed to; and (at 8 o'clock and 22 minutes p.m.) the Senate took a recess, the recess being, under

the order previously entered, until tomorrow, Wednesday, March 11, 1959, at 10 o'clock a.m.

NOMINATIONS

Executive nominations received March 10 (legislative day of March 9), 1959:

DIPLOMATIC AND FOREIGN SERVICE

Ogden Rogers Reid, of New York, to be Ambassador Extraordinary and Plenipotentiary of the United States of America to Israel, vice Edward B. Lawson.

DEPARTMENT OF THE NAVY

Cecil P. Milne, of Wisconsin, to be an Assistant Secretary of the Navy.

U.S. TARIFF COMMISSION

J. Allen Overton, Jr., of West Virginia, to be a member of the U.S. Tariff Commission for the remainder of the term expiring June 16, 1962, vice Edgar Bernard Brossard, retiring.

COMMISSION ON CIVIL RIGHTS

George M. Johnson, of California, to be a member of the Commission on Civil Rights, vice J. Ernest Wilkins, deceased.

U.S. CIRCUIT JUDGE

Henry J. Friendly, of New York, to be U.S. circuit judge for the second circuit, vice Harold R. Medina, retired.

U.S. DISTRICT JUDGE

Lloyd F. MacMahon, of New York, to be U.S. district judge for the southern district of New York, vice Lawrence E. Walsh, resigned.

CONFIRMATIONS

Executive nominations confirmed by the Senate March 10 (legislative day of March 9), 1959:

IN THE ARMY

The following-named officers for temporary appointment in the Army of the United States to the grades indicated, under the provisions of title 10, United States Code, sections 3442 and 3447:

To be major generals

Brig. Gen. Isaac Sewell Morris, O18806, Army of the United States (colonel, U.S. Army).

Brig. Gen. Christian Hudgins Clarke, Jr., O18213, U.S. Army.

Brig. Gen. Charles Hartwell Bonesteel 3d, O18655, Army of the United States (colonel, U.S. Army).

Brig. Gen. Lyle Edward Seeman, O17082, U.S. Army.

Brig. Gen. Jack William Schwartz, O17823, Medical Corps, U.S. Army.

Brig. Gen. Roy Tripp Evans, Jr., O19140, Army of the United States (colonel, U.S. Army).

To be brigadier generals

Col. Franklin Fearing Wing, Jr., O18107, U.S. Army.

Col. Clarence Renshaw, O17708, U.S. Army.

Col. William Warner Harris, O18170, U.S. Army.

Col. Chester William Clark, O41908, U.S. Army.

Col. Gines Perez, O30126, U.S. Army.

Col. Elmer Louis Littell, O29823, U.S. Army.

Col. Harvey Julius Jablonsky, O19390, U.S. Army.

Col. James Leslie Snyder, O19627, Medical Corps, U.S. Army.

Col. John Farnsworth Smoller, O19416, U.S. Army.

The following-named officer to be placed on the retired list in the grade indicated, under the provisions of title 10, United States Code, section 3962:

To be general

Gen. Henry Irving Hodes, O12845, Army of the United States (major general, U.S. Army).

The following-named officers under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in rank as follows:

To be general

Lt. Gen. Clyde Davis Eddleman, O15842, Army of the United States (major general, U.S. Army).

To be lieutenant general

Maj. Gen. Paul DeWitt Adams, O17306, Army of the United States (brigadier general, U.S. Army).

IN THE AIR FORCE

The following-named officer to be assigned to position of importance and responsibility designated by the President in the rank indicated, under the provisions of section 8066, title 10 of the United States Code:

To be general

Lt. Gen. Samuel E. Anderson, 92A (major general, Regular Air Force), U.S. Air Force.

The following-named officer to be placed on the retired list in the grade indicated under the provisions of section 8962, title 10 of the United States Code:

To be general

Gen. Edwin W. Rawlings, 95A (major general, Regular Air Force), U.S. Air Force.

IN THE NAVY

Having designated, under the provisions of title 10, United States Code, section 5231, the following-named officers for commands and other duties determined by the President to be within the contemplation of said section, he has nominated them for appointment to the grade indicated while so serving:

To be admiral

Vice Adm. Robert L. Dennison, U.S. Navy.

To be vice admirals

*Vice Adm. George C. Towner, U.S. Navy.

*Vice Adm. Hyman G. Rickover, U.S. Navy.

Rear Adm. William R. Smedberg III, U.S. Navy.

The following-named officers for appointment to the grade indicated on the retired list pursuant to title 10, United States Code, section 5233:

To be admiral

Adm. James L. Holloway, Jr., U.S. Navy.

To be vice admiral

Adm. Byron H. Hanlon, U.S. Navy, retired.

NOTE.—Asterisk (*) indicates ad interim appointment issued.

HOUSE OF REPRESENTATIVES

TUESDAY, MARCH 10, 1959

The House met at 12 o'clock noon.

Rev. Charles W. Holland, Jr., pastor, Fountain Memorial Baptist Church, Washington, D.C., offered the following prayer:

John said of Jesus—John 1: 3: *All things were made by Him, and without Him was not anything made that was made.*

Most Holy God, creator of the universe, the world, and all that is in the world, keep us ever mindful of Thy omnipotence.

We know, dear Heavenly Father, that it took a miracle to put the stars in space, and a supernatural act to put the worlds in place.

Dear God, as we realize Thy power, may we also appreciate the fact that Thou art a personal God—so personal as to one day wipe away every tear from our eyes.

May we be cognizant of Thy power and yet also realize that Thou art concerned with our well-being. May this knowledge keep us humble, whereby we do our best work.

This petition we make in Thy name. Amen.

The Journal of the proceedings of yesterday was read and approved.

WATERSHED WORK PLAN FOR LICK CREEK, TENN.

The SPEAKER laid before the House the following communication, which was read and referred to the Committee on Appropriations:

MARCH 6, 1959.

Hon. SAM RAYBURN,
The Speaker, House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: Pursuant to the provisions of section 2 of the Watershed Protection and Flood Prevention Act, as amended, the Committee on Public Works has approved the work plan transmitted to you which was referred to the committee. The work plan involved is:

State: Tennessee.
Watershed: Lick Creek.
Executive communication No. 515.
Committee approval: March 4, 1959.

Sincerely yours,

CHARLES A. BUCKLEY,
Member of Congress,
Chairman, Committee on Public Works.

COMMITTEE ON PUBLIC WORKS

Mr. GRAY. Mr. Speaker, I ask unanimous consent that the Committee on Public Works be permitted to sit today and tomorrow during general debate while the House is in session.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

COMMITTEE ON BANKING AND CURRENCY

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the Committee on Banking and Currency may be permitted to sit during general debate for the remainder of the week.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

UNITED STATES OF AMERICA MUST MOVE FAST IN TWO VITAL AREAS OF FOREIGN POLICY

Mr. IRWIN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include an editorial.

The SPEAKER. Is there objection to the request of the gentleman from Connecticut?

There was no objection.

Mr. IRWIN. Mr. Speaker, the tension in the world today is great and the manner in which we resolve the tremendous problems of foreign policy may well decide the fate of our Nation.

It is to our advantage, therefore, that we move cautiously and think carefully about the steps we should take to protect the position of world leadership so long enjoyed by the United States.

Along these lines, I think the following story from the Westchester Herald's weekend edition February 26 to March 2 should be weighed thoroughly by those responsible for determining our foreign policy.

The article was written by the Herald's editor-publisher, Mr. J. Spencer Gray. The newspaper is published in White Plains, N.Y.:

UNITED STATES OF AMERICA MUST MOVE FAST IN TWO VITAL AREAS OF FOREIGN POLICY

(By J. Spencer Gray)

The United States of America must take immediate action in two major areas of its foreign policy: First, provide more generously for its Foreign Service and other emissaries abroad; second, take a long, hard look at its present disorganized patchwork programs of foreign aid to greatly improve their effectiveness, reduce the load on American taxpayers, and at the same time provide more practical aid to our friends abroad who desperately need help.

The foregoing is the consensus of officials of foreign governments interviewed by the writer during recent tours of Europe, as well as foreign-affairs students—inside the Government and out—with whom the two interrelated problems have been discussed since that time.

The conclusion of many of these trained observers of overall U.S.A. policy is that present appropriations for foreign aid might well be scaled down by approximately 10 percent and the funds used for two main purposes: First, more generous salaries and expenses for Foreign Service personnel in all categories; second, a thorough study of the foreign-assistance programs and whether they are really doing the job they were designed to do.

Those who favor a fractional reduction in foreign-aid funds do not do so out of any reactionary desire to injure our underprivileged friends abroad, although they do point out, as the Springfield (Ill.) State Journal said recently, "We can't go on giving away money forever. We would go broke in time."

The general opinion among knowledgable sources appears, however, to be that a firm new approach is needed to planning assistance sent abroad by the United States of America and that we have entered an era where dollar and material aid—though still essential—are not as crucial as the type of personnel we send overseas to represent our Nation, and the effectiveness with which these emissaries tell our story and work with foreign peoples.

The point was recently emphasized to this writer that changing world conditions have also brought a change in the role that should be played by the United States of America as the world's leading force for peaceful progress, rehabilitation of nations crippled by war, and development of backward nations.

In the case of West Europe, for example, "the desire to trade is (now) greater than the need for aid," as one observer puts it. Of much greater value to our European friends than large-scale assistance would be the maintenance of a high level of trading activity between nations.

The needs of our Western Hemisphere neighbors are similar: Rather than putting major emphasis on handouts from the United States of America, the Rockefeller Brothers' recent report, "Foreign Economic Policy for the 20th Century," suggested that four major points be explored at a proposed economic conference bringing together the nations of North, South, and Central America.

The object of the conference would be:

1. To find procedures for moderating commodity-price fluctuation.

2. To promote economic growth and development with increasing living standards.

3. To prepare the ground for a regional common market.

4. To establish an Inter-American Development Union.

The mere expenditure of dollars is not a solution, whether in Latin America, Africa, Asia, or Europe.

What the United States of America needs is a consistent set of objectives regarding our economic role overseas, and highly qualified personnel to translate these objectives into reality.

Those who hold to this view are not of the shortsighted opinion that foreign aid should be reduced merely for the sake of saving money, desirable though this might appear. They recognize that the United States of America must continue to be willing to finance its preeminent role in world affairs or face the possibility of chaos and catastrophe.

But, they do believe that the present variety of foreign aid programs have too much of a patchwork character, and that without more planning and more liberal provisions for personnel to plan and direct these programs, much of our overseas altruism will be wasted.

FEDERAL RESERVE BOARD DISCOUNT RATES

Mr. VANIK. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. VANIK. Mr. Speaker in accordance with its established practice of announcing controversial policies at the weekend, the Federal Reserve Board has again juggled a discount rate increase from 2½ percent to 3 percent. Again, at the very moment our economy is beginning to renew hope in recovery, the Federal Reserve Board is repeating the procedures which extended the current recession. This discount rate juggling generally results in less available borrowing at higher and inflated rates. The ostensible purpose of this action is to reduce inflationary pressures by drying up the resources for enterprise expansion.

It may be entirely coincidental, but the record points up Federal Reserve action to increase interest rates just before the American Government must enter the money market for the handling of large issues of its own debt. The increased interest rates which result are more costly to the Government than to all other enterprise—both private and corporate—combined. Thus the Federal Reserve Board acts with almost open hostility to the Government which gives it life. If this process continues, the rising cost of artificially increased interest of the public debt may completely unbalance the Federal structure. The Federal Reserve Bank Board is thereby threatening economic patricide of the Federal structure.

Is the Federal Reserve action truly designed to help the current refunding of the Federal debt? Is it easier to sell $15 billion in new issues to replace maturing Federal securities in a market of higher interest rates—when even higher interest rates and higher investment profits result from private or corporate avenues of investment?

How much higher can interest rates be permitted to rise? Current business expansion in my community is available at short-term 6-percent rates plus shameful discounts or bonuses which must be added to the cost of the loan. Interest rates have already pushed up to the full limit of moral decency. How much pressure are we exercising on the legal limits of usury? When does the cancer of usury begin its evil and ultimate destruction of our economy?

The Chairman of the Federal Reserve Board stated last month that the inflammable tender of inflation is all around us. However, except for the price of interest on borrowed money, prices have been relatively stable since April 1958. The inflammable tender to which the Chairman of the Federal Reserve Board apparently refers is the threat of higher steel prices after a possible steel strike this summer. It is difficult for me to determine how inflating the price of borrowed money will in any way chill the current expanded production of steel—current steel industry profits—or the desire of steel workers to participate in them.

THE BUDGET, THE NATIONAL DEBT, AND INFLATION

Mr. BUDGE. Mr. Speaker, I ask unanimous consent to address the House for 1 minute and to revise and extend my remarks.
